IT is reported from Washington that the news of the appointment of Mr. Keim as Chief Examiner under the Civil-Service Commission "excited a universal smile in the capital." It is also reported that Mr. Eaton, when interrogated about the meaning of that appointment, appeared "very nervous." The smile, which was undoubtedly one of triumph on the part of the Machine politicians, is as intelligible as the nervousness of Mr. Eaton, when Mr. Keim's qualifications for the Chief Examinership, as well as the influences supporting him, are impartially considered. It is generally understood that the Chief Examiner will be the principal executive officer under the Civil-Service Commission, and that the practical success of the examination system will depend in a great measure on his fidelity and efficiency. It might, therefore, have been taken for granted that the appointing power, assuming it to have the cause of civil-service reform sincerely at heart, would not for a moment have thought of any man for that place who was not known as a sincere friend of this specific kind of reform, and as being well acquainted with its requirements and methods. The examinations which the Chief Examiner is to conduct are instituted for the very purpose of eliminating political influence from the exercise of the appointing power. The idea, therefore, of putting a man into that place, without conspicuous qualifications for it, merely on the strength of political influence backing him as an applicant for a "berth with a salary," should, of course, have appeared absolutely preposterous. It should have been considered essential not only that the fitness of the man selected for that post be above doubt, but that his history and his character qualify him as a man entitled to enjoy, and certain to enjoy, general confidence.

In all these respects the appointment of Mr. Keim appears at first sight almost grotesque. He is undoubtedly a good sort of man in his way, but that way is not civil-service reform. It does not even seem to be alleged that he ever sympathized with that cause, and certainly not that he ever familiarized himself with the methods it employs. Mr. Keim is, on the contrary, known as a faithful and active political aid of the Camerons in Pennsylvania, and the only ability he has shown in reference to civil-service reform has been to get a large number of politicians to push him for a berth with a salary of $3,500. And as his political associations have always been with the "Machine," and with a machine, too, of the most odious kind, it appears at first sight as if the Machine had succeeded in capturing the very instruments through which the reform of the civil service was to be effected. As Fletcher of Saltoun said: "Let me make the songs of a people, and I do not care who makes its laws," so the Machine politician may say: "Let me appoint the Chief Examiner, and I do not care who makes the civil-service rules."

Mr. Eaton has published an elaborate defence of the appointment, in which he assumes the full responsibility of it for the Commission. He sets forth that the Commission did everything they believed necessary to satisfy themselves about Mr. Keim's qualifications. If they had gone beyond the circle of those whom Mr. Keim had, in the way which is familiar to all politicians, induced to put their names on his recommendation papers, they would soon have discovered the effect which his nomination would inevitably produce. They would have satisfied themselves at once of the extreme difficulty of making the public believe that examinations conducted or superintended by Mr. Keim would be free from partisanship, or that the standards of capacity and acquirements established in them would be intelligent and judicious. They would soon have become aware that such an appointment must be a very injurious blow to civil-service reform by giving it a somewhat farcical character. The President is said to be willing to make another appointment if the Commission will recommend one, and this, it seems to us, is the best thing they can do. It will certainly not be very difficult for them to find in the departments at Washington, or in other Government offices, men who in former times have proved an intelligent devotion to the reform of the civil service, and who have also acquired the experience of civil-service examinations.

We will not assert that Mr. Keim will betray his trust, or prove as inefficient as may be feared. But surely Mr. Eaton gave an insufficient reason for taking that risk when he said that "there was no danger that Mr. Keim would not properly discharge the duties of his office, for he would be entirely within the con-

trol of the Commissioners, and any departure from the regulations adopted could be quickly rectified by a change of examiners." The Chief Examiner was to be the principal aid, the confidential executive officer, the right hand of the Commission, to carry out the regulations devised by that body; but now it turns out that an appointment has been made which adds to the duties of the Commission the peculiarly difficult task of watching the Chief Examiner. And if Mr. Eaton thinks that any departure from the regulations on the part of that officer can be quickly rectified by removing him, he will find himself egregiously mistaken, for the same political influences which were permitted to put him there will prove strong enough to keep him there.

THE REAL WEAKNESS OF AMERICAN UNIVERSITIES.

THE Alumni of Cornell University held a meeting in this city last week to discuss the cause of the decline in the number of students, as well as in other things, which, it is alleged, has taken place. There are two theories about the causes of this. One ascribes it to the failure of the labor system, the absence of President White, co-education, and the attacks of the religious press; the other to the falling off in the quality of the professors, owing to the smallness of the salaries paid them, as well as to some resultant mismanagement in matters of discipline. As the College has a good and well-managed endowment of about $7,000,000, there appears to be quite money enough for all reasonable wants.

We do not pretend to know enough of the affairs of the University to express any decided opinion on any point in the controversy but one. The failure of the scheme of uniting manual with intellectual labor has, perhaps, been injurious, because it was made a very prominent feature in the programme at the start, and had an effect on the imagination of poor youths in various parts of the country which has now passed away. But this was predestined to failure from the beginning. Whether it could succeed was never a scholastic question at all, but a physiological one, which almost any young man could have settled for himself before going to college. That only very few men can work hard with both mind and muscles at the same time has been a familiar fact almost ever since the invention of the art of writing. Everybody has only a limited amount of vital force, and if he puts it into his brain, he cannot have it for his muscles, or if he puts it into his muscles, he cannot have it for his brain. The human body is not a compound engine in which the steam can be used twice over. This is the long and short of the whole matter. It is still truer, too, of young and immature men than of older ones. The labor experiment at Cornell was therefore sure only to last a short time. It was the product of the imagination of a self-made man, who had not had a regular education, and, like all such men, underestimated the drafts which getting an education makes on the strength and energy and attention at the age when it has to be acquired if it is to be acquired at all.

The point which the Alumni made most prominent in their diagnosis—the low salaries of the professors—is, we think, the most important one, and the one about which there is least room for doubt. There is not a college in the country which is not suffering from this cause, some a little and some much; and, until a radical change has been wrought in public opinion on this subject, they will certainly continue to suffer. Most colleges have but little money compared to their needs, which is as it should be. All colleges ought in this sense to be poor. But their affairs are mostly managed by business men, more familiar with commercial than scholastic affairs. One of the best-founded maxims of business is, however, that a man's proper salary is what he can get in the labor market, unless he has some exceptional talent or capacity. But the only exceptional talent or capacity which business men find it easy to recognize is one that brings in large pecuniary returns. Judged in this way, no professor seems entitled to much pay. There is hardly any salary so low that "a professor" cannot be had for it; and the difference between professors is not very perceptible to the business eye. Moreover, the most successful and famous professor in the world seems to the business eye a very poor investment. It always seems as if what the poor youth struggling for an education gets from him could be got just as well from a very inferior man.

The general result of this state of mind on the part of college trustees is that, in founding or endowing a university, their main interest is given to buildings and material equipment. The professors are treated as subordinate accessories, on which economy can most readily be practised. When a pinch comes, for instance, the reduction of their salaries is apt to be the first way of saving that is thought of. How far astray trustees are in all this may be inferred from the fact—which we hold to be indisputable—that a university consists of the professors, that all other things are but accessories, and that you might have a great and successful university, in which the thirst for knowledge would be very eager, and the stimulus applied to those seeking it very powerful, in a barn or a large tent. Therefore any policy which saves on professors to spend on something else, is a mistake of the most injurious description.

The demand for cheap professors overlooks two important facts, one peculiar to this country, the other one of the general facts of modern society. The first is that, through force of circumstances, money is in the popular eye in America a rough standard of success. People apply it to everybody, including ministers. The successful minister is the one who is called to the rich city congregation, and gets from $10,000 to $20,000 a year. The attractive calling is the one which has the greatest number of large pecuniary prizes. The second is, that all over the world material comfort—that is, the possibility of living with a certain freedom from small cares, and with the means of a certain amount of social enjoyment and of educating children, and saving money for old age—exercises an increasingly powerful influence on men of real capacity in choosing their profession. The inferior man cannot choose his calling, as a general rule. He takes what comes to him. The superior man can; and the tendency in our time is for all such men to turn away from callings which do not promise them a respectable income. The importance of this consideration as regards the future of our colleges can hardly be overrated. The present attitude of trustees about salaries is exerting a very unfortunate effect on the teaching profession by driving away from it the young talent of each generation, and compelling colleges which wish for first-rate men to search Europe for professors willing to expatriate themselves in middle life. The tendency to the scholar's life is not very strong among our young men at best, but nothing better calculated to diminish it could well be hit on than the spectacle presented to them all over the country of professors who are either fourth-rate men, for whom their wretched salaries are full remuneration, or first-rate men toiling for what barely keeps body and soul together, and are thus placed, in an intensely mercantile community, in humiliating contrast with men of nearly every occupation above unskilled labor.

THE CONVERSION OF THE FRENCH DEBT.

THERE have been few operations with a more curious history than the conversion of the five per cents, for which the French Legislature is now at last providing. To keep them afloat for one month after they had become redeemable, and after the credit of the Government had improved sufficiently to enable it to borrow at four or four and a half per cent., seemed, from the financial point of view, plainly enough a great blunder for a heavily burdened country to make. And yet the Republic shrank from conversion for years, for the very odd reason that it was afraid of alienating the affections of the bondholders, who constituted a formidable body of voters, and who could not get the same rate of interest on any other security so good. When the loan was taken up eagerly by the peasantry and small shopkeepers throughout the country, the Government was justly proud of such a proof, both of the popular confidence and the popular thrift, but probably nobody thought that it would result in the state's being afraid to pay off its creditors. And yet this is exactly what came to pass, and it constituted a financial situation for which there has perhaps been no parallel. For at least ten years it was possible for the French Government to borrow enough at four or four and a half to pay off its fives, and it did not dare to do it. In other words, politicians of a demagogic turn, instead of crying out for a reduction of the interest on the public debt, cried out against it.

The matter, however, during all these years continued to be agitated. The more conservative financiers, like M. Leroy-Beaulieu, urged strenuously, as a measure of prudence, that the conversion should be effected while the state of the public credit and of the money market permitted it, but they were not listened to. Last year, when the scheme was for the first time taken up seriously, M. Léon Say opposed it in a now famous speech,

on the ground that the opportunity had for the present gone by, and that the condition of the money market was no longer favorable. The delay, combined with the agitation about it, had in fact had the effect of frightening the large holders of rentes, who knew enough of business to be able to change their investments profitably. They came to the conclusion that conversion would probably come soon, and that they might be paid off when it would be hard to find anything else as profitable. They, moreover, became alarmed by the colossal proportions of the floating debt, and the apparent want of forethought with which the finances were managed, and with the magnitude of the public works which the Government was undertaking, and began to sell out, and the fives have fallen till they are already, in point of fact, sixes or sevens. The money has gone into the English funds, or into the Italian fives, or come to this country for railroad securities. All the great borrowers of the world have, in fact, during the last year or two, been tempting French capitalists into new fields. Belgium, Holland, Italy, and even Hungary have been making them seductive offers of one sort or another, and, it would appear, with much success. In fact, the flight of money from the French rentes is reckoned by hundreds of millions of francs.

It is, therefore, questioned by some whether the conversion is any longer possible —that is, whether the Government can now borrow on terms that will make it profitable. But the experiment is going to be tried, and there is but little doubt that it will prove successful, because the small holders, who constitute the great majority, will probably accept the reduction sooner than be paid off. The mere reluctance of the Government to enter upon it for so many years has been a serious injury to French credit, because it was well known to be due to political reasons, and when the management of the public finances in any country is known to be affected seriously by political considerations, or, in other words, is known not to be purely financial, the effect on investors is depressing. The more conservative French financiers are now trying to cheer the Government up through the press by pointing to the example of England and America in the matter of conversion. What is oddest in these attempts is that they are careful to point out that conversion at a lower rate of interest is not an anti-democratic thing to do, because the United States do it. Into this state of mind it is a little difficult for an American, with his vivid realization that the public finances are his own, to enter. The Frenchman has so long been accustomed to look on the Government as an entity apart from the nation, with resources and means of being bountiful of its own, that even now, when the Republic is well established, he cannot quite grasp the idea that to convert fives into fours is to save money for the taxpayer. He is haunted by a vague notion that it is a simple piece of illiberality on the part of the state toward the bondholder, with which the taxpayer has nothing to do.

SENTIMENTAL QUESTIONS IN POLITICS.

London, April 19.

The absence of exciting questions in domestic politics, and the increasing part which women take in public affairs, have, during the past few years, brought what may be called sentimental questions more and more to the front in England. I use the term not in that disparaging sense which it is sometimes made to bear, and which the word sentimentalism implies. I use it merely to denote questions which are supported not so much because they involve either the political or the material advantage of any class, or because they are recommended by philosophical, or economical, or constitutional arguments, as because they appeal to some popular emotion. They are not the worse but all the better for doing so, and to call them sentimental is not to deny that they have other bases to rest on, but only to assert that their chief support comes from the feelings enlisted on their side. To this class belong all the liquor questions, of which we have so large a crop—proposals to give ratepayers the right of controlling the issue of public-house licenses within a given locality, proposals to interdict the sale of intoxicants during the whole of Sunday, proposals to close public houses at election times, and so forth. To this belong also the great group of woman questions: first and foremost, the grant of the Parliamentary franchise to women; then the admission of women to various institutions and occupations. Then there is another set relating to the protection of animals, of which two specimens have lately come before Parliament: the one a bill to put an end to the practice of shooting at pigeons suddenly released from a cage or box, the other a bill for preventing all experiments upon living animals. There are others, of course, which may be referred to the same category, but these are instances sufficient to show how many proposals of the kind are floating about. Needless to say that they receive very different measures of support, and from quite different classes of persons.

Of the three groups I have specified, the liquor-question bills excite by far the most general and active interest. Few things are more remarkable in the recent history of Great Britain than the growth of the teetotal movement. Drunkenness has long been the characteristic fault of these islands, as of the North-German and Scandinavian races generally, and it is beyond all doubt the greatest obstacle to the moral and social progress of the poorer classes. The growth of the philanthropic spirit among the middle and upper ranks of society, and the increased sense of responsibility and personal dignity among the workingmen, which have gone hand in hand during the last forty years, have given more and more momentum to efforts in the cause of temperance. Ten years ago we were in a period of great commercial prosperity; work was abundant, and very high wages were paid for it. The consumption of intoxicants had reached stupendous proportions. Social reformers felt more than ever the magnitude of the evil, and the clergy of the Established Church took up the question, as the Nonconformist ministers had done already. Associations were formed in every nook and corner of the country for stopping or restricting the sale of intoxicants, in addition to those which already consisted of persons who themselves abstained. The general election of 1874, in which the public-house interest had put forth all its strength, and been one main cause of the defeat of the Liberal Ministry, inflamed the minds of the temperance men, who saw how active and powerful their foe was. At the election of 1880 there was another trial of strength, and now the temperance men had the best of it. At present, although the liquor party is still strong and well organized, their favor in a constituency seems on the whole less effective than that of the abstainers, and accordingly the House of Commons has gone round. Up till 1880, it rejected the proposal to give the ratepayers of a district power over the grant of licenses. Since 1880 it has twice affirmed that principle, and if a bill for the purpose were to be brought in, it would be supported by a considerable majority. Your readers may ask why, that being so, bills are not brought in to carry out the temperance programme. The reason is that the forms of the House of Commons make it practically impossible for any opposed bill to pass which is not pushed through by the Government. There are so many engines of legitimate as well as illegitimate obstruction that a private member's bill has no chance. Thus the Sunday Closing Bill, which appears to command a majority, has been repeatedly stopped, and will doubtless continue to be so till a Ministry takes it up. In this state of matters, the temperance men are forced to go on agitating through the country. They hold many thousands of meetings every year, and send up thousands of petitions to Parliament, signed, as they declare, by millions of people. Public interest is kept alive, members are held to their pledges, the number of teetotallers seems to go on increasing, but the law remains unchanged.

The woman questions excite a far less general and ardent sympathy. They have indeed passed out of the stage of being ridiculed or called crotchets. Most sensible people are agreed that professions and employments ought to be opened to women, and their opportunities for getting a university education greatly enlarged. The franchise question stands on a different footing, but it is large enough to require a letter to itself. The proposals for giving additional protection to animals, which resemble the two former groups in being advocated chiefly on emotional grounds, are backed by a still smaller mass of public opinion. It is true that pigeon shooting is now condemned by nearly all, I might indeed say by all, humane men. Its defence is left to a few sportsmen, mostly belonging to the landed gentry, who are half ashamed of their odious cause. But the thing is too small to command much interest from the public, and the very fact that little can be said for such a cruel amusement makes people indifferent, because it is felt that it cannot last much longer. On the other hand, the proposal to forbid all experiments on living creatures is pressed and resisted with great warmth. The attacking force is comparatively small, the resisting force, consisting of the physiologists and those men of science or of medicine who sympathize with their physiological brethren, is still smaller. The great bulk of the public is neutral, and therefore opposed to a change in the law until it can be shown that such a change is necessary. Now, the present law, formed by an act passed in 1876, prohibits all such experiments except under a license granted by the Home Secretary, and imposes considerable restrictions on the experiments themselves, requiring anæsthetics to be used whenever the experiment is for the purpose of physiological teaching, and requiring the animal to be put to death (unless where a special license dispenses with this obligation) before it recovers from the anæstnetic administered. Licenses are sparingly granted under this act. In the year 1881, the total number of persons holding licenses was in the whole United Kingdom forty-four, and of these only twenty-eight did in fact perform experiments; the total number of experiments performed being 297.

The reports of the inspectors appointed to superintend the working of the act state that owing to the character of the experiments and the use of anæsthetics, hardly any suffering was caused to the animals operated upon, while results of considerable importance to science were obtained. The mischief does not therefore seem to those who believe these reports in itself a very serious one, and it is obviously small when compared with the suffering inflicted in pigeon, pheasant, partridge, and grouse-shooting, which are the favorite amusements of the wealthy classes ; in hare and fox-hunting, and in the coursing and shooting of hares for sport.

However, the matter has excited the hottest possible feelings among some benevolent persons. Two or three societies exist for the absolute interdiction of all vivisection (as it is called), and some leaders of the agitation insist that no discoveries in science or in practical medicine can justify the infliction of any pain upon a living creature. Here, too, the apparatus of petitions is resorted to; and in the present session a large number have been presented in support of a bill brought forward to render penal any experiment whatever on a living animal. The Government oppose this bill, and if a division is ever taken upon it, it will apparently be defeated, most people thinking that the present law sufficiently prevents any needless suffering. But the agitation is an interesting one for several reasons. In the first place, it illustrates the extreme tenderness of modern English feeling. Forty years ago cock-fighting was a common sport in England, as bull-baiting was in the days of 'Sandford and Merton' at the end of the last century. There are still cruel sports in vogue among us, but they have been put upon their defence, and in spite of the wealth and social influence of those who follow them—an influence, of course, far greater than that of scientific physiologists—they will in time decline and disappear. In most parts of the continent of Europe, and particularly in Italy and France, vivisection is carried on with no interference from the penal law, and cruelties perpetrated for which no one in England has a word to say, although they would have excited little comment in the last generation. Then, secondly, the excellent motives of those who conduct this agitation have made their language more vehement, and even fierce, than we have generally heard in any secular controversy. Matters which are argued on grounds of sentiment clearly have a peculiar power of heating men's feelings, and to destroy the capacity for weighing evidence and admitting that there can be two sides to a question. This was observed long ago in theological disputes. It is just as true of all others that enlist the feelings.

Lastly, this question, and, indeed, all these which I have called sentimental questions, are remarkable as having drawn women much more than formerly into the arena of public life. Not only on the woman questions, but in the anti-vivisection movement, and to some extent in the temperance movement, as well as in other matters to which it is needless to refer more specifically, a great part—sometimes the greatest part—of the work of agitation has devolved upon women. They have the advantage of comparative leisure, and of a tenacious patience which seems to exceed that of men. Their speaking at public meetings, which used to attract audiences, has lost the charm of novelty, but their talents for conducting a movement have been trained and developed, and they have still the advantage of being treated more respectfully by most people than male antagonists would be. They are sometimes accused of being more bitter and unfair in controversy than men are; but the charge is ill-founded. It is true that, in several of the controversies they share in, much bitterness has been displayed, but it comes just as much from men as from women, and may rather be set down to the exciting nature of the subject. They are now very influential auxiliaries in any movement which appeals to them; and the more active-minded among them are thus drawn on to be more interested in the general politics of the country than was formerly the case. Y.

RENAN'S LECTURE ON JUDAISM.

PARIS, April 13, 1883.

I REMEMBER a time when lectures were a thing unknown in Paris. Whoever wished to be instructed in some particular branch of science, of literature, or of art, had the resource of the lessons given in a vast number of establishments opened to the public ; the lecture proper, the conversation between an orator and a mixed public, was unknown. We have now on the Boulevard des Capucines a "Salle des Conférences," where you can hear a lecture every night. The lecture and the lecturer are advertised as a new play at a theatre. The Parisian public wants constant entertainment, and the railways bring so many people to the capital that every new play, even when it is mediocre, can be played a hundred, two hundred times in succession. The result of this great prosperity of the theatres is a certain monotony. The Parisian can only go a certain number of times to the play in the season, as he does not care to see a piece more than once. What shall he do the rest of the time ? Society is very stagnant ; it is divided by politics, discouraged, in a bad mood. The club is not a very great resource. We have now the exhibitions and the lectures. Every week there is some new exhibition. Every painter of any notoriety exhibits in turn his "œuvre." We had not long ago the exhibition of Baudry ; we have the yearly exhibition of the "Aquarellists"; we have just now the exhibition of old Japanese art.

The Saint-Simon Club is a new historical club, which gives a lecture to its members every Saturday evening. Among the first lecturers has been M. Renan, who chose for his subject "Judaism as a Race and as a Religion." The Saint-Simon Club aims to have lectures of a higher class than the popular lectures of the Boulevard des Capucines. The members of the Club all have some sort of notoriety, and are familiar with historical questions. It is needless to say that M. Renan, the author of so many famous works on the origin of Christianity, was particularly fit to speak of the Jewish race. As he proudly said, France has no Semitic question ; we can treat the questions concerning Judaism merely from an historical and ethnographical point of view. France has always looked on such questions from the highest standpoint of humanity. "The work of the nineteenth century consists in opening all the ghettos, and I do not make my compliments to those who wish to have them shut again."

M. Renan began by drawing a fundamental distinction between national or local religions and universal religions. Of universal religions, he knows only three : Buddhism, Christianity, and Islam. There are Buddhists, Christians, and Mussulmans of all races. We know exactly the date of the origin of these three religions : Buddhism was born four or five hundred years before Jesus Christ, though its great conquests came later. Everybody knows the date of the origin of the two other universal religions. The national religions are almost numberless : all the nations of antiquity had their own religion. These local religions were supported by patriotism, and supported it in their turn. Two national religions have survived : one is Parseeism, the other is Judaism, which, originally at least, was the religion of a country, the religion of Israel, of the land of Judah. It can be stated with certainty that Judaism in the beginning had the character of a national religion. "Jehovah protects Israel as Chamos, the Moabite god, protects Moab." What the Moabites thought of their god is well shown us by the inscription of King Mesha which is in the Louvre. The King is a sort of partner of the god ; when he gains a victory, he divides the spoils with Chamos, he thanks the god in proportion to the advantages which he has received. It is probable that the Hebrew kings did not feel much differently. How has this egotistic, interested religion become universal ? M. Renan says that the widening work, if I may so express it, was first begun by the prophets. The prophets are the proper glory of Israel. Isaiah, the most illustrious, told the Jews that all sacrifices were useless, that God must be adored with pure hands ; the true servant of Jehovah is the virtuous man. Religion becomes moral, and in this way, once penetrated with the idea of justice, it becomes perforce universal.

The founders of Christianity were, in the opinion of M. Renan, the heirs of the prophets, the last representatives of the prophetic spirit. They considered sacrifices a mere archaism. For him, the first founder of Christianity was Isaiah, who flourished about 725 B. C. He had the conception of a moral religion, and the vision of a sort of golden age, without any idols, of a perfect kingdom, of which Jerusalem would be the capital. The destruction of the temple did not destroy these hopes ; on the contrary, the century which followed this great calamity was for the Hebrew genius an age of great and marvellous expansion. As for the Jewish race, what became of it during the captivity and during the long period of the Persian domination, from the year 530 B. C. to Alexander ? M. Renan suspects that the race must have lost its purity ; the reformers Nehemiah and Ezra express a great horror of mixed marriages. The foreign element became very important during the period of the Greek and Roman domination. M. Renan calls attention to a phrase of Josephus, in his 'History of the Jews' (book vii., chap. iii). Josephus speaks of the extraordinary prosperity of the Jews of Antioch, and says : "Having brought to their worship a great number of Hellenes, they made them a part of their community." Here we see a number of Greeks converted to Judaism and going to the synagogue. It must have been the same in Alexandria, and M. Renan does not doubt that the Jewish Church of Alexandria was in a great measure recruited from the Egypto-Hellenic population. Alexandria was the place where so many propagandist books were published—sibylline books, false classics to which the Jewish writers lent their own sentiments—Pseudo-Phocylides, Pseudo-Heraclites, and others.

Were all the converted Jews complete Jews ? Did they only what was called in Rome, "vitam judaicam agere," or did they all adopt the traditional rites of the Jewish religion ? It is difficult to answer. What evidence we have is this : these men, of Greek origin, of Egyptian origin, who kept the Sabbath, were ripe for Christian ideas ; perhaps they were even more so than the old-fashioned Jews. Syria was a principal seat of Jewish propagandism. Helena, the Queen of Adiabene, made herself a Jew with all her family. In many cases these new Jews became perfect Jews—the second generation was nearly always so. At Palmyra we see the same phenomenon: many inscriptions have a pronounced Jewish character. The great dynasties of the Asmoneans and of the Herods brought

many populations perforce into Judaism. Josephus, in his treatise "against Apion," says:

"Thus arose among many multitudes a desire to adopt our worship, so that there was not a city, either Greek or barbarian, there was not a nation where you did not find the custom of the Sabbath, of fasting, of the lamps, of the distinctions in food, which we observe. They tried also to imitate our concord, our almsgiving, our love of work, our courage in suffering everything for the sake of the Law. For what is more surprising is that, without any attraction of sensual delights, the Law makes these miracles of itself; and as God penetrates the universe, so has the Law infiltrated itself among all men. If anybody doubts my affirmation, let him look at his own country and his family."

Dion Cassius, speaking of Judea, says that its inhabitants are called Jews. "I do not know," says he, "the origin of this name, but it applies also to other men who have adopted the institutions of this people, though they are of another race. And there are among the Romans many men of this sort." Nothing can be clearer than this assertion of Dion Cassius: the Jews primitively formed a separate people, but in his time they had ceased to be a race—there were Jews of various races. Judaism had become merely a doctrine, which had its orthodoxy and its shades and varieties of heterodoxy. There had grown up a mitigated Judaism; the spiritualism of the Jewish doctrine attracted many more than its rigid forms and its rites. Still, many of the converted became Jews in the complete sense of the conditions imposed on the descendants of Abraham. Juvenal (Sat. xiv., vv. 96 *et seq.*) shows clearly how the fathers began with the Sabbath, and how the sons became perfect Jews:

"Quidam sortiti metuentem sabbata patrem
Nil præter nubes et cœli numen adorant,
Nec distare putant humana carne suillam,
Qua pater abstinuit, mox et præputia ponunt.
Romanas autem soliti contemnere leges
Judaicum ediscunt et servant ac metuunt jus,
Tradidit arcano quodcumque volumine Moses,
Non monstrare vias, eadem nisi sacra colenti,
Quæsitum ad fontem solos deducere verpos.
Sed pater in causa, cui septima quæque fuit lux
Ignava, et partem vitæ non attigit ullam."

Juvenal here denounces the fanaticism of the Jews, and shows them little inclined to point the way to those who were not in it. This may be a calumny; but the first verses show well how the sons of the new converts became ardent and perfect Jews. The conversion of the Gentiles to spiritualistic and monotheistic doctrine was thus begun by Judaism before it was achieved by Christianity. Judaism stands in the history of the world as the first pure, immaterial, divine doctrine. There were distinctions among the Jewish converts—it is proved by all we have said, and the proof might be made more complete by citations from Tacitus, by distinctions established in the law of Antoninus Pius. There was no distinction in point of doctrine. All the Gentiles who adopted Judaism adopted the doctrine of the Law, the belief in a single God. The infusion of the Gentile element in Judaism became such that it alarmed the doctors, and the reaction which took place is no other than the Talmud. Judaism felt that it was at the point of being lost in Christianity. It made itself more orthodox, more narrow, and the spirit of proselytism was crushed. For centuries Judaism separated itself from the world.

It is clear, notwithstanding, that the Jews do not form an ethnographic unity. The first Jews who came to France (Gregory of Tours says that there were in his time many Jews in Paris, Orléans, Clermont) came from Marseilles. They made converts in the valley of the Rhone. M. Renan thinks that many Gauls may have made themselves Jews; but on this point we have very few data. Judaism came to Germany and to England from France; as for Russia, we know that the kingdom of the Khazars occupied nearly all southern Russia, and this kingdom adopted Judaism in the time of Charlemagne. The valley of the Danube and the south of Russia contain great masses of the Jewish population which, ethnographically, have nothing in common with the Jews of Palestine. "The Jewish race," says Renan, "which is often considered as the ideal of the pure *ethnos*, kept from century to century by the interdiction of mixed marriages, has been strongly penetrated with foreign infusions." Judaism was first a national religion, and it has become again a close religion: but during many centuries it was an open religion, and made converts in a thousand places. Ethnographically, the signification of the word has, therefore, become extremely doubtful. The main objection to this doctrine is what is called the Jewish type; but M. Renan maintains that there is not one Jewish type, but several, and he attributes the permanence of some of these types to the sequestration of the ghettos, and to the interdiction of mixed marriages.

Correspondence.

CONVICT INDEXING.

To the Editor of The Nation:

Sir: I fancy all who were interested in the subject were as much astonished at the savage onslaught made, in another journal, on the author of the amusing and inoffensive (if not specially brilliant) suggestion about "convict indexes" as the unfortunate writer must have been. Mr. Browne, however, is evidently quite able to defend himself, and I wish merely to point out the flaws in "W. I. F.'s" argument.

1. He assumes that convict labor is unskilled and bungling, whereas I believe prisons turn out as good quality of such articles as they make (*e. g.*, hats, furniture, etc.) as other establishments. Convict hat-makers, of course, have to be trained, but so, also, do indexers.

2. "W. I. F." calls the index to the *Popular Science Monthly* "an example of convict indexing." It is gross injustice to the industrial prison system to think for a moment that any prison which employed its convicts in indexing would allow such work to go forth.

3. It is obvious that if the occurrence of such errors as "W. I. F." cites stamps an index as convict labor (I have remarked how unjust to convicts such nomenclature is), then certain "professional indexers" must be convicts in disguise, for errors equally singular have been pointed out in your columns as occurring in "Poole." W. M. G.

Library of Congress, Washington, April 26, 1883.

THE KANSAS "INDEX."

To the Editor of The Nation:

Sir: I fear that your notice of the little monthly which I desire to issue may be misunderstood, and may endanger my success.

The actual subscription-list will, at best, be very small, and, whatever it may be, my intention is to expend every dollar thus received in increasing the circulation. My desire is to place in the hands of every young reader in the State, *gratuitously*, this monthly suggestion and guide to good current literature. I had no thought of general circulation, nor of making the "Index" *complete*, but as complete as the recognition by the best publishers would admit. Mine is purely a local, helpful measure. It will reach those who would rarely, under any circumstances, see either Poole's or the proposed monthly index, though I welcome them, and shall be only too glad to insert in the Kansas monthly a "standing" reference to them, suggesting their purchase and use, and will do this gratuitously.

I venture to make this explanation, lest your comment and slight comparison may (unintentionally, of course) prevent some publisher from recognizing me with an "exchange," and thus limit my references.—Very truly, etc.,

James H. Canfield.

University of Kansas, Lawrence, April 25, 1883.

[Our objection did not lie against the relative incompleteness of Professor Canfield's list as shown in his prospectus, but against the vagueness of his references, not to mention other defects in his mode of indexing.—Ed. Nation.]

THE TYPOGRAPHICAL REPRODUCTION OF MSS.

To the Editor of The Nation:

Sir: May I say that the writer of the paragraph in the last number of the *Nation* in commendation of Mr. C. F. Adams, jr.'s, paper at a late meeting of the Massachusetts Historical Society, in which that gentleman objected to the Society's edition of Bradford's MS. 'History of Plymouth Plantations' and Doctor Green's papers on Groton, for their attempt to represent in type spelling and contractions used in the manuscript, mistakes the purpose of such editors and the requirements of historical students? It is not that printers of those days would have set up the copy differently—that is admitted—but it is that the historical student needs such books "printed as manuscript," as the phrase goes, and he only feels safe in dealing with them when such is the case. Minute but essential points may sometimes turn upon contractions and spelling, and spelling and grammar are essential to the student's accurate conception of the authority he is dealing with, as Mr. Parkman, at the meeting, emphasized in the case of the Dinwiddie papers. The reasons now urged are confined to the supplying of historical material for purposes of study. The question of the way in which contemporary printers would have presented the MS., and the needs of the ordinary reader, is quite another question, and should not be confounded with the purposes which antiquarian societies in this country and in England have in preserving manuscript material as manuscript, though conveniently put in type. Justin Winsor.

Cambridge, April 27, 1883.

[Our language was sufficiently guarded. We said: "Much of this facsimile printing had better be dispensed with altogether, or reserved for special occasions. There is, in fact, no more sense in reproducing the commoner abbreviations," etc. We had in mind y^e for the, y^t for that, the familiar sign of contraction for the prefix per-, and the like, as to which the context leaves no room for mistake. In general it may be held that we can as well trust the transcriber of a MS. for his *interpretation* of the contractions in a hand which he has studied, as for his simple reproduction of them. Such as are peculiar to the individual writer and *at the same time* obscure or ambiguous should of course be imitated in print; but, at best, recourse must still be had to the manuscript itself in case of dispute.—Ed. Nation.]

CIVIL-SERVICE EXAMINATIONS.

To the Editor of The Nation:

Sir: The statement in your editorial of 26th instant, that it is feared in Washington that

persons who fail of success in the civil-service examinations may "accuse the examiners of unfair dealings as to the ratings, and harass them with criminal prosecutions," seems to indicate an inference by the persons in Washington who are suffering under such alarm that the new law simply transfers the power of appointing subordinates from the personal discretion of the politicians, in whom it is now practically vested, to the personal discretion of the Commission and its examiners. A similar want of information or density of perception has seemed to afflict a large proportion of the noisiest opponents of the reform both in and out of the various legislative bodies who have recently struggled with the subject. Hence it seems important to keep constantly before the public that the point and essence of the reform, as urged by its intelligent advocates, is not to remove discretion from one power to vest it in another, but to eliminate and destroy the dangerous element of personal discretion altogether. It was the opinion of Mr. Burt and other experts in the new system that, as reduced to practice in the public offices in New York, all personal discretion had been eliminated from the selection of officials except as regarded a residuum of about five per cent. of the determining considerations.

The systematic process by which this was accomplished, and unerring and impartial system effectually substituted for personal discretion, is too long to explain here; but, on a careful examination made some months since, I was personally satisfied that the claim to that effect had been made good. However that may be, it is certain that if the Commission adheres to the system adopted in England, and pursued by Mr. Burt in the Naval Office at New York—namely, of examining all applicants under distinguishing numbers, by which alone their identity shall be known to the examiners, referring for their names only to envelopes kept sealed till after the examination is concluded and the ratings made—there can be no ground for the fear of legal prosecutions against the examiners which seems to be disquieting the Washington politicians.—Very respectfully,

I. J. WISTAR.

PHILADELPHIA, April 27, 1883.

CATHOLIC CASUISTRY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 19 you raise a question on which, I think, I can throw some light. In your comments on Brady's denial of his guilt in court, you remark:

"It will be interesting, however, to see whether he denies it on the scaffold. If he does, it will heighten the public curiosity as to the nature of the arrangement with his spiritual advisers which enables him to do this. No satisfactory explanation of these solemn asseverations of innocence at the last moment by Catholic criminals who have just received the rites which the Church only gives to the penitent, has ever been made."

And again:

"There is doubtless some condition of the conscience, of which we know nothing, which enables these men to be good 'Catholics' in their own eyes, while engaged in a certain class of crime, and to deny it to the last gasp without imperilling their salvation."

Now all this, it seems to me, is the direct result of the system of moral (?) teaching at present in vogue in the Roman Catholic Church. Undoubtedly, what incites, supports, and justifies these men in their own eyes in the commission of such crimes is the Jesuitical maxim that "the end is justified by the means," and especially when an act is done "ad majorem Dei gloriam." What enables them to declare themselves innocent of such crimes, after conviction of them, after having actually committed them, and even on the scaffold itself, is that Church's authorized system of casuistry, devised for this very purpose of reconciling consciences, under certain circumstances, to certain cases of sins which otherwise seem to be condemned by broad, general laws of God.

This, I think, will appear to be the fact, on the following authority. A recent English writer, Dr. Littledale, in a small volume entitled 'Plain Reasons against Joining the Church of Rome,' in speaking of this very point in question, says (pp. 20 ff.):

"And the chief authority on morals now in the Roman Church is Saint Alfonso Liguori, whose teaching all Roman Catholic confessors are now encouraged to follow in the confessional, since he has been raised to the rank of a 'Doctor of the Church.' As a saint, according to Roman doctrine, there can be no error in his writings; but as a doctor, not only is there no error, but his teaching is to guide bishops and clergy in forming their judgment on difficult cases, and to be a standard whereby they themselves are to be judged (Leo XIV., cited by Benedict XIV., 'De Canonizatione,' iv., xi. 16). Now, he says, for example, (1) that the actual assassins of a man are not equally guilty with their instigator, whom he admits to incur excommunication ('Theol. Moral.,' iv. 364); (2) that if A murder B, in order that C may be suspected of the murder, and thereby suffer loss of any kind [is not this the case of Brady *et al.* with the Land League?], A is not bound to make C any compensation, unless he be a 'worthy' person (iv. 587); . . . (4) that an adulteress may deny her sin on oath, either by saying that she has not broken the marriage tie (since adultery does not void it), *or, if she has gone to confession, that she is innocent of the sin, because it has been washed away in confession* (italics are ours); or, again, that she has not committed it—*i. e.*, so as to be bound to acknowledge it (iv. 162); (5) that a man may swear aloud to any false statement, provided he add some true circumstances in an undertone, unheard by the bystanders (v. 168); (6) *that it is lawful to swear to a quibble or to perjure one's self before a judge, if any great loss or inconvenience would follow to a witness from speaking the truth* (iv. 151-6); etc., etc."

Now, I am not able to verify Dr. Littledale's references, as I have no copy of Liguori's writings by me. I do not even know whether there exists an English translation of them, as the only copy I ever saw was in the original (French?) Still, the reverend doctor plainly courts the most thorough investigation of the truth of his statements and of the correctness of his quotations; and it would be "interesting" to know, if you can get at the original, whether such asserted teaching by such an authority does not fully explain the strange obliquity of moral vision which seems to characterize such men as Brady in contemplating their horrible crimes against law, human and divine.

Truly yours, BOYD VINCENT.

PITTSBURGH, April 25, 1883.

UNIVERSITY HONOR.

TO THE EDITOR OF THE NATION:

SIR: In your last issue there appeared an article on "University Honor—North and South," in which conclusions were drawn unfavorable to the former. The basis of the writer's belief seemed to be, first, the fact that scarcely any supervision was exercised over the students in Southern colleges during examinations; and, second, the report of two instances where a student who had been detected by his fellows in the act of consulting books during an examination was compelled by them to leave college.

I think the conclusions are rather far-fetched. All that the writer relates as the ground of his belief is consistent with any amount of cheating on the part of the students. It was regarded as a virtue among the Spartans to be able to steal without being detected; but if the perpetrator of a theft had the misfortune to be caught thereat, he was severely punished. It is preposterous to assert that any large body of young men of such remarkable morality as this writer imputes to Southern college students can be found either North or South. Not long since, in a neighboring State, a county superintendent of public schools introduced examinations of the scholars on the plan of allowing each teacher to examine his own pupils on a set of questions furnished by the superintendent. Diplomas were to be publicly presented to the pupils who successfully passed the examination. The teachers in most instances were men and women of experience and ability, and of as high morality as is usually incident to human nature, and there was every reason to believe that the examinations would be fair and impartial. The results proved otherwise. Each teacher desired to have as many as possible of his pupils pass the examination, and in many instances the rules of morality and honor were grossly ignored. In their eagerness to have their pupils succeed, they actually assisted them in answering the questions.

This shows that even teachers are simply human, and require supervision. To maintain that college students can be allowed such liberties in the matter of examinations as your correspondent suggests, and to believe that frauds are not perpetrated under such circumstances, belies all human experience, and suggests a degree of gullibility quite extraordinary. To hold that Southern honor is superior to Northern honor implies that one is unaware of the origin of the word repudiation. When every day's paper brings us news from all parts of our country of bank, railroad, insurance, and Government defalcations, it is the height of "freshness" to bring forward the Southern-college student as a model wherein there is naught but purity and ingenuousness. Each class has its peculiar failings, and "cribbing" and "skinning" are the failings of college students. X.

TO THE EDITOR OF THE NATION:

SIR: At the close of Mr. Jameson's reply to Mr. Plimpton, published in your last issue, occurs the following language:

"Mr. Plimpton forgets that the greater part of the watching and of the cheating in Northern colleges takes place at the entrance examinations, when no *esprit de corps* has yet come into existence, while at the University of Virginia there are, if I remember, no entrance examinations."

Mr. Jameson is mistaken on this last point, as he will see on consulting a catalogue of the University. However, the error is pardonable, as it has been only during the past seven or eight years that such examinations (outside a general examination in spelling and English composition) have been required.

The point upon which I wish to give my testimony is, that the lads who enter the University of Virginia stand in no need of the "*esprit de corps*" of college life to develop in them a proper sense of the baseness of cheating. They carry up with them from the preparatory schools an utter scorn for any fellow who will lie or cheat, and, back of all this, a fixed determination that, whenever such fellow be found, he shall at once be kicked out of honest company.

During the eighteen years that I have been head master of this school I have found the sentiment universal among the boys as to the *meanness* of cheating or lying. A boy's word is never questioned here, and there is no watching. In this time, five boys have been sent off for lying or cheating (there are over one hundred boys in the school), and in every case they have virtually been sent off by the boys themselves, and this

notwithstanding the fact that they were all popular fellows. The cases were such as no master could ever have detected himself. The boys have the feeling that they are responsible for the honor of the school, and guard it jealously. It may interest some of your readers to know the method of procedure in such cases. It is as follows: Whenever a boy has lied or cheated, the two highest classes in the school (of their own accord) hold a meeting and appoint a committee to investigate the matter. This committee first gives the accused a hearing, and then reports. If the report is unfavorable to the accused, the committee waits on the head master and informs him that a case of cheating or lying has occurred in the school. The accused does not wait for the report to be read out before the whole school, but at once comes forward and gives his name. The head master then appoints a "jury" of twelve boys to consider the case, in his presence, reserving to himself explicitly the right to veto their decision. The accused is allowed absolute right of "challenge" as to members of the "jury," and may, without assigning any reason, throw off any member of it. He then makes his statement, and may call his witnesses. I have never had but two cases in which this has been necessary. The whole matter is then canvassed, and the head master, after discussion, asks the decision of each member, beginning with the youngest. It would astonish, I fancy, many older people to see the intelligence and fairness with which boys canvass such matters. I have presided at all of these trials, and have never seen cause to use my right of veto. The cases have been fairly tried, and of seven cases the unanimous verdict in five has been expulsion. In the other two the verdict was "not proven." I find that the committee appointed by the boys to investigate the matter uses the utmost caution before presenting the case. As I do not watch my boys or doubt their word, I have never had even a suspicion of the cases, save in one instance, until presented to me. Of course a boy expelled is never allowed to return. This sense of truth and fair-dealing speedily communicates itself to new boys who come in, and I have never seen a boy of any manliness who was not delighted with it.

The examinations here consist entirely of "paper work." The numerical value of the questions set amounts to 100, and the value of the answers must amount to 80 (four-fifths) for a pass into the "first division." The papers are corrected and handed back to the boys (in February and June), that they may see where and how they have failed. On three occasions I have had papers returned to me by boys who were rated at 80 exactly (just a pass), with the explanation that the instructor had overlooked in his addition marks taken off, and that, according to the papers, they were "pitched"—*i. e.*, had failed to attain the "first division." I have always felt bound to "pitch" them, but I have always applauded their fine sense of honor in the presence of the school, and confirmed them in the feeling that there are things in life worth a great deal more than the distinction of being rated in the "first division."

Cheating will never be stopped in any school or college until espionage is given up, and public opinion educated up to the point of regarding a cheat or a liar as a miserable "sneak-thief" (as Mr. Plimpton aptly phrases it). It won't do simply for "a majority" to be against it; the feeling against it, and the determination to put it down relentlessly, must permeate the whole mass of students.

I was six years in a great school preparatory to the University of Virginia, and afterward a student in the University, and I am satisfied that if any one were set to watch the students the feeling would be one of the utmost indignation, and that they would at once leave the examination-room. For years I have had no case of either lying or cheating here; and when I make this declaration, I do so, not because I am "green," but because my school and college experience, and my close companionship with boys and knowledge of their ways of thinking about such matters, assure me that I speak but simple truth.—Very respectfully,

W. Gordon McCabe,
Head Master Univ. School.

Petersburg, Va., April 28, 1883.

COLLEGE HONOR AND COLLEGE HONORS.

To the Editor of The Nation:

Sir: Mr. Geo. A. Plimpton, in his communication in the *Nation* of April 19 on "University Honor—North and South," seems struck with the fact that, at an examination in the University of Virginia, a student from Indiana "was detected consulting his books while out, not by members of the Faculty, but by his fellow-students," and that "the sentiment among his classmates was so strong at what they considered an outrage that they immediately warned him that, unless he left within so many hours, violence might be done to his person"; and with the further fact that, in a similar case at the University of Georgia, "the accused was detected and expelled, not by the Faculty, but by his own associates."

Is not a natural explanation of these facts suggested by the title I have given this communication? If not—if the action in these cases proceeded purely from unselfish indignation—how happens it that these same students in a case of "outrageous" violation of college law, *not* threatening their relative rank in scholarship, not only would not have taken the discipline into their own hands, but would, to a man, have refused to aid the Faculty in it, even by so much as testifying to what their own eyes had seen; and that, too, when suspicion might fall, perhaps had, to their own knowledge, already fallen, on the innocent? College honor is a queer compound, North or South.

Yours respectfully, E. J. Stearns.

St. John's School, Brandywine Springs,
Faulkland, Del., April 28, 1883.

WOMEN AND POLITICS.

To the Editor of The Nation:

Sir: In the issue of April 12 your correspondent signing herself "D.," and writing of "woman's interest in politics," has attracted me by the statement, "I would take a much deeper interest in all subjects, if I knew what to do with my knowledge." My object in writing is twofold: to bring myself in communication with "D." (as this is my only place of reaching her), and to add my testimony to hers, that women do take deep interest in politics, and to a far greater extent than most men know.

The slurs, cuts, and hostility the press of the nation everywhere has indulged in concerning those women bold enough to study politics, and who dare be called "strong-minded," has been the cause of many women doing precisely as "D." has done—veiling their knowledge, even from their own male relatives often, fearing the same scorn which these women have met from the public. Mrs. Elizabeth Cady Stanton declared once, in a company of ladies, that the Southern women she met in Washington with their husbands, who were members of Congress before the war, were all of them generally well posted on political questions. Few men were ever more deeply interested in all political questions than many women I can name—among them Mrs. Caroline E. M., of New Orleans, wife of a former Chief Justice of that State. Nor is there in the United States a man more thoroughly conversant with both State and national jurisprudence than Mrs. Myra Clark Gaines, of Louisiana; and she is always thoroughly posted on the political and financial questions of the day. One might naturally infer that it is because these two women have some special motive in being informed concerning politics. It would require greater space than the *Nation* would allow merely to enumerate the names of women thus interested in the three States of Louisiana, Texas, and Tennessee alone.

Bartle Massey, the schoolmaster in 'Adam Bede,' declares: "Women have no headpiece; it runs either to fat or to brats." Granting with the satirical Bartle, that much of woman's brain power is lost on "fat and brats," I think that in local politics men are better informed, because they participate in it; but on the great questions of the science of government, women are, if well educated, at the present day as really profound in their knowledge as men are. "D." says "my education has been desultory," and adds: "I assure you, in all frankness, that I rarely meet a man, either at home or in the North, who is as well 'up' in general politics as myself." Until within the last twenty years, or less, women's education and information were of the same nature as "D.'s," and it is this fact we should do well to consider while discussing this question. The versatility of talent in women is something to be remarked, and, if trained as men are, in some special line, we can readily believe they would succeed where now they fail.

During the three past years my life has been spent in travelling through the United States, and in a way that brought me in close personal acquaintance with many women; and I was delighted and surprised to find how widespread was the interest felt on political questions among women. We need not look far for the reason. Temperance in the last few years has become a political question, and women have perfected organizations all over the Union, and they watch the proceedings of the political world with painful attention. Add to this the large number of women who are advocates of the universal enfranchisement of women, with State and county organizations, and we must see the need of woman's interesting herself in politics. Increased facilities for good education, and the manner in which newspapers are now edited, induce many women who care nothing for either of these movements, to read concerning the political conduct of the marked men of the day, and they gain, as do many men, a superficial knowledge of current political events.

I think "D." will agree with me that nothing will tend toward the intellectual development of the South, the opening of its schools and universities to women, and the general advancement of our people, more than bringing our cultivated and thinking women into communication with each other, as our Northern sisters have done. I was in active correspondence with people all over America for years before my family cares admitted of my having them at my home, and when we did finally meet, we met as old friends. Only yesterday I sent to the Memphis *Appeal* a letter from Thomas Jefferson to Mrs. Katharine Duane Morgan, a daughter of William J. Duane, Secretary of the Treasury under Jackson, and wife of General Morgan who informed against Aaron Burr's scheme. The letter plainly shows that Mrs. Morgan was striving to advance an object of a political nature, and Jefferson heartily approved it. Her granddaughter, Sarah C. Atchison, is as profoundly interested in politics in her quiet home in Denison, Texas, as if she was an active participant in national affairs.

I select the following extract from a letter

bearing on this subject from among a lot of others, written to a Southern lady by the late Dr. John W. Draper. They corresponded for many years:

"DEAR MRS. S.: That the 'Intellectual Development' has been of some help to the cause of progress I am certain. It has passed, as you are aware, through several editions, and has been translated into almost every European language, even Russian. Send me a picture of your young friend who has read it through twice. I should like to see her counterfeit presentment. . . . I quite agree with you that the future of women will be one of the great problems of the day, in a *political* and social point of view. I think there is much cause of hope in the mere fact that public attention is now called to the subject, and that means will be found to bring about a great amelioration in female life. In 1839 I invented the process of taking portraits from the life by photography, and I can assure you, my friend, that it is one of my most pleasant reflections, that that process has been the means of giving a suitable and honorable employment o many thousands of women all over the world.

"In reply to your kind urging 'that I write more on this subject,' I can only say that I am very weary of authorship, and must leave its pains and pleasures to others; and among the rising generation of writers among women and men are some who I know will handle this noble subject far better than their predecessors have done. JOHN W. DRAPER.

"Washington Square, New York, August 12, 1873."

My father taught me that the possession of talent was in itself a forcible command to use it. He held that the parable of the ten talents had a deeper meaning than was generally given it, and regarded disused power on the part of its possessor as a grievous sin against the less fortunate of humanity. Then let "D." see that there is work for her, and all like her, in the South, if we would see our land, of which we hope so much, filled with an intelligent and prosperous people, both white and black.

ELIZABETH L. SAXON.

16 ORLEANS STREET, MEMPHIS, TENN., April 23, 1883.

Notes.

'DR. CLAUDIUS,' a novel, by F. Marion Crawford, author of 'Mr. Isaacs,' is in the press of Macmillan & Co.

A third and enlarged edition of Mr. Wm. H. Hills's 'Students' Songs' is nearly ready for publication by Moses King, Cambridge, Mass.

Houghton, Mifflin & Co. make the following announcements as regards the authorship of the forthcoming volumes of their 'American Men of Letters' series: Emerson, by Dr. O.W. Holmes; Bayard Taylor, by his colleague, J. R. G. Hassard, of the *Tribune;* Benjamin Franklin, by J. B. McMaster; Margaret Fuller, by T. W. Higginson; Edmund Quincy, by S. H. Gay; Bryant, by John Bigelow; and Poe, by George E. Woodberry. Mr. Aldrich's sketches of travel published in the *Atlantic* for some years past will be gathered into a volume called 'From Ponkapog to Pesth.'

Prof. W. G. Sumner's articles on industrial and social topics which have been appearing in *Harper's Weekly*, will be shortly made into a book called 'What our Social Classes owe to each other,' and published by Harper & Bros.

The Messrs. Harper report that their tempting offer of $3,000 for the best illustration of Alfred Domett's "Christmas Hymn" has resulted in more than 1,700 applications for the text of the poem and the terms of the competition. This will not embarrass the examiners so much as might appear. We think it a matter of regret that the subject is one on which if the last word has not been said pictorially, it is not reasonable to expect a genuine or powerful or very original expression from a youthful designer.

J. W. Bouton will be the American publisher of M. Louis Gonse's 'L'Art Japonais,' announced by Quantin in Paris. This important work, undertaken in conjunction with a native expert, promises to relate the history of Japanese art in all its branches as it has never been told before, with fulness and accuracy, abundant biography, and some thousand illustrations of a high order, produced by a great variety of processes, including etching, heliogravure, and chromolithography. The prospectus shows a quarto volume elegantly printed on fine paper. The edition will be limited to 1,400 numbered copies, in two grades.

Bernard Quaritch, 15 Piccadilly, London, has in preparation facsimile illustrations, in photo-intaglio, of the works of the Italian engravers of the 15th century, by Alfred Dawson, under the direction of the keeper of the prints in the British Museum. These will embrace Botticelli's designs for 'Il Monte Sancto di Dio' (1477), and to the 'Divine Comedy' (1481), and Fillippo Lippi's supposed designs for the 'Triumphs' of Petrarch, and much else that is rare and beautiful. The publication will be in parts to subscribers, and the edition very limited. Mr. Quaritch will also have ready in May a small quarto illustrated volume on 'The Fisheries of the Adriatic and the Fish Thereof,' by George L. Faber, British Consul at Fiume.

Mr. Christern has received the prospectus of the 'Allgemeines Historisches Porträtwerk' projected by the Munich house of Friedrich Bruckmann, already noticed by us. The twelve series will occupy about six years in publication. Princes and Popes lead off.

The Supplement to the March-April *Library Journal* contains the first instalment of the Co-operative Index we described a fortnight ago, edited by W. I. Fletcher. It fills 13 pages in double columns. Bookbuyers and students everywhere ought to subscribe to the *Journal*, if only for the sake of this new feature.

President Noah Porter prints in the May number of the *New Englander* his entertaining paper on "The New England Meeting-House," read in December last before the New England Society of Brooklyn. Some portions would bear amplification—*e. g.*, that on the secular uses of the meeting-house, and on the division of seats according to "quality." For instance, the negro pew, which was a common department in the meeting-houses of President Porter's State, goes unmentioned by him.

In the current Proceedings of the American Antiquarian Society (vol. ii., No. 2) Senator Hoar indicates the wealth of material for history in the Government archives and the National Library at Washington, and gives a list of prize appeals during the Revolution, whose records are now in the office of the Clerk of the Supreme Court. The same number contains important notes on the history of witchcraft in Massachusetts, by Mr. George H. Moore. These, pointing out certain errors of the best historians, partake of the nature of a vindication of the colony, but now and again one seems to hear a laughing in the sleeve on the part of the writer. Dr. Valentini contributes a learned paper on "The Olmecas and Tultecas" of Mexico; and Mr. Edward G. Porter quotes the earliest known document bearing the name of Washington—a parchment indenture in the Cathedral library at Durham, England. It is referred to the time of King John, about 1200. One of the parties to the agreement is Walter of Weissington. An engraving of the MS. and seal attached is given.

The ruins district of Babylon is the subject of a paper by H. Kiepert in the Journal of the Berlin Geographical Society, No. 103. A large colored map, reduced from the British survey of 1861-65, accompanies the text.

Those who have felt the charm of the Tanagra figurines will be interested in the illustrations to the series of articles on the Necropolis of Myrina (Sandarlik), in Mysia, in the current issues of the Bulletin of the French School at Athens. Thus there are seven plates in the February and March-April numbers, representing nearly three times as many objects, some of which have perfectly caught the Bœotian style, while others are like nothing which can be studied in this country. These terracottas possess many points of interest, especially in being more or less free copies of Greek masterpieces, and on account of their inscriptions. The latter probably either preserve the makers' names, or serve as directions in compounding the parts of the cast, or again as conventional trade-marks. As connected with the art of printing, it is interesting to find here, also, as in other relics of the ancient world, evidence of the use of stamps for impressing names upon the clay.

Mr. Hamerton discourses of Notre Dame and the Sainte Chapelle in the newest of his Paris series printed in the April number of the *Portfolio*. It is indirectly a plea for the "restorer," and a vindication of our time as the only one that respects the art of former generations.

Parts 71–76 of the chromo edition of 'Brehm's Thierleben' (B. Westermann & Co.) still linger among the mammals, arriving at the ungulates, of which the colored plates are very taking. Still, commend us to the admirable woodcuts for permanent wear.

Three numbers of Mr. Otto Kempner's *Student and Statesman* lie before us. The form of this new journal is that of the *Nation*, which it also recalls by its general make-up. Its avowed object is to organize the young men of the country, without regard to politics, in behalf of a change in the machinery of our Government. The editor's dependence is perhaps mainly placed upon the educated youth, the students at and graduates from our colleges, and he offers his columns as their special medium. He is already aiming to unite them in district societies for the study of political economy in harmony with the efforts of the Society for Political Education. His labors will command the sympathy of the thoughtful. The publication office of the *Student and Statesman* is at 5 Clinton Place, New York city.

A new magazine, possessing a painful and well-nigh universal interest, is the quarterly *American Psychological Journal*, which began with the April number. It is the organ of the National Association for the Protection of the Insane and Prevention of Insanity, is edited by Dr. Joseph Parrish, of Burlington, N. J., and published in Philadelphia by P. Blakiston, Son & Co.

The *Biographer* is the title of a new monthly serial just begun in this city, consisting entirely of short sketches of contemporary notabilities, generally with crude portraits on wood. The medley—which embraces princes and potentates, doctors, artists, revolutionists, journalists, pisciculturists, weather prophets, clergymen, senators, college presidents, prime donne, and new-school pirates—reminds one of nothing so much as the window of the photographic dealer with its strange juxtapositions.

The State of New Jersey paid last year nearly $9,000 in bounties for the growing of sorghum cane and the manufacture of sugar from it. An interesting account of this "infant industry" is given in the fifth annual report of the State Bureau of Statistics of Labor and Industries, just published. The chapter on the oyster interests concludes with "An Oysterman's Dictionary," largely taken from Ingersoll's "Glossary." The volume is replete with information of more than local value.

The Smithsonian Institution has issued for its Sixteenth Bulletin a "Synopsis of the Fishes of North America," by David S. Jordan and Charles H. Gilbert, of Indiana University. A small portion of this valuable catalogue was prepared in the spring of 1879. As now completed, it occupies, with the index, more than a thousand pages 8vo. The editors make liberal acknowledgment to a large number of scientists for friendly assistance, and state their aim to have been to do for American ichthyology what Dr. Elliott Coues has done for ornithology in his 'Key to North American Birds.' They announce as nearly ready for publication a 'Bibliography of American Ichthyology,' by Professor Goode.

No. 25 of the Professional Papers of the Corps of Engineers, U. S. A., is a report on the "Practice in Europe with the Heavy Armstrong, Woolwich, and Krupp Rifled Guns," with diagrams.

"Planting Trees in School Grounds" is made the subject of an excellent letter, full of sound advice in regard to ornamenting the grounds of rural school-houses, addressed by Dr. Franklin B. Hough to Commissioner Eaton, and published by the National Bureau of Education. The value of school-house grounds as places of recreation may, in nine cases out of ten, be greatly improved by a judicious planting of trees; and these, if properly selected, can be made to play an important part in increasing throughout the community a much-needed love and knowledge of our native trees. Dr. Hough well explains what trees should be chosen for this purpose and how they may be best planted. His letter should be widely read by the members of school boards and other town officials.

George Bell & Sons, London, have added to the Bohn Standard Library a volume containing 'Goethe's Miscellaneous Travels' (New York: Scribner & Welford). It contains a reprint of the 'Swiss Journey,' a revised translation of the 'Campaign in France in 1792 and the Siege of Metz,' originally made by Mr. Farie, and the 'Tour on the Rhine, Main, and Neckar' in 1814 and 1815, now first translated into English by Miss L. Dora Schmitz. This volume forms a valuable continuation of the series. Goethe's wonderful power of minute observation, and the happy objectivity which characterized his life, are admirably illustrated in this volume. It is not easy to see, however, why Goethe's 'Swiss Journey' in 1797, with his interesting visits to Frankfort, Heidelberg, and the South German cities, should have been omitted from the present work. Its insertion would have given completeness to this record of his minor travels. It would have been well, also, to prefix to the 'Tour on the Rhine' Goethe's own account of the occasion of that trip, with his description of the cities visited and the various art collections, which he published in the *Morgenblatt*, and which properly forms an introduction to 'Kunst und Alterthum.' The notes which the translator has added are taken from Dr. Strehlke's edition of the Travels, and will be found useful.

Julius Eckardt, the well-known author of 'Aus der Petersburger Gesellschaft' and other valuable works on Russian subjects, has been falsely credited with so many anonymous books on Russia that he has felt compelled to disclaim publicly the authorship of 'Livland und Irland,' a work just published by Duncker & Humblot in Leipzig. He takes occasion to say at the same time, in his letter to a German paper, that he has had no hand in other books on Russian and Baltic affairs, announced by the same firm as in press, which have in advance been attributed to him by various newspapers.

Berthold Auerbach's correspondence with his cousin, Jacob Auerbach, a scholar residing at Frankfort-on-the-Main, is shortly to be published by Cotta. The letters extend over a period of forty years, and will in a measure possess the interest of a diary, touching as they do upon personal as well as literary incidents in the novelist's life. The posthumous works of Auerbach are said to be considerable. Westermann's *Monats-Hefte* for April contains a short fragment of his, entitled "Ingenieuse oder die Cyklopenbäuerin," which in its conception is a most original literary production. It is in the form of letters to himself written by a young woman, who criticises his literary characteristics and poetic creations, more especially his peasants, whom, from personal experience, she pronounces altogether unreal. The fragment is in its author's best manner, and reveals a rich fund of humorous self-criticism, but it possesses a fatal defect—its criticism is too just; much of it may be seriously applied to Auerbach's best work. One cannot help reflecting what would have been the effect on the 'Dorfgeschichten'—on which, after all, his fame mainly rests—if his criticism on them had been expanded into a work of greater dimensions. We suspect, therefore, that few of his admirers will regret that he abandoned his scheme. Some disappointment seems to be inseparable from every posthumous publication.

Almost contemporaneous with the beginning in *Harper's* of James de Mille's posthumous 'Castle in Spain,' comes the republication in Paris, in the cheap "Collection Michel Lévy," of the French adaptation of his 'American Baron,' made by M. Louis Ulbach.

'L'Expédition de la *Jeanette* au Pole Nord, racontée par tous les membres de l'expédition,' is the title of a recent French work in two volumes, translated by M. Jules Geslin from the various letters and journals published in the New York *Herald* (Paris: Dreyfous; New York: F. W. Christern).

—"Œuvre de Saint-Jérôme" is the name of a French organization recently established for the purpose of preserving and publishing the linguistic productions of missionaries inhabiting foreign lands. Since many of these become irreparably lost after the decease of their authors, not a few missionaries have been discouraged from writing anything in or upon the languages spoken by their pagan proselytes as long as there was no certainty of ever seeing their productions printed in a correct and adequate shape. The Society also proposes to supply the schools of the natives with text-books, provided the manuscripts be sent in by the missionaries. The Minister of Public Instruction and the French Institute regard this undertaking as worthy of their aid; the administrator of the French missions in Central Polynesia, Mgr. Lamaze, has declared his readiness to contribute by literary work. One of the founders, Rev. Mr. Grézel, has published a dictionary of the language spoken on Futuna Island; another founder, Rev. Violette, is the author of a Samoan grammar and dictionary (Paris, 1879, 8vo, 92 and 468 pages), and of some religious texts in the same language. Before us is a volume published by the Society itself, of which the Abbé Bouche is the author: 'Les Noirs peints par eux-mêmes' (Paris: Poussielgue Frères, 1883, 8vo, 144 pages). The learned missionary of the Slave Coast, Western Africa, has concealed under this queer superscription a very attractive collection of proverbs, riddles, conundrums, and other folk-lore in the Nago language spoken around Abbeokuta. It is accompanied by a French translation with copious notes.

—M. Renan's last publication, a stenographic reproduction of a lecture on Jews and Judaism—'Le Judaïsme comme race et comme religion'—delivered on January 27, 1883, before the Cercle Saint-Simon in Paris, is very small in compass, but highly attractive. Its style, less finished and poetically ornate than that of most of his writings, is exceedingly pleasing from its chaste simplicity. A stronger and more unalloyed sympathy for its subject, the people and faith of Israel, breathes through its pages than we have ever met with in his former writings on kindred topics. They unmistakably reflect an admixture with his warm love for the Scriptures and their authors, and with his general philanthropy, of a feeling of regret at having formerly propounded race notions not entirely dissimilar to those which color the present anti-Semitic literature on the other side of the Rhine. He now not only sees the Hebrew nation of old in a more favorable light than when he wrote his 'Origins of Christianity' or his 'History of the Semitic Languages,' but he has also reached the conclusion—and this is the main point of his dissertation—that the modern Jews are far from being as purely Semitic by descent as is generally believed. Our Paris letter, on another page, dispenses us from following his argument in detail. Renan's conclusion is that the modern Jews are more strictly a denomination than a race. Were this proved, it would be a terrible truth to such Israelites as are still proud of their direct descent from Abraham and Sarah, and also to that branch of the anti-Semitic crusaders who found their gospel of persecution not on the old beliefs of the Jews, which so many of them disavow, but on the indelible blood taint of Semitism. Fortunately for both these classes, however, M. Renan's arguments are far from convincing. The positive evidences in their favor which he pointed out in the ancient writers are too scanty, and in some instances prove but little. The converted Khazars, Arabs, and Abyssinians have remained without influence upon the great bulk of the Jews, the Europeans especially. The strict anti-proselytizing spirit of the Talmud is well known. And the great, though far from complete, uniformity of Jewish national characteristics—physical, mental, and moral—is also an argument against M. Renan's theory, which his interesting and insinuating remarks on the subject, including observations on the variety of Jewish types, are not sufficient to invalidate.

OLE BULL.

Ole Bull. A Memoir. By Sara C. Bull. Boston: Houghton, Mifflin & Co. 1883.

THERE are two features in the early life of prominent composers and executive musicians that recur with curious frequency. The first is an early interest in music, which often manifests itself amid comic impediments; the second, the opposition of the parents, who are usually perversely bent on forcing some other than a musical career on their child. Ole Bull was no exception to this rule. When he was a mere child his Uncle Jens used to arrange for an occasional quartet soirée at the house of Ole's parents. On these occasions Ole was repeatedly discovered under a sofa or table, where he had concealed himself for hours, only to be ignominiously sent to bed again, after a whipping for disobedience. Notwithstanding the fact that the old rector who first gave him Latin lessons said to him: "Take to your fiddle in earnest, boy, and don't waste your time here," Ole's father wished him to become a clergyman, and intrusted him to a tutor who declared his musical tastes incompatible with his studies and forbade him to play the violin; "and thus the boy could only indulge at night in an inclination that now, under this restraint, became a passion." But one morning, when this tyrannous tutor came to drag one of his brothers out of bed at a very early hour,

Ole's patience gave way. He attacked Musaeus, and, after a violent struggle, floored him. This anecdote is here cited because it illustrates his extraordinary muscular strength, which had not a little to do with enabling him subsequently to execute those *tours de force* on three and four strings which so astonished his audiences. The Danish poet Oehlenschläger states in a letter that "his arms were like steel, and it is very possible that it was his excessive physical strength which occasionally interrupted the tender tones, while he shook his head so that his hair fell down into his beautiful brown eyes."

After three years' study under his tutor, Ole went, in 1828, to the University of Christiania, where he did not remain very long, however, as we meet him a year later at Cassel, whither he had gone to visit Spohr. "I have come more than 500 miles to hear you," he said to the great violinist, who coolly replied: "Very well, you can now go to Nordhausen; I am to attend a musical festival there." When, at Nordhausen, he at last heard Spohr, he was disappointed. The polished refinements of a traditional art evidently did not appeal to the taste of a youth who had grown up listening to the voices of Nature, practising with his six brothers on select sea-shells of different tones, and composing melodies to imitate the winds in the trees, the call of birds, the murmuring of brooks, and the roar of waterfalls. In 1831 he went to Paris in order to hear De Bériot, Baillot, Paganini, and Berlioz. When he arrived the cholera was raging, the revolutionary excitement had not yet subsided, and the young musician soon found himself penniless, as his efforts to get a position at the Grand Opéra and other places were not attended with success. Suicidal thoughts tormented him, he was attacked by brain fever, and might have fared ill had it not been for the kindness of Mme. Villeminot, at whose house he had secured lodgings, and whose daughter Alexandrine afterward became his wife.

After his recovery he made a concert tour in Switzerland and Italy, where he was recognized as a "rough diamond," who often marred the music he played by adding something of his own —a practice, however, which in those days was common enough. Even Liszt indulged in this vicious habit, and Berlioz tells a good story of one of his orchestral musicians who insisted on embellishing his part with additions of his own. Berlioz remonstrated with him, and he kept quiet at the last rehearsal; but at the concert, when Berlioz was helpless, he put them all in again. Ole Bull's first appearance at the Grand Opéra in Paris was marked by several mishaps. He stumbled in coming upon the stage and had to run on headlong to save himself from falling. In the midst of one of his pieces the A string snapped, which compelled him to transpose and finish the movement on three strings—a feat that was loudly applauded by an audience which included Meyerbeer. It was one of Ole Bull's maxims: "If you have the audience under your spell, never break it by a change of instruments, even for a broken string." At some of his Parisian concerts he had the coöperation of Liszt and Chopin; and through his friendship with the latter he came to figure in one of George Sand's works, her 'Malgrétout.' Among the other distinguished people with whom he came in contact were Mendelssohn, who dined with him in Leipzig and afterward played with him the Kreutzer sonata, to dedicate a valuable violin just acquired by Bull; Rossini, who showed him various favors; Moore, who wrote out and sang for him some of his melodies which Bull wished to use at his concerts; Hans Christian Andersen, who was one of his intimate friends and correspondents; and Paganini, who at their first meeting, to Bull's surprise, "spoke of his illness and troubles, and the persecution of the critics; in short, he treated him as if he were an old and confidential friend." He praised Bull's individuality of style and foretold his brilliant career. In 1874 Count Cessole, in whose arms Paganini died, "gave Ole Bull a letter to Paganini's son requesting him to show him the manuscript of an unpublished concerto of his father's, adding that he was the only person capable of doing it justice." For Malibran, we are told, Bull felt an admiration approaching idolatry; nor did Malibran fail in her esteem of the violinist. One day, when he was playing at her house, in presence of De Bériot, she said, "He has a much sweeter tone than you, De Bériot"; and could not be convinced that the superiority lay in the violin. Malibran's death, which was caused by a hemorrhage—the result of forcing a very high note and holding it for a very long time in order to outdo a rival and astonish the public—throws a curious light on one of the degrading forms of virtuosity prevalent at that period, and unhappily not yet extinct.

It is as a remarkable virtuoso rather than a great artist that Ole Bull will be remembered. According to all accounts he possessed some of the weird fascination of Paganini over his audiences, and a very large share of his wonderful technical facility. But while his playing usually "carried away" the masses, it did not fully satisfy the connoisseurs and critics to whom art stands above virtuosity. M. Fétis says that in 1848 he heard Bull play in a manner so touching and expressive as to justify his claiming a place among the foremost artists. He adds, however, that the reproach of charlatanism often brought against him was not without some foundation: "Great factitious needs and his excessive vanity often made him sacrifice his art and his own feelings to the desire to please the bad taste of his audience." "He told me himself laughingly that an extravagant caprice which he had entitled 'Beef Eaten by a Tiger' excited such enthusiasm in the United States that he derived from it a profit of $60,000." The following extracts, from an article by Dr. Hanslick, written in 1858, will give a good idea of the estimate in which the best German critics held the Norwegian violinist:

"Ole Bull has lived for years as a farmer in North America, and now, after having been almost forgotten, he reappears in Europe. But either we have become more practical in life or more idealistic in art—the appearance of Ole Bull has retained little of its old charm. . . . To-day, as twenty years ago, he plays only compositions of his own. Unless we are greatly mistaken, they are even the very same pieces. To be edified by these thoughtless and formless fantasias, however, can hardly be expected of any one. In former times it was customary to interpret a certain artistic darkness in these compositions as sublimity and depth, and to characterize as 'genuinely Northern' things which one did not feel justified in admiring as good music. . . . The same tricks are sure to recur in every work of this virtuoso. There are especially two of these for which he shows a striking preference: harmonics and playing on several strings at once. Both are treated by Ole Bull with unfailing accuracy and purity; but by composing interminable and insignificant passages exclusively for harmonics and for several strings he renders the hearer callous to these effects. More brilliant still are his staccato runs, which he executes equally well with up and down bow. His tone is beautifully soft, but becomes occasionally whining in an adagio. The whole character of his playing is antiquated, and it requires all the amiable personality of Ole Bull to infuse into it an occasional and at least seeming vitality."

This "amiable personality" had much to do with his popularity, and it is attested on all sides, among others by Helmholtz, who wrote in a letter dated 1881: "I was much impressed by his personal character; he was at the same time so enthusiastic and so intelligent, interested in all the great problems of humanity." His enthusiasm often took the form of ardent patriotism, which was fostered by his love of national song and mythology, and led him in 1848 to found a national theatre at Bergen—a "Norse theatre with a Norse orchestra," which he himself led when the theatre was opened two years later. Having become involved in difficulties with the local authorities, he made his second trip to America (the first having occurred in 1843), and here founded his Norwegian colony in Pennsylvania, which emptied his purse of what the national theatre and his numerous contributions to churches, libraries, etc., had left in it. To exchange one continent for another was of course a mere trifle for a travelling virtuoso like Bull. He even visited Africa, and an account is given by Adolf Ebeling ('Bilder aus Kairo') of a romantic feat that was accomplished at Cairo. In company with some friends, Bull ascended a pyramid, and, having arrived at the summit, took his violin, which a Bedouin had carried up for him wrapped in a silk handkerchief, and played a "hymn of praise" under the inspiration of a scene in which the green valley of the Nile offered an artistic contrast to the boundless "golden deserts" and the Libyan Mountains. He had also a vein for fun which sometimes took on a rather odd form. Once, on board a steamer, he had displeased his friend Oehlenschläger by a too severe criticism of the Swedes. To effect a reconciliation he subsequently crawled up to the poet on all fours and barked at him like a dog. Another time, when he was getting shaved at Hartford, the bootblack played several tunes on a violin. Bull took the instrument and played a series of harmonics, to the lad's great astonishment, and then gave him a ticket to his concert. When it was over, the boy came up to him and said: "Mister, can't you come down to the shop to-morrow to get shaved and show me those tricks? I feel powerful bad." His request was granted.

Ole Bull's knowledge of the anatomy of the violin was no less remarkable than his technical skill. Even in his early boyhood he had learned the construction of his instrument by taking it to pieces and then putting the parts together again. Later in life he spent much of his time repairing violins for his friends, and "it sometimes seemed as if he were happier at work on an old decrepit fiddle, which he saw could be restored, than when playing on his own superb instrument." "Through every nook and corner of Italy," says Mrs. Lydia Maria Child, "he sought for new varieties of his favorite instrument, as eagerly as an Oriental merchant seeks for rare pearls. He had tried all manner of experiments; he knew at sight the tuneful qualities of every species of wood, and precisely how the slightest angle or curve in the fashion of an instrument would affect the sound." He had a fine collection of old violins, but the one which he especially valued was three centuries old. For a long time he was unable to obtain a sounding-post of sufficiently old and "vibrated" wood to match it, until he discovered a very old double-bass in a Philadelphia theatre which had the desired quality. Through an accommodating accident on the stage this double-bass was crushed, whereupon Bull eagerly bought the pieces and constructed the long-sought post—*i.e.*, the little stick which supports the sounding-board or belly of the instrument. The members of the violin family have one advantage over other instruments: they improve with age. One of the problems which exercised Ole Bull was to effect such a change in the structure of the piano as to make it resemble the violin and prevent it from losing its beauty of tone after being in use for a few years. The first piano made after his plans cost $15,000, but did not please him al-

together, whereupon another was made which proved more satisfactory.

Some interesting information in regard to the history of the violin, the famous Italian makers, the "lost varnish," and the best way of making the various component parts of the instrument are given in Bull's Violin Notes—a short treatise of about thirty pages appended to Mrs. Bull's Memoir. They include an excellent analysis of Paganini's playing. Excepting a few of his compositions, this is almost the only thing of value, so far as we are aware, that Ole Bull has bequeathed to posterity in black and white. Those of his letters which are printed in the present memoir are extremely personal and dry. It is to be regretted that he did not, like Berlioz and Gottschalk, for instance, keep a record of his travels in the form of a diary. As he was "interested in all the great problems of humanity," such a diary would have had a social as well as æsthetic and music-historical value. Of the Memoir itself it must be said that it would be much pleasanter reading if it were pitched half an octave lower. It would be unreasonable to demand absolute objectivity of a relative, but then it is not necessary for the latter to represent her hero as a sort of angel with fourteen wings, and as one of the most genuinely inspired artists that ever lived. The faith of the reader is sometimes severely tested, as when he is told that Bull "was offered £800 for one night in Liverpool," or that he declined an order and some jewels offered him by a king. But the book is written in an easy, pleasant style, and as it contains, besides a good index, several technical appendices, it will be a welcome addition to any musician's library.

RAWLINSON'S ANCIENT RELIGIONS.

The Religions of the Ancient World, including Egypt, Assyria and Babylonia, Persia, India, Phœnicia, Etruria, Greece, Rome. By George Rawlinson, M.A., Camden Professor of Ancient History, Oxford, and Canon of Canterbury. Charles Scribner's Sons. 1883.

THERE is a great and growing appetite on the part of the general public for small books on the principal subjects of modern research. Such "primers," whether intended for children in schools or for the educated laity at large, should be written either by specialists in the various departments, or by compilers well acquainted with the most recent literature and not wedded to any theory. It is particularly desirable that errors of detail and sweeping generalizations should be avoided in these little treatises, for the reason that the mass of the reading public are likely to pin their faith to them, especially when they appear on the authority of a man high in position. Prof. Rawlinson is well suited in some respects to prepare a manual on the national religions of the ancient world. He is a veteran student of the subject and a prolific author; his 'Herodotus' took him in a general way over much of the ground, and in his 'Five Great Monarchies' and his 'History of Egypt' he has devoted a good deal of space to the three first religions named on the title-page of his present work. But he has not produced as good a book as we had the right to expect. Much of what he says is correct and valuable, and his whole presentation is an advance on preceding popular books of the sort; but his work is disfigured by inaccuracies, and especially by a dogged sort of dogmatism which obscures his subject at every step. The explanation of this seems to be that he has not always consulted the latest writers on his subject, and that he is irreconcilably hostile to certain lines of modern scientific thought.

It is interesting to see how differently the "fashion of the day" is understood by different minds. In some quarters we are told that our age is materialistically given up to the worship of facts. Rawlinson, on the other hand, in his introduction, declares that at the present day "to deal with facts is thought to be a humdrum and commonplace employment of the intellect—conjecture is found to be more amusing than induction, and an ingenious hypothesis to be more attractive than a proved law" (pp. 2, 3); and this indictment is brought against astronomers, physicists, biologists, and students of comparative philology and of religion. It is a serious charge, which, it is to be hoped, is not strictly true. But, as our author thinks it true, it is all the more surprising to find him, in the course of the book, indulging in the speculation that he so strongly condemns. For example, he feels able to say (p. 105) that no conscious monotheism lay behind the religion of the early Indians at its first formation, and then to explain (p. 106) how the monotheism which he says they undoubtedly at one time possessed was so completely forgotten. It does not appear by what process he obtained this accurate knowledge of the "first formation" of the Hindu religion. And is it a pleasantry when, in the introduction also, he says that he has omitted the religion of the Jews "as sufficiently well known to all educated persons" (p. 4)? We had supposed that most educated persons were rather distinguished by their ignorance of the real nature of the early Jewish religion, and we must regret that no mention is made of it here, where a comparison with neighboring faiths would be particularly interesting and instructive. In general he is untroubled by doubts as to his results: "It is confidently believed," he says, "that further research and study will only supplement, and not contradict, the views which are here put forward."

The best part of the book seems to be that devoted to the Greek and Roman religions. Without going far beneath the surface, the author gives the principal facts of their mythologies in clear and easy style, and not without sympathetic appreciation of their ideas. In other parts—particularly in the chapters on the Assyrian and Babylonian, Phœnician and Persian faiths—he makes a number of incorrect or unproved statements. Thus, the existence of a god Il in Babylonia (p. 37) is exceedingly doubtful. In all the places where it occurs it seems possible to regard Il or El as the word for deity in general, as it is in the Hebrew and Phœnician systems. The place assigned to Anu, Bel, and Hea in execrations (p. 40) is not accurate. Often these three are not named at all, or only one or two of them are named—*e. g.*, in Tiglathpileser 8, 74, the "great gods" invoked in the curse are Anu and Raman; and in the Sargon-cylinder, l. 77, the deities called on are Assur, Samas, and Raman. The great deity Assur, the father of the gods, is not doomed to celibacy, as Rawlinson states (p. 50), but has for wife Belit (Beltis), who, in 5 Rawl. x. 26, 27, is called "mother of the great gods, beloved wife of Assur." The name of the "messenger of the gods" who figures in the war of the seven evil spirits against the moon-god is not Paku, as Rawlinson quotes (pp. 58, 59) from Fox Talbot's translation ('Records of the Past,' v. 165), but Nusku, who later became one of the great gods, and always stands last in the frequently occurring list of twelve great deities in the great inscription of Assurbanipal (5 Rawl. i.-x.). Rawlinson's account of the Babylonian ideas of a future state appears to be very fanciful. The hitherto prevailing view has been that the other world was for the Assyrians and Babylonians simply a cold and gloomy abode, where the dead, good and bad, existed as inactive shades, conscious only of the privation of the delights of earthly life. Rawlinson speaks (pp. 62, 63) of a separation between good and bad, of the former as dwelling in the presence of the gods, clad in radiant garments and partaking of celestial food, while the latter suffer different and appropriate punishments. But Fox Talbot's translations, on which this picture of the happiness of the good is based (Trans. Soc. Bibl. Archæol. ii. 31, 32, 'Records of the Past,' iii. 135), are so arbitrary, putting in just the ideas in question, that to draw any conclusion from them would be in the highest degree unwise. Throughout Rawlinson puts too implicit faith in the Assyrian translations of the 'Records of the Past,' many of which are known to be inaccurate. For what he says of the appropriate punishments of the different classes of the bad he gives no reference, and we doubt whether the monuments offer any such information.

In the chapter on the Phœnician religion, we miss, above all, the comparison with the Babylonian-Assyrian. Though it is once or twice remarked that some Phœnician divine name occurs in the Babylonian pantheon, there is no hint of any community of origin between the two religions (between his accounts of the two he interposes the chapters on the Hindu and Persian systems), though the resemblances are striking enough to provoke comparison. The materials contained in Philo Byblius are dismissed too summarily as untrustworthy (p. 131); the essays of Renan, Lenormant, and others have brought something like order out of Philo's apparent chaos, and his work is at any rate worthy of careful study. On the other hand, Rawlinson is too positive in respect to the characters and functions of the little-known Phœnician deities. The Phœnician El is as doubtful as the Babylonian Il; and we should expect at least some reference to the opinion, ably set forth by Tiele in his recent book on the Egyptian and Semitic religions, that Baal and Adon are not proper names, but titles, of divinities. We can thus explain not only "Baal-shamayim," the "lord of heaven," but also "Baal-hamman," the "lord of the sun," which Rawlinson (pp. 139, 151) continues to represent as an identification of Baal with the Egyptian Amon! He rightly regards Moloch as probably a mere title (p. 146), and Dagon as rather a corn-god than a fish-god (p. 142). It is strange that he can speak of Tammuz (p. 143) without hinting at any relation between him and the Babylonian Dummuz. Two other things that he says may excite surprise, but for a different reason: the Phœnicians he calls a Semitic people (p. 133), and he explains the second element of the name Melchizedek as Sadyk, a Phœnician deity; but one does not see how he can then maintain the ethnographical authority of the table of nations in the tenth chapter of Genesis, where the Phœnicians are reckoned among the Hamites, or the philological accuracy of the epistle to the Hebrews, where Melchizedek is said to mean "king of righteousness" instead of "Sadyk (or, the Righteous One) is my king."

Rawlinson's main authorities on Zoroastrism are Max Müller and Haug; besides these, he cites Brockhaus, Windischmann, Westergaard, Hübschmann, and Spiegel each once, and mentions the name of Burnouf, but says nothing of Roth, Geldner, De Harlez, or Darmesteter. What he here gives is, in fact, simply an abridgment of his chapter on the Median religion in his 'Ancient Monarchies,' vol. ii., published in 1871; he seems to have read nothing on the subject since. Thus, he calls the sacred book of the Persians the "Zendavesta," which name, he says, "can scarcely be now displaced" (p. 80), though, as a matter of fact, "Avesta" has now come into general use. Perhaps, also, if he had consulted recent writers, he would be less posi-

tive in his description of the Persian religion. One does not expect long processes of investigation in such a manual as this, but one may expect to be informed where the results are markedly uncertain. The unwary reader will find himself in evil case if he accepts, for example, what our author says of Zoroaster (pp. 78, 79), that, according to one account (Berosus), he was a Median king who conquered Babylon about B.C. 2458 (Berosus will not be quite sure of the date), but by another account, which is "more probable, and rests on better authority" (Hermippus, Justin, Ammianus Marcellinus, and Moses Chorenensis), he was a Bactrian, who, "at a date not quite so remote" (for Berosus's date would, in fact, carry us back to the Flood), came forward to teach a new religion. And Rawlinson does not intimate by a word that there are modern scholars who wholly reject both these accounts. He himself seems to rest contented with the "more probable" of the two, and the thence deducible little biography of Zoroaster. Further, he informs us with equal positiveness (p. 93) that "the original religion of the Iranians was Dualism of a very pronounced type," and that it "became corrupted after a time by an admixture of the foreign superstitions of Magism, or the worship of the elements" (p. 97). As the whole history of the development of Mazdeism is in debate, the author might somewhere have put a note of interrogation, as he could easily have done without abandoning the form of a simple manual for lay readers.

Rawlinson says, and not without right, that, in the space he has allowed himself, he could not trace each religion historically from its first appearance to its last phase, and he therefore limits himself to presenting each in the aspect which it wore at the full completion of its natural and national development (p. 239). We do not find fault with this general restriction, though it has its difficulties—for where are we to place the "complete natural and national development" of the early Sanskritic Indian religion, or the Iranian, or the Phœnician?—but we regret the hard dogmatic tone that characterizes the book where the author finds himself forced to depart from his plan and say something of the development of ideas. In his "Concluding Remarks," after saying that the time is not yet come for the construction of a Science of Religion (in which opinion no scholar will differ with him), he proceeds to lay down several fundamental principles of such a science—namely, the various religions have had not one origin, but several distinct origins; the Hebrew religion could not have originated from any of the religions here treated of; the sacred books of the Hebrews cannot possibly have been derived from the sacred writings of any of these nations; progress has been from monotheism to polytheism, and not in the reverse direction; the most probable theory is the existence of a primitive religion, communicated to man from without, whereof monotheism and expiatory sacrifice were parts, and the gradual clouding over of this primitive revelation everywhere, unless it were among the Hebrews. Here is certainly a very fair outline of a Science of Religion, of which, however, the author offers no proof at all in his preceding chapters. We judge, therefore, that his objection is to Sciences of Religion as constructed by other men, and differing from his own.

THE BLOCKADE IN THE CIVIL WAR.

The Blockade and the Cruisers. By J. Russell Soley, Professor in the United States Navy. [The Navy in the Civil War. Vol. I.] Chas. Scribner's Sons.

In the war of the Rebellion the Volunteers came from every village and hamlet, and carried with them the sympathy of every community. The military operations were on such an imposing scale that they dazzled the public eye and tended to blind it to the bearing of the navy. Much has been written, and well written, of the operations on land, but, after all, it must be allowed that they added little new to the science of war. With the service on the sea it was very different. This made the war an epoch of the first interest and consequence. It marked a transition in means and methods of naval warfare greater than the world has ever known, except perhaps when oars were exchanged for sails, or gunpowder was substituted for bows and spears. Indeed, the change is not yet comprehended, or even perhaps completed, and Christendom seems to be waiting in suspense, not knowing how to fortify its harbors and cities, or what engines they and its ships are to be called on to encounter.

At the beginning of the Rebellion, the fact that sailing-vessels were already obsolete was not generally recognized; for, though war-steamers had been used for the first time in the Mexican war, they did not meet sufficient opposition for their advantages to be conspicuous. Horizontal shell-firing with large calibres was hardly ten years old, and for this our Dahlgren guns were the best in existence. Rifled guns, rams, and torpedoes were rare experiments. Armored vessels, also, were in their trial stage. They had received most attention in England and France, but our navy had had no experience with them. All of these novelties were now eagerly availed of by both sides, and pushed to a rapid and great development. The result was a service calling for quickness of apprehension, resource, energy, and scientific knowledge. The change suddenly rendered half the vessels in the navy practically useless, and a considerable proportion of older officers as well. As our author says: "A captain that fought the Invincible Armada would have been more at home in a war-ship of 1840 than a captain in 1840 in the advanced types of the civil war. In 1861, many officers were in command of steamers who had never served in one before, and who were far more anxious about their boilers than about their enemy."

Till this war, our Government, proud of its naval history in the Revolution, in Africa, and especially in the war of 1812, and with a flourishing mercantile marine to draw from, had kept up the navy to a high standard. The number of ships was not large, but each successive class of vessels launched was of the best. It was also prompt to recognize the importance of the adoption of steam. The *Powhatan* and *Susquehanna*—side-wheelers, to be sure—"at the time they were launched in 1850, were the most efficient naval vessels afloat." The fine screw-frigates built in 1855, including the *Niagara*, *Colorado*, *Roanoke*, *Minnesota*, and *Merrimac*—the last of which afterward became so famous in the Confederacy—"were regarded all the world over as the model men-of-war of the period." This wise tradition seems to have been since forgotten. But considering the unsatisfactory results of the lavish expenditures of other nations for iron-clad cruisers, and the tremendous possibilities of torpedoes and electricity, perhaps the backwardness of this country in naval architecture since 1865 may not prove so unfortunate as is generally thought.

The first service the navy was called on to perform in the war was to establish the blockade. This was a task of great difficulty; a blockade of such extent had never been attempted before. It involved closing 3,000 miles of coast, much of it with an inland sea and double line of shore, with many inlets, and with nearly all its harbors in the hands of the enemy. In some places it necessitated riding out storms at anchor off a lee shore, where such action had formerly been considered hopeless. It compelled increasing the number of officers till it equalled the whole complement of the navy before the war. The seamen were increased to more than fifty thousand. The number of vessels grew in proportion, by construction and purchase, so that on one station in February, 1863, were collected as many as comprised the entire number in commission two years before. The blockade at once brought up the question of the status of the Confederacy. The claim of our Government was that the blockade was simply a domestic embargo; that subjects of the Confederacy were rebels, and its ships-of-war pirates; and this view was for some time adhered to and asserted on paper. But a blockade is essentially an act of war. The size of the Rebellion, its completely organized government, and the certainty of reprisals, made our position untenable in practice, and almost from the beginning the laws of war were observed as in a foreign war. This subject is discussed with some fulness by Professor Soley, and, with the admirable justice which characterizes his book, he shows that the unfriendliness of England was shown more by her haste to recognize the Confederacy as a belligerent than by the recognition itself.

The experiences of the blockading squadrons are given in detail—in Chesapeake Bay, on the Atlantic coast, and in the Gulf. On one side were ceaseless vigilance and prolonged inaction, while the daring, ingenuity, and romance, as usual, were with the weaker party. This blockade was very stringent, and constantly growing more so to the end. From an opponent who may be said to have had no marine were brought in as prizes more than one thousand vessels, while half as many more were destroyed. The value of these vessels and their cargoes was $31,000,000—probably more than the destruction by navy and privateers combined in the war of 1812, which was waged against a commercial nation.

The principal naval action immediately connected with the blockade and the attempts to break it was that of the *Monitor* and *Merrimac*. The story is familiar, but we do not remember a more intelligible and detailed account than the one here given. Among the curious statistics is the fact that the *Monitor*, in her fight of four hours at such short range that she several times almost touched her antagonist, was only hit twenty-one times, or an average of once in twelve minutes. The providential arrival of the *Monitor* on the very eve of the day when she was needed to save the rest of the fleet of men-of-war and transports in Hampton Roads, to maintain the blockade, and to assure the doubtful blessing of the advance of McClellan's army from Fort Monroe, is well known; but the perils of her passage from New York—twice as great as the danger in action, and seeming doubled again to the brave men cooped up in her, from the novelty of the risk—are not so well known. "Many experienced officers doubted seriously her ability to keep afloat in any but the calmest weather—an opinion which the *Monitor's* subsequent career fully justified." In fact, she foundered the next time she went to sea. "If she sank, she would sink quickly, and there was small chance" of escape. She started from New York about noon on Thursday, towed by a tug and escorted by two gunboats. She got along comfortably till the afternoon of Friday, when the sea rose and began to come aboard. Soon it was breaking over her smoke-stack and blower-pipe, and caused the blower-bands to slip and break. This stopped the draught, filled the furnace-room with gas, made the men there unconscious, and rendered the engines use-

less for either propelling or pumping. The men were set to pump and bail, and the tug headed for the shore. In five hours smoother water was reached, damages repaired, and the engine started slowly again. About midnight the *Monitor* ran into another heavy sea. The wind was too high to hail the tug, and no provision had been made for signalling at night. While the danger was increasing, the wheel-ropes jammed, and the vessel became unmanageable and began to sheer about wildly. Fortunately, the tow-rope held. Half an hour repaired the injury. For several hours the position was critical. At daylight the tug was ordered in-shore, and at 8 A. M. the danger was past. Hardly was the *Monitor* in smooth water when the hawser which had saved her parted. At nine that evening she anchored near the *Roanoke*, two hours after the *Merrimac* had closed her triumphant day's work.

In the next day's fight Lieut. S. D. Greene had command of the turret and guns, with no means of receiving orders from Lieut. Worden except by passing the word. He was shut up in a revolving turret on a moving platform. The ports could only be opened to fire. The marks on the stationary flooring which showed the line of the ship were soon obliterated, and after one or two revolutions of the turret "it was impossible to guess at the direction of the ship or the position of the enemy. . . . At last the difficulties became so great, the revolutions so confusing, and the mechanism governing the movements of the turret so little under control, that it was left stationary, and the ship was fought and the guns pointed by the helm." It is evident that the escape that seemed so marvellous was a very narrow one.

The career of the Confederate cruisers included some of the most stirring episodes of the war, and is told in some detail. It is customary at the North to refer to it as wanton and wicked. This is natural to the victims of it, but not justified by the facts. It does not appear that their course in the main was without law, or that their acts were different from those of all hostile men-of-war. They showed an energy, enterprise, and skill which, apart from the cause they supported, were worthy of high praise and honor. They preyed on an ample commerce, while they had none of their own to defend. Their efficiency is manifest from the injury they worked on the Northern merchant marine, from which it has never recovered.

It was the true policy for the few Confederate cruisers to avoid our war vessels as they did. When they occasionally met them, the conflict was interesting. The *Hatteras* was sunk by the *Alabama* twenty-five miles off Galveston. She was overmatched two to one, and none of her shells burst. She was beaten and surrendered in thirteen minutes, and sank in ten more. On the other hand, the *Weehawken*, an improvement on the original *Monitor*, captured the strong Confederate ironclad *Atlanta* (altered from the English blockade-runner *Fingal*) in fifteen minutes by firing five shots at short range, four of which hit. As Captain Rodgers pithily remarked, the first shot took away the disposition of the *Atlanta* to fight, and the third her ability to get away. An interesting parallel is drawn between this action and that between the *Shannon* and *Chesapeake* in the war of 1812, just fifty years before. In both cases a gallant and popular captain, elated by society praise, with an undisciplined crew, sailed a few miles from port escorted by pleasure boats filled with spectators eager to enjoy his triumph, only to meet after fifteen minutes' fighting utter defeat at the hands of a well-prepared, well-disciplined antagonist. The *Chesapeake*, however, was carried by boarding, with heavy loss. The *Atlanta* surrendered as soon as her vulnerability to fifteen-inch shell was discovered.

The most important of these engagements was the action between the *Kearsarge* and *Alabama*. This was particularly gratifying to the North on several accounts. The vessels were a singularly equal match. The *Alabama* had done great damage. She was built in England like an English gunboat, carried among her guns a Blakeley 100-pounder rifle (considered in England the best gun yet made), and many of her crew were Englishmen, so that she was in a measure associated in the popular mind with the ill-will that had grown up against England for her unfriendliness and arrogance toward the North in her tribulation. The career of the *Alabama* had not been suited to develop drill or discipline, and here, as before, victory declared for the most thorough preparation and skill. The *Alabama* surrendered in about one hour, and sank in twenty minutes more. The *Kearsarge* only had two boats left with which to take off her prisoners, and the task was hopeless, as the *Alabama* was settling fast. The English yacht *Deerhound* had come out with the *Alabama* to see the fight. Captain Winslow had the right and the power to prevent her interfering with his prize in any way ; but the alternative presented itself to him of seeing many of his prisoners drown like rats before his eyes or authorizing the *Deerhound* to save them. A generous man could not hesitate in his decision. Probably without much reflection, he asked the *Deerhound* to help, which it readily did. Captain Winslow apparently expected that the beaten crew would be brought to him, and his indignant officers urged him to shell the *Deerhound* when she made off with them. He very properly refrained. The *Deerhound* could not have surrendered them without incurring a grave responsibility to the Confederate Government, even if she had not been glad of the excuse to liberate them. As soon as the men put foot in her boats they were on English territory, and Captain Winslow could no more take them from them than he could have arrested them afterward in the streets of Liverpool if he had met them there.

This book is well arranged, written clearly, without technical terms, and shows great familiarity with the subject. It is marked by thoroughness of preparation, sound judgment, and admirable impartiality. It is a promising beginning of the projected series ; and if the other volumes prove worthy of this, they will make a valuable addition to the army series which has proved so useful and popular.

George Eliot. By Mathilde Blind. [Famous Women Series.] Boston : Roberts Bros.

ASSIDUOUS painstaking deserves its reward, but it ought not to be mistaken for higher and finer qualities. The author of this life of George Eliot has made the most of a few bits of fresh information about her childhood and school-days, and there are besides about a half-dozen of hitherto unpublished letters. A valuable list is given of articles contributed to the reviews of twenty-five years ago, but the account of the *Westminster* is ludicrously inadequate—"not so fashionable as the *Nineteenth Century*." The rest of the book is avowedly taken from sources so near at hand as *Harper's*, *Scribner's*, and the *Contemporary*. Indeed, most readers would have been better satisfied to find the articles themselves reprinted entire. A translation of some of the very interesting foreign (French and German) critiques upon George Eliot would be a positive addition to our rather slender store of good criticism.

Seven chapters are devoted, each to one of the novels, and an eighth to the poems, making in all two-thirds of the book. In her treatment of them, the author has, it seems to us, entirely mistaken the office of the biographer. A reviewer is justified in presuming that the book before him has been, or may at once be, in the hands of his readers, but the biographer has to describe the life of his subject and his work, be that work a mission or a novel. Instead of clear sketches of the works of George Eliot, such as might impel the new generation to read 'Adam Bede' and 'Silas Marner'—from which, be it remembered, they are almost as far removed as George Eliot herself was from 'Waverley'—we have a wearisome succession of negative criticisms : what she did not do, and what she should not have done. So little has the writer understood the remark which she herself quotes from one of George Eliot's letters : "I would rather impress the public generally with the sense that they may get the best result from a book without necessarily forming an 'opinion' about it, than I would rush into stating opinions of my own." Of the writer's own thought and style, one extract will show equally its platitude and its profundity :

"However vastly a mountain may appear to loom above us from the plain, on ascending to its summit one always finds innumerable lesser eminences which all help in making up the one imposing central effect. And similarly, in the world of mind, many superior natures, in varying degrees, all contribute their share toward the maturing of that exceptional intellectual product whose topmost summit is genius."

There is left to some one yet a great opportunity in writing of George Eliot. Mathilde Blind has as much idea of the power and the scope of her genius as a wren might have of an eagle's flight.

Memoir of Annie Keary. By her Sister. London and New York : Macmillan & Co. 1883.

THIS memoir possesses more than usual interest. Miss Keary's was not a life of much outward incident, but it was a beautiful, helpful, and happy life, and it is told in this little volume in a loving and sympathetic spirit. The early pages place before us a happy childhood in a delightful home—a wholly natural and at the same time an unusual life. Her active and imaginative mind was fertile in childish devices; and one can very well understand the complaint of her nurse : "Nurse Bream had borne with the elder children. It had been a hard struggle enough, but 'there was not one of them who ever had inventions such as Master Arthur and Miss Annie had'" (p. 9). It was these "inventions" of the child that were the seed of the well-drawn characters and scenes of the novelist. As to the healthy, if simple, food on which the young mind was fed, we have some suggestive words on page 22: "How the modern child would sneer at Mrs. Sherwood and her goody-goody tales ! One sometimes wonders what the grown-up people of that generation would have thought of filling little heads with sensational stories of ragged London depravity, like those which do duty as Sunday books nowadays. But each age to its own liking."

Of Miss Keary's mature years we need say little. The admirers of her novels will be glad to meet here and there the account of a person or event that suggested such and such passages in them. A good deal of attention is given to her religious experience. She was the daughter of an Irish gentleman who, after serving through the Peninsular war, had become a clergyman and settled in Hull, where she was born in 1825. She had, as was natural, a strongly religious nature; but "in her youth Annie's thoughts had wandered from the old beaten tracks of religion in which she had been brought up, and she had then found relief for her difficulties in the teach-

ings of the Broad Church school of theology" (p. 130). Afterward she was drawn to the High Church, for reasons which are described on page 154: "It had been her natural shrinking from their hardness and cruelty that had first alienated her from the doctrines of the evangelical school: the want of patient human sympathy shown in them, and the pitiless punishment of the wicked ascribed by them to the Deity. In the Broad Church teachings she had found it a great relief to have condemnation narrowed and hope extended; yet, strange to say, within that very liberty a seed of cruelty had hidden which, springing up by and by, seemed likely to choke the wholesome air." This seed of cruelty—the passage is too long to give at length—is found in the "easy confidence that all must be well with everybody in another state of existence," the undervaluing of "supernatural graces," etc. The story of this spiritual life—in whatever degree one may sympathize with its several phases—is one of absorbing interest.

A Handbook of English and American Literature, Historical and Critical, with Illustrations of the Writings of each Successive Period. By Esther J. Trimble. Philadelphia: Eldredge & Brother. 1883.

Landmarks of English Literature. By Henry J. Nicoll. D. Appleton & Co. 1883.

Of many recent volumes upon English literature, this 'Handbook' is one of the most remarkable as an illustration of what is to be taught in public schools. It is complete in its scope. It covers the ground on which English literature has flourished from the regions where Baldur ruled over the city founded by Odin "at the historic date 70 B. C.," to those where the Indians are now roving; it begins with "the earliest Celtic poets recorded in history—Ossian, Merlin, and Taliesin"—of whom the two latter "probably lived in the mythical period of Arthur"; but, as the narrative goes on, it becomes less exhaustive of the facts, is in the middle notably deficient, and at the end compensates for this by including a host of books known only to publishers' catalogues. In style it is by turns tropical and frigid. In criticism and information it is alike deficient. Of the influence of classical learning, for example, there is little said except that "the grave of the last writers of antiquity became the cradle of modern literature." It is needless, however—it would, indeed, be impossible—to point out its defects in detail. A few citations will suffice to show its crudity, inanity, and tawdriness. Of Swift, it speaks "as a willing dependant on the charity of others"; and of 'Gulliver's Travels,' it can say only that, "rid of its coarse features, it becomes for children a charming story of pigmies and giants." Addison, on the other hand, "had a 'message' to the world"; "Keats, with Miltonic tread, was more purely sensuous"—but we forbear. One sentence is really adequate, a naïve definition of the metaphysical poets as "a class who carry out a train of thought further than their readers wish to follow." The volume is strikingly patriotic; in the American portion, although it is true that nothing important is much dwelt on, nothing insignificant has been omitted. Thirty-five ministers are credited with contributions to our young literature since 1800; and space is found for the history of Indian missions and the geography of Western States. Praise is not spared: Drake outranks Keats in fancy, and older and forgotten authors are assigned novel positions in the temple of Fame; but Mr. Howells's books, written "in a style of great excellence," to be sure, are commended only as being "so accurate that they serve as guide-books in travel," and Mr. James is more briefly dismissed as a producer of "many magazine stories." The quotations that interleave the text are selected without discrimination. In short, there is in the whole no literary insight, critical judgment, or skill in arrangement to be discerned. The scholars who are condemned to study this volume will learn as much English literature from it as they would of rhetoric from a pocket dictionary.

Mr. Nicoll has not undertaken to write a manual, dictionary, or history of English literature, but, as he states in his preface, he aims to supply information and criticism to the ordinary reader regarding those English authors whose works are valuable to a modern busy man. The antiquarian portion—no inconsiderable part of the subject as now taught—he dispenses with at once, and begins with Chaucer. He passes briefly over the earlier good prose authors and poets, and devotes most of his space to later times, including our own age, which he treats at length. In all nearly two hundred names are mentioned, and the selection is in general admirable. He has not hesitated to avail himself of the profuse material offered to a compiler in the biographical and critical productions of recent years; in fact, he has woven his book of liberal quotations, and tried rather to compress the best existing literature on the subject than to give original work. He is familiar with this literature, and reduces the researches of the Chaucer and Shakspere scholars, for example, and the essays or books of Arnold, Leslie Stephen, Minto, Morley, Saintsbury, Lowell, and critics of that order, with skill and justice. His volume is therefore a very useful compendium of the laborious study which the best minds have expended on our literature in the last thirty years; and it is, besides, written in a pleasing and simple style, of greater correctness than is found in most of what pass for good books. The concluding chapter on magazines is a very compact statement of many facts not elsewhere to be found gathered together, so far as we know. In some particulars it would be easy to justify a difference from the conclusions the author reaches, as in the relative sins of Addison and Pope in their famous quarrel, and such minor points; but in these cases either side may be taken. So, too, the Edinburgh reviewers seem of more consequence to him than to us. As a whole, however, the volume may safely be trusted as having the weight of the best authority both for facts and opinions.

The Epic of Kings. Stories Retold from Firdusi by Helen Zimmern. With a Prefatory Poem by Edmund W. Gosse. Henry Holt & Co. 1883. 12mo, pp. xlvii.–339.

These heroic stories are retold not from the Persian, but from Mohl's complete French version of the 'Shah Nameh,' and of course greatly abridged. In length as well as in beauty Firdusi's Epic is truly Oriental; the curtailment has, however, been performed with skill, and the figures stand out in bold relief amid fresh and poetical scenes, doughty Rustem above all, with whose death Miss Zimmern wisely concludes her narrative. Nor is the native note absent—the tragic wail of Iran's antique history, which succeeds to hymns of victory as fatally as night to day. These episodes are well grouped, and all attractive reading; yet, even admitting the writer's easy method of reduction from the French, the book does scant justice to the Persian poet at whose expense it is made. If plastic verse is the gift of the few, there is many a picturesque modern idiom without recurring to what Miss Zimmern is pleased to name "the simple language of the age of Shakspere and the English Bible," a prose far more remarkable for its penurious syntax than for the Shaksperian mark. To eyes accustomed to view the Orient through the medium of King James's Version, this labored simplicity may have the charm of appropriateness; but to enjoy it fully one must possess the easy unconcern of the young in questions of literary individuality. If, however, the book was intended for youthful readers, it is a pity that some grave problems were not left out of the Introduction, to which, moreover, Miss Zimmern gives no satisfactory answer.

It is hardly accurate to place the Shah Nameh on a plane with the 'Nibelungen Lied' and the 'Iliad.' The 'Book of Kings' was a work of art, not of faith, and the poet steps from behind the masses of his heroes simply to glory in his verse and boast that he has "weeded out the garden" of story. To wonder "how completely the Musulman Firdusi has apprehended" the old Persian religion will only occur to one little acquainted with the latter. It is enough for Firdusi's fame that with a poet's divination he cleared from out the ruins of old Iran the pure gold of the legend and fashioned it anew. As to the inner meaning of the "stories," the few suggestions barely quoted are either trite or wanting in directness. Linguistic comparison has proved to a certainty that the epic struggle—at least in the cycle of Jemshid and Zohak—is nothing but the Iranian version of a favorite Aryan conceit: the fair powers of light defending man's cause and their own against the demons of darkness.

Our book has, otherwise, the singular merit of being the only presentation of the Persian Epic in recent English. The abridged translation of the 'Shah Nameh' by J. Atkinson (1832) is now out of print, and, of single parts, the tale of Rustem and Sohrab alone has found in the verses of Matthew Arnold a treatment worthy of its poetical beauty. Other languages are richer, and those concerned in getting a closer likeness of the original will find, among others, in the graceful German hexameters of A. F. von Schack ('Epische Dichtungen,' 2 vols., 1853) a literal and graphic version of the very episodes barely sketched in these pages. The complete French version is in bright and fluent prose, but less available on account of its length ('Le Livre des Rois'; 7 vols., 12mo, the last published in 1878).

Henry Holt & Co.

HAVE READY:

Dissertations on Early Law and Customs.

By Sir Henry Sumner Maine. 8vo, $3 50.

Some Impressions of the United States.

By Edward A. Freeman. 12mo, $1 50.

No New Thing.

By W. E. Norris, author of 'Matrimony.' 16mo (Leisure-Hour Series), $1.

Outlines of the Constitutional History of the United States.

By Luther Henry Porter. 12mo, $1 50.

Classic Mythology.

A Translation of Prof. G. Witt's Griechische Gotter und Heldengeschichten. By Francis Younghusband. Supplemented with a Glossary of Etymologies and related Myths. 12mo, $1 25.

Houghton, Mifflin & Co.'s NEW BOOKS.

THE FREEDOM OF FAITH.

By T. T. Munger, author of 'On the Threshold.' 1 vol. 16mo, $1 50.

A book of discourses which merit, and are sure to receive, such attention as very few books of sermons either receive or merit. They combine in a rare degree the alert, progressive, liberal spirit of the age with the faith and reverence which conserve and characterize true religion in all ages.

FROM PONKAPOG TO PESTH.

By Thomas Bailey Aldrich, author of 'Marjorie Daw,' 'The Story of a Bad Boy,' etc. 1 vol. 16mo, $1 25.

Travel-sketches, mostly in Europe, marked by careful observation, interesting comment on personal and national traits, a delicious humor, and that charm of style which makes all that Mr. Aldrich writes so delightful reading.

THE QUAKER INVASION OF MASSACHUSETTS.

By R. P. Hallowell. 1 vol. 16mo, $1 25.

Mr. Hallowell has made an exhaustive study of the persecution of the Quakers by the authorities of the Massachusetts Bay Colony, and in this book he tells the pitiful story very clearly, correcting many inaccuracies in the histories which have generally been accepted as authentic.

NEW YORK, THURSDAY, MAY 10, 1883.

The Week.

THE rules submitted by the Civil-Service Commission to the President for his approval were made public during the week. They have been but slightly modified by him. Nothing is said in them about removals, for the simple reason that, if the appointing power is bound, or binds itself, to confine its choice to a certain class of candidates whose merit has been ascertained by an impartial trial, and if all partiality and influence of a political or personal nature is excluded from the exercise of that power—if, in other words, the removal of a man can no longer serve to make room for the appointment of some special favorite—the ordinary motives for making arbitrary removals will also disappear. The rules follow the law in providing that "the examinations shall be practical in their character, and, so far as may be, shall relate to those matters which will fairly test the relative capacity and fitness of the persons examined to discharge the duties of the branch of the service which they seek to enter." The opponents of civil-service reform have been busy creating the impression that under the competitive system none but "young men fresh from college" would have a chance to get places. This cry has been persistently kept up in the face of the fact that, wherever the competitive system has been in practice under our Government, a large majority of the appointments have been of persons who had enjoyed only a common-school education. The new rules of the Commission provide that the general examinations for admission to the service shall be limited to the following subjects: 1. Penmanship, copying, orthography, letter-writing. 2. Arithmetic, fundamental rules, fractions, and percentage. 3. Interest, discount, and elements of bookkeeping and of accounts. 4. Elements of the geography, history, and Government of the United States. It is difficult to imagine how the examinations could be more "practical," and more closely confined to the things which a Government clerk, to be efficient, must necessarily be conversant with, and which, at the same time, everybody in this country can easily acquire in the course of a common-school education.

The rule providing that "there shall also be competitive examinations of a suitable character to test the fitness of persons for promotion in the service" will probably be found by the Commission in the course of time and experience to admit of a liberal construction. There are certain branches of the service, for instance the Patent Office, where scientific acquirements are of essential importance, and where, if the relative fitness of candidates for promotion is measured by ordinary competitive examination, but few mistakes will be made. But in other branches, where, in addition to the scholastic acquirements necessary to all, the different degrees of quickness and accuracy with which business is disposed of mark the relative grades of merit, the business records covering certain periods may be looked upon as more reliable tests of efficiency and usefulness than can be furnished in any other way. There is, in fact, in the transaction of official business, a constant competition going on, and the Commission will probably find that, in order to ascertain the relative claims of different clerks to promotion, it is only required that these records of efficiency be kept in a regular and trustworthy way. This method has been tried in some offices, and found to work justly and to the benefit of the service.

The Assembly passed the Civil-Service Reform Bill for this State by the remarkable vote of 90 to 2, the Senate, after a favorable report by the Judiciary Committee, unanimously. The bill is framed after the model of the Pendleton bill in its provisions. The apparent collapse of the opposition to it must certainly not be interpreted as a sudden and thorough conversion of the politicians in the Legislature. It means simply that most of those politicians thought it prudent to make this concession to public opinion for the time being. The real struggle will begin when the law is to be executed. Governor Cleveland has shown by his selection of Commissioners that he takes the reform seriously. The appointment of Mr. Andrew D. White, President of Cornell University, Mr. Augustus Schoonmaker, and Mr. Henry A. Richmond is universally and justly commended by the press. Mr. White and Mr. Richmond, the one a Republican and the other a Democrat, are both known as ardent advocates of civil-service reform. Mr. Schoonmaker's opinions on this subject have not come before the public, but he is a man of high character, and it may be assumed that Governor Cleveland would not have appointed any one as a member of the Commission who could not be counted upon to coöperate with him faithfully. Some doubt is expressed as to whether Mr. White will take the position for which he has been selected. It would be a serious disappointment to the people of the State if he did not.

The President has appointed Mr. William S. Woods to fill the vacancy in the United States District Judgeship caused by General Gresham's appointment as Postmaster-General. The selection seems to be a very commendable one. It is reported from Washington that it will be a very severe disappointment to Senator Harrison, of Indiana, who had most warmly and persistently urged his law partner, Mr. Hines, for the place, but that it is quite satisfactory to the rest of the Indiana delegation in Congress, who are said to have become a little impatient of the manner in which Senator Harrison disposes of the patronage. Two or three years ago Senator Harrison was looked upon as a "rising man," fast growing to the proportions of a "favorite son." But his horizon has already been considerably darkened by the energy and perseverance he has shown in getting offices from the President and the heads of departments for relatives and friends. He is in great danger of winning the reputation of a spoilsman, and with it a harvest of resentments and quarrels. Some time ago we took notice of a letter he had written about the appointment of a Collector of Internal Revenue, which contained a large quantity of combustible material of the first class. Now comes the appointment of Judge Woods in preference to Senator Harrison's partner, which would not injure the Senator in the least had he not already created the impression that dealing in patronage is considered by him one of the principal duties and prerogatives of a Congressman. As it is, it will impair his prestige.

The reply of the Union Pacific Railroad Company to the demand of Secretary Teller for the payment of the sums claimed to be due to the sinking fund provided for in the Thurman Act, is in substance that the company has a counter-claim against the Government for carrying the mails more than sufficient to offset the Secretary's claim, and that the same is now in litigation in the Court of Claims. Under its charter the company was entitled to charge for Government service of all kinds "fair and reasonable rates of compensation, not to exceed the amounts paid by private parties for the same kind of service." But it has been the practice of Congress in making appropriations for the postal service to confer upon the Postmaster-General the power to fix the rates to be paid for carrying the mails on all railroads. The rate has been fixed in this way for the Union Pacific as well as for other railways. The Union Pacific Company disputed the right of the Postmaster-General to fix the rates, and the Supreme Court of the United States sustained the company's position, holding that it was not competent for one of the parties to the contract to decide what were "fair and reasonable rates" without the consent and concurrence of the other party. The question what are fair and reasonable rates is still to be determined judicially. The company claims the right to charge the same rates for carrying the mails that it charges for carrying express matter for private individuals, both kinds of matter being carried on first-class passenger trains. The difference between the sum allowed by the Postmaster-General and that claimed by the company is $2,738,889, covering the whole period in dispute. This is a very large sum of money, and it will strike the public as something extraordinary and in violation of railway practice, as well as of the common rules of equity, if a customer who sends an enormous and regular quantity of matter day by day is to be charged the same rate per pound as individuals who send casual packages and consignments by express.

To judge from his after-dinner utterances, Mr. Conkling holds not only that the country was robbed of "ten years of progress" by General Grant's failure to be nominated for the Presidency in 1880, but that the same event led to a sweeping Democratic victory in

the Congressional and State elections of 1882. The ex-Senator seems to forget that General Grant was elected President in 1872, and that in 1874 the Republicans suffered an overthrow fully as grievous as last year's, and that the defeat of 1874 was notoriously the consequence of the peculiar kind of "progress" enjoyed under that administration. Both General Grant and Mr. Conkling were then in the fulness of their power.

The report of the Committee of the Columbia College Trustees on the question to what extent, if any, the College should undertake to give women a collegiate education, has been made, and it offers really more than Harvard, which is frequently cited as an example in this matter, has offered or shows any sign of offering. We therefore trust that even if it be not all that the friends of the movement would like, or expected, they will seize hold of it and get what good they can out of it. The offer is substantially rather more than the London University offers to men, which is simply examinations for honors and degrees. The Columbia Committee recommends that the College officers should examine women for entrance to a four-year course; should prescribe this course in groups, to be obligatory for the first two years and elective afterward; should hold intermediate examinations as often as may seem desirable, and should finally grant a certificate equivalent to a degree. With the provision or superintendence of instruction, or buildings, rooms, or any of the other indispensable accompaniments of the course, the College declines to charge itself, and reasonably enough, in its present financial condition. These things we think the promoters of the movement ought to provide, and can provide if they bestir themselves. They are simply a question of money and organization. Suitable quarters can be rented; professors can be got for pay, and so can laboratories and apparatus, if Columbia will not open its own. The experiment can, in fact, be fairly tried at a very moderate expense, and tried, we trust, it will be. There is no use in speculating how many young women now in the city desire a college education; that cannot be ascertained in advance. There is only one way of ascertaining it, and that is by offering the college education. Nor will it do to be discouraged because the applicants are at first few in number. A good education is one of those things which furnish an exception to the economical rule of supply and demand. With regard to this, the supply creates the demand, instead of the demand creating the supply.

The lower house of the Massachusetts Legislature has passed the Senate resolution "vindicating" the late Oakes Ames, and asking for like action on the part of Congress. The Massachusetts Legislature itself is now in need of vindication, and if its request should ever come up before Congress, it will come to plague those who brought it there. It will soon be felt that neither political party can afford to do what the friends of the late Oakes Ames want to have done, and that it was in every respect an extremely unwise thing to stir up the matter at all.

In financial affairs there has been a continued progress toward easier rates for money. The redemption of U. S. called bonds under the 120th call for $15,000,000 on May 1 brought about $7,000,000 of money into the market in the first two or three days of May, over $4,000,000 of the $15,000,000 having been redeemed two weeks before, thus leaving about $3,000,000 for redemption after, say, May 2, of which a large proportion has probably now come in. This has caused a great movement of specie out of the Treasury and into the New York banks, which have shown an important increase in their reserves and their ability to loan. The domestic exchanges are now generally in favor of New York, with a consequent increase in the movement of legal-tenders to this city. The tendency of capital to find investment in railroad bonds, noted last week, continues the most prominent feature of the financial markets, and is in strong contrast with the dulness of the stock market, where prices have advanced but little except for a few stocks, and for reasons special to these. The bill passed by the Legislature permitting savings banks of this State to invest their trust funds in railroad bonds, instead of being restricted to Government bonds, and which now only awaits the Governor's signature, meets with the most unqualified disapprobation of all conservative bankers and financiers. Of the vicissitudes of railway capital, two significant instances may be cited. The Jersey Central and the Reading roads, which a few years ago earned 8 and 10 per cent. dividends on their stocks, have for several years been in the hands of receivers, with only a prospect of being now taken out.

The stipulation in the extradition treaty concluded not long ago between the United States and Belgium, to which the *Herald* calls attention, providing that "an attempt against the life of the head of a foreign Government, or against that of any member of his family, when such attempt comprises the act either of murder, or assassination, or of poisoning, shall not be considered a political offence, or an act connected with such offence," reads rather oddly, because it implies that murders or assassinations of other persons may be considered political offences, or acts connected therewith. There is no doubt that this has always been well understood, but it is a pity that when an exception to the rule was for the first time inserted in a treaty, something more extensive in the way of a definition of the term "political offence" had not also been attempted. Civilized nations will undoubtedly have to come to this before long.

It is well known that criticism is, according to those who are criticised, a very poor business, and many a high-minded author and painter has expressed the opinion that the world would be a much brighter and happier place if there was not a critic in it—a change which might easily be accomplished if the critics would but turn their attention to some respectable calling. They will therefore be glad to have their attention drawn to the fact that Mr. Ruskin, who is certainly one of the most eminent critics now living, is publishing a new edition of 'Modern Painters,' in which he lets out what he now thinks of some of his early essays in criticism. He does not spare the rod, but lashes himself with great vigor. "Pure nonsense" he finds some of his writing to be. When it is not that, he objects to it as "offensively aggressive," "heedlessly and insolently written," "a piece of pious insolence," "extremely pedantic and tiresome," etc., etc. This is a way of anticipating and taking the wind out of the sails of the hostile critic, which may be cordially commended to the creative author. In a professional critic it seems rather thrown away. With what invaluable footnotes Mr. Tupper, for instance, or Walt Whitman might gloss new editions of his works.

The Cincinnati *Commercial Gazette* reports from Harrodsburg, Ky., that "now that the evidence is all in, the feeling is growing that Phil Thompson ought to be tried for murder." "Ask," it says, "nearly anybody not connected with the Thompson family what he thinks, and he will whisper in your ear that Little Phil ought to be called to account, 'but for God's sake,' he will add, 'don't tell anybody I said so.'" The reason of this is that the Thompson family are numerous and "quick on the trigger," and would probably not brook hostile criticism, or, for that matter, a hostile verdict. They might not shoot a man for saying that Little Phil ought to be hanged, but they would soon discover other reasons for shooting him, and they would do it in such a way that it would not be cold-blooded murder either, but a regular "difficulty." The great hindrance to punishing a certain class of murders in fact seems to be very much the same in Kentucky as in Ireland—that is, part of the population sympathizes with the murderers, and those who do not are afraid to let it be known.

The Macon (Ga.) *Graphic* reports the following remarks of Judge Simmons, of that State, in sentencing two prisoners to death for robbery and murder:

"It is a very painful duty, John and Henry, and I am at a loss to know what is best for the public as to how the sentence of the law should be executed—whether in private or in public. After consulting with a great many people, I have decided that the execution be in public. It is true, you may have borne a good character, John. You lived at my house twelve months, and during that time I never heard of any acts of violence by you. Yet a man's character can be destroyed by one act like yours. The Supreme Court decided that you had a very bad case, according to the testimony. I thought myself that the killing of that old man was unjustifiable on your part, and you added murder to robbery."

It must have startled "John" to find that a twelve months' good character acquired in the Judge's own house could be destroyed by one such little act of folly as robbing and murdering an old man. What, he may well ask, is a good character worth if a single peccadillo like this, committed after one year's abstinence from violence, can ruin it? Of course, every one must agree with Judge Simmons that John's treatment of the old man was "unjusti-

fiable." For ourselves, we think, however, that the Judge gave himself too much trouble in making up his mind as to whether John and Henry should be hanged publicly or privately. The important thing is that they should be hanged speedily, and as long as this is done, it matters comparatively little how many Georgians enjoy the spectacle.

The conference of members of the Irish Nationalist party in London, which is reported as organizing a fund for the relief of the families of persons who have fled the country, or have been "arrested in connection with murder trials," would do well to classify the objects of their bounty a little carefully, or they will increase the odium already brought on the party by its apparent sympathy with murderers. It is all very well to call the fugitives "breadwinners," but a breadwinner who has had to run from the police because he was planning the murder of another breadwinner, is not in the opinion of the civilized world a proper object of sympathy. Two hundred persons are said to have fled from a district known as Crossmaglen in Ulster, since the conviction of five or six residents of that place for belonging to a murder society. They would undoubtedly not have fled, if there were not proof of some kind somewhere that they were going to kill somebody. The country is therefore well rid of them, and the less said about them the better. The notion that whatever informers swear must be untrue, has been thoroughly exploded by the revelations in Dublin. It would be very difficult now to persuade anybody not belonging to the Nationalist ranks, that when they see an Irish breadwinner flying it is simply because wicked men have been telling lies about him. We do not believe there are now any fugitives who have not been mixed up in some criminal—and not simply illegal—enterprise.

There are, however, undoubtedly some hard cases among the fugitives, where men have thoughtlessly or from really patriotic motives joined secret societies, and then found themselves sold into a horrible slavery, in which they were compelled, on peril of their lives, to commit or conceal crimes, under orders from villains like Carey or Tynan, who keep in the background, and, if the worst comes to the worst, sell their dupes to the police. The Land League, or the National League, could render no better service, therefore, to a large body of their young countrymen than issuing an address warning them against these secret societies, with their "Number One," and their "inner circles," and "head centres," and other tomfoolery, which have so often in Irish history ended by bringing the least guilty of those concerned in them to the gallows. But from this most salutary step all the leaders seem to refrain with a caution which discredits them with the civilized world. They are apparently under the impression that it is possible in our time to get up a code of morality for the special use of Irishmen, so that there shall be an Irish right and wrong distinct from that of the rest of the world. There were such things as local morals in the Middle Ages, but they are extinct and cannot be revived.

The Dublin Grand Jury has found true bills for murder against Tynan ("Number One"), Walsh, and Sheridan, who are all in this country. Their extradition will doubtless, therefore, be now demanded, and this Government will have to deal with a very troublesome question. The peculiar constitution of the court which is trying these cases in Dublin is one of the things which will complicate the matter. The court is not one of the ordinary tribunals of the country, but one created to deal with a crisis which is undoubtedly political in its main features; and although it now tries by jury, if juries fail to give convictions it may be converted into a court of three judges, a change which has been threatened in Kelly's case, on which two juries have failed to agree. Moreover, it is not difficult to furnish abundant proof from the speeches of English statesmen —Mr. Trevelyan, for one—to say nothing of articles like that of the London *Times*, from which we quoted the other day, that the English Government regards these murderers as representing the whole body of their countrymen in a political sense, because on more than one occasion in the House of Commons the redress of undeniable Irish grievances has been refused expressly on account of the murders. The arguments which these amazing indiscretions have put into the hands of the murderers and their friends in this country against their surrender under the extradition treaty, are obvious enough.

The news of the indictment of Sheridan, Tynan, and Walsh has, following close on the confession of Delaney and Caffrey, caused a good deal of excitement in Irish circles. Sheridan and Walsh declare they will stand their ground, and meet whatever is in store for them. We need hardly say that both of them are as innocent of complicity in murder as unborn babes. What troubles them most, doubtless, is the judicial persecutions to which these poor fellows Brady, Curley, Kelly & Co. have been subjected in Dublin by all those perjured judges, juries, witnesses, and Crown counsel. Tynan is said to be in America, but nothing certain seems to be known about him. His photograph is on exhibition in all the shop windows in England, so that the British public at least is tolerably familiar with his appearance as he was; but then he had a large, bushy beard, which has doubtless been sacrificed by this time, so that he is no longer the same man. That he, too, is innocent of anything like murder it is useless to add. All he knows about murder is doubtless what he hears from those "ignoble villains," the informers. There is as yet no positive news about that member of Parliament with "the blonde beard," who is said to have attended some of the murderers' meetings. A great many people in England are very anxious to prove the connection of the Land League or the Parnellites with the assassins, and the smallest trace of a prominent Leaguer in a murder society is joyfully received. That reliable gentleman and profound political thinker, the London correspondent of the *Tribune*, says that "no effort will be spared to identify" this member with the blonde beard. We have it on the same authority that "it is said in important quarters that Mr. Parnell is so deeply implicated in the work of the party of violence as to be unable to disavow them even if he wished to do so." If this be said "in important quarters," it must be true, particularly as "important quarters" have been saying it for a year.

The success of the opposition to the granting of pensions for two lives after their death to Lords Wolseley and Alcester, probably marks the final abandonment of this mode of rewarding military and naval commanders in England. The most remarkable thing about this last attempt to continue it is that a cabinet made up as Mr. Gladstone's is, should have made it, because the pension list is one of the worst of the scandals bequeathed to the present generation by the old régime. There are now several persons in receipt of pensions granted to their ancestors two hundred years ago, when it was not uncommon to grant a pension to a man and his heirs in perpetuity. Then it became the practice to grant them for three lives after the death of the original grantee. Then two lives became the rule, and now the practice has been abolished altogether, and Lords Wolseley and Alcester are to get their rewards in a "lump sum." The chief Radical objection to hereditary pensions is, of course, to be found in the recognition which they contain of the existence of such a thing as hereditary merit in politics. Radicals refuse to admit any longer that a young man can be entitled to money out of the public purse because his father or grandfather was a great man, just as they are more and more reluctant to admit that he ought to be a legislator because his father was one.

Mr. Gladstone's refusal to treat his defeats both on the Affirmation Bill and on Sir Stafford Northcote's motion to prevent Bradlaugh's administering the oath to himself, as a cause for resignation is naturally somewhat provoking to his enemies, but nothing else was to have been expected. Ever since the Bradlaugh case came up he has treated it as a question for the House and not for the Ministry to decide. It is a question, moreover, which in no way affects the policy of the Ministry. No such question has ever been made a Cabinet question, unless connected, as in O'Connell's case, with some great feature of policy, like Catholic Emancipation. Baron Rothschild was elected for the city of London in 1847 and 1849, during the Premiership of Lord John Russell; in 1852, during that of Lord Aberdeen; in 1857, during that of Lord Palmerston, and had during that period the support of the Liberals, but never as a party, in the House, and it was not till 1858, when the Tories were in power, that the rules were modified so that he could take the oath. It is all but certain that if it had been understood that Bradlaugh's was a Cabinet question, the Ministry would have had a majority. There is a considerable body of Liberals who are quite ready to keep Bradlaugh out, even on the flimsiest pretext, in order to please the Nonconformists, but they would do nothing of the kind if it promised to expose them to the trouble and risk of a general election.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 2, to TUESDAY, May 8, 1883, inclusive.]

DOMESTIC.

THE rules put into the hands of the President and the Cabinet by the Civil-Service Commission were prematurely published. They provide that the general examinations for admission to the service shall be limited to the following subjects: 1. Penmanship, orthography, copying, letter-writing. 2. Arithmetic, fundamental rules, fractions, and percentage. 3. Interest, discount, and elements of bookkeeping and of accounts. 4. Elements of the geography, history, and government of the United States. Competitive examinations, of a suitable character to test the fitness of persons for promotion in the service, are also provided for. The Cabinet and President revised and remodelled the rules in minor particulars, and they were officially published on Tuesday.

Postmaster-General Gresham on Saturday morning decided that the law readjusting the salaries of postmasters of the fourth class went into effect on the passage of the act—namely, March 3. This decision has created consternation in the Post-office Department, and will involve an endless amount of labor before it is satisfactorily settled. Some twenty-four thousand post-offices are involved. The act specified the date October 1 for larger offices, but said nothing about the date for those of the fourth class.

On Friday, United States Government officers seized a great quantity of letters in two private post-offices, for the distribution of city letters and circulars, in this city. These offices do a large business by delivering letters at a rate less than regular Government postage. This is held to be contrary to law, and it has been decided to suppress them.

Judge William C. Woods, of the Indiana Supreme Court, was on Wednesday appointed United States District Judge of Indiana, in place of the present Postmaster-General. It is said that the appointment was made at the latter's request.

Vice-Admiral Stephen C. Rowan has asked to be relieved from the duties of Superintendent of the Naval Observatory at Washington, and Secretary Chandler on Wednesday appointed Commodore R. W. Shufeldt to succeed him in that position.

The sales of revenue stamps since the new tobacco-tax law began to operate on May 1 have been very large.

A message was received by General Sherman from Brig.-Gen. Crook on Friday. It was dated at San Bernardino Springs, Arizona, May 3. He said: "It is not my intention to violate the convention between the two Governments. My object in visiting Sonora and Chihuahua was to arrange for coöperation, and in case my troops followed the hostiles into Mexico, to see if I could not secure a liberal interpretation of the terms of the agreement in regard to the time I could be allowed to remain there. It is my intention to start to-morrow morning in pursuit of the savages, in accordance with the treaty." This was in answer to a despatch from General Sherman warning him not to violate the treaty with Mexico in regard to the pursuit of hostiles across the border.

In the Star-route trial, Mr. Bliss continued his speech throughout the week, concluding on Tuesday. He criticised with great severity the course of S. W. Dorsey.

Judge Billings, in the United States Circuit Court at New Orleans, on Thursday decided the case of Myra Clark Gaines against the city of New Orleans in favor of the plaintiff. The suit has been pending for many years. The amount involved is $1,925,667 83, rent and interest on the property of Mrs. Gaines, wrongfully disposed of by the city in 1837.

The United States Supreme Court on Monday afternoon denied petitions for rehearing in what are known as the Louisiana and Virginia bond cases.

Governor Cleveland on Wednesday nominated the following gentlemen to be Commissioners of the Niagara Falls Preserve, in accordance with the bill recently passed: William Dorsheimer, J. Hampden Robb, and Andrew H. Green, of New York; Sherman S. Rogers, of Buffalo, and Martin B. Anderson, of Rochester. The latter is President of Rochester University. They were immediately confirmed by the Senate.

The last days of the session of the New York Legislature were crowded with business. The Conference Committees of both houses met on Wednesday afternoon and agreed upon a bill apportioning the Congressional districts of the State. It gives the Democrats seventeen districts, the Republicans fourteen, and leaves three doubtful. Both branches passed the bill on that day. The Campbell Penal Code amendments, relating especially to Sunday occupations, were also passed. The Assembly passed the bill providing for a State Civil-Service Commission of three Commissioners, at salaries of $2,000 each, who are to superintend the execution of the civil-service rules throughout the State. On Thursday the Storm King Bridge Bill was rushed through the Assembly in spite of stout opposition. The New York Aqueduct Bill was passed by a vote of 104 to 10, after having been so amended as to make Mr. Parke Godwin a seventh Commissioner. The Senate refused to concur in this amendment, and a conference committee was appointed, which struck out the amendment, and the bill was then sent to the Governor. The Senate defeated the bill reducing pilotage fees in the port of New York, and passed the Harbor-masters Bill. It was agreed on Thursday to adjourn at 7 o'clock on Friday evening.

On Friday the Assembly Civil-Service Reform Bill was passed by the Senate without a dissenting voice, and immediately sent to the Governor. In executive session the Finance Committee of the Senate refused to report on the nomination of Mr. Murtha for Immigration Commissioner. He is distasteful to Tammany. This put the nomination beyond the reach of the Senate, either to confirm or reject it, and also put it beyond the power of the Governor to make other nominations for the place. The Harbor-masters' Bill was adopted in the Assembly. Later in the day the Senate received a great many nominations from the Governor, among them for Harbor-masters, Quarantine Commissioners, and Commissioners of the State Survey. In these Tammany received little recognition. Other important nominations were: For Civil-Service Commissioners—Andrew D. White, of Tompkins; Augustus Schoonmaker, of Ulster; and Henry A. Richmond, of Erie. For Chief of the Bureau of Labor Statistics—C. F. Peck, of Steuben, editor of the Hornellsville *Tribune*. These were confirmed; but beyond these Tammany refused to go, and the other nominations were not acted upon. The Governor soon after sent a remarkable message to the Senate, in which he lectured them on the disgraceful exhibition of greed for spoils shown in their rejection of the nomination for Immigration Commissioner, for factional reasons. An angry reply was made by Mr. Grady for Tammany, and the message was referred to the Finance Committee. No further action was taken on Mr. Murtha's nomination.

The closing hours of the session in both branches were characterized by hasty action and turmoil. The Anti-Free Pass Bill was defeated in the Senate by the objections of Mr. McArthur and Mr. Mackin. The new Building Law for this city, the Union College Bill, the bill making the Brooklyn bridge free to foot passengers, the bill for the opening of Flatbush Avenue to the Brooklyn bridge, the "Freedom of Worship" Bill, the Prohibitory and Woman Suffrage amendments, and the Broadway Underground Railroad Bill were lost. An adjournment *sine die* was reached at 7 o'clock in the evening.

The Republican members of the New York Legislature framed an address to the voters of the State, and published it on Tuesday, reviewing the course of the Democratic majority and severely criticising it.

The Massachusetts House of Representatives on Monday afternoon adopted the Senate resolution recognizing the ability, services, and integrity of Oakes Ames, and asking for a like recognition on the part of the national Congress.

At the May dinner of the Saturday Night Club, in this city, on Saturday, ex-Senator Conkling said, referring to the Chicago Convention, in the course of a violently Stalwart speech: "I believe as firmly as I believe anything, that the results of that Convention have held this country back ten years."

Mr. W. H. Vanderbilt on Friday announced his retirement from the Presidency of the New York Central Railroad. His sons also retire from the Presidencies and Vice-Presidencies which they have held, but remain in the directory of the several Vanderbilt roads. In order that the control may not go out of the family, a new office has been created in each of the roads, namely, Chairman of the Board of Directors. This change is made in accordance with the system pursued in the government of the great English railway corporations. The sons are Chairmen. The object of the change is to relieve Mr. Vanderbilt from routine duties.

The canals of New York State were opened for the season on Monday with a great rush of business.

A dramatic festival, in which many notable actors took part, was held in Cincinnati during last week.

Congressman Thompson, of Kentucky, who recently shot W. B. Davis, was indicted for murder on Wednesday.

Phipps, the ex-Almshouse Superintendent, of Philadelphia, was on Saturday convicted of forgery. He was recently brought from Canada by extradition.

Signor Salvini, the Italian tragedian, sailed for home on Wednesday. He expects to return in the autumn of 1884.

The trustees of Trinity College, at Hartford, Conn., have elected to the Presidency the Rev. George Williamson Smith, D. D., of Brooklyn. He is a graduate of Hobart College, and was for some time Chaplain at the Naval Academy, Annapolis. Afterward he was rector of a church in Jamaica, Long Island, and since 1881 has been rector of the Church of the Redeemer, Brooklyn.

Mr. Frederick Marquand, of this city, has given $60,000 to Princeton College for the endowment of an Art School. Arrangements are being perfected for the endowment of four chairs in the School of Philosophy.

The Rev. Josiah Henson, known for many years as Mrs. Stowe's "Uncle Tom," died on Saturday in Dresden, Ontario, in his ninety-fourth year. He was born a slave, and made a remarkable escape to Canada. He visited England twice, where he sold 40,000 copies of his autobiography. Incidents in his career were used in 'Uncle Tom's Cabin,' but the book is not the history of his life.

FOREIGN.

In the House of Commons on Thursday night the Affirmation Bill was refused a second reading by a vote of 292 to 289. On Friday afternoon the Speaker said that he had received a letter from Mr. Bradlaugh, in which that gentleman announced that he would, at the beginning of business, ask to be

permitted to take the oath. The Speaker asked for the guidance of the House. Loud cries were made for Mr. Gladstone, but as the Prime Minister did not rise, Sir Stafford Northcote said that he would propose that Mr. Bradlaugh be precluded from going through such a form. Mr. Gladstone said he could raise no objection to the motion, which, under the circumstances, Sir Stafford Northcote was the proper person to make. On motion of Mr. Labouchere, it was decided to hear Mr. Bradlaugh in his own behalf at the bar of the House. Mr. Bradlaugh pointed out that, as the House had rejected the Affirmation Bill, which would have enabled him to take his seat, it was his duty to take the oath. As long as he was not disqualified, he would claim the right to his seat. Mr. Gladstone announced that he would vote against Sir Stafford Northcote's motion, which was then carried by a vote of 271 to 165. Mr. Bradlaugh again addressed the House on his claim to a seat, and then returned below the bar. The subject was dropped. Mr. Bradlaugh announces that he has decided to visit his constituents and formally to tender his resignation as their elected representative.

In the House of Commons on Monday afternoon Mr. Gladstone announced that, instead of the pensions which it was proposed to bestow upon Lord Wolseley and Lord Alcester (Admiral Seymour), they would be given a lump sum of money. This change, it is believed, is due to the outcry which has been raised against the provision in the bill providing pensions, which declares that they shall, on the death of the beneficiaries, revert to the nearest heirs.

John Walsh, P. J. Sheridan, and Peter Tynan (Number One) were indicted by the Grand Jury at Dublin on Thursday for murder. Fitzharris was indicted as an accessory after the fact. Bills for conspiracy were found against a number of others. It is understood the British Government will ask for the extradition of Sheridan and Walsh, who are in New York city. They have not attempted to conceal themselves since the indictment, and put great faith in a probable refusal of the request for extradition. It is confidently asserted in Dublin that Peter Tynan is in London, negotiating with a view of turning informer. Other reports assert positively that he is in this country. No demand has yet been received at the State Department in Washington for the extradition of Walsh, Sheridan, or Tynan.

Patrick Delaney and Thomas Caffrey, two more of the men charged with participation in the murders of Lord Frederick Cavendish and Mr. Burke, were arraigned for trial in Dublin on Wednesday. They created a sensation by pleading guilty. Caffrey was informed that the Crown gave no hope of a mitigation of the sentence of death which would be passed upon him. Delaney, when he was called upon to plead, said: "We had to obey the orders of the society, or take the consequences. When I got in the park I could not get away. I saw the murders committed, but took no part in them." Caffrey made a similar statement. Both were sentenced to be hanged on June 2. Delaney's sentence was commuted by Earl Spencer on Tuesday.

The third trial of Timothy Kelly for participation in the murder of Lord Frederick Cavendish and Mr. Burke was begun in Dublin on Monday.

James Mullett and William Moroney pleaded guilty to the charge of conspiracy to murder in Dublin, on Thursday. Lawrence Hanlon was put on trial, charged with attempting to murder Denis Field. On Friday he was found guilty and sentenced to penal servitude for life.

The Dublin *Freeman's Journal* says the dynamite plot hatched in America was betrayed to the British Consul at New York. The name of every conspirator who came to England, and of the ship on which he sailed, was cabled to England directly after the vessel left New York. The police watched the conspirators from the moment they landed in England.

At a conference of members of the Irish Nationalist party in London on Friday it was resolved to organize a fund for the relief of the families of persons who have fled the country or have been arrested in connection with the murder trials in Ireland and generally under the Crimes Act. It is estimated that 600 families have been rendered destitute by the flight or incarceration of their breadwinners.

It was announced on Tuesday that the Governor of Limerick Jail had retired from office, probably because of complaints of his harsh treatment of suspects.

Richard Deasy, Judge of the Court of Appeals of Ireland, died on Sunday at the age of seventy-one.

Alarming rumors were current in Halifax on Monday that a letter had been received by Lieutenant-Governor Archibald, warning him of the expected visit to Halifax of two suspicious American vessels, and cautioning him to have precautions taken for the safety of life and property about the city. The letter asserted that two suspicious vessels, manned, it was believed, by Fenians, had left Boston for Halifax, carrying a quantity of torpedoes. On arriving there the torpedoes were to be laid in the harbor, with the intention of blowing up the shipping. It was denied on Tuesday that the letter referred to suspicious American vessels, but it contained significant warnings which have been heeded.

It was announced by the Prince of Wales on Monday, at the formal opening of the School of Music at Kensington, England, that Mr. Arthur Sullivan, the composer, and Mr. Grove, the journalist, had been knighted.

In the German Reichstag on Wednesday Herr Richter introduced a motion declaring against the execution of private orders in military workshops. Prince Bismarck protested in the name of the Emperor against the assumption that the army can be required even to receive a direct recommendation from the Reichstag. Herr Richter then altered the motion so that its demands were addressed to Prince Bismarck instead of to the military administration. The Minister of War declared that the motion implied a direct invasion of the powers of the Emperor. Prince Bismarck's action is not regarded as a reprimand to the Reichstag so much as a reassertion of his prerogatives as Chancellor over the other Ministers, especially the Minister of War.

In the debate on the budget for 1884–5, in the German Reichstag on Monday, Herr Richter moved to refer the subject to a commission, it being impossible to make trustworthy estimates so far ahead. The motion was supported by all the Liberals. The Tories and Clericals not being present in full force, it was finally adopted by a vote of 105 to 97, again frustrating one of Prince Bismark's favorite projects.

The treaty of commerce between Germany and Mexico passed its second reading in the German Reichstag on Monday.

In reparation of its unwarranted attack upon United States Minister Sargent, the Berlin *North-German Gazette* recently published, with an apologetic introduction, a translation of Mr. Sargent's report to the State Department, to show that its remarks had been based upon what it alleges was an incorrect translation which appeared in a New York German newspaper.

The Berlin *North-German Gazette*, commenting on the overtures of the French press to the Republicans of Italy and Spain, in which the papers speak of France as being a moral ally, says that although this coquetting with revolutionists is a bad symptom, it is less dangerous to peace than the intrigues an Orleanist restoration in France would speedily hatch in the European capitals.

The Lower House of the Austro-Hungarian Reichsrath has adopted a bill fixing the minimum force of the Austrian Landwehr, exclusive of that of the Tyrol, at 138,000 men, and authorizing the formation of six regiments of Landwehr cavalry. The measure will involve an increase in the military budget of 1,000,000 florins.

The bakers' strike still continues in Vienna. There were serious riots on Friday evening.

The greater part of Königinhof, Bohemia, has been burned. The town is on the Elbe, and has a population of between 6,000 and 7,000.

Count de Chambord had a slight attack of apoplexy on Tuesday.

It is reported that the Duc d'Aumale is seriously ill in Sicily.

The ex-Empress Eugénie of France has renounced her claims to the château presented by the municipality of Marseilles to the Emperor Napoleon.

Louis Viardot, the distinguished French author, is dead in the eighty-third year of his age. He studied law, but abandoned it for literature at the age of twenty-three, writing for several Paris journals of advanced opinions. He was the author of many notable works on art, on the history of the Arabs, Spain, Italy, and the Jesuits.

The many grave complications which were threatened during the sittings of the Spanish Budget Committee have been safely got rid of. The Finance Minister is now in sympathy with the reforms proposed by Señor Moret, and the credit of 85,000,000 pesetas for public works which was projected will be withdrawn.

A building used as a manufactory of explosives has been discovered at Cronstadt, Russia. Several naval officers were arrested.

Much ill feeling exists in some of the regiments of the Russian army owing to the fact that rewards are being offered to the men to induce them to denounce any of their comrades who are known to be Nihilists.

Lord Dufferin has started from Cairo on his return to Constantinople.

The Amsterdam Universal Exhibition was opened, on Wednesday, by the King of Holland.

It was reported on Sunday in London, from Rome, that Cardinal Jacobini, the Papal Secretary of State, had sent a despatch to Cardinal McCloskey, of New York, asking whether or not it was true that he had received Alexander Sullivan, the President of the Irish National League of America, and demanding explanations, if such was the fact. The rumor was positively denied by Cardinal McCloskey on Monday.

A telegram has been received at Cairo from Colonel Hicks, reporting that on April 29 he had an engagement with 5,000 rebels in the Sudan. The battle, which lasted half an hour, resulted in the defeat of the rebels, with 500 killed, including the Lieutenant-General of El Mahdi, the False Prophet, and many wounded. The Egyptian loss was slight.

The Chilian Colonel Canto has had two engagements with Caceres's forces at Balconiello and Pampas de Sicaya, Peru. In both cases, according to Chilian reports, he routed the enemy, capturing a cannon and forty rifles. Caceres is at Tarta. His troops are demoralized. The Peruvian Minister at Washington asserts that one of the battles was a victory for Peru.

INTERNATIONAL CRIME.

THE proclamation of the supplementary extradition treaty with Spain concluded last summer may serve to draw attention to the curious fact that we have established with Spain, usually regarded as a type of a benighted and retrogressive country, a far better and more comprehensive international system of protection against crime than with England. We have been wrangling with England for many a long year over the Ashburton treaty, and have even gone so far as to suggest that it might become necessary for us to withdraw from it altogether, and yet not a single question growing out of its extradition clauses has been settled. Meanwhile, as if for the purpose of demonstrating that there was really no reason for any trouble with England at all, we made a treaty with Spain in 1877 which raised and disposed of all these very points, without the least trouble in the world.

The trouble with England, as our readers will remember, grew out of our insisting that we could, after getting a man surrendered for one crime, covered by the treaty, say forgery, try him for another and a totally different crime, not covered by the treaty, say smuggling. To this the English replied: "Then why have we a treaty at all, and what is to prevent your trying him for a political offence? and if you can try him for a political offence, what becomes of the right of asylum?" To this we answered—we are not burlesquing, but merely condensing the argument—that some things were too dreadful to be thought of at all, and need not be provided against by treaties; that this was the view taken by the Athenians of the crime of parricide, and such was the attitude of the United States toward trials for political offences. But further than this, we maintained that England had been perpetually extraditing criminals for one offence and insisting on the right to try them for another, so that it seemed as if she ought to blush with shame to mention the subject. Instead of this, England had passed an act of Parliament forbidding the surrender of any criminal unless we would give a pledge that he should be tried only for the crime for which he was surrendered. This enabled our Government to say, "Aha! you are trying to impose obligations on the United States under a treaty by means of domestic legislation, are you? We will soon show you whether you can play fast and loose with treaties in this way." And this extraordinary discussion ended fitly enough in the suggestion of the abrogation of the treaty, to the great delight, no doubt, of many citizens of either country about to commit or who had committed crime, but to the considerable mystification of all those who were simple enough to imagine that the one object of diplomacy was to arrive at some practical result, and that the object of this particular correspondence was the better protection of both countries against crime.

But the funny part of the whole thing was that we had hardly closed this great international debate, when we turned round and negotiated with Spain a treaty which provided against every difficulty which had been raised in the English correspondence. When Spain inquired what was to be done about political offences, we did not contend that the right of asylum was so sacred that it was not necessary to do or say anything about it; on the contrary, we signed an article providing that "no persons surrendered by or to either of the contracting parties in virtue of this convention shall be tried or punished for any political crime or offence." When it was suggested that difficulties might arise out of an attempt to try a man for a crime for which he had not been surrendered, we agreed without hesitation to a provision that "no person shall be tried for any crime or offence other than that for which he was surrendered," except it be for some other crime expressly covered by the treaty.

It would seem from this as if, for some reason or other, it was really harder for us to come to an understanding on the simple subject of surrendering criminals with a country bound to us by identity of race, language, religion, and legal principles, than with a benighted, retrogressive old country like Spain—a by-word for want of the "spirit of the age," and alien from us in race, language, religion, and laws. This suspicion would seem to be confirmed by the fact that the list of crimes provided against in the treaty with Spain, as enlarged by the supplementary agreement, is a very comprehensive and enlightened one, while that in the treaty with England is still antique and curiously meagre. It seems incredible, but it is nevertheless a fact, that forgery, or the utterance of forged paper, is the only strictly commercial crime covered by the Ashburton treaty. This was natural enough in 1842, but how strange it is in 1883! To see how our international code with England ought to be enlarged, we have only to turn again to the treaties with Spain, and we find not only forgery and utterance of forged paper, but the falsification and fraudulent use of official documents—so often resorted to in aid of commercial frauds—counterfeiting, embezzlement, and obtaining money or property under false pretences, or the purchase of property so obtained, all made extraditable offences. Now, it is notorious that it is the swindler in our day who is the real international pirate, the true enemy of mankind, against whom we need protection, and also that the great field for the American swindler is England, as the field for the British swindler is the United States. His operations are carried on on a gigantic scale and with extraordinary impunity. Nothing would do more to protect both countries against him than a rational and enlightened extradition treaty such as we actually have with Spain, and which is itself drawn up as if to demonstrate that there is no cause for any difficulty on the subject with England.

THE PARLIAMENTARY OATH IN ENGLAND.

THE defeat by a small majority of the bill substituting an affirmation for the oath of admission in the House of Commons has no political significance, because the Ministry, from the very outset, refused to treat the Bradlaugh case as a Cabinet question, and, although the bill is of their introduction, their followers have been left free to follow their own inclinations in voting on it. But it is none the less a remarkable exhibition of the power of bigotry and intolerance, and, we may add, humbug and hypocrisy, in that assembly. It is notorious, and has never been denied in all the discussion which this matter has called forth, that a very large number of nominally Christian members of the House are really agnostics, and take the oath, not because it is more binding on their conscience than a simple pledge, but because it is to them an unmeaning form, which pleases religious people, and does nobody else any harm. This is really the view which Bradlaugh offered, and still offers, to take of it, and the real reason why he was not allowed to act on it was, not that the view was in itself objectionable, but that he was an odious man.

Since his reëlection by his constituents, and his formal offer to take the oath without ifs or buts, the matter has assumed a much more serious aspect. In refusing to let him take it the majority of the House took upon itself to decide, that a duly elected member was not entitled to his seat because it did not like him, and that it need not allow anybody to take the oath if it doubted his sincerity or did not approve of his religious views. It was to get the House out of this very absurd and wholly untenable position that the Affirmation Bill was introduced, but it now appears that the House will not accept deliverance in this way. Mr. Gladstone's speech in favor of the bill is said to have surpassed in some passages all his former oratorical exploits. In acknowledging that the Liberals were probably damaging themselves with the country in trying to pass it, but maintaining that it was none the less their duty to do so, he took ground on which but few politicians in any age have stood, and which, whenever Mr. Gladstone takes it, profoundly disgusts not only his enemies but a good many of his followers. It produces on them the sickening effect which the "civil-service twaddle" so long produced on our own statesmen, as worthier of the Sunday-school than the forum.

The discussion on the bill throughout the country has not been very profitable or very symptomatic, because it turned in a very small degree on the expediency of making members of Parliament take an oath implying a belief in God. To nine-tenths of the middle classes, Bradlaugh's morality was a far more important element in the discussion than the value of oaths. He is not only an atheist, but holds very odious views about marriage, which he has sought to propagate in a very obnoxious way, and is altogether a very offensive person to English respectability. He has really no political allies, his Liberal friends being a good deal ashamed of him, though his ability is undeniable. He has completely beaten his adversaries in the courts, in the suits they brought against him to exact the legal penalty for taking his seat without qualifying, although he has acted throughout as his own counsel. There is, therefore, good reason to believe that if the attempt to substitute affirming for swearing had not been intended to meet his needs in the first instance, it might have been successful.

But no attempt of the kind will ever be successful in a country like England, without a victim of some kind to instigate it. The oath would never have been so modified as to admit Catholics, if O'Connell's election had not furnished a particular case in which its injustice

was made manifest. Nor would it have been so modified as to admit the Jews, if Baron Rothschild had not year after year for several years presented himself, with a powerful constituency at his back, to demand it. The arguments used against the Affirmation Bill by those who pretend to oppose it on religious grounds are almost exactly the same as those used in the O'Connell and Rothschild cases half a century ago. O'Connell was to be kept out because England was a Protestant state, and it would cease to be Protestant if there was a Catholic in Parliament. Rothschild was to be kept out in like manner because it was a Christian state, and would cease to be Christian if there was a Jew in Parliament. Now, it is said that it is a theistic state, and will cease to be so if a man who avows his atheism has special facilities provided to enable him to get into the House of Commons.

The theory which underlies the argument in all three cases is not only that every state has relations with the Deity as a corporation, but that he is placated, or the reverse, by corporate acts or shortcomings, without looking into the motives or mental condition of the men who compose the corporation or represent it. Consequently, a collection of the rankest unbelievers or Gallios might get together in a legislature, and, by going through certain forms, winking at each other all the while, give complete satisfaction to the Ruler of the Universe, and prevent his inflicting divers calamities, known and unknown, on the community to which they belonged. This is a familiar mediæval view of the dealings of Providence with political societies; and although very few persons nowadays would acknowledge that they held it, if presented to them nakedly, the number who do hold it in some form unconsciously is very large. We find it among ourselves acting powerfully on that small body of persons who agitate for the insertion of some mention of God in the Constitution as a means of securing Divine favor, and one hears frequent recognition of it in prayers in churches. But there is, of course, absolutely no means of combining it with the doctrine of individual responsibility on which the moral government of the universe must always rest. As long as every man must answer for himself before the supreme tribunal, he, of course, cannot be liable either to loss or suffering for the doings or undoings of his fellow-men, whether they be called Kings, or Congressmen, or Bosses.

SOUTHERN AND OTHER DUELLING.

A SOUTHERN correspondent asks us in another column how "Southern gentlemen, young gentlemen especially, are to be taught to look at duelling in all its forms, regular and irregular, as all the civilized world—the French *passim*, German students and army officers, some English army and navy fogies, etc., etc., excepted—look at it." We presume no such change was ever brought about by any one agency in any community. The disappearance of all superstitions—and belief in the usefulness or necessity of the duel is certainly one of them—has always been brought about by a composition of causes. Nobody knows what destroyed the belief in witchcraft and in the necessity of discovering and punishing witches; but it somehow died out, and the mere mention of it now excites a smile even among the ignorant. The duel is, as everybody knows, like so many other absurdities, a legacy from the Middle Ages. It was unknown in the ancient world, and it had its justification in the Middle Ages in the notion that God permitted the right and wrong of a dispute, or the guilt or innocence of an accused person, to be settled in that way. This was a complete justification, too. Trial by battle was, to men who saw in it a mode of direct Divine interposition in human affairs, a very solemn and perfectly proper proceeding.

What makes the modern duel absurd is, that the form has survived while the reason is gone. Nobody now believes that a duel decides anything except that neither of the combatants is afraid to risk his life; but it is not once in a thousand times that this is the issue raised in their dispute. It is very seldom indeed that a man fights a duel because somebody has called him a coward. Duels are almost always due to some imputation on a man's morals—his truthfulness, for instance, or honesty, or on the propriety of his behavior in some episode of social intercourse. A mediæval duel would have settled this in the minds of the combatants or their friends. Heaven would have revealed through the issue of the fight whether somebody had lied, or stolen, or behaved like a brute, as charged. But the modern duel decides nothing except which can shoot best, or handle the rapier most skilfully. The real point in dispute, about the lying, or the knavery, or the brutality, it leaves just where it found it.

It is the gradual perception of this, combined with the growth of the habit of legality, which has abolished duelling in most countries in which it once prevailed. It is this which has made it ridiculous, even in the army and navy, among a very practical people like the English, which still holds physical courage and coolness in the presence of danger in very high esteem. Two colonels in the Guards had the other day in London the very kind of dispute which it was formerly thought nothing but a duel could settle. An anonymous letter was written to the *World* reflecting severely on Colonel Williams, to whom the editor sent it. He thought he detected in it the handwriting of Colonel Burnaby, and charged him with writing it. Colonel Burnaby denied it indignantly. Under the code everything was now ready for a duel. But of course it was clear that a duel would decide nothing but that the two colonels were physically brave, which nobody doubted, and which was not an issue in the case. The issue was whether Colonel Burnaby had been guilty of writing an anonymous slander, and for the trial of this a court of law was, of course, the proper place. Accordingly, when the matter was referred to the Commander-in-Chief, the Duke of Cambridge, he directed Colonel Burnaby to bring an action, which he did. The case was never tried, as it was settled out of court, by Colonel Williams withdrawing his imputation.

What strikes one in all this is the rationality of the whole proceeding, and it is the growth of rationality which must abolish duelling everywhere, as it has abolished so much other folly and tomfoolery. In a community in which people cultivate rationality, and at the same time place a high value on their moral character, it cannot possibly long survive as a means of settling quarrels. Civilian Germans do not fight duels, and mainly for this reason. Duelling is kept up in the army as a means of keeping alive the personal sensitiveness which many military men hold to be essential to discipline. As Lecky has pointed out, a meek or long-suffering army would be an absurdity, and on the Continent it is part of the system of militarism to guard against the growth of meekness by cultivating quickness of resentment and readiness to appeal to arms. There is some rationality about this, however. If you want to keep a man fierce, and arrogant, and combative, you cannot do better than to keep him ready to fight anybody who annoys him. But in the German army no officer is allowed to settle in this way the question whether he has been lying, or cheating, or misbehaving himself in the streets. This is decided by the ordinary legal methods, and by a tribunal of his superiors. Of the students' duels we do not need to speak, as they are one of the amusements of boys.

In France, duelling is now confined mainly to Parisian journalists and "young men about town," though graver and more valuable men occasionally indulge in it. The reason why it holds its ground there so much better than in any other country is undoubtedly to be found in the qualities of mind and character which make Frenchmen such unsuccessful politicians, and make their Parliamentary debates such queer affairs. That the *manner* of doing a thing is rather more important than the result, has long been a powerful motive in French government and society, and it has a great deal to do with producing the Parisian duel. That duel has now reached a point where it proves nothing whatever, not even the physical courage of the combatants, because it is fought under a rule which makes any wound, however slight, destructive of the needful equality of conditions, and therefore the close of the fight. It is only by gross carelessness or accident, therefore, that French duels are ever fatal or even serious, as they are nearly always fought with swords. But they are never fought without the publication in the newspapers of a "procès verbal," or record of the proceedings, drawn up by the seconds, which is the real reason why they are ever fought at all. A secret or private duel, of which no account was ever printed, would be repugnant to the feelings of most Frenchmen to the last degree, and if the law struck at this publication, it would probably do twice as much as it can do or has ever done for the extirpation of duelling by enacting penalties for the fighting or witnessing. In other words, duels are fought in France, as so many other things are done, mainly for the sake of the notoriety.

The South is now the only civilized country, in fact, in which duels are fought by all classes, not to prove or disprove anything, because nobody really believes in the physical cowardice of Southern men, but to kill, or in-

flict grievous bodily harm. For this reason even fighting Europeans shrink from duels with duelling Americans. Europeans do not wish to kill or be killed, or even to wound, but to be talked about, and look on American duels, therefore, as savage encounters in which a gentleman should hardly be expected to engage.

From all this it may be gathered, indirectly at least, and in a general way, what we think about the means of getting young Southerners to give up fighting with deadly weapons. The process must be the same there as in England, and Germany, and at the North, and it is a process for which there is no distinct formula. It is one into which nearly all civilizing agencies enter in a greater or less degree. What made men give up wearing swords and colored silk clothes in England? Why are witches no longer burnt? Why is capital punishment no longer inflicted for petty larceny? Why does a prisoner no longer have heavy weights put on his stomach when he refuses to plead to an indictment? Why are the Exchequer accounts no longer kept on a notched stick? Why are bulls no longer baited? Why are men and women no longer put in the pillory, and pelted by a mob with rotten eggs? Nobody can tell exactly why. In one way or another these things have come to seem so monstrous, or ridiculous, or absurd, that they have become practically impossible. In other words, that great aggregation of forces, both moral and mental, called civilization, has banished them from the world. Duelling at the South will go in the same way. It cannot be got rid of by an act of the Legislature, or a clever essay, or any patent contrivance whatever. It will perish under the growth of rational views of conduct and legislation.

THE PARK BENCHES.

As the worst of the spring is now over, and out-of-door life promises soon to have many attractions, we feel it our duty to direct our readers' attention to a social problem which recurs with every returning year, and yet remains unanswered. It relates to what may be called down-town park life. Everybody has noticed that the first effects of the increasing mildness of the weather on these places of rest and recreation is to fill them with a peculiar class. We do not mean the children, who may be observed in some of them playing hoop and top; these are evidently the same children who are to be met with at every hand, in the streets and avenues and in domestic circles, at church and at Barnum's. Nor do we mean the nurses, for a nurse is unmistakably a nurse, just as a man is a man, all the world over. Nor do we refer to the police, though the fondness of the police for park life, probably owing to its safety and innocence, is notorious. The class we refer to consists of the occupants of the benches. That the benches should be occupied is in itself, of course, nothing remarkable. That is the object of the city in placing them there. The strange thing is that from this time of year, on through the long New York summer and far into the fall, they are occupied by the same class. It is quite clear that the benchers, if we may call them so, are not the parents of the children in the parks, or the employers of the nurses, for they manifest no personal interest in the gambols of the one, nor do they direct the movements of the others. They are not laborers, for their time is evidently at their own disposal. Nor are they the owners of the houses in the neighborhood of the benches on which they sit. They take no part in the life around them beyond looking on at it. What they see appears to give them ample food for reflection through the livelong day. They seldom stir from their benches; at the same time their habits are not such as we usually associate with sedentary pursuits. A sedentary life suggests a fondness for reading, but the occupant of the benches reads very little when on duty in the park, whatever he may do elsewhere. When he does read, however, it is with a thoroughness and close, conscientious attention to the details of the words with which he is brought into contact, that contrasts in a very marked way with the hasty casual glance through the columns with which the ordinary professional man or man of business contents himself.

We have often wondered what subjects interest him most—whether he prefers the editorial page or the accounts of fights, murders, or fires, or reads everything indifferently. He hardly reads often or easily enough to be a type of the "general reader," whom Mr. Freeman declares plays such an important part in the development of American society. His occasional use of the newspaper, too, as a receptacle for the food which he sometimes brings with him, must greatly impair its value as "reading matter." His choice of a newspaper does not seem to be determined by political or partisan considerations, for he may be found sometimes engaged with newspapers as recklessly independent as the "octuple *Herald*," or again with issues of the strict party press. In fact, we have sometimes thought that reading was, with him, pursued, as we are told that art should be, for its own sake, and not for any coarse practical object like information or mental improvement. There is no marked peculiarity about his costume, which never offends against good taste by being ostentatious or gaudy. His clothes are usually dark in color, and are not new.

Who are they? Where do they come from? What do they live on? What are they waiting for? What becomes of them in winter? What gives them such a hold on the park benches that no other class attempts to interfere with their right to an exclusive occupation of them? They have, of course, no more exclusive legal right than any other class; but they have established a park-bench monopoly as complete and thoroughgoing as any to be found in the world—and established it without the aid of capital or any known political backing.

The rise and progress of this singular social phenomenon can only be explained by the fact that they appear to have what no other class in the community enjoys—absolute leisure. Foreigners have for generations complained of the sad effect on the American constitution and habit of mind of our unceasing toil, and at the same time have predicted that the time must come when a leisure class, such as is to be found in all old countries, would spring up here. Of course, reasoning from what they saw about them in England and other aristocratic countries, they thought that this leisure class when it made its appearance would be composed of old families, and even we ourselves used to be fond of attempting to detect the germs of such a new social order among the families of "Signers" and "Old New Yorkers." In this way we overlooked, as is so often the case with such speculations, the fact that a real American leisure class, unlike any known in Europe, was making its appearance under our very noses.

That the class we have been considering has many of the distinguishing marks of an aristocracy, is plain enough. In many respects they closely resemble the best part of the aristocracy of Great Britain. They are, in the first place, negligent with regard to dress—a trait which, when exhibited by the British titled visitor, is so puzzling to his American entertainer, but which really springs from an indifference to the opinion of others produced by a secure social position. Again, they are fond of an open-air life and simple pleasures. They are reserved and quiet in manner, and associate only with members of their own class. There is nothing surprising about their gradual occupation of the parks, for no leisure class has ever grown up in any country without parks. It may be said, however, that ours was the first to perceive that it made little difference who owned the parks, provided they obtained possession of the benches. What enabled them to do this was leisure—the fact that they had time to spare. The parks, of course, were not originally designed exclusively for them, but for "the people"—the whole mass of the population, from the humble newsboy to the lordly boss and the bloated millionaire—the people at large, who are generally represented as "rising in their might," but who are also severally and individually fond of sitting down for a quiet afternoon in the public places set apart by themselves for themselves. This old popular democratic theory of park life is undoubtedly still preserved in Central Park, but hardly a vestige of it remains in any of the parks in the lower part of the city. All these are in the hands of our leisure class. Time only can show whether they will want Central Park too. If they do, we have little doubt that they will get it. It is useless for the busy, occupied classes to attempt any struggle for their right to benches with a class that can—as Captain Williams says—devote "eighteen hours a day, every day in the week, right along," to its allotted task.

A very interesting and peculiar fact remains to be mentioned—that there is strong reason to believe that the winter habitat of the class which in summer occupies the park benches, is the Astor and other public libraries. It is not, however, for books that they go, so much as for a warm, comfortable place to spend the day, and a nicely warmed, sunshiny library is just the place that the leisure classes all over the world like to spend a considerable part of their time in. They generally take down a book from the shelves for form's sake, and sit dozing away the afternoon over it, dreaming, no doubt, of

the pleasant summer days to come, on the park benches. Curiously enough, too, it is said that they come in greater numbers every winter, and that they are silently but surely driving out the readers and students; so that it looks as if ultimately the libraries and possibly all the well-warmed public institutions in the city during the winter would fall into their exclusive possession and control, as the parks do in summer.

MR. BRADLAUGH ONCE MORE.

LONDON, April 26.

IT seems as if the House of Commons was never going to hear the last of the member for Northampton. Since the day, now nearly three years ago, when he came up to take his seat and asked to be permitted to make an affirmation instead of swearing the customary oath, the country has never been suffered to forget him, and the House has been standing on guard, so to speak, to repel him from its benches. It would be tedious to recapitulate the history of the contest, although your readers have doubtless forgotten its incidents, so I will only state the main stages through which it passed. His first request to be allowed to affirm was refused, but, subsequently, on the motion of the Government, he was allowed to affirm instead of swearing, and to take his seat at his own peril—that is to say, at the risk of incurring the penalties prescribed by statute for those who speak or vote without having taken either the oath or the affirmation which persons belonging to certain sects, who conscientiously object to an oath, are permitted to substitute. He did take his seat, he spoke and voted repeatedly. An action for the penalties was brought against him by one Clarke, a person put forward by Mr. Newdegate, member for Warwickshire, and in this action it was decided, firstly, that he had no legal right to affirm, and had therefore committed an offence; but secondarily, on appeal to the House of Lords, that the action could not be brought by a common informer, but only by the Attorney-General. This last point is a serious one for Mr. Newdegate, on whom it throws all his own costs; and Mr. Bradlaugh having brought an action against Mr. Newdegate for the legal offence called "maintenance" in supporting Clarke's action, has further thrown his own costs on Mr. Newdegate.

But his success in this, achieved only a few days ago, does not affect the main question settled two years ago, that he cannot under the existing law affirm. When that question was settled, in the early part of 1881, he offered to take the oath, but the majority of the House, recalling his previous declaration that the words which formed part of it, "so help me God," would not bind him, refused to permit him to swear, and, when he endeavored to enter the House, directed the Sergeant-at-Arms to remove him and keep him out. One evening he succeeded, by taking a New Testament in his hand up to the table before there was time to stop him, and repeating the words of the oath, in swearing himself in: but the House not only held this to be no due compliance with the law, but even expelled him as a punishment. Thereupon he went down again to Northampton, and was reëlected, presented himself once more, and was again refused permission to swear, the majority holding that his reëlection did not purge away the effects of his original statement that the oath did not carry with it to his mind a religious obligation. Thus the matter had got to a deadlock. He was a member for Northampton, but he could not, under the law as declared by the courts, make an affirmation, the House would not suffer him to take an oath, Northampton remained without its proper representative, a troublesome question continued to divide the country, and Mr. Bradlaugh's infidel opinions became more widely diffused, owing to the popularity which every one wins in England who is thought to have been unfairly treated.

The obvious way out of the difficulty was to pass an act either abolishing the Parliamentary oath altogether, or at least permitting any one who pleased to substitute an affirmation for it. This was the course which had been suggested by Sir Stafford Northcote, leader of the Conservative Opposition, when the question first arose in 1881. And when, after Mr. Bradlaugh's re election in 1882, it was clear that the House of Commons was determined to refuse to let him swear, it was the course taken by Mr. Labouchere, his colleague in the representation of Northampton, who brought in a bill for the purpose. This bill was at once opposed by the Tories, who, by "blocking" it (a form of obstruction permitted by the present Parliamentary rules), prevented it from reaching even the stage of second reading. This session the Government have themselves taken up the question. They were, of course, most unwilling to do so. Mr. Bradlaugh's writings, his speeches, his conduct, have made him an object of intense aversion to religious people, and indeed to the respectable classes generally, for, besides attacking Christianity, he has published books on other subjects which excite scarcely less feeling. The Roman Catholics, and many of the Nonconformists, dislike him as heartily as do the clergy of the Established Church, so that it is disagreeable and damaging for any Ministry to appear as his allies and the promoters of his claims. Besides, the passing of the Affirmation Bill must consume a good deal of time, and time is just what a Government can least spare. These considerations urged them to leave the question alone. But others not less urgent forced them to deal with it. Its mere existence as an unsolved problem reflected some discredit on them. It divided the Liberal party, and had exposed them to two or three defeats. It might cause the loss of seats at elections, for Mr. Bradlaugh might, if left unaided by the party, have taken his revenge on it by contesting boroughs where a Liberal and a Tory were already in the field, and so dividing the local Liberals as to bring the Tory in; and it would have been specially vexatious at a general election, because the Tories would have made out of it a not ineffective election cry, representing the Liberals as the friends of atheism and themselves as the protectors of religion.

Such are some of the grounds which induced Mr. Gladstone's Government to bring in the present measure, the debate upon whose second reading began on Monday last, the 23d, and may possibly continue for several nights, perhaps until these lines have reached your side of the Atlantic. The Ministerialists of course desire to abridge it, the Tories to spin it out, for Mr. Bradlaugh's case is by far the best piece of luck they have had during these three years of Liberal rule. Other promising questions have balked their hopes. The Ministry extricated themselves far better than was expected from the Irish crisis of last spring and from the Egyptian expedition of last summer. They have retained upon nearly every other matter the loyalty of their supporters in Parliament. Only on this subject has their party in Parliament repeatedly split asunder; only on this is any large section of their following in the country secretly vexed, if not openly disaffected. Hence the Tories, disappointed in so many other hopes, cling to Mr. Bradlaugh as their tower of strength. He has never failed them. His appearance on the scene has always brought annoyance if not disaster to the Government. He is, to use their favorite metaphor, a fox who may be hunted any number of times and give just as good sport the next time. Hence they see with alarm the prospect of a settlement of the question by his admission, and are resolved to get all they can out of his case before he is finally admitted. The longer the topic is debated, so much the more will the country, in their view, be disgusted, and so much the deeper will the stain of sympathy with Mr. Bradlaugh be, as they say, rubbed in to the Liberals. It is therefore their intention to prolong the discussion, an intention which they avow the more freely because it would be impossible to apply the new rule for closing a debate, since the Government would be unwilling to discredit that rule by employing it for the first time in a question of this nature.

So far the debate has been hollow and dull, nor can the question appear to the eye of an observer outside England one of any real importance. If it really involved the admission of persons not Christians, or not theists, to full political rights, it would be a question of principle, and a very grave one. But till Mr. Bradlaugh appeared on the scene, nobody ever thought of raising such a question. Mr. John Stuart Mill and other persons who had written books opposed to Christianity, and even to theism, have sat in the House of Commons. Such persons sit in it now. No one proposes to exclude them; and, indeed, when Lord Redesdale last session brought into the House of Lords a bill for establishing a theological test, it was laughed out of that conservative but practical assembly. This, therefore, is not the true issue, although, of course, people on the Continent of Europe are inclined to think so, and to applaud or decry us accordingly. What is curious about the matter is, that being really such a small matter, so purely personal, so accidental, so to speak, and unrooted in any principle, it should nevertheless have made, and be making, so great a noise, have caused, and be still causing, the waste of so much precious time. I must, therefore, try to explain how this comes to pass, and what are the motives and feelings of those who openly oppose or reluctantly support the Government bill.

Three different influences have been at work. The first is mere hostility to Mr. Gladstone's Government and a desire to seize every occasion of injuring it and him. It is quite natural that an occasion like this should be seized; and the Opposition would approach nearer to the nature of angels than political partisans do, either here or with you, if they forbore. The second is real religious feeling — the idea that somehow or other Christianity and the recognition of the Deity are bound up with the well-being of the country, or are, as some people put it, part of the common law and ancient constitution of the realm. To strike out of the Parliamentary oath all recognition of the Supreme Being seems to them dishonoring to him, a breach of national allegiance like those recorded of the Israelites in the Old Testament. And, thirdly, there is a strong dislike of Mr. Bradlaugh personally, and a notion that in this matter an undignified concession is being made to him. "After all," they say, "the bill is brought in on his account. If it were not for him, we should never have heard of the matter. Who is he that the nation should legislate expressly on his behalf? and what is the constituency of Northampton that, in disgracing itself by such a choice, it should try to disgrace the whole of England? We do not object to the presence of Mr. J. S. Mill and others like him, when they come in quietly and do not

flaunt their infidelity, but we do object to throwing down the venerable entrenchments of the Constitution in order that this man may march in triumph over them."

These two latter lines of feeling have, of course, told upon those whose hostility was in the first instance due to party motives. They have made the great bulk of the Tory party satisfied that they are doing good service, and heartily jubilant in their resistance. It is now to them an honorable—one may say a patriotic—resistance. And such feelings are shared by many who are not Tories, who are either Liberals or neutrals, and whom party motives would have rather led to support Mr. Gladstone. Confidence in him is strong enough to keep them comparatively quiet; but some blame him, and many more would like to do so. In Scotland, for instance, which is ardently Gladstonian, not only the Presbyteries of the Established Church, whose clergy are largely Conservative, but those of the Free Church also, which are even more largely Liberal, have petitioned against the bill. Of the English Wesleyan Methodists, more than seven hundred ministers are said to have signed to the same effect. The other Nonconformist bodies, and particularly the Congregationalists and Baptists, are with the Government, because they hold that the state has nothing to do with religion at all. Yet even among their members there are a good many who dislike the line which logical consistency forces them to take. So far are men or peoples from being governed by principles, or accepting the conclusions which flow from their previous acts. Four years ago no one would have opposed a proposition to enable agnostic members taking their seats in Parliament to make an affirmation, just as agnostic witnesses in a court of justice do. And now we have a fierce political agitation over this very matter.

The Government, anxious to appease discontent as far as they could, have lightened their ship by undertaking that the bill shall not be retrospective—*i. e.*, that it shall apply only to members hereafter elected, so that Mr. Bradlaugh will have to go to Northampton once more for reëlection. It is thought that by this concession they will secure a few waverers, and that the bill will be carried by a fair majority. However, this will not end the matter. The House of Lords will be strongly tempted to reject the bill, and any considerable defection from the Ministerial ranks will give it a fair pretext for doing so. Y.

EMPEROR WILHELM'S MESSAGE ON BIENNIAL SESSIONS.

BERLIN, April 21.

IN really constitutional countries the person of the monarch is conscientiously excluded from any interference with the political strife of the day. "Le roi," said M. Thiers, some forty or fifty years ago, "règne, mais il ne gouverne pas." With us the Emperor not only reigns and governs, but is also used as a shield for and by his Chancellor, whenever the latter sees fit, to fortify his policy. Thus, on comparatively insignificant occasions, the Emperor is induced to publish a message, in which he explains his, or rather Bismarck's, personal views, or gives advice and direction to the Reichstag on its routine business. People here have nearly become accustomed to these patriarchal dealings, and to the more or less sentimental strains which the Chancellor composes for his master. Thus the last imperial message, which on the 14th inst. was sent to the Reichstag, created little excitement. The solemn form employed was quite out of proportion to the end which it wished to reach.

In my opinion it is a frivolous play, that never ought to have been resorted to. The Chancellor's object is really too transparent. He wants to convince the people that the Reichstag does not fully attend to its work, that it squanders its best time in party quarrels, and that the Emperor must even remind it of its duties. Now, each legislative body is the best judge of the methodical performance of its business. Whatever the shortcomings of the Reichstag may be in other respects, it is an assembly of faithful and industrious public men, who work diligently, without any fee or salary, and who in their majority are opposed to that dilettantism which manifests itself in Bismarck's social-political schemes, such as the accident assurance plan and the compulsory act for nursing and supporting sick workingmen. He insists upon their immediate passage, for he apprehends that the death of the old Emperor, or some unforeseen accident, may deprive him of all the fruits of his endeavors. The Chancellor overlooks the fact that in monarchies, more than under any other form of government, there prevails a continuity in the development of public affairs. In losing sight of this fact he slights the Crown Prince. Besides, he wishes to get rid of the control of the Reichstag as much as possible. Some years ago, as you will remember, he proposed biennial sessions of the Reichstag—a proposal which was of course rejected. Last session he again tried to attain this object. He brought in a budget for two successive years. The Reichstag ignored that for 1884–1885, and adopted only that for the present fiscal year, viz., from April 1, 1883, to March 31, 1884. A few days ago Bismarck sent in a new draft of the budget for 1884–1885, justifying this extraordinary proceeding with the remark, that the present fiscal year having commenced with April 1, it could make no difference to the Reichstag whether it debated the new budget now or later in the session. But in reality, the fact is that the later a budget is taken into consideration (within the legal limits of the Constitution, of course), the better it is, as the several items of income and expense can best be fixed and estimated at the close of the preceding year. The imperial message, therefore, had to advise the Reichstag to pass the budget for 1884–1885 at once, under the pretext that by so doing it would be enabled to devote its time next winter exclusively to the discussion and passage of the Government's social-political bills.

Now, it would have been a very easy thing for the Chancellor to avoid delays and hindrances, if he had not troubled the Reichstag with the reconsideration of measures which had been once rejected, such as the duty on tobacco; if he had not brought in bills which on account of their inadequacy he was finally compelled to withdraw; if he had not detained the Reichstag with crude and badly drafted bills; and, last not least, if he had not convoked the Landtag too late, so that the Prussian Legislature stood and still stands in the way of the German Reichstag. The question now is, how will the latter act? It is a pity that of its own initiative it will not act at all. Under the impression caused by the extraordinary step taken by the Emperor, a great many Liberals proposed to answer the message with an address in which both the open and the sly attacks of the Chancellor should be refuted, and the situation of public affairs represented in its true light. The left wing of the Liberals, viz., the Progressists and Secessionists, were in favor of this policy, but the National Liberals refused to join them, thus making a majority impossible. The united Conservatives are decidedly opposed to an address, as well as the Ultramontanes, who are still waiting for a bid from the Chancellor. He is now the master of the situation, and can dictate his terms. The great majority of his opponents will come over to his side and bide his pleasure. "Why not discuss the budget for 1884–1885?" asks one of them. "To have done so before April 1st would have involved the violation of a principle, but to do so now is a mere matter of expediency; let us therefore enter at once upon the discussion of the budget." "The social-political problems are of such enormous importance," says another, "that the sooner they are passed the better it will be for all." "The Emperor is old," says a third party; "his demands are just; let us comply with his wishes." "We cannot risk the dissolution of the Reichstag," says a fourth party. In short, they almost all, with the exception of the left wing of the Liberals, yield to Bismarck's dictates, and draw the triumphal car of the powerful Chancellor, while the press joins in the chorus.

One of the worst consequences of this servile submission to him is the injury which it inflicts upon parliamentism. Bismarck, imbued as he is with bitter hatred of the middle classes, wishes nothing better than to debase it, and now those who are called upon to represent the people voluntarily help him. Though it is impossible to annihilate the germs of our constitutional life, for the time being it will be crippled and reduced to insignificance by the Chancellor's arbitrary and despotic manner. A dissolution of the Reichstag would have been the lesser of two evils, just as a cheerful war is preferable to a stagnant marasm. Whether willingly or unwillingly, the German Reichstag and the Prussian Landtag, which are once more holding their sessions side by side, have to perform the task imposed upon them by Bismarck, and to submit to his hurrying them through the most important measures. Problems which have exacted the closest study and attention from the scholars and statesmen of all ages neither can nor ought to be settled within a few weeks. The end will correspond to the beginning. † † †

Correspondence.

DUELLING AND CIVILIZATION IN FRANCE.

TO THE EDITOR OF THE NATION:

SIR: Please give us something on the relations in which French duelling stands to French civilization and to civilization in general. The question of Southern homicides is by no means exhausted. The thing had perhaps gone far enough on the line you and your correspondents were travelling, but there are somewhat different points of view from which it might be useful to look at it. *How* are Southern gentlemen, young gentlemen especially, to be brought to look at duelling in all its forms, regular and irregular, as all the civilized world—the French *passim*, German students and army officers, some English army and navy fogies, etc., etc., excepted—look at it? There is not a man alive who would be more pleased to see them brought into that state of salvation than I; but how is the thing to be brought about? Do you not see that we must give up some of our dearest prejudices (are we to be better than Yankees in *nothing*?), and are not our best virtues—at least the distinctive ones—intertwined with these prejudices and traditions?

We are not specially strong at analysis. Self-analysis, deliberately made with a view to reconstruction of one's self, is not the easiest and most popular chemistry in these latitudes. Suppose you attack the problem from the *far* end—start on the other side of the world, or at some

tolerably remote point of time, when somebody else, who has since acquired some sweetness and light, was weltering in this slough. *Quien sabe?* We might be caught in the net of your gospel (it is my gospel, too), in spite of our aversion to philanthropic missionaries, especially when their story comes wafted on the wings of a northeast wind. These winds, while powerfully tonic, have been at times almost too energetic in their alterative action to be quite safe for a patient so chronically diseased as the Southern man benighted. Do not, I beg you, cast us quite away. Though we have done you such despite as my unhappy friend Bierne of the Richmond *State*, and some others, I can assure you that nearly everybody whose opinion you would value at one groat's worth credits you with perfect honesty and kind intention as well.

This scribble has been prompted by the paragraph, "According to *La Réforme Sociale*," etc., middle column, page 341, No. 929 of your excellent paper, of which I have not missed reading three numbers since it was started, eighteen years ago.

Faithfully yours, C. J. HARRIS.

LEXINGTON, VA.

CATHOLIC CASUISTRY.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, Boyd Vincent, whose remarkable letter I was surprised to see in the *Nation* of the 3d instant, had probably never heard of, much less seen and read, Father Ryder's 'Catholic Controversy,' a reply to Dr. Littledale's 'Plain Reasons.' If he had, he certainly could not in good faith have made the declaration that he did, and quoted Dr. Littledale in proof. I am not surprised to know that he "was not able to verify Dr. Littledale's references." If he had had Liguori's writings by him, he would have been able to determine for himself the full extent of Dr. Littledale's disingenuousness in quoting Liguori's teachings in moral theology. Your sense of fairness will, I am sure, allow me to quote from Father Ryder in answer to Dr. Littledale's misrepresentations. Pages 163, 164, New York edition, Father Ryder says:

"Amongst various instances of immoral doctrine St. Alfonso teaches, Dr. Littledale says: (1) 'That the actual assassins of a man are not equally guilty with their instigators, whom he admits to incur excommunication.' (Theol. Mor. iv. 394.) On the contrary, St. Alfonso never attempts to compare the guilt of the two parties. What he says is that the employers ('mandantes') alone are excommunicated because so runs the particular decree of excommunication in question, and we must not extend the penalty beyond the letter. He accounts for the actual assassins not being included in the decree by the very sufficient reason that, in the case contemplated by the decree, the assassins were infidels, and so not possible subjects for excommunication. (2) 'If A murder B, in order that C may be suspected, and thereby suffer loss of any kind, A is not bound to make C any compensation unless he be a worthy person' (iv., 587). Now, there is nothing on the subject of homicide at Dr. Littledale's reference No. 587, but at No. 586 the question is put, and you are referred for the solution to No. 636, and there St. Alfonso maintains that however A may have *intended* the murder to be imputed to C, if in fact he has done nothing to *cause* that imputation, he cannot be regarded as 'efficax causa damni,' and so as obliged to compensation. Of course, the presumption is entirely against the murderer. It is a thousand to one that he has done something to cause the imputation; but if he has not, following the case out *speculative*, you cannot impute to him what, *ex hypothesi*, he did not do. The little clause 'unless the person be worthy' is a gratuitous and absurd importation by Dr. Littledale from No. 587, where a quite other question is discussed, viz., that of the obligation of one who has prevented another by unfair means from obtaining a benefit. He is bound, the Saint says, to compensate in proportion to the expectations frustrated, provided only the intended subject *was worthy of the benefit*. This clause Dr. Littledale has inserted in the question of imputed murder asked in No. 586 and discussed in No. 636, whilst omitting the vital point that A is supposed to have had nothing to do with the imputation upon C beyond creating the fact imputed, viz., the murder, and mentally intending it should be imputed."

Again:

"Dr. Littledale's charges (4) (5) and (6) all fall under one category: St. Alfonso's allowance, under certain circumstances, of equivocation, even supported by an oath. What Dr. Littledale omits to tell us is that such equivocation is only admitted in defence of an undoubted right which the questioner is seriously invading. The right to plead 'not guilty,' acknowledged in our law, St. Alfonso maintains to be, under certain circumstances, a natural right. Where the questioner has a right to the truth, there the equivocation is forbidden; where, as far as the rights of the questioner are concerned, a lie is lawful, then, out of reverence for God's verbal currency, which, to most modern Englishmen, appears fantastic, *literal* truth is laboriously preserved. Where St. Alfonso would allow of equivocation, his Protestant critics would, in all probability, lie clumsily; that is about the difference between them."

I should think it was about time for our intelligent Protestant friends to stop taking the opinions of St. Liguori at second hand. Certainly, they ought to take for granted that a "doctor" of the Catholic Church is not likely to be either a fool or a knave.

H. LIVINGSTON RICHARDS.

WINCHESTER, MASS., May 6, 1883.

UNIVERSITY HONOR.

TO THE EDITOR OF THE NATION:

SIR: The letter entitled "University Honor, North and South," suggested the thought that such confidence between instructor and student is not entirely confined to the southern half of the Union. In our own institution it is not at all uncommon for a member of the Faculty to leave the lecture-room during an examination; students having special examinations frequently work, during the allotted two hours, entirely alone in the professor's study, with books of reference filling the shelves; and generally the instructor attends examinations to explain and direct rather than to detect. There have been almost no cases of dishonesty.

The simple fact is that in the West young men still *go* to college—are not *sent*. The average age seems to be higher than at the East. With our 581 students this year, including normals and those in the sub-freshman classes, it is over nineteen years. Of the present Senior class of twenty, nearly all have done something toward their own support, and at least half of them have been entirely self-supporting. Such do not need watching.

Bodily health and strength, maturity in years and in thought, independence and self-reliance, integrity of character, a longing for knowledge, no dormitories to breed mischief, and sixteen years of radical co-education without even a whisper of scandal—these are the things in which we rejoice. JAMES H. CANFIELD.

UNIVERSITY OF KANSAS, April 30.

TO THE EDITOR OF THE NATION:

SIR: Mr. W. Gordon McCabe, of the University School, has admirably replied to the communications of Mr. Jameson and "X.," in regard to the code of honor in our colleges, but there yet remains the easy task of refuting the insulting insinuation of the gentleman from Delaware.

Mr. Stearns seems so anxious to assign selfish motives for the *esprit de corps* of the students of the University of Virginia, that he imagines that a spirit of rivalry for place makes the men indignant at any unfair advantage taken by one of their fellows.

The mere fact that there is no competition whatever in the University of Virginia, nor in any other institution on the elective plan, that I am aware of, would seem to destroy the gentleman's theory. There is a competitive entrance examination for all who choose to try for the eleven scholarships, but after a man has entered the University, his only motive for study must be his own desire to avail himself of the opportunities. All who attain the required standard of distinction are on an equal footing, and no jealousies can possibly arise. Thus how any particular man comes by his degree is a matter of no moment to his fellow-students, so he comes by it honestly. But when he is found to fall below the standard of a gentleman, then the students consider him unfit to remain, and are selfish enough to deny the society of gentlemen to one who is unable to appreciate its value.

The very fact that a youth knows that he is watched seems to make him desirous of eluding that watch. At the Naval School in Annapolis, where a system of espionage is most rigid, there is probably more cheating than anywhere else in America. But even here it is confined to the men from the North. I have had very good opportunities for observing, and I have never yet heard of a Southern man condescending to such baseness even in that institution, where the majority countenance it. They are frequently the wildest of the set, but they esteem their honor sacred because their training has made the feeling instinctive.

I, of course, agree with "X." that "to err is human," but I believe that the average college student in the South is more free from the meanness of lying and cheating than is usually the case. The spirit of the North is so pushing and business-like that the youth naturally become imbued with the idea that the accomplishment is the main point, and the means of very secondary importance. That they may excel is frequently the one absorbing idea, and they shrink not from the commercial qualities which have rendered the wooden nutmeg so famous to accomplish it. On the contrary, the South is more indolent, and what it lacks in success it makes up in pride. Southern chivalry is proverbial, and the youth of gentle nurture who attend our colleges, having been trained from infancy by the examples and precepts of honor, hate cheating worse than they do Satan, and fear a lie more than their Maker.

Repudiation is indeed a reproach to us, but when one recognizes by what class repudiation was carried, and in what estimation they are held by the honest and upright of the community, our shame should be sufficient punishment. That a majority of ignorant negroes, led by reprobate white men, should have sinned thus, should not be imputed as a crime to the people of worth who deplore it.

I am, with high respect, truly yours, L.

PETERSBURG, VA., May 6, 1883.

TO THE EDITOR OF THE NATION:

SIR: It seems to me unfortunate that the discussion of this question should have commenced with a comparison between the two sections of the country, instead of between the colleges themselves, whether North or South. If any particular college or colleges pursue any system of examinations especially well calculated to develop in the students a keener sense of honor, let the merits of such a system be stated independently of all considerations of locality. The good in the one will not be increased in value because of the defects in the other, while the prejudice raised by the comparison may prevent many from acknowledging or adopting it. They naturally reply, By their fruits shall ye judge

them. You cannot separate university honor from society honor. The moral sentiment of the school will be reflected in the State. Wherever you find the best laws impartially administered, the greatest security for life and property, you may be sure that the students of that locality are being well trained in those elements which make honorable men.

The fact that the students resort to personal violence to show their disapprobation of cheating, does not prove in them a higher sense of honor in the South than in the North. The North believes in peaceful, legal methods of redress. They believe it far better for the college and community to hand over all offenders to the proper tribunals for trial, than establish the hasty arbitrary punishment of personal violence, so liable to commit a greater wrong than the one it would redress. In the legal way a man may not always receive the punishment deserved, yet in the long run each one of us is much surer of having meted out to him the full awards due, both of good and evil. When one's blood is hot, one's mind is not in the best condition to do even-handed justice

I repeat: if either section of the country has any particular merits in its educational system worthy of imitation, let them be stated simply for what they are worth, without drawing odious comparisons, keeping alive the differences of the past. Rather let us each try to see what there is good in every section, forgetting there is a North or South. Time and commerce, with a little help from each one of us, will obliterate the line.

E. G.

Boston, May 7, 1883.

CONVICT INDEXING.

To the Editor of The Nation:

Sir: To my claim that indexing is work worthy of the painstaking efforts of the best and most cultured intelligence, "W. M. G.," in your last issue, offers no rebuttal, and I cannot see the *raison d'être* of his communication. If I do not misread the initials, 'twere strange indeed if "W. M. G." were willing to admit that indexing is only an "humble, though useful, drudgery." But I feel called upon to notice two of his assertions: 1. "'W. I. F.' assumes that convict labor is unskilled and bungling." No, not that; I simply say that it lacks *brains* and *heart*, and that indexing which shows neither intelligence in nor love for the work is fairly called convict indexing. 2. ". . . Errors equally singular have been pointed out in your columns as appearing in 'Poole'" "W. M. G." appears to forget that the indexing in Poole is not mainly the work of its editors. If some of the collaborators, sharing Mr. Browne's heresy, farmed out their share of the work, no wonder if some results of the convict system of indexing appear in the completed work. But I am quite willing that the contrast between the "convict" and the "professional" systems of indexing should stand or fall by the results of a comparison of "Poole" with any of the indexes I cited in my previous note, with regard not to frequency of "errors" (a minor point), but rather to efficiency and practical value as an index. And at the same time I wish to appeal to the candor of "W. M. G." himself, whether this sentence of his as to "errors equally singular" is not an overstatement. I am, etc.,

W. I. F.

Hartford, Ct., May 4, 1883.

Notes.

J. B. Lippincott & Co. have in press a new 'Memoir of S. S. Prentiss,' by Joseph D. Shields; 'Our Young Folks' Plutarch'; and a 'Manual of Microscopic Diagnosis,' by Dr. Henry F. Formad.

'Dynamic Sociology' is the title of a work, by Lester F. Ward, of the Statistical Department at Washington, to be published shortly by D. Appleton & Co. It is a thoroughgoing argument in favor of paternal government, or the largest possible intervention and control by the state.

Richard A. Proctor's 'Mysteries of Time and Space,' consisting of his lectures to American audiences, is announced by R. Worthington.

A 'Dictionary of Boston' is about to be issued by Moses King, Cambridge. The editor is a Boston journalist, Mr. Edward M. Bacon, and the work will comprise some 500 pages. Dr. George E. Ellis furnishes an historical introduction.

Ginn, Heath & Co., Boston, add the following to their recent list of new books: 'The Moral and Religious Training of Children,' by G. Stanley Hall, Lecturer on Pedagogy, Harvard University; a 'Primer of Geology,' by Prof. Nathaniel S. Shaler; a 'Sanskrit Reader,' by Prof. Charles Rockwell Lanman; and 'A Science of Mind,' by President Seelye, of Amherst

Anson D. F. Randolph & Co. will publish immediately 'The Reformation in Sweden: its Rise, Progress, and Crisis, and its Triumph under Charles IX.,' by C. M. Butler, D.D., Professor of Ecclesiastical History in the Divinity School of the Protestant Episcopal Church, Philadelphia.

Mrs. Harriet H. Robinson has brought out a second edition of her well-written 'Massachusetts in the Woman-Suffrage Movement,' originally published rather more than two years ago (Boston: Roberts Bros.). She gives proof of her sincere endeavor by extensive revisions in accordance with accomplished facts, or with the better knowledge of some of her critics, particularly of Mr. T. W. Higginson. But she also fortifies some of her statements which have been impugned, in a supplement to the appendix. The addenda altogether fill 14 pages, and are valuable. Early suffrage literature, the National Woman-Suffrage Association of Massachusetts (a branch of the Stanton-Anthony organization), the State legislation for women in 1881-2, the yeas and nays on woman suffrage in the Legislature (a reactionary record), a table of employments for women, and woman's position in school matters throughout the Union, are the new topics. Between the two editions a law has been passed overcoming the judicial decision against admitting women to the bar; and even as we write, the initial steps are being taken for a constitutional amendment permitting women to be appointed notaries public and justices of the peace. A typographical error of "be" for "by" still lurks on p. 115, line 8.

What most of our juvenile magazines do incidentally is the sole object of *Mastery*, just begun to be issued weekly at 842 Broadway, New York. It is "devoted to home handicrafts, household affairs, nature-study, manual arts, experimental science, rural sports, and other entertaining employments for young people." These departments are fairly represented in the first number, which is well printed and illustrated. The editor's aim is serious, and his selections show tact even if his own writing appears a little too elevated in style for his audience.

Our British cousins are still the inventors for the race in forms of periodical literature. *Merry England* (of which the International News Company are the American agents) is in several respects an original conception. Typographically, it has a broad, open page, without columns, and a pretty innovation is the bracketing of subject and author, as a sort of subordinate running-title, to left or right of the name of the magazine. The aim is novel—to restore merriment to England by comforting and elevating the laboring classes; at least, this appears to be the sum of the editorial "manifesto." Mr. Saintsbury's opening paper on the "Young England Party" serves to connect the socialistic purpose just mentioned with the worship of Lord Beaconsfield, who is commemorated in an etched frontispiece and in some absurd verses on "Primrose Day." Mr. Kegan Paul's "The Rustic of George Eliot and Thomas Hardy," and Mr. Alan S. Cole's "Plea for Health Guilds," are the most important articles in the first number of *Merry England*.

President Andrew D. White's discourse last summer on "The New Germany" is printed in Bulletin No. 4, 1882, of the New York Geographical Society, just issued. We say last summer, because such is our recollection, but, with the slovenliness characteristic of these publications, there is nothing to show when, where, or why the speaker delivered this address.

L'Esplorazione (March-April) reviews a work by Prof. G. Marinelli, of the University of Padua, on the superficial area of Italy, in which the author controverts the figure arrived at by General Strebiltsky (in his authoritative discussion of the European area) as being too small. At the time when the peninsula was under consideration, the maps at the Russian statistician's command were much inferior to those now available, but the upshot of the controversy is that Italy is still so badly mapped that Professor Marinelli calls for a Government trigonometrical survey, and, in the meantime, for a fresh planimetric reduction like that of Strebiltsky's, with the superior advantages of the present day. He thinks Italians ought to blush to be told that after twenty-two years of unity their country is unable to inform the nations what its extent is.

We have received from the Department of Agriculture of South Carolina a map of the State on a scale of ten miles to the inch. The agricultural and mineral resources of South Carolina, its water power, and cotton factories are indicated by conventional signs, and an ingenious coloring of the townships shows the preponderating race as "over 50 per cent. white," "over 40 per cent. white," and "under 40 per cent. white." The coast line includes Wilmington, N. C., and Savannah, Ga. A section from Charleston to Ridgeway shows the strata pierced by the artesian well, 1,970 feet deep, at the former city.

The graphic 'American Grain and Provision Chart' (New York: Wemple & Co.) expresses the crop quantities and their variations by colored areas. In many cases the figures also are retained, and the chart would have been still more serviceable if they had been retained in all. The crops of corn, wheat, and oats for all the larger grain States, the number of hogs packed yearly, and the exports of all the cereal products are thus represented to the eye, and the fluctuations in their respective prices throughout the past five years, both in Chicago and New York, are given diagrammatically with detail and clearness. The data are taken from official sources since 1877. During this quinquennial period Illinois, for instance, has twice led every other State in her crop of wheat, four times in her corn crop, and in oats every year. Kansas has increased her wheat crops by eighty per cent., and her corn crops by sixty-six per cent., since 1879, gaining but a trifle in her oat crop, while this in Missouri has been doubled, and the wheat crop but slightly increased. For the chief grain-producing countries of the world the comparative crops of wheat and corn are shown by a compact diagram. Its unit, representing 1,000,000 quarters (8,000,000 bushels), is a square, colored blue for wheat and red for corn. The American wheat crop shows 62¼ of these

squares, the Indian 42, the French 40, the Russian 26, the Austrian 16½, the German 14, and New Zealand closes the list with one blue square.

Three papers will attract attention in the *American Journal of Science* for May. One is Mr. J. C. Smock's "Surface Limit or Thickness of the Continental Glacier in New Jersey and Adjacent States"; another is Mr. C. G. Rockwood, jr.'s, "Notes on American Earthquakes," chiefly for 1882, but going back also as far as 1879, and so offering some comparisons with those recorded for 1878–81 in the following paper by Dr. Streets, U. S. N., whose field is Japan; and still another is the second part of Messrs. Gray and Trumbull's review of De Candolle's 'Origin of Cultivated Plants.' All true Yankees will welcome this botanic-antiquarian vindication of the pumpkin as indigenous to America. *Asquash*, says Mr. Trumbull, is the plural of the Algonkin word *asq*, and means "green things" or (to be eaten) "immature," according to the Indian practice.

In *Science* for May 4, Mr. W. H. Pickering, carrying out a suggestion made by Professor Brewer, of Yale, constructs the curve of the progress of the trotting-horse in America, and finds that it will cross the mile-in-two-minutes line about the year 1901. He also deduces, from statistics prepared by the same authority, the conclusion that at the date mentioned there will be not far from 10,000 horses in this country which can trot a mile in 2:30 or better. In the news department it is stated that Williams College has secured the right to a table at Dr. Anton Dohrn's famous Naples zoölogical station, and holds it for any fit American worker (not necessarily a graduate of Williams), on condition of getting in return a course of lectures from the beneficiary. This example is valuable for all our colleges, and deserves to be classed with the scheme which gave us the American School at Athens.

Mr. Frederick Billings, who bought in September last the library of the late George P. Marsh, has just presented it formally to the University of Vermont, at the same time making the liberal gift of $75,000 for the erection of a fire-proof building for the college library. Mr. Billings is a graduate of the University.

It appears from the last Johns Hopkins University circular that the Sidney Lanier Memorial Fund amounted to $6,250, of which Baltimore contributed more than two-thirds. It has been put at interest for the benefit of the poet's family.

The "Parish Institutions of Maryland, with illustrations from Parish Records," by Edward Ingle, forms the sixth of the valuable Johns Hopkins University Studies in Historical and Political Science. The author acknowledges his indebtedness for a part of his sources to the rich collection available in the library left by the late Bishop Whittingham to the diocese of Maryland.

A year ago (February, 1882) President Garrett, of the Baltimore and Ohio Railroad Company, bore the cost of certain free lectures by instructors of the Johns Hopkins University to the employees of the road in Baltimore. The subjects were "How Skulls and Backbones are Built," "How we Move," "Fermentation," and "Some Methods of Locomotion in Animals"; and the lecturers, Prof. H. Newell Martin, and Drs. Henry Sewall, Wm. T. Sedgwick, and Wm. K. Brooks. Mr. Garrett has since had these familiar talks printed for gratuitous distribution among his employees, substituting excellent wood-engravings for the lecturers' diagrams.

The ninth year's issue of permanent prints by the Society for Photographing Relics of Old London offers for the usual guinea charge twelve views, to wit: three of Lambeth Palace—the Gate-House, the Great Hall, the Lollards' Tower; an old house in the Palace Yard, Lambeth; two old houses, Aldgate; another, Great Ormond Street, and still another, Queen Square, Bloomsbury; two buildings, Nos. 37, 73, Cheapside; "The Golden Axe," St. Mary Axe; and a shop on Macclesfield Street, Soho. Three of the structures thus commemorated, including the inn, are no longer standing. No one who has enjoyed inspection or, still better, ownership of this invaluable series, need be assured of the worth of the forthcoming instalment. Subscriptions are payable in advance to Mr. Alfred Marks, Long Ditton, Surrey; and back sets are still procurable.

Grave and gay are mingled in the April *Le Livre*, Arsène Houssaye's concluding article on the miserable end of Gérard de Nerval being preceded by Champfleury's account of Daumier as an illustrator of books. Both papers have illustrations in keeping with the tone of each.

Every one knows that the Bostonians are said by the English to say that they speak better English than the English themselves. If it is so, they may soon put forward a similar claim in regard to French; for the language of Montaigne and Molière, or, to come nearer to date, the language of Victor Hugo, appears to be rapidly fading out in Paris, and giving place not merely to the argot which we find in Du Boisgobey and Gaboriau and Zola and his naturalists, or to such coinages as *pschutt;* but to a new dialect composed in part of English words adopted entire, and partly of words which their users fancy to be English. "Reporters," "performance," "high-life," "ball-trap," "gun-club," "handicap," belong to the one class; "matchs," "punch-conference," "shooters-sterling," "waterbull"—which we do not profess to understand—belong to the other. Happily many of these importations or inventions will be as short-lived as a new fashion in bonnets, so that it may, after all, be some time before the French of Stratford-atte-Bowe, or of Ascot and the Derby, will be exactly the same as that of Paris.

The *Deutsche Revue* has published an interesting statistical table on the German universities. The number of students has increased in the last ten years from 15,000 to 24,000. Is this the effect of peace after war? The number of students in our own universities increased in the same way immediately after the civil war. In another series of tables, beginning with 1830, the writer shows that there are rather fewer lawyers, but rather more doctors in proportion, than there were half a century ago. But the great change is in the gain of the faculty of philosophy—that is, the faculty of all that is not law, medicine, or theology—and the loss of theology. Protestant theological students have fallen from 28 to 12 per cent., and the Catholics from 11 to 3 per cent. We could furnish some similar figures in this country, if we were allowed to count independent professional schools and not merely those attached to universities.

—In the April number of the *Magazine of American History*, Dr. J. F. Jameson, of the Johns Hopkins University, has a paper upon "Montauk and the Common Lands of Easthampton." The survivals of land community in New England—and Montauk Point once belonged to New England—present an interesting and important subject of study. Dr. H. B. Adams, of the same University, has examined several instances of it, and our readers will recollect the description of such a system in Nantucket in the *Nation* for January 10, 1878. The Easthampton system is not unlike that of Nantucket, but is less complicated; the territory in question is considerably less extensive, and the number of great divisions (fields) of course fewer. There were five or six of these—great plain, eastern plain, Accabonack meadows, etc.—and a single share, as described in the records, contained one or more allotments in each of these, besides home-lots (two in this case)—ten parcels in all, containing not far from sixty acres. "What is this," Mr. Jameson asks, "if we add the share in the common pastures, but the old Germanic hide, with common tillage abandoned?" The organization of "proprietors," as a distinct body from the citizens of the town, was kept up, as in many New England towns, but ceased to be of importance as early as 1748. There still remains one remnant of the common-land system, in that "it is generally supposed that a direct descendant of one of the old proprietors may permit his cow to feed by the roadside, while a new-comer may not." The land-community of Montauk, an extension of that of Easthampton, continued until 1879. Its history has a peculiar interest from the connection with the Indian population, which is related at some length.

— The May number of this magazine shows, under the new management, a much improved typography, and a noticeable increase in the number of illustrations, both woodcut and facsimile. The opening paper, from the editor's pen, begins a history of Wall Street in the popular style of her 'History of New York'; and it is fair to expect that Mrs. Lamb's predilection for this sort of narrative, with its pictorial antiquarian embellishment, will fix the standard for her collaborators. The most serious article in the present number is Mr. Horatio King's naïf "vindication" of President Buchanan's attitude toward the revolting South in the last days of his servile administration. A large part of it is devoted to proving that the *Constitution*—the Administration organ in Washington—was such an open advocate of secession and treason that it is hard to understand why the President hesitated so long to stop the paper by cutting it off from the Government advertising. The incident, of course, was perfectly characteristic. The rest is neither novel nor exculpatory. We would remind Mr. King that there is a much more serious charge against Mr. Buchanan than the vacillation caused by his life-long associations and unabated sympathy with the secessionists, and that is his consenting to let a member of his Cabinet go down to North Carolina and urge the State to secession. He will find it made on p. 526 of Clingman's 'Speeches,' and it would justify another article in "vindication," especially as the author of it is still in the flesh.

— The eighth volume of the Boston Record Commissioners reproduces the town records from 1700 to 1728, and, like the preceding, has valuable indexes of persons and subjects. The development of the town in this period is witnessed by the increasing solicitude as to fires (for the staying of which, in spite of a few engines, dependence was placed on blowing up houses with powder), as to interments, the depositing of garbage, and the draining of roofs, careless driving in the narrow ways, the perilous playing of certain games in the streets, such as foot-ball and "throwing the long bullet," etc. In 1708 it seemed desirable to define the streets in a permanent record, and Frogg Lane, Flownder Lane, Crab Lane, Mackrill Lane, Cow Lane, Beer Lane, Crooked Alley, Turnagaine Alley, and Paddey's Alley, were duly spread upon the minutes. In the same year need began to be felt of a charter of incorporation; in 1721 the first instructions were given to the town's representatives in the General Court. The first town clock was set up in 1717. In 1723 the Irish invasion first disturbed the municipal mind with fears lest the newcomers "become a town charge, or be otherwise preju-

dicial to the welfare and prosperity of the place." Schools began to multiply, John Foster's executors offering to build a free writing school (1717), and Thomas and Edward Hutchinson giving a grammar school and writing school (1719). A school committee was first proposed in 1709-10, "agreeably to the usage in England, and (as we understand) in some time past practised here," the clergy of course being included; "and at their said visitation, one of the ministers by turns to pray with the scholars and entertain 'em with some instructions of piety specially adapted to their age and education." In 1711 the custom was fully established, and the "Inspectors of the [Latin] school, and ministers of the town" were directed to consider a memorial praying that "some more easy and delightful methods" of teaching might be "there attended and put in practice," as "in some schools of Europe." Dogs, Indians, and mulattoes were a source of much anxiety when abroad. Fines were imposed (1701) on any person keeping "any curst or unruly dog or bitch within this town," to the harm of man, horse, neat cattle, sheep, or tame fowl. In 1728, "ordered that no person shall keep any dog or bitch to go at large within this town of Boston above ten inches high," the same being liable to be killed at sight by any of the inhabitants. The ordinances against Indians and blacks were stringent in the extreme, and cruel penalties betray the customary uneasiness of a slaveholding community. They could not be out after dark, or carry arms or sticks, or go upon the Common on public days; and in 1728, it being "found by experience" that their "buying of provisions in the market place or elsewhere" enhanced the price of provisions, they were cut off from dealing with "the country people." The ninth volume in this precious series will be a record of births, deaths, and marriages up to 1700, and the tenth volume miscellaneous. These are in press, but will be preceded by Vols. xi. and xii., the one a continuation of the town records from 1728, the other the first volume of Selectmen records.

—It is not a long time since botanists were occupied solely in attaching generic and specific names to plants, and it is not strange that that dryest of all human pursuits should still be the chief work of the botanical classroom. There are teachers, however, who know that botany has become a new subject; that questions of development, of the habits and motions of plants, of their means of attracting the insects which fertilize them and warding off those which eat their honey without making any return, of protecting their seeds and at the same time inducing various animals to distribute them widely, are questions of the deepest interest. But such teachers are staggering beneath the weight of all the sciences: in all probability they are still teaching in the winter term that oxygen exhilirates and that carbonic acid is injurious in the air of rooms; and it is too much to expect them to be ready in the spring to direct their pupils in that close observation of living plants which alone makes plants worth studying. Six pages of condensed suggestions, such as are to be found in W. J. Beal's lecture on 'The New Botany' (Philadelphia: C. H. Marot), are enough to enable them to make great changes in their usual routine course. An idea of the usefulness of the little pamphlet before us can be given only by a long extract:

"What insects visit each flower? Study flowers of willows, poplars, and see what attracts insects. . . . Look in flowers of the closed gentian for bumble-bees. . . . What parts of a flower secrete honey? See pæony, buttercups, hellebore, pulsatilla, caltha, poinsettia, and others. Observe stigmas after pollen has been applied and where none has been applied. How does pollen get out of flowers of compositæ, lobelia, etc.? Is nodding any benefit to flowers? Look for appendages to anthers and inside corollas, and study their use. Where are the holes in an anther when at rest and when visited by insects? See many ericaceæ, as vaccinium and kalmia. See whether the weather or time of day affects the supply of honey in any flower. Watch insects on the flowers of melons or pumpkins to see how they behave and transfer the pollen. Cut the petals from some flowers to see if bees or other insects can find them readily. . . . Why do not tendrils coil on their own main stem from which they branch? Observe the tendrils of a squash vine after it has spread out on the ground. Tear it loose and see what happens. . . . Look for liquid or mucilage on roots. Let them stick to glass to see if it is corroded. From spring and during summer examine every few days to see how the bulb of adder-tongues is formed."

It would be difficult to overestimate the difference between the delight which a class of bright young girls or boys would take in such observations as these, and the dreariness of the hours their elders were forced to spend over the analysis of flowers.

—Mr. W. E. A. Axon has given in the *Manchester Quarterly* some new facts in addition to those which we instanced (Nov. 23, 1882) in support of the derivation of *stipulatio* from the custom of breaking a straw and joining the pieces as a sign of a bargain. Mr. Axon quotes the French phrase "rompre le festu avec quelqu'un" (*i. e.*, se brouiller avec quelqu'un) now usually, says Littré, "rompre la paille," and a passage from Udal's translation of Erasmus's 'Apophthegms,' where to "break a straw between them" means to quarrel. But it is not evident what connection there is between the two meanings. In the manor of Winteringham, North Lancaster, "a straw is always inserted in the top of every surrender of copyhold lands; and the absence of this straw would render the whole transaction null and void." In Yorkshire, in the reign of James I., a field was "surrendered and given up with a strawe." In Kingston-upon-Hull a straw is attached to a surrender, and in another part of the ceremony the straw has degenerated into an office ruler, which is offered to the new tenant by the deputy-steward. All these cases, it will be noted, are from the North of England. In the same number of the *Quarterly*, Mr. Earwaker gives a woodcut of a seal of the date 1413, in which a portion of a reed is embedded in the wax. The straw-bargain idea, once started, will perhaps explain more than was expected, as the sun-and-moon theory has cast its light, sometimes illuminating and sometimes misleading, over the whole surface of mythology. Even the phrase, "a man of straw," which we had always associated with children's cheap dolls, or with scarecrows stuffed with straw, is interpreted by Mr. Axon as applying to men who stood in the vicinity of the law courts ready to be bought as a witness, and, as a sign that they were on sale, wore a straw in their boot, just as, according to Dr. Warren, Hariskandra when, after losing everything, he offered himself for sale, placed a straw on his head. So, at statute fairs, farm laborers waiting to be hired displayed a straw as a sign that their labor was for sale.

—M. Lesseps, who is not yet seventy-eight years of age, evidently believes that he has still plenty of time left not only for his work of piercing the isthmus which now separates the Atlantic from the Pacific, but also for that of creating an inland sea in Northern Africa. The report which he delivered a few weeks ago before the Paris Academy of Sciences on his exploring mission, in the interest of the latter scheme, through the desert region of the Tunisian and Algerian *shotts*, or salt marshes, is as enthusiastic a document as he ever presented in connection with his so grandly executed Suez Canal enterprise. The shotts—mostly very extensive bodies of stagnant salt water, below the level of the Mediterranean—form an almost unbroken chain, about two hundred and fifty miles long, from the mouth of the Wed Melah in the Gulf of Gabes, a little north of the Tunisian town of the same name, to the neighborhood of Biskra in Algeria. The feasibility of the plan for inundating and feeding this entire basin through a channel at the Tunisian coast and some cuts in the interior, was acknowledged by a commission appointed by the French Government last year. The commission also found that the work would be durable, if not perpetual; that it would improve the climate, render unhealthy regions salubrious, and thus promote colonization. They were, however, divided in their opinions in regard to the military and commercial advantages to be derived from the enterprise, and found it difficult of execution and consequently very expensive. The commission studied the scheme in Paris; Lesseps went down to Africa, accompanied by specialist engineers and experienced contractors, and "all have come back quite convinced." They found the estuary of the Melah, the beginning of the inundating canal, to offer a part admitting of easy excavation, and fitted to form a well-sheltered port. The navigation of the canal would be facilitated by its straightness. There would be no obstacle to anchoring in the inland sea, owing to a total absence of rocks; vessels would thus everywhere be safe. All the territory on the north banks of the waters, from Gabes to Biskra, could easily be rendered fertile. Borings and natural wells proved the existence of subterranean water. The land recovered for cultivation would afford ample remuneration for the capital and expenditures. It would evidently be sufficient to cut, in the alluvial parts, a canal averaging twenty-five or thirty metres in breadth, which the current itself would widen. The calcareous rocks at the base of the Gabes bar would offer little inconvenience, and in compensation would furnish material for the construction of piers, locks, etc. The rocky heights at Kriz, separating the great shotts Faraun and Sebkhat el-Gara, which frightened the Government commission, could be flanked on the southwest at Tozer, where the soil is sandy. The canal could be cut in five years or less time, and ought not to cost more than 150,000,000 francs. The impression produced by the report is said to be very encouraging.

—M. Ferdinand Brunetière, whose 'Études Critiques de la Littérature Française' we referred to on their publication, is the regular literary critic of the *Revue des Deux Mondes*, in which publication he has been leading a campaign against the naturalists, MM. Flaubert, Zola & Co. He has now gathered a dozen of his essays on this subject into a volume, 'Le Roman Naturaliste' (Paris: Calmann Lévy; New York: F. W. Christern), which deserves to be read by all who are interested in the changing phases of contemporary fiction both in France and in England. M. Brunetière is a sound critic, although he is dry and hard and unsympathetic, and a good fighter, and there is no doubt that he punishes his adversary severely. He finds that M. Zola has used Ben Jonson, or at least as much of him as he could find in the footnotes of M. Taine's 'History of English Literature,' and that he borrowed from the same source certain bits of Otway's 'Venice Preserved' to deck out his modern 'Nana.' He joins issue with Flaubert in two vigorous chapters, one on the 'Trois Contes' and the other chiefly on 'Madame Bovary.' But where M. Brunetière's book is of special interest to us is in

the acute comparison he makes between the French naturalists and the English. As his earlier volume reveals, M. Brunetière is at home in English literature, although he shows the curious limitations of a foreign critic when he pays serious attention to the novels of Miss Rhoda Broughton, as if at all typical. Perhaps the best essay in the book is on "English Naturalism, a Study of George Eliot," in which he contrasts what the French naturalists declare they are aiming at with what George Eliot actually accomplished. He makes a subtle criticism on the different way in which the 'Mill on the Floss,' for example, affects us from the way 'Madame Bovary' affects us, to the effect that while the Frenchman sets down cruelly what he saw, deliberately seeking the grotesque and the trivial, the Englishwoman had a fellow-feeling for her characters and did not take sides against them. M. Brunetière concludes that (with two or three exceptions, M. Daudet's 'Jack' for one) the French naturalist has not the needed sympathy with his characters, while the English naturalist (with two or three exceptions, notably 'Jane Eyre' and 'Silas Marner') has no feeling for form, no constructive faculty, which the French have in a high degree. He especially contrasts the disjointed structure of the 'Mill on the Floss' with the symmetry of action of 'Madame Bovary.'

—The first half of the third volume, or "Jahrgang," of the *Zeitschrift für die Alttestamentliche Wissenschaft*, edited by Professor Bernhard Stade, of the University of Giessen, now lies before us. The learned editor, though working on his 'History of Israel'—two parts of which have already appeared in Oncken's 'Allgemeine Geschichte in Einzeldarstellungen'—presents in this number, too, several contributions of his own, including further remarks on Micah and a lengthy criticism of the Bible texts concerning the buildings of Solomon. The most important contribution is Georg Hoffmann's string of remarks on Amos. Dr. Samuel Adler, of this city, offers a novel and interesting view, which he critically establishes, of the original signification of the Day of Atonement, as reflected in the oldest references to it in the Scriptures. He handles the Pentateuch with the same lack of reverence for old texts and traditional views to which the readers—we ought perhaps to say, the students—of the *Zeitschrift* are accustomed. Karl Budde and Wünsche are among the other writers for this volume, the contents of which promise to be as varied as those of the first two, while it may not present any critical dissertations as elaborate and important as the editor's examination of Deutero-Zechariah and F. Giesebrecht's treatises on the "Hexateuch" (Pentateuch and Joshua) and the Psalms, which appeared in the *Zeitschrift* of 1881–2. The standing of this publication is now fully established: as a periodical exclusively devoted to Old Testament studies it has no rival. The editor adheres strictly to his plan of giving only original communications, for which the authors alone are responsible, and excluding reviews and reports. He gives, however, ample bibliographical lists of independent or journalistic productions within this field, in which he is aided by the collections of the Deutsche Morgenländische Gesellschaft.

RECENT NOVELS.

Dust: a Novel. By Julian Hawthorne. [*Our Continent* Library.] Fords, Howard & Hulbert. 1883.

A Transplanted Rose: a Story of New York Society. Harper & Bros.

No New Thing. A novel by W. E. Norris. Author's edition. [Leisure Hour Series No. 148.] Henry Holt & Co. 1883. The same. Harper's Franklin Square Library.

My Trivial Life. By a Plain Woman. Part 1. Spinsterhood. Part 2. Meum and Tuum. G. P. Putnam's Sons.

Fanchette. By One of Her Admirers. [Round-Robin Series.] Boston: James R. Osgood & Co.

The Gentle Savage. By Edward King. Boston: James R. Osgood & Co.

The Virginia Comedians; or, Old Day in the Old Dominion. By John Esten Cooke. D. Appleton & Co.

Geraldine Hawthorne. By Beatrice May Butt. [Leisure-Hour Series.] Henry Holt & Co.

The Admiral's Ward. By Mrs. Alexander. [Leisure-Hour Series.] Henry Holt & Co.

Who is Sylvia? By A. Price. Harper's Franklin Square Library.

A Chelsea Householder. [Leisure-Hour Series.] Henry Holt & Co.

A Story of Carnival. By Mary B. Hoppus. [Leisure-Hour Series.] Henry Holt & Co.

But Yet a Woman. By Arthur Sherburne Hardy. Boston: Houghton, Mifflin & Co.

Stray Pearls: Memoirs of Margaret de Ribaumont. By Charlotte M. Yonge. Macmillan & Co.

MR. HAWTHORNE has set his face, in theory and in practice, against the modern "analytical" novel, and 'Dust' certainly has as little analysis in it as any story with which we have met for some time. It is a romance made up of materials a good many of which form part of the common stock of all writers of fiction. The scene is laid in England, and the period is that of Tom Moore, who is one of the subordinate characters. There is a wicked banker who comes to grief, and a wicked and beautiful woman who fares no better, and a tale of true love which encounters obstacles and in the end overcomes them. The interest of the story centres in the banker, who resorts to the dangerous device of propping up his failing business by the aid of a private gambling establishment, with the result which most bankers would anticipate from such an experiment. He is saved from ruin at an early period of his career by the generosity of a business associate, who becomes a wanderer on the face of the earth, without home, name, or friends, in order that he may be spared his deserts. This self-sacrificing man confides his daughter to the care of the banker, and has, at the opening of the tale, disappeared into space, to return many years later and find, what he might have expected, that the banker is no better a man than before, and that his daughter's moral education has not been a success. A murder and many other complications follow, all of which are perhaps natural enough *sequelæ* of such a plot; but the foundations on which the story is laid are improbable. Here a little analysis would not have been out of place, at least by way of preparation for construction. Mr. Hawthorne does not take much pains to give a realistic reproduction of English society in the time chosen for the action of his novel. His characters talk a language from which he is not careful enough to exclude modern phrases and expressions, and these sometimes have a queer sound.

In the "international" novel, of the kind written by Mr. James, we are enabled to see ourselves as the Europeans see us, and vice-versa. 'A Transplanted Rose' is a sort of inter-State novel, in which the Western barbarian is shown against the shining, polished background of New York society. Miss Rose Chadwick is the barbarian, and the need of her transplantation and careful culture in the soft, mellow social atmosphere that makes New York so dear to us all, is seen at once when we mention the fact that she appears "in our midst" in green gloves. With the story as a story we have no fault to find, but Western girls will not be apt to like it, or admit that wearing green gloves is a local peculiarity of theirs. It is certainly open to question whether a girl who thought green gloves proper could be ever thoroughly civilized. It seems to us to show a nature incapable of social amelioration. We should, in fact, select it as the plainest possible outward sign of primitive and ineradicable savagery, like the nose-ring of the African girl. If the Western girl is what we take her to be, she will resent the imputation of such a habit; and it is noticeable that the volume is published anonymously, as if the author were not prepared to face the consequences of a publication so unfair to an important section of our common country.

Mr. Norris, in 'No New Thing,' falls far short of the success he achieved in 'Matrimony'; and, judging by internal evidence, we should be inclined to believe it the earlier novel of the two. It contains considerably less of that nice observation of the weaknesses of human nature with which the other was so filled, and there are no characters in this novel so entertaining in their different ways as Varinka, or Freddy, or the amiably cynical Mr. Jervis. The story revolves about the career and fortunes of an Anglo-Italian boy, who is adopted by the kind-hearted heroine, and the analysis of his pleasure-loving, superficial character is very good. It is his fate, and leads him a strange dance, through failures, and misfortunes, and mistakes, and a good many lies, to a queer end. The contrast of his selfish, facile disposition with the stronger and simpler English characters with whom he is thrown in contact is very well drawn, as is the contrast also between his subtle half-Italian intellect and their coarser mental fibre. The story is very natural, and it is hard to point out any way in which it could have been improved; but the chief difficulty with it is that it contains no character except Philip who rises much above the level of commonplace novel types, while the dissection of Philip, clever as it is, we follow with an interest chiefly made up of curiosity. 'Matrimony' was of course a success which Mr. Norris would find it hard to repeat.

The first part of 'My Trivial Life' is worth reading; the waste-basket is a suitable place for the second. "Spinsterhood" is a sketch of the sort of which 'Cranford' is the inimitable best. The characters are from county families of moderate wealth—on the one side, the ladies whose lives are an edifying example of mingled piety, charity, and fashion; on the other, the really strong figures of the unworldly, but intensely narrow, natures, who permit themselves but one idea, who move in but one groove, until the ideas become tyrants, and the groove a prison. It is probably only another illustration of the difference between the power of observation and of imagination that a writer who can draw so remarkable a figure as the stern, self-centred Aunt Jane, can do nothing better in the way of a story than the crude and hackneyed sensationalism of "Meum and Tuum." The wife has lost all the cleverness of the spinster who had her little hits always ready—*e. g.*, "Arcadia is the only country place one hears of where everybody speaks to everybody else." "Small places and small cliques have a perspective of their own." "The worst kind of solitude is not to be alone by yourself, but alone with another person." "There is a certain satisfaction in doing your duty, but unfortunately it does not

prevent you from being infinitely bored." She does equal justice to Aunt Jane, "who might think things wicked that were not very wrong, but never thought what was wrong was right"; to the "woman to whom church millinery must ever be a delight, a sort of sanctification of her own millinery instincts"; and to the ladies of fashion — the admirable Catharine, who has tatted an aisle to a church, and "thinks her everlasting tatting a visible sign of spiritual energy," and the Lady Arabella, who cannot afford suppers, and so "goes in for the cheap and charitable." "You must have young men for the ladies if you have not piety."

'Fanchette' is an actress, "with straw-colored curls that resembled a golden nimbus." Her warmest admirer calls her "a perfect lady" and "a diabolical little chatterbox." All readers know what to expect of a book that opens with "elegant equipages" and an "elegant lady" receiving her guests, and another "elegantly-dressed lady" sitting before the fire. After thus much, it does not seem necessary to inquire as to the probability of the seclusion of a priest of Buddha and his granddaughter in a splendid country-house on the eastern shore of Maryland.

It seems a pity that handsome paper and type should have been wasted on such a marvel of improbability as 'The Gentle Savage.' A Cherokee, a "brave" who has "a blood feud" in his family, but is nevertheless quite subdued to "social elegance," goes to Europe, on behalf of his tribe, to remonstrate with an American banker there against a railroad which threatens their territory. He saves the life of the banker's daughter, and falls in love with her. As he departs without a declaration, she becomes ill. Her father sends for the Cherokee and implores him to save his darling. The Indian returns West, and is followed by the lady, who arrives just in time, first, to save *his* life from his foe of the "blood feud," and then to rescue him by her eloquence (through an interpreter!) from the anger of "the braves" when they discover his entire desertion of their cause. It is a whimsical suggestion that she is paying back the debt to Pocahontas, but one cannot help it. Intermediately, the Cherokee is involved with Nihilists, whose cause is made one with the Indians', and there is an artist—a new Liszt—who is blown up in the summer-house of his hostess for revealing awful plots of assassination. What with the extravagance of the incidents themselves and the farcical way in which they are combined, the force of absurdity can no further go.

The reprint of 'The Virginia Comedians' brings out very distinctly the great difference between the novel of the first half of the century and the novel of to-day. No one would think of bestowing so much pains and such literary ability upon a similar subject now. A crowd of personages hurry through a succession of striking incidents, imagined to illustrate the splendor and picturesqueness of the old régime in Virginia on the eve of the Revolution. Such a plan, on so broad a scale, is too much for even 600 pages, and there is no space left, however much the author might wish it, for that development of character through the action of the story, or the analysis of motives, which is more and more the chief interest in the best fiction. Not what is done, but how it is done and why it is done, are the questions both of the novelist and his readers.

'Geraldine Hawthorne' is ostensibly another story of the Revolution, but in fact it is one of those that belong to all time. It is of the faithful love of a woman clinging to a man who has brought shame upon all who love him. For her sake he escapes the punishment he deserves, and in her devotion he finds the sole hope of his later life. There is only so much history as may supply the motive and the circumstances of the treason and its pardon. The book is wholly one of emotion—the very reverse of the preceding. There is not much local color, but a slight archaism in speech gives a remoteness which, combined with a graceful style, suggests a Gainsborough picture.

If 'The Admiral's Ward' has less striking figures in it than some of Mrs. Alexander's earlier novels, it seems, nevertheless, to be the most even of them all. There is a fineness about the whole life in it that was sometimes missed heretofore. It is the old story of the gain and the loss of an inheritance, but imagined with motives so unusual, and situations so unexpected, as to give it positive originality. The incidents are simple, almost homely, but every-day life is transformed to something of poetry by the patience of the heroine in her humble duties, and by the beautiful, enduring affection of the two women of whom love and fate might have made enemies. The "Admiral" and Mrs. Crewe, "who does not take lodgers, but only consents to receive a gentleman or two, personally recommended," are of the best of the whimsical oddities with whom Mrs. Alexander enlivens her tales—best, because drawn with more reserve. The plot develops so quietly that there is no suspicion of the catastrophe until the last moment. It startles, but it proves its own fitness, for it makes the reader at once turn back to reread the story in the light of it. Too often the end of a novel is only like the solution of an enigma. The tangle untwisted, one cares no more, but, as in this case, real skill will lead up to a result which impels us to turn back and judge of character by our knowledge of final deeds. It should be observed that the successful lover of the heroine is not at all the hero of the story. It is less and less frequent that both of the ultimate pair of lovers are in the first plane of the picture.

There is another "bar sinister" in 'Who is Sylvia?' and so much misery descends upon her lovely head that it would be well to read the last chapter first, and then with a free mind to enjoy the always charming English country life from which the book is made up. Sisterhoods afford new ground for the novelist, and the scenes in St. Mary's Refuge show them at their best and worst.

'A Chelsea Householder' is Muriel Ellis, a girl of just that gentle independence of spirit which is so much more attractive than positive softness (if that is not a paradox) or outright strong-mindedness. She is enough of an heiress, too, to play very prettily at being an artist. The hero is a clergyman of Broad Church affinities, a puzzle to his own kindred. "Really," says his cousin, "when a good man—and I suppose Steeny is better than most—takes an obstinate fit, he's worse than any one." While the book is not of great power, it has an individuality quite marked—and by this is meant something different from originality. It takes its own way unmindful of what one might expect. Muriel lives in Cheyne Walk, and the picture of Chelsea is unmistakably from the life, but there is not the slightest consciousness of the Kingsleys, the Carlyles, and George Eliot, who have made that suburb classic ground. Yet the river flows on through the story, under the changing lights, now weird, now tender, now splendid, as we knew it in 'Daniel Deronda.' The descriptions of country landscape are singularly happy, for none of them are done with direct intention—only a bit here and there of the picturesqueness of the New Forest or the wide monotony of Norfolk, as the simple incidents of the story require.

'A Story of Carnival' is not equal to the other Leisure-Hour volumes upon the list, though it moves with a brisk alertness that interests the reader in incidents more ingenious than probable. The women are the merest shadows.

Not so with the gracious creatures to either of whom the title 'But yet a Woman' might be applied—Renée, the delicate maiden, with all the fearless ease of innocence; Stephanie, the woman of the world, "of a strange confidence and naturalness, blended with a dignity that was almost imperious." The other characters are not unfamiliar: the elderly Frenchmen, with their nightly game of picquet, the priest, the polished journalist, the young doctor; but it is only in the finest and choicest of French work—the best of Cherbuliez, for instance—that they are presented with anything like the delicacy to be found here. The story is strong and original withal. The reader will find all his conjectures as to plot, not disappointed, but contradicted and surpassed. There is no smiling Circe to deplore, but a woman, noble, though sorely tempted, who could strike the death-blow to her own happiness rather than win it at the price of shame and treachery. The Spanish episode, the hapless fate of Felisa, is a model of its kind, telling a tale of guilty passion not for the sake of excitement, but for the Nemesis. It were a pity to forestall the story, but without doing so it is not easy to give it the praise it deserves. The style is exquisite in its limpid clearness, and, while we admire the beauty of description and the power of characterization which gives us living human beings, not critical analyses, we are inclined to put foremost the conversations. To make people talk as they do in the *salon* of M. Michel is a rare success. We believe Mr. Hardy has before this made himself known in the field of exact science. It is an old theory that no man succeeds there without imagination. That power by which the invisible is made real to the mind's eye is as much at home in the abstractions of higher mathematics as in the mysteries of human hopes and fears.

In 'Stray Pearls' Miss Yonge takes up again the fortunes of the family to whom the 'Chaplet of Pearls' belonged, and narrates many of the incidents of the Fronde in the bright, clear way which has long made her books of history the delight of the school-room. Mme. de Bellaise is the granddaughter of that Mme. Eustacie who kept the cows, and knitted like a peasant-girl while a fugitive in the Bocage, after her brilliant child-marriage. Born of an English father, and married to a French marquis, she is alternately an attendant upon the exiled Henrietta and the companion of *la grande Mademoiselle*. In her old age she writes the history of herself, and her brothers and sisters, for her grandchildren. Such a chronicle becomes in Miss Yonge's hands a picture of character and manners at once instructive and interesting. There could be no better introduction to the fascinating memoirs of that time, nor one more likely to create a taste for them. Indeed, one might read long in those same memoirs without forming so clear a conception of the general current of events as may be obtained from the very brief sketch in the preface to this story.

TWO MASSACHUSETTS TOWN HISTORIES.

History of Hardwick, Massachusetts. With a Genealogical Register. By Lucius R. Paige. Boston: Houghton, Mifflin & Co.

Ancient Landmarks of Plymouth. Part 1. Historical Sketch and Titles of Estates. Part 2. Genealogical Register of Plymouth Families. By W. T. Davis. Boston: A. Williams & Co.

It will, we think, be admitted that town-history making is not a profitable branch of literature,

Small as the editions of works of this class usually are, the public demand for them is even smaller, and oftentimes the printers' bills are in excess of the receipts from sales. Moreover, they bear upon the face marks of toilsome and long-continued research fairly amazing to the beholder. Take the books under notice as an illustration. Here are 550 solid pages of genealogical matter—records of the births, marriages, and deaths of the inhabitants of the towns to which they severally pertain, from first settlement down to the year 1880. The time spent in preparing such registers can be appreciated only by the few who have been engaged in similar undertakings. Without the hope of gain, or the expectation of fame, what is it that encourages the local historians in their laborious performances? There is a "sublime pleasure," as one has expressed it, "in walking over the ground cultivated by former generations, in reviewing the records of their deeds, and in examining the monuments of their industry, wisdom, and piety." That "sublime pleasure" may be their sufficient reward. We trust it is.

At eighty-one years of age Dr. Paige has committed to the press the history of his native town of Hardwick. In gathering materials for this work, he has been engaged, off and on, ever since the days of his youth, and what was originally designed to be his "first literary labor" has become "absolutely the last; for at the age of eighty-one years it is altogether too late to commence another task requiring much time for its completion." The book has been printed, in accordance with a vote of the town, at the town's expense, the author, "for his labor of love," being permitted to retain fifty copies, notwithstanding his "willingness to furnish the manuscript without any compensation whatever."

The territory of Hardwick, in colony times, was the favorite hunting-ground of the Nipmuck Indians. In 1686 it was purchased of the aboriginal owners by Joshua Lamb and his associates (all men of consequence residing in the town of Roxbury) for the sum of twenty pounds, "current money of New England." The conveyance covered a tract twelve miles long by eight miles wide; and this transaction was not the only land speculation which engaged the attention of Mr. Lamb and his co-partners, for we find that the same grantees, at about the same time, obtained an Indian deed for eight miles square of land, the site of the present town of Leicester, and this for the "consideration" of fifteen pounds. The district of Hardwick—Lambstown was its earlier name—although purchased in 1686, was not entered upon for settlement until about forty years afterward, and was not incorporated as a town until 1739, when it was christened Hardwicke, in honor of Philip Yorke, Lord Hardwicke; but how or when it lost its final letter has not been ascertained. Dr. Paige's work covers the whole ground—"Indian History," "Civil History," "Ecclesiastical History," "Military History," and "Literary History," and traces the progress of the town according to the indications of these several headings. Names of the men who went to the wars fill many pages. It is a grand roll, for Hardwick furnished its complete quota of soldiers for the French and Indian war, the Revolutionary war, and the war of the great Rebellion. The "last war" with Great Britain was so unpopular that only one volunteer could be procured in all the town, and "resort was had to the draft." In the insurrection of 1786–87—commonly called Shays's Rebellion—a majority of the men of Hardwick sympathized with the insurgents, and many of them took up arms against the State Government. Dr. Paige believes "they were, probably, as excusable in their resistance to the Government now as they formerly were in resisting the authority of Great Britain"—a most awkward compliment to the Revolutionary heroes. He has, however, a good word for both sides: for the insurgents, "who sought relief by the means which had formerly been so effectual," and for the supporters of the Government "in its terrible struggle to maintain the supremacy of the law." John Wheeler, one of the leaders of the rebellion, and an aide de-camp of Shays, was a citizen of Hardwick. He was convicted of treason, and sentenced to be hung, but received pardon, "full, free, and ample." General Warner, a commander of the forces in the suppression of the rebellion, was also of Hardwick.

Dr. Paige dwells in affectionate terms upon the character and services of Timothy Ruggles, of Hardwick, one of the most prominent citizens of Massachusetts, and indeed of New England, in both civil and military affairs. "As colonel and as brigadier-general in the French war, as Representative and as Speaker of the House, as President of the Congress at New York, and as Chief Justice of the Court of Common Pleas, he was equal to his position and adorned it." In Hardwick, "Brigadier" Ruggles, as he is usually styled, was looked upon as a public benefactor, for he had "contributed more than any other person to the agricultural prosperity of the town, by improved methods of tillage, the introduction of choice breeds of cattle and horses, and the culture of engrafted fruits." He is said to have kept thirty horses, remarkable for their size and beauty, a deer-park of twenty acres, and a pack of hounds for the amusement of his friends. John Adams wrote of him: "Ruggles's grandeur consists in the quickness of his apprehension, the steadiness of his attention, the boldness and strength of his thoughts and expressions, his strict honor, conscious superiority, contempt of meanness, etc. People approach him with dread and terror." It seems to have been generally admitted that he had no superior in the province, and that, had he attached himself to the "right side," he would have been one of the foremost characters of the Revolution. But he was a loyalist, and steadily adhered to the measures of the British ministry. "He had eaten the King's bread, and he would not lift up his heel against him; he had repeatedly sworn allegiance, and he would not violate his oath." His five farms, with other property in Hardwick, were confiscated, and, refusing to take up arms on either side, he retired to Nova Scotia, "sat himself down in the wilderness, and began to cultivate a new farm, which he carried on with wonderful perseverance and success." In the act of September, 1778, forbidding the return of refugees (without permission) "on pain of death without benefit of clergy," his name stands near the head of the list, in the most conspicuous group. "For much the greatest part of his life General Ruggles ate no animal food and drank no spirituous or fermented liquors, small beer excepted, and enjoyed to his advanced age almost uninterrupted health." He died in Wilmot, N. S., August 4, 1795, in the eighty-fourth year of his age.

Jonathan Danforth was looked upon as the most "unmanageable and pugnacious" of Brigadier Ruggles's political adherents. He was the keeper of a country store in Hardwick, and incurred public odium by dealing in tea while it was contraband. In 1775 the Committee of Correspondence voted to publish him to the world as opposed to freedom, recommended that no one should deal with him, and determined that he should not leave the town without permission. In the following year the Committee of Correspondence directed the sheriff to imprison Mr. Danforth in the common jail, and imprisoned he was, "among prisoners of war, thieves, etc.," the sheriff being forbidden to take bail. Danforth was not easily kept down, and took his grievances into the courts, where he recovered his liberty and "the tea before mentioned," and was not quieted until the General Court, by a resolution, put a stop to his "expensive and perplexing lawsuits." Eventually he secured the respect and confidence of his fellow-citizens, and served them as selectman, assessor, and tax-collector. Touching his treatment by the Committee of Correspondence, he sometimes "expressed his opinions in language more forcible than elegant." Dr. Paige relates the following anecdote:

"In 1831, when he was eighty-nine years old, Mr. Danforth recounted to his pastor, Rev. Mr. Goldsbury, some of his early trials and sufferings. Among other grievances, he said the Committee of Correspondence prohibited him from leaving his own farm, except to go to meeting on Sundays and to attend funerals. 'One day,' said he, 'a member of the Committee informed me there was to be a funeral, and inquired whether I wished to be present. I told him I always liked to go to funerals, and I hoped I might live to attend the funerals of the whole Committee; and I have done it—I have lived to see every divil of them under ground.'"

Mr. Davis modestly informs his readers that his book is "not a history of the Old Colony nor a history of Plymouth," its "matter lying for the most part outside of the domain of history." His introductory narrative will, however, pass for a tolerable history of the colony and of the town. Starting with the Pilgrims in Old England, it takes them to Holland, and thence across the ocean to Cape Cod and to the very Rock of Plymouth, and goes on to trace the rise of a town which fills a most conspicuous place in the annals of America; and though the leading facts have been printed unnumbered times before, they still, under Mr. Davis's handling, give out a certain odor of freshness. The major part of the volume is devoted to the abstracts of titles of Plymouth estates and the genealogies of Plymouth families, and herein the compiler may well claim credit for much "faithful labor and an honest purpose." A map of Plymouth in 1701, the result of Mr. Davis's own investigations, exhibits the streets existing near that time, with the houses of about two-thirds of the inhabitants and the names of their occupants—highly useful in connection with the abstracts of land titles. A clear defect, to our view, is the omission from the genealogical pages of the month and day of the month in dates—only the year of a birth, marriage, or death being retained. The abstracts of titles show a similar defect. Most of Mr. Davis's subscribers will wish he had worked upon a different system.

"Burial Hill" makes the subject of an interesting chapter, and has a map delineating the ancient graves. The oldest stone bears the date of 1681, and Mr. Davis doubts if the Hill was occupied for burial purposes before the close of King Philip's war. The founders of the colony lie buried in unknown graves. From the pages which describe "Mills and Manufactories" we find that the "first meeting-house bells," the "first cut-nails and tacks," the "first cannon and cannon balls," the "first machines for carding, spinning, and roping," etc., etc., are to be credited to the Old Colony—showing that the colony "has always maintained that rank in enterprise and skill which of right belongs to the first settlement in New England."

Throughout the work "ancient dates are made conformable to the present style." Mr. Davis's chronological plan is simple enough, and he carries it out by adding ten days to the calendar date of events occurring before 1752, irrespective of the events having happened in Holland (where the New Style was in vogue) or in England,

And here Mr. Davis often comes in conflict with the best authorities. A typographical error usually corrects itself, and is unimportant in comparison with a systematic error. We do not hold Mr. Davis responsible for making the date of Governor Carver's death (p. 25) "April, 1620," nor for the arrival of the *Fortune* (p. 27) "19th of November, 1621," and again (p. 129) "9th of November, 1621." These are "slips" to perplex every writer. What we complain of is that he takes undoubted New-Style dates, and by an addition of ten days makes them fit no style whatever. Many serious errors in the opening chapter are traceable to this false system of reckoning. On page 4 we read that "on the 19th of April, 1609, a twelve years' truce was concluded" between the United Provinces and Spain, while, in fact, by the New Style, the truce was concluded on the 9th of April. King James's patent for dividing Virginia into two colonies was dated April 10, 1606, and not "on the 16th of April," as Mr. Davis (p. 6) gives it. On the same page (6) Mr. Davis says that Sir Edwin Sandys was chosen treasurer and governor of the Virginia Company "May 7, 1619," and (p. 11) "we know that Sir Edwin Sandys was chosen treasurer and governor of the Virginia Company May 7, 1619." What is "known" is that Sir Edwin was chosen to these offices on the 28th of April, O. S., and that the 28th of April, O. S. (in 1619), corresponds to the 8th of May, N. S. The letter of Samuel Fuller and others to Carver and Cushman (p. 17) was not "dated June 20," 1620, as Mr. Davis makes it, and is dated June 10, N. S., and is so given in Prince's 'New England Chronology,' and also in Mr. Charles Deane's edition of Bradford's 'History of Plymouth Plantation.' Errors of this class in the 'Landmarks' are almost "too numerous to mention."

The book is exceedingly well printed, and has a complete index to Part 1. For Part 2, the Genealogical Register, no index was necessary. The List of Subscribers affixed contains the names of many prominent gentlemen in various States of the Union.

Dante Gabriel Rossetti. A Record and a Study. By William Sharp. London and New York: Macmillan & Co. 1882.

THIS volume contains a brief but sufficient biography of Rossetti, a descriptive catalogue of nearly all his pictures, and a critical account of each of his poems, of which the principal ones are treated with great detail. It is what it purports to be, "a record and a study," and in the case of Rossetti, whose genius has, in England at least, that charm for younger men which enforces study, such a book is of especial value; but this painstaking and elaborate method of criticism necessarily fails to give the ordinary reader a clear impression, although what is here set down affords ample material for a reflective man to form for himself an adequate idea of Rossetti's artistic and poetic work, and of the predominant characteristics of his mind. We are the more sorry for the author's omitting to summarize his own views, because what little general criticism there is, here and there, is remarkably straightforward, just, and effective, and especially because it is free from the prepossessions of the æsthetic school. Thus, in an incidental way, he draws a portrait of Rossetti, the lineaments of which he says any one could see in 'The House of Life':

"Those who had never met or seen him, or who had never heard of his personality, would discern a man with an acute, even painfully acute, sensibility, with a passionate love of the beautiful, with a habit of morbid introspection and a tendency to succumb to morbid impulses, with an occasional passion and vehemence, startling in its suddenness, and, while of an essentially spiritual nature, forced by bent of genius into a poetic expression wherein sensuous images and symbolism are preëminent."

This single sentence has the compactness of final criticism; it describes all that is essential in Rossetti's personality. In this man of keen senses and brooding mind and almost ascetic aspiration, there was a strange blending, and at times apparently a confusion, of the artistic and poetic faculties. This fact contributes much to give his work its peculiar charm and to make it a critical puzzle. Mr. Howells once said that Rossetti should have "painted his poems and sung his pictures." The phrase indicates the sense of imperfect expression that one usually feels in contemplating his work of either kind. He charged his pictures with ideas they could not express without the commentary of the sonnet he so frequently annexed to them, and he filled his poems with color and visions they could not present without the illustration he so seldom gave. The pictures will not be apprized at their worth unless the observer can carry out their mental suggestion with poetic feeling, nor his poems unless the reader has powers of vivid visualization. This union of the two faculties would hardly have been possible, certainly would not have been so fruitful of good results as it was, had not Rossetti been a mystic. A mystic he primarily was, a man who cared less for the object or the thought than for its vague and often arbitrary suggestions; who used things and ideas not for their current value, but as coins stamped with his own image and superscription; tendering them for the original and self-derived worth he gave to them. Necessarily he dealt much with symbols, the only refuge for a mystic who desires to indicate his meaning to others. If he wished to bring before the mind the Temptation of the Flesh, he painted a luxurious woman or he sang of "Eden Bower," but in either case Lilith is more than she seems, she stands for something else. If in his work one sees or hears mention of a dove or an apple, one must ask, not what it is, but what it means, for he is almost certainly using a sign-language.

Again, like mystics in general, he does not rest in his idea, but is ever either elaborating it or passing to cognate ideas that it has suggested. The peculiarity in Rossetti's case is that, because of his sensuous susceptibility, he chooses his symbols from the things of the senses, using what is most significant to himself to express what is highest, and therefore displaying the spirit through the flesh. This drew on him the unfortunate review that so much embittered his life, in which he was branded as one of the "Fleshly School." The purity of his own mind cannot be questioned. One proof of it is the fact of his suppressing or modifying the passages in his poems most objected to, when he came to a truer knowledge of his common audience, so much more alive to his physical than to his spiritual meaning. As he is not to be ranked with the "Fleshly School," neither is he to be put among the so-called Neo-Pagans, for even less than they had he anything classical in his genius. He was original in the sense that he was a mediæval man, "born out of time"; but, to describe this phase of his character, we cannot refrain from quoting Mr. Sharp's own words:

"It is true the beautiful was the ideal of the Greek artistic mind, and also that the beautiful was the aim of Rossetti in his dual vocation—but how different the conceptions of beauty! The former looked to light, clearness, form, in painting, sculpture, architecture, to intellectual conciseness and definiteness in poetry; the latter looked mainly to diffused color, graded to almost indefinite shades in his art, finding the harmonies thereof more akin than severity of outline and clearness of form, while in his poetry the Gothic love of the supernatural, the Gothic delight in sensuous images, the Gothic instinct of indefiniteness and elaboration, carried to an extreme, prevailed. . . . His classical work can be so called only in a restricted sense, first, because his sympathies were not Greek, but Gothic, and because his creations typify the mysterious yearning of life, the brooding and hope and despair and resignation of a certain type of womanhood; not the joy *in* life, the exultation of physical being, the spiritually untroubled Greek ideal. Penelope, Pandora, Proserpina—these as they appear to us through the medium of Rossetti's subtle and beautiful art are not the Penelope and Pandora sung of and painted from time immemorial, the Proserpina who wandered in fair girlhood in the bright sunshine along the warm, sweet-scented Sicilian fields; but through the eyes of *this* Penelope all womanhood that dreams and yearns for a scarcely definite yet apprehended ideal love seems to look forth; in the eyes of *this* Pandora lie prophetic gleams of all she, typical of woman, can let loose upon the world, as she opens the casket from whence wing, in circling and evasive flight, passions and delights and joys and sorrows; and in the face of *this* Proserpina, queen of the dark realms, as she passes along the corridor in her splendid but desolate palace, there broods the regret and the passionate longing of all women who look into the past, and see that it is full of light, and that its day can never dawn again."

This extract not only marks Rossetti as romantic, symbolizing, and mystical, but it also indicates well and accurately (and for this purpose we have quoted it at length) the special character of his pictures to such as have never seen them, and helps to an understanding of the fascination they possess over men in whose minds, as in his, beauty and thought are not disjoined. Mr. Sharp, however, notwithstanding such eulogy as is implied in the above passage, has no disposition to become responsible for Rossetti's defects by approval of them. In both arts, it must be confessed, Rossetti's command of technique was far from perfect. In painting he did not draw well, never having learned how, and his continual repetition of the same face in successive pictures was a weakness. In poetry he did not know nature; and all must notice in his verses the paucity of natural facts and the lack of feeling for them; what few there are, being such as strike an artist's eye rather than stir a poet's heart. But we doubt if any man of equal poetic endowment ever remarked to a friend that it was "wonderful how much a bit of nature helps," or ever wrote to an acquaintance, as Rossetti does, in a letter here given, for "a feature or incident characteristic of the glen at nightfall," to put in his poem, when he had just spent some time in the place referred to. His treatment, too, is frequently literary, as distinguished from natural, depending on study or inspiration at second-hand. An analogous fault appears in his diction, in the Queen-Annishness of such a line as

"The embowered throstles' urgent wood-notes soar."

His choice of form was by no means instinctive, and was sometimes far from right, as noticeably in "The White Ship" and the beryl song of "Rose Mary"; he occasionally sank into bathos in wholly meaningless though fine-sounding lines; his music is monotonous, his ear for dissyllables is very defective, and his rhymes, now and then, are incomprehensible. Nearly all these blemishes Mr. Sharp notices; but the claim that, in spite of them, he makes for Rossetti as a remarkably original, exceptionally endowed, and influential mind, is valid. Neither the history of English art nor of English poetry can be written without reckoning with him—though in poetry, at least, Mr. Sharp evidently thinks the æsthetic school is already moribund.

Medical Economy during the Middle Ages: A Contribution to the History of European Morals from the Time of the Roman Empire to the Close of the Fourteenth Century. By George F. Fort, Author of the 'Early History and Antiquities of Free-Masonry.' 1 vol. 8vo, pp. xii.–488. J. W. Bouton. 1883.

THIS is one of the works which would be the

gainer if the advice of Sidney Smith were followed, to avoid all prejudice by never reading a book that one is reviewing. At first sight, everything is in its favor. It is attractively printed; the subject of medical superstitions (for that is apparently the meaning of the somewhat enigmatical title) is a good one, and the affluent display of industrious learning in the innumerable references in the foot-notes seems to give assurance that the author has ransacked every attainable source of information in many languages, and that his book may be regarded as the last word on a most fruitful topic in which our literature is singularly deficient. Pettigrew's 'Medical Superstitions' is a mere sketch, amounting practically to little or nothing; Oswald Cockayne's admirable 'Saxon Leechdoms, Wortcunning, and Starcraft,' though amply full of detail within its prescribed limits, is still bounded by those limits; and Hecker's 'Epidemics of the Middle Ages,' translated by Babington for the Sydenham Society, only touches partially on the ground covered by our author. The critic, therefore, is in every way predisposed in favor of the book.

He is somewhat startled, however, by the initial paragraph of the Preface:

"In its general purpose, the object of the treatise now published under the preceding title may be stated to be an historical inquiry into the practical effect upon social life throughout the period traversed, of that singular credence which involved supernatural agencies. Perhaps no portion of society of the Middle Ages reveals greater susceptibility to these curious influences than that appertaining to the preservation and restoration of bodily vigor."

Without fully acquiescing in the French aphorism, "le style c'est l'homme," one is usually safe in assuming that a man who thinks clearly will write clearly, and conversely, that a confused, rambling, unintelligible style indicates corresponding qualities of mind. Never have we met with a more painful display of these undesirable peculiarities than in the case of Mr. Fort. His opening paragraph is a fair specimen of what follows. Thus, we are pompously told, in introducing Galen to our notice, that

"Barbarism permanently domiciled by the side of a corrupting Grecian civilization, mournfully predicted and justly forecast by the inflexible Censor of Republican Rome, mutually strained the social fabric by their perverted humanity, which dissipated the martial essence of the colossal government" (pp. 29, 30).

And of Galen himself:

"Of all the sectarians of curative dogmatism, he was the most fertile, the most dexterous and puissant, and in the universality of professional scope the most extensive (p. 32). . . . Four years later, proceeding to Smyrna for the purpose of attending the instruction of Pelops in dissection, thence to Corinth to listen to the Numescarius [*sic*], and finally to Alexandria, where he devoted himself exclusively to anatomy, and, as it appears, to vivisection, at the instance of Boethius, of such subjects as were procurable, where he sojourned for an extended period to complete his studies" (p. 33).

While of the Greek physicians who flocked to Rome, we are informed (p. 4) that "their services were gradually became indispensable"; and similar flowers of rhetoric could be culled from almost every page.

The matter of the book corresponds with its manner. It consists of a vast number of undigested facts, thrown together with little perception of orderly sequence, and connected by inconsequent remarks that fail to draw from the abundant material any significant results. Nor are the facts by any means to be always implicitly relied on. We are given to understand, for instance (p. 29), that the Pillars of Hercules were the same as "Ultima Thule"; and on page 23 we have the extraordinary statement that the dignity of the archiatri, or chief public physicians, was upheld by Constantine, in his law of 321, which "interdicted the issuance of a warrant against them to bring their body [*sic*] before the courts . . . under a most exemplary fine, and the penalty of being flayed alive"! Now, the law referred to (Cod. Theodos. XIII. iii. 1) provides the single penalty of 100,000 nummi for persecuting ("si quis eos vexaverit") grammarians, physicians, and other professors of learning, with the addition that if the offender is a slave he ought to be flogged by his master. There is nothing about flaying anybody alive, and Godefroi, in his commentary, suggests that the law was probably enacted to restrain the Christians from prosecuting members of the learned professions, who were mostly Pagans.

Contrasting strongly with this is a piece of German legislation quoted (p. 9), to the effect that physicians experimenting with the lives of their patients were to be broken on the wheel. The date of this law is stated to be 1532; the authority given for it is "Carciani" (Canciani), whose collection of laws does not come down beyond the thirteenth century; the reference made is to a page that does not exist in his work, and the law is said to be cap. 134 of the "Leg. Barb."—a code which is to be found nowhere save in the imagination of the author. A more curious muddle of mistakes, typographical or otherwise, could hardly be put together in the space of three lines. We presume that Mr. Fort intended to refer to cap. 134 of the *Carolina* (the criminal code issued by Charles V. in 1532), which provides the penalty of the wheel for skilled physicians who administer drugs for the purpose of killing their patients—"necandi hominis causa"—a very different thing from risking their lives by experiments.

If Mr. Fort is thus free with his syntax and his authorities, he is no less a law unto himself in the matter of his vocabulary. "Adoptation" passes current (p. 3) for "adoption"; "sacerdoty" (p. 9) for "priesthood"; "accessory" (p. 11) seems to mean "cure"; what "social sensuousness" (p. 13) indicates, we confess our inability to make out; "this scholastic" (p. 16) apparently connotes a physician—a term which is also implied by "medicists" (p. 19); "the Comitava" (p. 20) we presume stands for "comitiva dignitas"; on the same page "guardianship" and "tutelage" are used as convertible terms, and "descendable" is employed in the sense of "heritable," while on page 273 "funebral" is used for "funereal," we hear of "flowers blooming in aromic beauty," and we are told that St. Sulpicius was a "saintess."

These additions to the vernacular could be multiplied indefinitely; but we have already bestowed too much space on a virtually unreadable book, and we must conclude with an expression of unfeigned regret. That regret is twofold. The author has evidently bestowed time, money, and labor in no stinted measure on its production, and it is melancholy to see a life thus wasted through lack of the literary faculty and the power to coördinate the results of his researches, when it would have given us so real a pleasure to welcome a successful explorer in fields which so few American scholars have traversed. We regret, moreover, the loss of the opportunity to add to our literature a book which would be of no common value. Any one who would, in a philosophic spirit, bring together all that modern science has developed as to the belief in supernatural remedies among the earlier races of mankind, in India, Persia, Assyria, Egypt, and Judæa, and trace their descent and modifications through the Hellenic, Italiote, and Teutonic peoples down to the Middle Ages, with their survivals in modern civilization, would render a service of the highest moment to students of human progress and development. This work remains to be done, and Mr. Fort, we need hardly say, is not the man by whom it is likely to be accomplished.

Specimens of Early English. A new and revised edition with Introduction, Notes, and Glossarial Index by the Rev. Richard Morris, LL.D. Part I. from 'Old English Homilies' to 'King Horn,' A. D. 1150–A. D. 1300. Oxford: at the Clarendon Press, 1882; London: Henry Frowde.

An Anglo-Saxon Primer. With Grammar, Notes, and Glossary by Henry Sweet, M.A. Oxford: at the Clarendon Press, 1882; London: Henry Frowde.

THE volume of specimens of Early English begun by Dr. Morris and just finished by Professor Skeat completes a series from Cædmon to Spenser. When the delegates of the Clarendon Press undertook some twenty years ago to publish text-books for the study of English, the period before Spenser was quite beyond the reach of general scholarship. There were current editions, to be sure, of Chaucer and of some of the classic Anglo-Saxon books, but they were too far apart and too little critical to be of much use in studying the history of the language. A trackless chaos yawned between Anglo Saxon and Chaucer. The materials for a road across it lay in manuscripts difficult of access and a few rare books. A first attempt was made in 1867 by Dr. Morris. His volume is now replaced by three prepared by Dr. Morris and Professor Skeat. The present volume contains the oldest extracts, closing up to the 'Anglo-Saxon Reader' of Mr. Sweet. It is the last to appear because it was the most difficult to prepare. We have now in the completed series, including Mr. Sweet's 'Reader,' extracts from ninety-two different works, selected mainly on the ground of fitness to illustrate the language at each step of its progress. They are of adequate length, carefully spelled according to the period to which they belong, accompanied with brief grammars of the different periods, and with grammatical and critical notes and full vocabularies. The editors are the best scholars of England in this department. Dr. Morris and Professor Skeat are also skilful teachers, and know how to adapt their work to the habits and needs of the class-room. The books are printed at the Oxford Press and are every way suited for academic study. They are also full of interest and of scientific instruction for every student of English. The grammarian has here spread out before him the slow and irregular procedure with which the elaborate inflections of the Anglo-Saxon period weathered away; the modern Englishman may here observe the gradual picking up by the Saxons of Norman and Latin words, and the slow growth of our present rich vocabulary.

The latest volume, excellent as it is, is still in questionable shape. There is a difficulty with it in the nature of the case. It deals with the period when the Anglo-Saxon was falling into dialects. The specimens follow the manuscripts, and these are mostly phonetic, so that the spelling indicates the varying pronunciation of different localities, and brings out all sorts of dialectic peculiarities. And here arises the difficulty. Do we propose to study these dialects? For a thorough critical study these text-books do not afford sufficient material, and they are open to criticism of their accuracy. German scholars have lately taken up Early English: the swarms of their eager students have reached this region, and suggested many new readings in the extracts here given, a considerable number of which are claimed to be more accurate decipherings of the manuscripts. Dr. E. Kölbing, to whom these

studies owe so much, is already urging in the *Englische Studien* that his readings have not received due attention.

But it may be said that any such study of the old dialects is not to be expected or desired. There is no more interest or value in it than in the study of modern English dialects. But nobody thinks of introducing even Scottish for general study in our schools. To set about learning grammars of all the dialects and their laws of phonetic change is out of the question. The object of a book of specimens of this sort must be mainly gratification of curiosity to see how the speech of that period looked. But for rapid reading and speedy getting of a general view, the explanations in this volume are hardly copious enough, and demand too much dictionary and grammar work. Attention is called to niceties of pronunciation and grammar which call on the teacher or student for a higher kind of accuracy than is needed for general reading, and which is embarrassing and unsatisfactory. It is plain enough, however, that no book could be made which would satisfy everybody, perhaps none more acceptable than this.

Mr. Sweet's 'Anglo-Saxon Primer' is a neat volume of 116 pages, 53 of which are grammar, 36 are extracts for reading, and the rest notes and glossary. Mr. Sweet is the recognized chief of the English students of Anglo-Saxon, and this book is a model one in its method, clearness, accuracy, and originality. It is one of the felicities of our time that original investigators of the first rank are willing to prepare elementary text-books on their specialties, but it may be doubted whether this practice has not a drawback in the undue prominence often given to the special views of the authors. Mr. Sweet has made a specialty of half-a-dozen manuscripts of Alfred's time, which had before been neglected, and of phonetics. He is for having the spelling of these manuscripts and the pronunciation which he believes to have been used by their writers adopted as the standard Anglo-Saxon language, and for having the dictionaries and elementary books reconstructed on that basis.

For his 'Primer,' as he does not find in these manuscripts the extracts he wants for reading, he has respelled extracts from other works to suit his purpose, and he lays down as general rules of pronunciation the rules by which he believes the West Saxons pronounced. Thus our beginners in old English are to be taught to pronounce *f* always as *v*, *s* as *z*, *th* as *dh*, to say *vaedher* for *father*, *vor* for *for*, *zit* for *sit*, *dhink* for *think*, *dhree* for *three*, *Züdh-Zeaxone* for *South-Saxons*, and so on.

In this Mr. Sweet's manuscripts and his scientific phonology carry him too far from the main current of the English speech. Our modern English, which is our main interest in the study, did not descend from the dialect of Wessex, nor was the original and prevalent use of the Roman alphabetic characters in Anglo-Saxon determined by any such dialect. The general classic Anglo-Saxon uses these letters with the same powers they had in Latin, and have prevailingly in modern English. Perhaps no man in Wessex talked this Anglo-Saxon. So they say no man in Germany talks German. The book speech is none the less accepted for elementary instruction. Longfellow and Webster were Yankees, but it would make a queer primer to put together extracts from them rewritten into the spelling and pronunciation of the 'Biglow Papers.'

Mr. Sweet takes his own way in all sorts of things, as of course he would if he made a 'Primer' at all. He objects to illustrating the Anglo-Saxon by giving the corresponding forms in German, Latin, and other languages, as other makers of elementary Anglo-Saxon books have done. He overlabors the pronunciation, and, having denoted long vowels by an acute accent, he denotes accent by a period inserted before the accented vowel, which makes the words look like compounds incorrectly divided. He forms his declensions on the ground of gender, instead of by their stems, and gives the cases of his paradigms in an unusual order; so also in the paradigms of the adjective the order of genders is masculine, neuter, feminine. He has his own way in naming and exhibiting the conjugations. The syntax consists mainly of observations upon noticeable constructions occurring in the book. The regular staple of common rules used in drilling beginners is not here. It would be padding, doubtless, to Mr. Sweet, and that would be intolerable.

La Gravure: Précis élémentaire de ses origines, de ses procédés et de son histoire. Par Le Vicomte Henri Delaborde. Paris: A. Quantin; New York: J. W. Bouton.

Les Procédés de la Gravure. Par Alfred de Lostalot. Same publishers.

THESE two works form part of a Library of Fine-Art Instruction, published with official approval, and designed to supply a deficiency of elementary manuals in France, especially for the students and graduates of the lycées, and again for young women as well as young men. The collection already embraces eight volumes, octavo, sold at three or four francs each, according as they are stitched or bound. The two before us overlap each other less than might be supposed from their titles.

M. Delaborde's task was to relate the rise and progress of the art of engraving in the several countries of Europe. He has done this with the ease which his great familiarity with the subject permitted, at the same time giving a literary flavor to his recital unusual in such compendiums. His method is biographical by preference, and there could be no surer way to interest. We find here, as was to be expected, sound views, fair appreciation, and sober criticism of the various masters under discussion. Naturally the French school is most dwelt upon, and there is perhaps here and there a trace of national antipathy toward the Germans. M. Delaborde is a partisan of the Dutch in the dispute over the origin of wood-blocks and of movable type—he will only allow Gutenberg to have been the first type founder. This does not necessarily proceed from chauvinism, and we would not insist upon it. His handbook is, it must next be remarked, devoted almost exclusively to metal-engraving. At the beginning, proper notice is taken of the early development of engraving on wood, but the subject is not pursued beyond Dürer, his pupils and imitators. Nor is etching treated of except in a very subordinate manner. What M. Delaborde has to say of metal-engraving in this country is not very flattering, nor by comparison with Europe is it unjust. Still, one feels that he writes without knowledge of our best achievements, or of the course of this branch of art from the first Boston engravers to the present time. And no one but a Frenchman would have spoken of "the engravings exposed for sale in New York *or New Orleans*," as if he had named the two centres of art productiveness in the United States.

M. de Lostalot has not made so readable a book as the foregoing, but this could hardly help being the case. His concern is with processes rather than with history or biography. On the subject of wood-engraving he is much more satisfactory than M. Delaborde, following the safe guidance of M. Firmin-Didot. But he too stumbles in praising American wood-engravers for having carried their mechanical appliances to the highest perfection, and implying that they have abandoned the manual dexterity which can alone be associated with works of art. Etching, line-engraving, mezzotint, aquatint, and other modes of metal-engraving are described with more or less fulness for practical use, together with a host of methods for obtaining relief plates from incised, whose names would have made Quintilian stare and gasp. American readers curious in such matters will find themselves initiated into a great many "processes," both derived from and independent of photography, by which any kind of drawing or wash or tone picture can be copied in facsimile or expressed in lines—processes more numerously in vogue in France than elsewhere. M. de Lostalot proposes the substitution of the sandblast for acid in etching; compliments the English on their incomparable color-printing after Miss Greenaway, Walter Crane, and R. Caldecott; and, taking up a subject wholly neglected by M. Delaborde, lithography, vindicates its quality and its future in what is much the most entertaining chapter in the book, though pretty strictly limited in its survey to France.

Both these volumes are profusely illustrated, but the cuts are rather promiscuously disposed, especially in 'Les Procédés,' and are not always chosen so as to be of the greatest assistance. Reductions of the whole of a design are constantly given where a fragment enlarged or at scale would have met the student's need far better. Again, there are too many facsimiles made by the graver. Finally, the press-work of the cuts leaves something to be desired. Still, the examples taken together, especially those of early printing, offer a notable addition to any similar collection with which we are acquainted.

Der Buddhismus in seiner Psychologie. Von A. Bastian. Berlin. 1882.

Der Buddhismus und seine Geschichte in Indien. Von Heinrich Kern. Translated by Hermann Jacobi. First volume. Leipzig. 1882.

DR. BASTIAN, though professing to treat only of the psychology of Buddhism, makes an exhaustive treatise on the entire system. It is so full of matter, sometimes relevant and sometimes not, that it would be hopeless to attempt to review the points of the argument, or the facts brought forward in illustration of the argument, adopted by the author. The useful index at the beginning of the work will exhibit for sufficient purpose the scope of the book. Under the heading "Mikrokosmos," the author considers his subject technically; he explains the character of Buddhism as it relates to the mental constitution of man. The khanda, or the constituents of his personal existence, the sangkhara, the ayatana, and so on, are considered severally; and the entire nomenclature of the subjective part of Buddhism is exhibited and explained in detail. Under the heading "Makrokosmos," the author brings under our notice the external view of the system. Its connection with the outer world, the heavens and earth, the gods and their mode of existence, are considered from a Buddhist point of view, and contrasted with other religious systems or philosophical theories. The amount of learning brought to bear on this part of the treatise is quite surprising, and makes the study a severe trial. The third chapter refers to the teaching of Buddhism. Here we have the "four truths," the foundation of Buddha's doctrine, explained. After this, the author directs us to consider Buddha's method of teaching by parable; his views respecting caste; the abstruse doctrine of dharma; the nature of Adi-Buddha, and so on.

It will be seen from this bare outline, that the author includes in his plan the entire substance of Buddhist teaching. One portion alone, as, *e. g.*, that of "the dharma," would be enough for review; the whole circle of doctrine is beyond our reach. With respect to "the other world" (*das Jenseits*), the most important subject is the meaning of Nirvâna. Here we notice the author adopts the theory, now generally accepted, that Nirvâna is of two sorts: the condition of the Arahat (or the fruit of Arahatship), which is known as Upádidisesanibbána—that is, Nirvâna "having remains"; and Anupádidisesanibbána, which is the condition of a Buddha after the death of his body. What this last condition is, our author explains partially as "a mode of existence independent of space and time." This seems to point to the idea that Nirvâna is, after all, the condition of the "absolute"—absolute existence, without relationship and unconditional. It is more and more evident that the interesting part of Buddhism lies in the study of its teaching as an ethical system; its philosophy and psychology are beyond the intelligence of the present age.

Prof. Kern's volume contrasts strongly with that just reviewed. Here all is order, and the argument a plain one; in the former, learning and profuse illustration hide the form of the argument and obscure the conclusions drawn. Prof. Kern, first of all, seeks the explanation of the term âtman, as this is the key of Indian philosophy. He compares it to "light." This light, entering the range of man's intellectual being, gives him the idea of "self." But self is no reality: it is like the salt taken up by the water; it can have no separate existence apart from the water. Self, then, is a delusion, a misunderstanding (*Missverständniss*). On this mistake depends the entire result of human experience, its joy and its misery; and only when the mistake is rectified is there a return to man's right condition. This, then, is the object of Indian philosophy and its religious teaching, to show us the non-reality of the "self," and to give us freedom in the knowledge of the unreality of this fetter.

The author then proceeds to consider the Buddha-legend. He derives the points of his comparison principally from the 'Lalita-Vistara.' This work, however, is hardly a fair criterion of the primitive legend, as it undoubtedly belongs to a late period in the Buddhist development. The author considers the legend to be allied to the Sun-myth, in keeping with the view of M. Sénart. But there is certainly behind the myth a real and living personality. Buddha was a human teacher. The events of his early life and the more obscure portions of his mature age may be mythical, but we can hardly doubt that he lived and died like other great teachers—the wonder of the age while alive, and the early recipient of an apotheosis after his death.

In considering the legend, our author well says that the groundwork of Buddhism and, in short, of all heathen teaching, whether in India or Europe, is the dogma, "that all that is born must die." This is the keynote sounded by Buddha himself, as the foundation of his system. The condition of Nirvâna, the highest good, is the condition that admits of "neither birth nor death"; and to find this condition is the one aim he proposes in his teaching and his method of life.

It will be found, after all, that the mass of Buddhist literature may be reduced to small limits, when this is understood, that Buddha was not a philosopher himself, but a man deeply affected by a sense of human misery, and impressed with a conviction that this misery may be remedied. His system may have grown into a philosophy, but as it came from his own hands it was a bold attempt to stem the tide of evil by giving up all thoughts of "self" as finite, and allowing the "infinite" light of the "highest self" to enter and restore the subject, miscalled the individual, to the condition of an original un-selfconsciousness.

A Grammar of the Homeric Dialect. By D. B. Monro, Fellow of Oriel College, Oxford. Clarendon Press Series. Large 8vo, pp. 344.

THIS handsome volume is a work of much merit, and it will be warmly welcomed by students of Homer, for there was a real need of a Homeric grammar in English. Mr. Monro seems peculiarly well fitted to have undertaken such a work. He has for years been engaged in Homeric studies, has a thorough acquaintance with the German literature on the subject, and has been recently associated with the famous Cobet, of Leyden, in the collation of the Venetian manuscript (Codex Venetus A) upon which Dindorf's edition of the Venetian scholia of the 'Iliad' (Clarendon Press, 1877) is based. In 1877, Mr. Monro published an admirable little volume, entitled 'Book I. of the Iliad, with Notes and an Essay on Homeric Grammar.' Those terse and suggestive notes are to be regarded, we presume, as a specimen of Mr. Monro's long-promised critical commentary; that essay on Homeric grammar was plainly the germ whence the present bulky treatise has grown.

This Homeric grammar, it should be stated at the outset, is not adapted, as it was probably not designed, to serve as a text-book. It is rather a thesaurus of information upon Homeric forms and syntax. The author cites in his preface the numerous sources whence he has derived assistance, pointing out that a book of this kind must be to great extent a compilation, and acknowledging special obligation to Curtius, Delbrück, and La Roche. He begins his grammar with the examination of the forms of the verb, and follows closely the lines of Curtius's *Verbum*. By his constant use of the terms *thematic* and *non-thematic* forms, he will help to habituate English and American readers to the disuse of the expression *connecting vowel*, to which even our elementary manuals must ultimately come. When we have once fairly begun to use the new nomenclature, we shall probably find that it is simpler to speak of appending a personal ending directly to a *theme* λεγε or λεγο than to speak of joining it to a *stem* λεγ by a connecting vowel.

The remarks on the Greek passive are valuable. The author points out that we should rather speak of a passive use of middle forms than of a passive voice. This passive sense commonly grew out of the reflexive meaning proper to the middle, as may be illustrated by many French reflexive verbs; but in the so-called aorists passive (aorists in -ην and -θην) was probably developed out of an original intransitive meaning.

There are some interesting observations upon the augment. Augmented and unaugmented forms are about equally common in Homer, except in the speeches, where the augment is rarely lacking. Hence the inference is drawn that the augment is freely omitted in ordinary narrative because the context plainly shows that past time is referred to. Monro's statement, in this connection, that the augment is *always* lacking in iterative forms (p. 44), is more sweeping than Curtius and other grammarians venture to make.

We have not space to follow the author in his discussion of the declensions, which are less fully treated than the verb, but must pass at once to the syntax. The accusative is treated under two great divisions: the accusative of the internal and of the external object. The dative case falls under three heads: the true dative, the instrumental dative, the locatival dative. The classification of the genitive is as follows: true genitive, ablatival genitive. We would refer the reader particularly to the discussion (p. 105 ff.) of the subdivision called the quasi-partitive genitive.

The Homeric student will be interested in following through the long lists of translated examples illustrating the various uses of the cases. Mr. Monro's translations are exceedingly apt, and these lists are a very valuable part of the book. That is a useful remark, thrown out under the head of the vocative, that when two persons are addressed, the second name has regularly the nominative form. The various uses of the infinitive are traced back to its original form as the dative case of an abstract verbal noun. Hence the use of the infinitive to express purpose is easily derived, while the very common use of the infinitive as the subject of a substantive verb is seen not to have been the earliest use. Here we may mention the passage, B 291, ἦ μὴν καὶ πόνος ἐστὶν ἀνιηθέντα νέεσθαι. This is usually translated: "Verily it is a hardship to return in vexation." Monro suggests this rendering: "Verily there is toil (enough) to make a man return." The chapter on the uses of the article in Homer strikes us as one of the most original and valuable in the book. We cannot follow the author in his lengthy treatment (forty-six pages) of the moods, further than to say that he adopts Delbrück's views of the subjunctive and optative. "The subjunctive is used to express the will of the speaker or his sense of the necessity of some future event, and is commonly rendered by *shall* and *must;* the optative expresses a gradation of notions, from a simple wish down to a mere supposition or simple possibility."

The grammar closes with an admirable essay on metre and quantity in Homer, and three indexes (of Homeric forms discussed, of subjects treated, of passages in the Homeric poems referred to) make readily available the large stores of information here for the first time collected in a single treatise.

Colin Clout's Calendar. By Grant Allen. New York: Funk & Wagnalls.

THIS is a chatty volume somewhat after the style of White's 'Selborne,' and gives the record of an English summer from a Darwinian's point of view. The striking and trifling characters by which certain plants obtain and keep an ascendancy over their fellows are described in an attractive and forcible manner. There are some infelicities of expression which indicate that the work must have been hastily, not to say carelessly, prepared. Thus: "They blossom early, do the hyacinths, because they have got a good stock of material in their bulb to go on upon"; and, "Thoroughly well-established and ancient species do not throw back so easily or so often to less advanced ancestral forms." A good deal of interesting folk-lore is scattered through the book, which thereby becomes better suited to the general reader. The world will never be weary of gossipy works on natural history, provided the amount of information conveyed in them is not too great or too improving. The charm of such books is not a little heightened when, as in this case, a few touches of local history of customs, words, and places are added.

BOOKS OF THE WEEK.

Abbott, Rev. L. For Family Worship. Part 1. Scripture Readings. Part 2. Family Prayers. Dodd, Mead & Co. $1 50.

Albee, J. Poems. G. P. Putnam's Sons. $1 50.

Alden, W. L. The Cruise of the Canoe Club. Harper & Bros.

Aldrich, T. B. From Ponkapog to Pesth. Boston: Houghton, Mifflin & Co. $1 25.

THE BEST THOUGHTS OF THE BEST WRITERS OF THE DAY.

Topics of the Time.

A Series of Representative Essays on Questions of the Day.

Principally selected from the leading British and Continental journals. Published in handsomely-printed 16mo volumes, which will be issued monthly. Price, each, in paper, 25 cents; in cloth, flexible, 60 cents.

Subscriptions received in advance for twelve numbers, in paper, at $2 50; in cloth, at $6.

The essays will be arranged in such divisions as the following, to each of which successive volumes will be devoted:

SOCIAL PROBLEMS, HISTORICAL STUDIES, QUESTIONS OF BELIEF, STUDIES IN BIOGRAPHY, INTERNATIONAL ISSUES, STUDIES IN LITERATURE, SCIENTIFIC PROGRESS.

Ready this week, the volume for May:

SOCIAL PROBLEMS, comprising papers by Giffen, on WORLD-CROWDING; Labouchère, on THE COMING DEMOCRACY; Laveleye, on THE EUROPEAN TERROR; Jehan de Paris, on SECRET SOCIETIES IN FRANCE; and other important essays.

The second volume, now in press, will be devoted to BIOGRAPHICAL STUDIES, and will include Harrison on GAMBETTA; Miss Christie, on MISS BURNEY'S OWN STORY; Dasent, on BISHOP WILBERFORCE; and other representative papers.

Send orders for specimen volumes.

The Nation.

NEW YORK, THURSDAY, MAY 17, 1883.

The Week.

THE past week has presented but few new features in the trade and industry of the country. Business in general merchandise continues fair, but not equal to the volume of last year and not quite equal to expectations for the present. The troubles in the iron business continue. Prices of pig iron have declined, with a prospect of a further decline, and the expected strike among the iron workers in the Western mills on June 1 is still pending. The most encouraging feature of the past week has been the improvement in the prospects for the wheat crop. In financial affairs the significant symptom has been the decrease of activity of the railroad-bond market. The total sales of bonds in the open market have not been more than one-third as large as in the preceding week. Money has continued to increase in the market, and rates for call loans have declined to 3 and 4 per cent., while rates for discount of mercantile paper have been reduced an average of ½ of 1 per cent. for all classes of discounts. Speculative capital has gone largely into grain, and especially into wheat, and has had the effect of making prices in American markets relatively higher than in the foreign market. The result has been a diminished export of breadstuffs from the United States in the past fortnight. Speculative capital has to a considerable extent been diverted from the stock market into operations in grain, and has had the effect of making a languid and drooping market for railroad stocks.

At last the troublesome question, Who is to be Chief Examiner under the Civil-Service Commission? has been settled, as it ought to have been settled at the beginning, by the appointment of Mr. Charles Lyman. He understands the business he is to do, he is devoted to the cause he is to serve, and there is general confidence in his fitness as well as his good faith. The Commission has now an executive agent upon whom it can depend. It ought to recognize that those who saved it from the consequences of its first mistake rendered it a very great service. The press and the President are entitled to its thanks, the press for promptly protesting against an appointment which would have burdened the Commission with no end of embarrassment and trouble, and the President for prudently holding back the appointment until public opinion had fully manifested itself, and then helping the Commission out of their dilemma by inducing Mr. Keim to withdraw. The Commission has been aided very effectively and in a most friendly spirit, although in a way which at first may have been an unpleasant surprise.

A clause has been inserted, it is said, at Secretary Frelinghuysen's request, in the extradition treaty with Belgium, providing that "an attempt against the life of the head of a foreign government, or against that of any member of his family, when such attempt comprises the act either of murder or assassination, shall not be considered a political offence, or an act connected with such offence." As this stands, it is difficult to regard it as otherwise than unfortunate. It suggests very strongly the idea that the assassination of the head of a foreign government is to be treated as an exception to a general rule, under which the assassination of other officers than the head of a government may be a political offence, or an offence connected with politics. As a matter of fact, however, if we are to help by treaty to protect any foreign political personages from assassination, we ought not to confine its operation to the heads of foreign governments. The present clause was doubtless drafted under the influence of President Garfield's assassination, but the analogy between the American President and the head of a foreign government is in most cases very defective. There is no monarch in Europe, except the Emperor of Russia, who is head of the government in the sense in which our President is. In most European countries to-day the temptation to assassinate the Prime Minister is far stronger than the temptation to assassinate the King, and his assassination would produce more important political results. The murder of Mr. Gladstone or Prince Bismarck, for instance, would be a far more political offence than the murder of Queen Victoria or the Emperor William. The murder of Lord Frederick Cavendish, too, was more significant as a political event than that of the Lord-Lieutenant would have been. In other words, if we are going to include in the treaty murders committed from political motives on any officer of a government, we ought to include all officers of the government, or at least all conspicuous ones.

As the Belgian treaty will now stand, it looks very much as if we at least wished to leave the murder of a Prime Minister a doubtful case, to be passed on as matter of policy whenever it arises. But we really ought not, on a matter of this sort, to leave any doubt whatever as to our position. We ought to say either that we shall not bind ourselves as to any murder committed from political motives, no matter who may be the victim, or bind ourselves with regard to all officers of foreign governments whose political position exposes them to the special hatred of fanatics or conspirators. The better course would therefore seem to be either to put all murders, from whatever motive, in the same category, without either express or implied exceptions, or reserve to ourselves the right of deciding each case on its merits—that is, of saying whether any given murder was a political offence, or an offence connected therewith, or not That, as has been suggested, the insertion of the new clause in the Belgian treaty indicates that the Government will give up Sheridan and Tynan, seems very unlikely. It seems to us to indicate, on the contrary, that the President means to reserve to himself the right of deciding whether the murder of any officer but the head of a government is an extraditable offence or not. But it also illustrates very strikingly the confusion which surrounds the whole subject.

We print elsewhere a letter on the offer of Columbia College in the matter of the higher education of women. As we have not said the offer was a satisfactory one, most of "E. T. M.'s" argument applies to the Columbia trustees rather than to us, and we think it perfectly sound. If we supposed this offer was going to be a finality, we should probably advise the petitioners to let it alone. But, considering that it comes from a college which a year ago refused to publish a report, and has stood so far apart from the community in which it has existed for 150 years that it has only received two small donations, and that the plan of the Committee was probably drafted by a gentleman who within three months has been denouncing the higher education of women from the pulpit, partly as something incomprehensible and partly as a suggestion of Satan, we think it shows wonderful progress in the right direction, and progress that will continue. We believe, therefore, that it would be wise to accept it and act on it as vigorously as may be. All objections to its acceptance drawn from the history of female education at Oxford or Cambridge, or even Harvard, strike us as beside the mark. The friends of higher education here are working in a very different social and intellectual atmosphere, and are dealing with a University which has been managed hitherto under very different influences. We hold that anything done in New York in the way of public recognition of young women's claim to and fitness for a collegiate education is really a great thing, and that any step toward giving it made by Columbia College is a valuable step. We have not advised the acceptance of its offer as all that is expected, but simply as much as may be looked for this year from an institution so conservative. Nothing will do so much to obtain further concessions as the practical demonstration that there are young women in the city who want a man's course and are competent to take it. Doubtless Dr. Dix ought to be satisfied of this by the experience of the English universities; but then he is evidently one of that large class of very estimable people on whose imagination such facts of their own day as are remote, either in time or space, make but little impression. We must be patient with this order of minds if we are dependent on it for assistance in any field of activity.

The silver question has come up in a practical shape in a quarter in which one would least have expected it. It appears that the American Baptist Missionary Society has been paying the salaries of its missionaries in the East in silver rupees instead of American gold, which the missionaries, according to their story, expected. That is, the Society has been pay-

ing them in rupees at par, just as we might pay our Government officers in silver dollars, while actually buying the rupees at the market discount on silver, which makes them only worth about ninety-one cents. This has been going on now for ten years, or ever since silver began to depreciate, and the missionaries estimate a loss to them and a gain to somebody else by this process during that period of over $50,000. Who profited by it does not clearly appear, which is the most serious part of the affair, as the missionaries allege that the saving on the silver is not accounted for in the treasurer's reports. Thus, one salary, which is set down in the reports at $600, only cost $500, a missionary says, to pay in rupees, and the question is, What has become of the difference?

Commander Gorringe's new ship-yard appears to be in some sort a revolutionary undertaking. It is intended to show that we can build iron ships as cheaply as the English and Scotch builders, and hence to show that subsidies and navigation laws are unnecessary. Mr. Gorringe has already taken contracts which will enable him to prove the truth or error of this assumption. The price of iron is very much in favor of the shipbuilder, and is likely to continue so for a sufficient time to close out all existing contracts. As Mr. Gorringe gets his yard and plant for the first year or so free of cost, he has some advantages over his competitors on both sides of the Atlantic. Yet, when all these factors are taken into the account, it will be a very surprising thing if a yard on the Delaware shall be able to turn out ships at the same price as the yards on the Clyde; and if Mr. Gorringe succeeds in doing this he will have accomplished a much greater achievement than the carrying of Cleopatra's Needle from Alexandria to New York.

The retirement of Jay Gould from active practice in Wall Street in the prime of life has naturally led to a great deal of speculation as to his probable employment of his leisure, but there seems to be the same difficulty in getting at the exact facts that there used to be so often in ascertaining the real truth about his business movements. He himself declares that he is simply going yachting, and points to the fact that he has had a yacht built at an enormous expense in proof of the truth of this assertion. Notwithstanding this there are, it seems, people who are circulating a story that he and Mr. W. E. Connor have purchased "a large tract of sandy land" in Florida, where they are going to engage in the cultivation of the orange. Mr. Connor himself says the story is "ridiculous"; that he bought the land that he might "have a place to go fishing," and that he does not think orange trees would grow on it. This reply, which is very good as far as it goes, is met by the statement that a contract has been signed to plant the trees, and the question is still undecided. It may seem as if it was nobody's business but that of Mr. Gould himself whether he took to planting oranges or not; but this is a narrow view to take. His entrance upon any new field cannot be regarded as an entirely private event, because it is sure to have such wide-reaching effects. Just as he powerfully affected the development of jurisprudence and the railway system of the country, he may be expected now to produce changes in any light pursuit to which he devotes himself, though what these may be, we cannot of course predict. Will yachting, or orange culture, or fishing—will they ever be quite the same as they have hitherto been when Mr. Gould has taken a hand in them for a few years? The same thing may be said of athletic sports, should he see fit to devote himself to these. Were he to become a leading promoter of lawn-tennis, or base-ball, would not the whole country be interested in the probable future of those games? When a man like Mr. Gould joins the leisure classes, it can no longer be regarded as a merely private matter.

Mr. D. A. Wells has been exposing, in the Princeton *Review*, the stories told by Mr. W. D. Kelley, the Rev. Cyrus Hamlin, and others about the enormous expenditures of the Cobden Club for purposes of bribery and corruption in the United States. According to Mr. Kelley, the Club raised and transmitted to the United States $1,000,000 in 1880, and according to the Rev. Cyrus Hamlin, the Club expended "vast sums" during the last ten or twelve years to "incite our farmers against the Government and manufacturers." Mr. Wells shows that the Club is composed of leading philanthropists, thinkers, jurists, statesmen, and philosophers in England and on the Continent—of men, that is to say, about as capable of raising money for secret bribery or corruption as of organizing for the robbery of railroad trains—and that the income of the Club has never in any one year reached $15,000, and is expended on the circulation of books and pamphlets and an annual dinner. Of course the story is ridiculous. It makes Englishmen and Frenchmen laugh and feel sorry for us. But then Mr. Wells makes a great mistake if he thinks he has ruined it, or that it can be ruined by any evidence. It is one of the sacred myths of protectionism, and cannot be exploded by any amount of human testimony. We might just as well go to the College of Louvain and try to explode the miracle stories in the Bollandist Lives of the Saints. Good protectionists will always, as part of their creed, believe that American free-traders are paid with "British gold." It is now one of the things which most of them learnt in childhood, and is lodged in far deeper recesses of their constitution than their understanding.

According to some of our contemporaries in Kentucky, the attorneys of "little Phil Thompson," in his trial for the murder of Mr. Davis, should have taken the ground not only that Thompson committed no crime in putting Davis to death, but that he performed a very virtuous and honorable act, a failure to perform which would have been a shameful neglect of his duty to society. Instead of this, their plea is "emotional insanity." They virtually admit that if Thompson was not a madman when he shot Davis, he was a murderer. But what, according to this, will be the plea of the newspapers which have been so vociferously maintaining that Thompson was neither a madman nor a murderer, but a hero, an intrepid avenger of the outraged hearth, deserving a civic crown?

Even Kentucky homicide has a comic side to it. A week or two ago the editor of the Louisville *Courier-Journal* announced his intention of delivering a lecture against homicide and pistol-carrying, and in advocacy of the enforcement of the law, and the like, to the young men at one of the colleges there. But in the interval the "Phil" Thompson murder was committed, which so tickled his fancy that he anticipated the lecture by a dithyrambic article in his paper apostrophising the family shotgun as the poor man's best friend, and the true and great defence of domestic hearthstones, registers, stoves, and other heating apparatus, against libertines and seducers, and glorifying "Little Phil's" exploit.

The trial of Dunn for the murder of Elliott was begun on Thursday in Chicago, and Mr. Emory Storrs assured the jury that the case was one of justifiable homicide, Dunn having been obliged to kill Elliott in self-defence. Most people would imagine from this that Elliott attacked Dunn with a knife or revolver, or some other weapon, and that Dunn, to save his life, had to kill him. The case, however, was somewhat different from this. It was Dunn who armed himself and "went for" Elliott. He found him, most luckily, seated at a table in a restaurant talking with a friend, and at once began firing at him. Our readers may not think that this sounds like "self-defence," and it certainly does not, according to commonly received ideas on the subject. But Mr. Storrs's theory is this: Dunn knew that if he did not kill Elliott, Elliott would kill him. He knew this, not because Elliott committed any overt act, but because he was a bad man, and mentioned in conversation his intention to kill him. Therefore, there was nothing left for Dunn to do but to defend himself, which he certainly did very neatly and thoroughly. This is the same kind of "self-defence," only a more perfect illustration, that created so much difficulty in our courts when Conkling defended himself against Haverstick by shooting him down in his own house, and in Kentucky led to the escape of Crittenden, the man who quietly armed himself with a shotgun, hunted up an unarmed negro whom he disliked, and defended himself against the black rascal by taking his life on the spot. This theory of self-defence is new, and the interesting part of it is that it should always be the man who carries the revolver who has to defend himself against the man who is unarmed. The revolver apparently produces in the mind of the man who carries it an extreme apprehension of violence, and a corresponding ferocity of disposition in the minds of unarmed persons with whom he comes into contact. He goes about in constant bodily fear of them, and to save his life there is nothing for him to do but to kill.

Mitchell, the English "champion," has written a letter to the *Herald* on the subject of his recent glove-fight with Sullivan. He declares that he was not beaten at all, because the fight was stopped by Captain Williams, and all he wants is an opportunity to meet Sullivan again. He says, moreover, that there was no real referee, but only "a gentleman, Mahoney by name," who "acted as master of ceremonies in the absence of Pop Whittaker." Mahoney, too, though the fact might not be suspected from his name, is from Boston, and "a friend of Sullivan's." But then, on the other hand, the fairest referee—even "Pop" Whittaker himself—would have been of no use, for he would have had no authority to order the fight to go on if Captain Williams determined to stop it. The more carefully the matter is examined, the more clearly does it appear that the part now taken by the police in contests of this character robs a glove-fight of all real probative value.

Mr. Henry Irving recently made a speech in London, in the course of which he severely criticised the fashion of going to see amateur theatrical performances, on the curious ground that the public ought to occupy itself exclusively with supporting professional actors, "whose art," he said, "was their livelihood." Amateur acting must be very different in England from what it is in other countries, if its popularity is emptying the regular theatres. Nothing generally does so much to help the real stage as the amateurs, for two reasons—first, that, when the performances are good, they stimulate a general interest in the drama which inures to the benefit of the regular theatres; and, second, because so many amateur performances are of such a character as to make their victims long to see professionals, with a longing they would never have otherwise known.

The Supreme Court of the United States has, during the term which has just ended, accomplished, as usual, a great deal of work. It has disposed of 387 cases, about the same number as were got rid of during the preceding term. Only fourteen of the cases argued and submitted this term remain undisposed of; and among those argued and decided have been many, such as the Curtis political assessment case, the Kuklux decision, the Arlington estate case, and the Bond cases, which presented questions of more than ordinary importance. The court, strengthened as it is by the addition of Judge Gray and Judge Blatchford, is in a better state than it has been for many years, and it is fair to assume that it has, during the past six months, done as well as it can be expected to do as at present organized. Still, the number of cases on its docket continues to grow, and has now reached 871, an increase of 34 over the docket as it stood at the end of the last term. The bad effect which this condition of things produces is shown in the work of the court in a variety of ways. The most obvious result, of course, is that it is about two years behindhand with its work, a serious matter for litigants, especially as the evil is still increasing. But this is by no means the whole story. No court can have too much work to do, and work under constant dread of an accumulating docket, without the quality of its work being affected. Judges are in this respect just like any other overworked men. They may accomplish wonders in despatching business, but their anxiety to clear their docket, their hope of some day or other being able to do it, will infallibly tell upon the consideration they give to cases, and result in hasty, or weak, or confused opinions. When judges determine to decide a case it can always be done; but when they undertake to announce their reasons, what is important is that they shall be agreed as to what the principles of their decisions are, and it is just at this point that the work of the Supreme Court sometimes produces an impression of weakness, which is probably directly traceable to its overworked state.

The Arlington case, for instance, was one which involved on the one side the exemption of the Government from private suit, and on the other the right of the citizen to be protected against interference on the part of the Government with his vested rights. It was undoubtedly a difficult point to decide, but the difficulty was greatly increased by the fact —which the briefs in the suit made painfully evident—that it hinged on previous decisions of the court which were in extraordinary conflict. This was itself a natural consequence of the hasty work incident to a crowded docket, and the result in the Arlington case was a wide divergence of opinion among the judges, which resulted in the decision of the matter by a bare majority vote. As soon as the composition of the court undergoes the slightest change, the probability is that an attempt will be made to fight this old ground all over again. The opinions in the Virginia bond cases show even more distinctly the pressure under which the court labors. The decision itself, that the court could not assist the creditors of the State, must be taken to be all right, but it is certainly most unfortunate that it should have been rested, by the judge who wrote the majority opinion, upon a ground which one of the dissenting judges treated in his opinion as contemptible and ridiculous; nor is the matter at all helped by the fact that, owing to the divergence of the judges' views, the opinions do not enable a lawyer who examines them to say with positiveness precisely what is the principle on which the decision is grounded.

There is a general agreement in the reports from England that the Ministry has again been weakened by the Affirmation Bill, and its failure to push forward important business. This, if true, means either that it will enter on the last session of the present Parliament—for there will be a dissolution next year—in a despondent condition, or that Mr. Gladstone will try his luck in a dissolution this year. That he will "go to the country" again, however, as the leader of the party, and thus pledge himself to assume the cares of office for another Parliament, seems very unlikely. It is no secret that he has been for the last two years anxious to retire, and has only refrained under the urgent solicitation of his colleagues, and in the belief that in this session, at least, he would be able to accomplish important English legislation. In this he has undoubtedly been disappointed. The temper of the Tories is as fierce and obstructive as ever, and they have learnt how to obstruct in spite of the new rules. Moreover, the Parnellites are joining them in anything that seems likely to force on a dissolution, as the Parnellites expect to make important gains at the next election.

The conviction of Timothy Kelly, in Dublin, on the third trial, was made almost certain by the confessions of Delaney and Cafferty, which confirmed the evidence of Carey and Kavanagh as to Kelly's presence at the murders, and, in fact, participation in them with Brady. Of course this was not evidence adducible in court, but it was impossible to prevent its affecting the mind of the jurors. His youthful and somewhat innocent appearance saved him on the first trial, one of the jurors saying frankly that he would never consent to send such a pathetic-looking boy to the gallows; but this impression seems to have worn out. The confession, too, has doubtless taken away the air of cruelty from the persistence of the Crown in retrying him. Delaney's sentence has been commuted, probably in the belief that he really was ignorant of the object of the expedition when he was driven up to the Park. Carey, the informer, says that every one of the party except Brady offered to inform, and this is probably true, because it is characteristic of all these Irish murder societies. What is peculiar about this case is the fact that the principal instigator of the plot anticipated his underlings. Usually it is the other way. The general result is that the Government is complete master of the situation as far as murder and outrage are concerned, and it is mainly owing to the permission now given by the law to the magistrates to institute private inquiries into crimes, and examine any persons they may select as witnesses, willing or unwilling, in secret. Under the old rule the accused had to be present from the beginning when testimony against him was taken. Now a very full case may be made out against him on oath before he knows anything about it.

According to a despatch from Valparaiso, a treaty of peace has been signed by General Navoa and General Iglesias, and "is said to have been confirmed." We are not told who says so, nor what political body confirmed it on the part of Peru—a rather important matter in the present condition of that country. The terms of the treaty are said to be that Chili takes Tacna and Arica for ten years; that at the end of that time a plébiscite is to be taken to determine to which country they shall belong, and that the country acquiring them will "pay indemnity." Nothing is said about Tarapaca, the great bone of contention hitherto, and the determination of the fate of Tacna and Arica by a plébiscite does not explain for what they are to be held as security during the next ten years. Iglesias is one of the numerous Peruvian pretenders, but a man of property also, and therefore desires peace not only from patriotic but from personal motives. He has been trying to get a treaty signed for some time, and there is nothing improbable in the story that he has succeeded, but the despatch does not make its terms intelligible.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 9, to TUESDAY, May 15, 1883, inclusive.]

DOMESTIC.

THE commission of Charles Lyman as Chief Civil-Service Examiner was made out by the President on Thursday. Mr. Keim, who had been nominated for the place, withdrew, in a letter which was aimed to be a defence against the accusations of the press all over the country that he represented Machine politics and politicians. Mr. Lyman is Chief Clerk of the Treasurer's office, and his nomination is highly commended. He is an accomplished scholar, and has had much experience in civil-service matters. He was Civil-Service Examiner under the Grant Commission. He made no application for the position.

Some persons who had experience with the civil-service system under President Grant express the opinion that the modification of the rules which was made by the Cabinet, exempting the chiefs of division and heads of bureaus from the operation of the law as to promotions, is a vital blow at the reform.

The members of the Civil-Service Commission on Friday and Saturday started on a tour of a number of the principal cities, for the purpose of establishing local examining boards to carry out the provisions of the Civil-Service Act.

Ex-Congressman Dezendorf (Rep.), of the Norfolk (Va.) District, has written to Dorman B. Eaton, to the President, the Postmaster-General, the Secretary of the Treasury, and the Secretary of the Navy, protesting against Mahone's practices in controlling politics in his district.

President Arthur on Wednesday designated Mr. John J. Knox, Comptroller of the Currency, to act as Commissioner of Internal Revenue for the next ten days.

President Arthur on Friday appointed several Assistant Appraisers for New York in place of officers suspended. The appointments, it is said, will result in a greatly improved administration of the affairs of the Appraiser's Department.

Aristarchi Bey, the retiring Turkish Minister, on Friday presented his letters of recall to the President, and Tewfik Pasha, his successor, presented his credentials.

Recent decisions of the Supreme Court of the United States in the case of Ruggles agt. the Chicago, Burlington and Quincy Railroad, and the similar case against the Illinois Central Railroad, are the most important decisions on the transportation question which have been rendered by that court since the noted Granger cases. These cases were brought by the respective railroads to test the validity of the law of the State of Illinois which creates a Board of Railway Commissioners with power to fix rates of freight and of fare. It was contended on behalf of the State of Illinois, among other things, that the State never bound itself by contract that no law should be passed prescribing reasonable maximum rates of toll for the transportation of passengers and freight; that the enactment of laws to prevent extortion by those having control of public highways is a legitimate exercise of the police power of the State; that these police or governmental powers are inalienable, and that the Legislature cannot bind itself by contract not to exercise them. The Supreme Court of the State of Illinois maintained the correctness of this position on the part of the prosecuting authorities of the State, and the United States Supreme Court has now affirmed the decision of the Illinois Court.

A number of valuable crop reports have been issued during the week. The estimate of the Illinois Department of Agriculture, covering 1,600 townships in the State, is that the winter wheat crop will not exceed 40 per cent. of the crop of 1882. The Maryland and Delaware peach prospect is a full average. New England reports for all crops are favorable. The May returns to the Department of Agriculture at Washington show that the average condition of winter wheat is 83½ against 80 in April. The May average last year was 100, which means a medium growth, with a full stand and a healthy plant. Without regard to the spring wheat breadth, the present prospect for the winter wheat area, in consideration of reduced condition and acreage, is 20 per cent. less than in May last, representing a loss of about 77,000,000 bushels.

Rumors that a disaster had happened to General Crook's column of troops, in pursuit of the Apaches along the Mexican border, were discredited at General Sheridan's headquarters on Wednesday. On that day the first detailed report was published of a battle in the Sierra Madre Mountains, Mexico, between Mexican troops under General Garcia and Colonel Torres, and the hostile Indians. The fight occurred on April 30, and after hours of hard fighting the Indians were dislodged, eleven being left dead on the field. Five of the Mexicans were killed. About 200 Indians were engaged.

On Wednesday, in the Star-route trial, at Washington, Mr. Wilson began the closing arguments for the defence. On Thursday the argument was interrupted to hear the testimony of Mr. Blackmar in regard to Rerdell's propositions to act for the Government while sitting with the defendants. Mr. Wilson, on Friday, entered upon a detailed analysis of the routes, which occupied several days.

Governor Cleveland has decided not to call an extra session of the New York Legislature unless absolutely necessary. On Friday he signed the Haggerty Receivership Bill; the bill extending the Brooklyn Primary Election Law to all cities in the State; authorizing the United States to buy land in Brooklyn for a Federal building; substituting the Railroad Commissioners for the State Engineer as the persons to make the examination of a railroad's income previously to a reduction of its fares; relating to the payment of the canal debt for the fiscal year beginning October 1, 1883; limiting the carrying and sale of pistols and other firearms in the cities of the State; and providing ways and means for the support of government. Great opposition has developed to the Page Savings-Bank Bill, which increases the list of investments allowed to those institutions by law. The Governor has not yet signed it.

The argument before Governor Cleveland on the General Street-Railroad Bill was held at Albany on Tuesday. Francis Lynde Stetson, of New York, first presented the objections to the bill, based on the fact that it shuts out Broadway from its provisions. He appeared in the interest of Mr. Vance, as the head of an association of Broadway property-owners who desire a railroad on Broadway. Other arguments, for and against the bill, were made.

Mayor Edson, of this city, on Wednesday, sent a number of nominations to the Board of Aldermen. John J. Gorman, for Fire Commissioner, to succeed himself for a term of six years, was immediately confirmed. Thomas S. Brennan, for Commissioner of Charities and Correction, to succeed himself for a term of six years, was also confirmed. William P. Mitchell was confirmed for Excise Commissioner, and William H. Phillips and Charles Welde, for the same office, were rejected. Charles F. Chandler, to succeed himself as Health Commissioner, was rejected. Other nominations were made and confirmed.

Andrew J. Smith, President of the Manhattan Fire Insurance Company of this city, was on Friday arrested, charged with having committed perjury in connection with the annual report of the Manhattan Fire Insurance Company for the year 1880, which was filed in the office of the State Insurance Department at Albany, on January 31, 1881. He waived examination, merely stating that he was not guilty, and was bailed in the sum of $5,000.

It was announced on Thursday that the *World* newspaper of this city had been sold by Mr. Jay Gould and others to Mr. Joseph Pulitzer, editor of the St. Louis *Post-Despatch*, for about $400,000. That gentleman took editorial charge on Friday. The paper will remain Democratic.

The corner-stone of Sherred Hall, a new building to be erected by the General Theological Seminary upon its grounds at Twentieth Street and Ninth Avenue, in this city, was laid on Thursday afternoon.

There has been considerable excitement in this city over the exposure of the shameful practices in the Mott Street Chinese opium dens. It is alleged that 100 young girls (not of Chinese parentage) have been ruined by them. A number of arrests were made during the week, and the keepers of several dens have been committed to jail to await trial.

The annual dog show was held in this city last week, and closed on Friday. It was very successful. There were about 1,000 entries.

There are 100 cases of malignant measles in Burgholtz, Niagara County, N. Y., and the State Board of Health is investigating the causes of the epidemic.

The long-continued excise excitement in Lockport, N. Y., closed on Friday with the rejection by the Board of all applications for licenses, and its adjournment to the first Monday in June. All the saloons continue to sell without a license.

During a violent thunder-storm, about 3 o'clock on Thursday morning, a bolt of lightning struck one of the tanks of the National Oil Storage Works, near Communipaw, N. J. A great explosion and fire followed which spread to neighboring tanks. Four more were exploded, and about 500,000 gallons of oil were burned. Six lives were lost and property valued at about $800,000 was destroyed.

A cyclone in southwestern Missouri on Sunday did great damage to property. The territory passed over was fully fifteen miles in length.

At Des Moines, Iowa, on Wednesday, in the United States Circuit Court, a decision was rendered in the long-contested driven-well cases of Green against several hundred defendants in Iowa. The court holds that the patent is entirely null and void.

Congressman Phil Thompson, of Kentucky, has been on trial during the week at Harrodsburg for the shooting of Mr. Davis. The ground of the defence was emotional insanity.

During the week which ended on May 9, 800,000 pounds of tax-paid tobacco were shipped from Petersburg, Va. The total revenue collections of the office in that city amount to $66,704 19, and the largest collections of any single day were $38,811 90.

At least 500 gamblers have left or will leave New Orleans on account of the recent act of the Legislature making gambling a felony.

Mrs. Fair was awarded a decree of divorce from her husband, Senator Fair, in Nevada on Saturday, and was allowed $4,250,000 in money and United States bonds, the family residence at San Francisco, and the custody of the three minor children. The custody of the oldest boy, James Fair, jr., was awarded to the defendant.

Mr. Amasa Stone, the Cleveland (O.) millionaire, committed suicide on Friday by shooting himself through the heart with a revolver. He had been suffering for some time with indigestion and insomnia, and for the past five or six weeks had been confined to his house the most of the time, not being able to obtain over two hours' sleep out of the twenty-four. This, with his recent business troubles, is thought to have unsettled his mind. He began life as a carpenter, and died worth about $6,000,000. He was very successful as a bridge builder. His charities were many, and Adelbert College, recently completed in Cleveland, was one of his largest gifts. He lost

heavily by recent troubles in the Chicago Union Rolling Mills.

Ex-Gov. Israel Washburn, jr., died on Saturday, in Philadelphia, whither he had gone for medical treatment, at the age of 71. He was a member of Congress from the Thirty-second to the Thirty-sixth, inclusive. In 1860 he was elected Governor of Maine, and in 1863 was appointed by President Lincoln Collector of Portland.

Mrs. Jesse R. Grant, mother of Gen. U. S. Grant, died at her home in Jersey City on Friday. She was eighty-four years of age, and had resided in Elizabeth and Jersey City since the death of her husband in 1874. The body was taken on Saturday evening to Cincinnati, and buried in Spring Grove Cemetery.

Senator Anthony's physicians do not offer any hope of his final recovery.

FOREIGN.

The Committee of the French Chamber of Deputies on the Tonquin Expedition were officially informed on Wednesday that 4,000 Annamite or Chinese troops attacked Ha-Noi, the capital of Tonquin, on March 20, but were repulsed by the French; also that Captain Kergaradec, Envoy of the French Government, bears a letter from President Grévy informing the King of Annam that his inability to assure the security of Tonquin compels France to establish herself definitively there. The letter advises the King not to resist, invites him to recognize the protectorate of France, and guarantees the integrity of his dominions. The committee adopted a report in favor of the credit proposed by the Government for the expences of the expedition. It is reported that 2,000 Chinese troops have been despatched in the direction of Tonquin. The French Chamber of Deputies on Tuesday voted the credit by 358 to 50.

It was announced on Tuesday that the Comte de Chambord, the head of the elder branch of the Bourbons and the last of his line, was dying. He was born in 1820.

It is semi-officially announced in Berlin that the mission of M. Waddington to Germany is to assure that country of the continued pacific intentions of France. He has been cordially received by Bismarck and the Emperor.

The Malagasy Envoys are greatly pleased with the reception which has been given them in Berlin. A treaty has been concluded with Germany on the most-favored-nation principle.

It is said in Berlin that Prince Bismarck's belief in dissolution as an effective weapon against a refractory Parliament is by no means as strong as it was. The health of the Chancellor is again unsatisfactory. There is an almost open rupture between Prince Bismarck and Herr Scholz, the Minister of Finance. The Prince declares, notwithstanding the above report, that the recent vote on the question of the budget will have convinced the Emperor of the impossibility of carrying out social reforms with the present Reichstag.

Emperor William of Germany has written to the Prussian Cabinet referring to the changes in the War and Navy Ministries, which, he says, were caused by want of energy on the part of General von Kameke and Admiral von Stosch, in protecting the imperial prerogatives of military command against the pretensions of the Reichstag.

Mr. George J. Dodson, Chancellor of the Duchy of Lancaster, introduced a bill in the House of Commons on Thursday by which agricultural tenants will be entitled to receive, when their tenancies expire, compensation from landlords for improvements they may have made to the lands they occupied. By this bill the landlord's right of distress will be limited to a sum equivalent to one year's rent. Mr. Childers, Chancellor of the Exchequer, said in the House on that day that the Government would consider during the present year the question of permitting the growing of tobacco in the United Kingdom. On Friday afternoon Sir Richard Assheton Cross, Conservative, called attention to the surrender of the Cuban refugees, Maceo, Rodriguez, and Castillo, to the Spanish authorities at Gibraltar. Sir Henry Drummond Wolff, Conservative, attacked the policy of the Government. Sir Charles Dilke, President of the Local Government Board, denied that Spain had acted in such a manner as to give England the right to demand the return of the Cubans. It is hoped, however, that Maceo will soon be liberated. It is said that there is a growing disposition among the Liberals not to support the Government. The London *Times* says they have "lost the habits of discipline."

A large meeting of Mr. Bradlaugh's constituents was held at Northampton, England, on Wednesday night, at which resolutions were passed in favor of Mr. Bradlaugh's retaining his seat in the House of Commons.

Joe Brady, who was convicted of participation in the murder of Lord Frederick Cavendish and Mr. Burke on the 6th of last May, was hanged at eight o'clock on Monday morning in Dublin. Brady was the first man brought to the gallows for connection with that crime. He was firm to the last, and made no statement. Fully 10,000 people were gathered outside the jail at the time of the execution, but they dispersed quietly.

Timothy Kelly's third trial for complicity in the Phœnix Park murders was concluded in Dublin on Wednesday. He was found guilty, and sentenced to be hanged on June 9.

Joseph Mullet, who was indicted on May 3 for complicity in the attempt on the life of Juror Denis Field, was on Thursday placed on trial in Dublin. He was charged with planning the attack, and was found guilty. He was sentenced to penal servitude for life.

The seven London conspirators were again arraigned in the Bow Street Police Court, in that city, on Thursday. Various witnesses were examined to prove the identity of the prisoners and the finding of nitro-glycerine on the premises occupied by Whitehead. On Friday all except O'Connor, *alias* Dalton, whom the Crown were unable to connect with the others, were committed for trial on the charge of treason-felony. Lynch, *alias* Norman, the informer, was committed on a charge of misdemeanor. O'Connor, on leaving the dock, was rearrested by detectives from Liverpool, to which city he was taken that night. On Saturday he was brought into court in Liverpool and formally remanded, charged with having been concerned with O'Herlihy and Kennedy in the dynamite plots.

In an article published on Monday, the London *Times* made an appeal to American opinion on the Irish question.

The London *Times* on Tuesday printed the details of an attempt to destroy a steamer plying between Liverpool and New York. Just before the steamer left Liverpool, several weeks ago, a man placed a box in the care of the steward. The latter's suspicions were aroused, and, on examination, the box was found to contain an infernal machine. The name of the steamer is kept secret.

The Fenian excitement was renewed in Halifax, N. S., on Thursday, by the fact that a steamer which acted in a mysterious manner had been sighted in the harbor.

Archbishop Croke, of Ireland, sent a communication to Cardinal Jacobini, the Papal Secretary of State, maintaining that his conduct in relation to the agitation in Ireland has been perfectly regular, and that his object is not to stimulate revolt, but to obtain for the people right and justice. The explanation of the Archbishop is not deemed satisfactory at the Vatican. On Friday the Archbishop was received in audience by the Pope, when he was informed of certain grave resolutions taken by the Pope in regard to the agitation in Ireland, especially one condemning the clergy in promoting the Parnell fund. It was announced on Saturday that the Archbishop had promised the Pope that he would in future conform to the attitude of Cardinal McCabe with regard to Irish affairs. He departed from Rome on Saturday so suddenly as to cause some surprise. On Tuesday it was announced that the Pope had addressed a strongly-worded letter to the Irish bishops, desiring them to prohibit the clergy from participating in political meetings or encouraging subscriptions in aid of the present agitation; also recommending the use of respectful language toward the state.

A meeting of influential shipowners, including the Anchor and Harrison Lines, and representing Suez Canal traffic to the extent of 3,000,000 tons, was held in London on Thursday. A resolution favoring the construction of another canal across the isthmus was unanimously adopted, and an executive committee was appointed to carry out the plans of the meeting.

The International Fisheries Exhibition was opened in London on Saturday, with impressive ceremonies, by the Prince of Wales. The Prince expressed regret at the unavoidable absence of the Queen.

The Dean of Westminster has granted permission to place a bust of the poet Coleridge in Westminster Abbey. An American admirer of the poet's works will bear the cost of it.

An exhibition of water-colors and etchings by American artists is being held in Egyptian Hall, Piccadilly, London. Moran's "Poet's Reflections" and Abbey's "Sketches on Long Island" are specially mentioned by the press.

James Young, the celebrated Scotch chemist, who discovered the slow-distillation process of extracting petroleum from coal, died on Monday, at the age of seventy-two.

There has been a general rising in Basuto Land, South Africa, which is now, however, under control.

The loan of 86,000,000 pesetas for Spanish public works proposed by the Government has been withdrawn, and the funds for that purpose will be provided instead by increase of the credit, inserted under the extraordinary budget, which will be covered by revenue to be derived from the sale of national lands. Señor Moret has informed the Budget Committee of the Chamber of Deputies that he cannot preside over their deliberations, as he is resolved to oppose the extraordinary budget.

Signor Depretis, President of the Italian Council, said, in the Chamber of Deputies, on Wednesday, that the Irredenta agitation was conducted solely by persons hostile to the institutions of the country. The Government, he said, were determined to repress all criminal preparations.

According to a Valparaiso despatch of May 15, a treaty of peace between Chili and Peru has been signed by General Novoa and General Iglesias, and is said to have been confirmed. It involves a ten years' cession to Chili of territory obscurely defined in the despatch. At the end of that term a plébiscite is to be taken to determine to which country it shall belong. The country acquiring it will pay indemnity.

National affairs in Ecuador are still critical. Business is suspended in Guayaquil, and the streets are held by armed troops.

Reports of the revolution in Hayti are conflicting. The true situation appears to be that Miragoane, which is defended by about seven hundred rebels, holds out against 6,000 Government troops, while the rest of the Republic is comparatively quiet, although there is a rumor that the town of St. Marc is in arms. Several noted persons at Cape Haytien have been arrested. It is said that the rebels have blown up a bridge at Miragoane with dynamite, killing 200 persons and wounding 200 more.

It is said that the Japanese Government has proposed to China that they establish a joint protectorate over Corea. China, however, is not inclined to accept the proposition.

MAHONE.

If the Administration of President Arthur desires to maintain a fair degree of respectability and to avoid becoming an unbearable burden to the Republican party, it cannot too soon put an end to all political fellowship with Senator Mahone of Virginia. The association with him of Republicans in responsible positions has been a disgrace from the beginning. The mere fact of his being a man of decidedly loose principles as to the binding force of public debts should have absolutely forbidden it. But in addition to this it was easy to foresee that his selfishness, arrogance, and unscrupulousness as a political manager, would without fail involve any administration or party countenancing him in endless disreputable entanglements.

Things seem now to have come to such a pass in Virginia that the Administration will be forced either to take the full responsibility for Mahone's doings, or shake him off for good. The *Tribune* on Monday published extracts from letters addressed to the President, the Secretaries of the Treasury and of the Navy, the Postmaster-General, and Mr. Eaton of the Civil-Service Commission, by Mr. Dezendorf, formerly the Representative in Congress of the Norfolk (Virginia) district. Mr. Dezendorf makes statements of a startling character, which the Administration can scarcely afford to ignore. It appears that for a considerable time Mr. Mahone has been permitted to say who shall and who shall not be a Federal office-holder in Virginia. His power seems to have been well-nigh absolute. The Federal office-holders in that State were therefore, to all intents and purposes, "Mahone's men." When he said "go," they went, and when he said "come," they came. He had them appointed for the purpose of doing his political work, and they did it, and are still doing it.

Now, some Republicans, probably a considerable majority of the party in Norfolk County, Virginia, thought it was not well that the Republican party should be dissolved and merged in the Readjuster organization for Mr. Mahone's benefit, and they nominated a Republican ticket for the county offices. Whereupon Mr. Mahone, this being done against his orders, levied an assessment upon the Federal office-holders, and sent a swarm of the latter from different parts of the State into Norfolk County to help defeat the Republican nominees. The Federal office-holders in the county itself had, of course, to give all their time to political work for the same purpose, on pain of official death, at Mr. Mahone's command. This is, indeed, a somewhat extraordinary state of things, leaving civil-service reform aside and looking at it from the point of view of mere party politics: a Republican Administration; Federal office-holders appointed by that Republican Administration; a State boss, not a Republican, using these Federal office-holders to defeat Republican candidates; and the Republican Administration coolly asked by him to aid him in this business.

No wonder that, in addition to this, Mr. Dezendorf finds these Federal office-holders too busy with politics to attend to their official duties. He tells the Postmaster-General that Mr. Mahone's man in the Norfolk post-office is "incompetent and inefficient"; that he, as well as his assistant, have been almost constantly absent on political errands, and that the merchants and business men of Norfolk have forwarded to Washington complaints about the mismanagement of the office and petitions for relief. He tells the Secretary of the Treasury that the Light-house, Internal Revenue, and some of the Custom-house officials are almost constantly absent from duty, canvassing; that the Custom-house is used as political headquarters, and that "the most shameful and disgraceful efforts at political bribery and corruption have been practised in public offices in the present campaign." He informs the Secretary of the Navy that the Navy-yard at Norfolk, especially the Construction Department, "is rotten to the core"; that the constructor in charge is notoriously inefficient and incompetent; that "the yard is, and has been for the last two years, a mere political machine, in which the public money has been squandered to further the ends of Senator Mahone"; that the flagrant abuses in the Navy-yard "account in some measure for the excessive cost of the work done on the *Pinta*, recently repaired at that yard," a vessel of 306 tons, which had more than $100,000 spent on her for "repairs," and which has since been ordered out of commission upon the recommendation of the Board of Inspection. Finally, he offers to prove that "during the Congressional campaign last fall, men were borne upon the rolls and paid for weeks at a time who did not put a foot into the Navy-yard to do an hour's work there."

Evidently the Administration should make haste to look into this thing. It should have done so long ago, for these complaints are not new. If it does not do so now, the next House of Representatives on its part may consider it a pleasure to do so. We are aware that there are Republican politicians in Washington who look upon this alliance with Mr. Mahone as an unusually smart piece of party diplomacy. Their theory is that Mahone is just the man to prevent the Democratic party from carrying Virginia at the next Presidential election. We doubt very much whether Mr. Mahone, if he should desire to do so, would be strong enough to give the State to the Republicans. But if he were, have the Republican managers counted the cost of the gain of the Virginia vote through Mahone? There are very few things that would injure the Republican party with the respectable and conservative element in the debatable Northern States so much as apparent abandonment of its best principles by the alliance with a repudiation movement, and an insult offered to the reform sentiment through the association with one of the most unscrupulous political bosses of our day. The Republican party could not have a harder race than with Mahone on its back.

FRAUD IN DIVORCE.

The *Western Jurist* publishes a report made last year to the American Bar Association by its Committee on Jurisprudence on the subject of divorce, accompanied by a draft of an act "to prevent fraudulent divorces." Divorces, the Committee say, are obtained so easily, partly because of insufficient restrictions as to length of residence in the State in which the application is made. To meet this difficulty they recommend the passage by State Legislatures of the following act:

> "The jurisdiction of the courts of this State in suits for divorce shall be confined to the following classes of cases: 1. Where both parties were domiciled within this State when the action was commenced. 2. Where the plaintiff was domiciled within this State when the action was commenced, and the defendant was personally served with process within this State. 3. Where one of the parties was domiciled within this State when the action was commenced, and one or the other of them actually resided within this State for one year next preceding the commencement of the action."

This would undoubtedly tend to check fraud, if "domicile" in law meant something different from residence. But as a general rule domicile means very much the same thing as residence; that is, it means merely the place where a man lives. Now, a man may change this place whenever he pleases. He may be living to-day in New York, and may to-morrow "settle" in some Western State. The moment he makes the change, his "domicile" changes; in other words, to get a new legal domicile is the work of a week or a day. Further than this, although a court may suspect that the change is made merely for the purpose of getting a divorce, and that the domicile will be abandoned as soon as this is obtained, there is no way of ascertaining this in advance. Therefore, domicile seems a very inadequate test to apply. Proof of an actual residence for a prescribed term of years—say five—is what the statute ought to require. Such a requirement would make collusive and fraudulent applications much more difficult than they are now.

In this respect there is a most crying need of reform. With regard to the general laxity of the divorce laws all over the country, the Committee has no specific to recommend, and we think the longer the matter is examined the clearer it appears that reform in these matters must come mainly from an improvement of the tone of public opinion on the whole subject of marriage and divorce. It used to be imagined that the laxity was owing to the facilities for divorce afforded by the Western States, and that the East, and especially New England, was void of reproach in the matter. But we know now that the tone of legislation in one part of the country is very much the same as in another, and that the Eastern States produce an annual crop of divorces which makes all comparison on the subject useless. In New Hampshire there are no less than sixteen causes of divorce. In Pennsylvania the liberality of the Legislature is pushed to a point where it becomes comical; for, not satisfied with making (we quote from the report) "such conduct on either side as renders the other party's condition intolerable" a good cause for divorce, the Legislature has taken the pains to give the Pennsylvania husband a special safeguard against the dangers of the matrimonial bond, by authorizing him to get a divorce whenever he can show "cruel and barbarous treatment on the part of the wife."

To improve the tone of the laws on the subject, what is needed is the growth of an im-

proved public opinion, such as the discussion of the matter during the past few years has encouraged; but the fraudulent-divorce business, which is openly advertised in the press, is not supported by any public opinion of any kind, and is a shocking scandal. One way to render it a less lucrative calling than it is now is through some legislation on the subject of residence. There would certainly be no hardship in the proposed change. It would merely serve to prevent the courts of the various States from being used for improper purposes. People who settle in new places for the bona-fide purpose of "growing up with the country," and find it necessary to begin their new lives with an application for divorce, may fairly be asked by the community of which they propose to become members to give it some guarantee of good faith. The very fact that two people who have once made up their minds that they do not wish to live together can always secure a divorce in some way, and that the opportunities for collusion and the manufacture of evidence in such cases are so numerous, makes it all the more important that the courts should be protected against downright fraud where it is possible.

But even a very general improvement in State legislation is not likely to bring divorce scandals to an end. Owing to the fact that the State Legislatures act independently of each other, the one thing certain about them is that they will continue in the long run to produce laws differing from each other in many ways as to the contract of marriage itself, the causes for which divorce may be granted, and the safeguards against fraudulent divorces. As long as they have control of the matter it will always be possible for a citizen of one State to resort to the courts of another to get rid of an inconvenient marriage. No way has ever been suggested to obtain such a uniform system of law on the subject of marriage and divorce as would render this practice impossible except through a constitutional amendment; and now that the subject is engaging the attention of reformers, this is a matter which ought not to be overlooked. Such an amendment would, of course, transfer to the general Government a subject belonging to a class which we are accustomed to regard as properly a matter of local regulation; but no one, so far as we are aware, has ever shown that such a transfer is impracticable or objectionable in any way. It may be said that such a Congressional divorce law could hardly rise above the average tone of State legislation on the subject, inasmuch as it would be passed by Representatives elected by precisely the same people who choose the State Legislatures. But, even granting this, even a very liberal general law on the subject would do the one thing which the States can never do. With such a law there would be none of the extraordinary confusion on the subject which now prevails. The same man or woman could not be married, say, in New York, while having a single status in Connecticut and a married one again in Massachusetts. No wives would casually learn from the newspapers that their marriage was terminated. In short, as in other civilized countries, a man or woman once married would continue married throughout every part of the United States, and, if divorced, the divorce would be good everywhere too. Very little fraud in divorce could survive the passage of such a law.

THE IRISH CONSPIRATORS AND THE AMERICAN GOVERNMENT.

We took occasion some weeks ago to express our fear that the indignation excited here by the Irish assassination and dynamite conspiracies, and uttered in the American press, would mislead Englishmen as to the amount of assistance they were likely to receive from American law in punishing or preventing such conspiracies when concocted on American soil. That our apprehension was well founded is proved by an article in the *Economist* of April 28, on the "American Irish and the American Government," in which it undertakes, with much good sense, to moderate the expectations of Englishmen touching the duty of the American Government in the matter of restraining the Irish-American attacks on British peace and security. It points out that the American Government is a government of law, and that it cannot punish the men who plot on this side of the water the murder of British officials or the destruction of British buildings, except under the law and through the courts, and that it cannot be expected to strain the law for English convenience. It shows, moreover, how little use to England even the greatest liberality in the matter of extradition would be, seeing that the crimes against which it is sought to provide, if committed at all, would be committed on American soil, and would be, therefore, justiciable only in the American courts. It then proceeds to give its own solution of the difficulty as follows:

"What we have a right to ask from the Union is simply this, that the Government should accept, or even suggest, a treaty binding both parties to make conspiracy to murder, or to destroy property, beyond their own confines, a penal offence, punishable, on conviction, before the usual courts created to try criminal offences. The Minister of each state would then collect his evidence and produce his witnesses like any private prosecutor; there would be no question of extradition even raised, and no one could presume to doubt the justice of the court. Each state would try offenders on its own soil, through its own judges. The offence alleged is a crime, not against this or that state, but against humanity, just as piracy is, and it would be tried just as that offence is, without any of the *éclat* that attends a political trial. The Government of the country in which the conspiracy was alleged to exist would not be concerned in the matter at all, would be responsible neither for sentence nor acquittal, but would leave everything, as in all other criminal cases, to the court, which would have no motive in the majority of cases to do anything but justice, and which, whether in England or America, would be beyond the reach of menace from angry voters. We all know that in England or Canada such offences would meet with no sympathy, and in America the people are obviously willing to punish, if only the law is made clear and there is sufficient evidence. The case is not one for an extradition treaty at all, but for a treaty declaring the law, and promising that the courts shall, in the ordinary way, with ordinary juries, take cognizance of the offence."

It would be difficult in any reasonable space to explain all the misunderstandings and mistakes contained in this short paragraph. In the first place, supposing that Americans were less sensitive than Englishmen have shown themselves to be about altering their municipal law for the purpose of obliging foreigners, the difficulty in the way of making any such treaty effective would be much greater here than in England. In England the treaty-making power also initiates and shapes legislation. When Mr. Gladstone makes a treaty with a foreign Power, he makes it in the double capacity of chief administrator and chief legislator, and if it needs any legislation to make it operative, can promise to bring that legislation about. But even the Prime Minister cannot always make such promises with the certainty of fulfilling them. Lord Palmerston made just such a promise to the French Government in the Orsini case, but when he attempted to fulfil it he was driven from office.

In the second place, the President, though he shares in the treaty-making power, can only recommend legislation. He may create offences by treaty, but the courts will not take any notice of them without a statute defining the offences and prescribing the punishment. Therefore, no matter how solemn the engagement into which he might enter with Great Britain to indict and punish dynamite and murder conspirators, it would not have the slightest value as a deterrent without an act of Congress. Treaties, to be sure, are part of the supreme law of the land; but when treaties relate to matters of internal regulation, legislation is necessary to make them operative, and President Arthur could not promise any foreign Power to procure such legislation; he could only promise to ask for it. That authority to create new crimes is included in the treaty-making power of the President is a doctrine which even the loosest constructionists have never ventured to produce. Congress alone has the power to add to the list of offences against international law, and to provide punishment for them, and in our humble opinion it is vastly more likely to exercise this power, in the case of the Irish-Americans, of its own accord, or on a simple Presidential suggestion, than under a treaty concluded with Great Britain for the express purpose of helping her out of her Irish troubles. In fact, we can hardly conceive of a greater hindrance to such legislation than such a treaty would be. It would wound the national pride at a great many points, and would be vigorously opposed by tens of thousands who care nothing about the Irish question, and loathe the dynamiters as much as Sir William Harcourt.

One great objection to it in the minds of this class would be the familiar one that there would be no reciprocity in it. It would be entered into solely for English benefit. No American, in his wildest dreams, foresees the possibility of the United States having to ask for the assistance of foreign governments in protecting itself against plots to murder its public men, or blow up its buildings, concocted on foreign soil, by large numbers of exiled citizens. A state of things somewhat like this arose, it is true, during the late war, but arose during a war, and the cause of the war has absolutely disappeared. Let the galled jade wince, therefore, would be the answer which would occur to a great many Americans when any such treaty was asked for. Whatever the faults or crimes of the Irish agitators may be, the presence of nearly two millions of born

subjects of the Queen on American soil, animated by the deadliest hatred of her government, is a tremendous and unprecedented fact, and it is the central fact of the situation. It is this which makes the dynamiters formidable or, indeed, possible, and it is a fact which it is impossible to get Americans to regard as an isolated one, without antecedents, or as simply a result of Irish perversity. Everybody knows that it has a cause, and that that cause is long-continued misgovernment. To ask the American people to treat it as a great misfortune, common to both them and Englishmen, and for which they are responsible in an equal degree with Englishmen, would therefore be asking too much, and yet this is what such a treaty as the *Economist* describes would ask.

Finally, there does not as yet appear to be any necessity for such a treaty. No conspiracy entered into here for murder or explosion in England has yet been proved. If any has been entered into, the English law and police have proved amply sufficient to deal with it. The conspirators in the dynamite cases have been captured with very little trouble, and they are the only cases of the kind which anybody pretends to have originated in the United States. Every English newspaper received now contains boasts of the successful vigilance of the police, and of the perfect confidence felt in their capacity under the new law to discover and frustrate all such attempts in future. Why, then, should American aid be invoked at the risk of seeing it refused, and of rousing American susceptibility into the bargain? We say nothing about the *Economist's* description of the calm and quiet with which trials under such a treaty would be conducted. Its picture will amuse most American readers, but it is not yet worth while to explain to Englishmen the cause of their merriment.

POLITICAL ORGANIZATIONS—THE AFFIRMATION BILL DEBATE.

LONDON, May 3.

ONE of the most conspicuous signs of the growing intensity of party feeling in England is to be found in the establishment during the last few years of so many new political clubs in London and so many party associations over the whole of Great Britain. Thirty years ago there were only two great political clubs in London—the Carlton for the Tories, the Reform for the Liberals, since White's and Brooks's, the older local homes of the two parties, had already become rather social than political bodies. Then the Conservative Club, in St. James Street, was created as an adjunct to the Carlton, intended to receive those for whom the latter had no room, or who were not thought quite qualified for it by position. So things went on till seven or eight years ago, when the Liberals set up a new club, the Devonshire, while the Conservatives, still keeping ahead of their rivals, erected opposite to the old Carlton, in Pall Mall, a Junior Carlton, rivalling its mother in size, if not in selectness. The next step forward has just been taken, but this time by the Liberals, in the foundation of their gigantic National Liberal Club, which celebrated its birth by an inaugural dinner last night, with Lord Granville in the chair, and Mr. Gladstone, the club president, coming in after dinner to deliver a party manifesto.

This last creation of the passion for political organization is remarkable in two ways. It is due not merely to the increasing number of persons who come on political business to London, but to the disgust of the Liberals with the old Reform Club. That institution used to be a sort of centre of party action. It had—indeed, it still has—a political committee which looked after elections. It used to raise funds to help candidates to fight costly constituencies. Liberal members of Parliament were expected to join it, and to use it as a place of meeting with the influential party leaders of the great towns of the North and West. But the Reform fell by degrees into the hands of another class of persons. It was famous for its cookery, and plenty of people joined it who cared more for cookery than for politics, and accepted the profession of faith in peace, retrenchment, and reform required from them just as easily as nationalist Irish or English republican members of Parliament accept the oath of allegiance to the Crown, regarding it as a mere old-fashioned formality. Besides, the general change in the political sympathies of the wealthier inhabitants of London, which has made London Society, as it calls itself, almost wholly Conservative, told upon the older as well as the newer members of the Club. Men who were earnest reformers in 1850 had become substantially Tories in 1882; and this new attitude has repeatedly shown itself in the disposition of the Club to blackball persons associated with radicalism. The most notable instance was the rejection last summer of the brothers of Mr. Joseph Chamberlain, apparently for no reason except that they were his brothers, and that he is the most prominent figure in the ranks of the Radical organizers. Hence the desire for a club of a more pronounced and vigorous liberalism, the political allegiance of whose members to the party leaders should be more unqualified. The second and more novel feature in this new club is the attempt which it makes to gather to a focus the immense number of local Liberal associations and clubs which have sprung up during the last few years over England and Scotland. These associations are permitted, and indeed invited, to affiliate themselves to this central club, and thereby to obtain privileges for their members and the right of being represented on its committee. A great number have done so, and in consequence the Club has already become a centre for the whole Liberal party throughout the country, such as never existed before, able to receive impressions from the country and bring them to bear upon the party in Parliament; able to convey instructions from the Parliamentary leaders to the local managers and the rank and file in the constituencies with a celerity and completeness which rivals, if it does not surpass, that of your party machinery in America. It is perhaps in one point more effective than yours, because in England, and still more in Scotland, the party managers are less distinct from the mass of party voters than with you, there being here no office-seeking class because there is no longer any appreciable party patronage.

How far the organization will work as it is intended to do, remains to be seen; all that we can do now is to indicate the results expected from it by its founders. They hope by it to remove the centre of political action to London from Birmingham, hitherto the seat of the executive of the Federation of Liberal Associations. They desire to counterbalance—by the pressure which local Liberals coming frequently to London, and there meeting their representatives in Parliament, will exercise upon those representatives—the social influences in favor of conservatism under which the zeal of many waxes cold. And above all, they seek to maintain the unity of the Liberal party—a unity often threatened, and likely to be threatened more seriously than ever by the approaching withdrawal of Mr. Gladstone, whose ascendancy has silenced for the last few years the controversies of discordant sections. The inaugural banquet of which I have just spoken was an imposing manifestation of this unity as it now exists. Nineteen hundred members, representing every corner of Great Britain, sat down to dinner. Most of them were doubtless Radicals, but the Chairman was a typical representative of the old Whig governing class, and the reception given him was only second to the enthusiasm which welcomed Mr. Gladstone.

The Conservative party has far less occasion to consolidate itself by means of an elaborate organization. It hangs together by its own nature, being divided by no such differences, either of speculative doctrine or of material interest, as those which threaten the Liberals. There have been indeed patent signs of jealousy among the leaders, and charges brought by some of the younger members of the House of Commons against their seniors of sluggishness, timidity, and want of skill. The Liberals make merry over these recriminations, and are lulled by them into a sense of security. While the enemy quarrel, they say, we are safe. Their incompetence to administer the affairs of the country is proved by the criticisms their own subalterns pass upon them; so the country will not think of turning us out to put them in. This is a superficial view. The country cares a great deal less about such jealousies than men in Parliament fancy. Its votes are determined by other considerations, and though the Conservative party would doubtless be stronger if it had a bold and skilful helmsman like Sir Robert Peel, or even like Lord Beaconsfield, still there lies at the bottom of every Englishman's mind the notion happily and simply expressed by that typical Englishman, King George the Third, that every man is good enough for any place he can get. If the Liberal Ministry were to commit any grave mistake, or even to be involved in any grave misfortune, or if, on Mr. Gladstone's retirement, differences of opinion were to prevent the whole party vote from being cast in support of the same chief, the Tories might come back to power forthwith. The natural cohesion of the party is strong enough to survive the dissensions of its leaders. However, it is wisely endeavoring to emulate the progress its foes have made towards organization. A great Constitutional Club has been formed, which will doubtless in due course be inaugurated with as much pomp and zeal as the National Liberal Club was yesterday, the only difference being that the Tories do not possess any leading figure so imposing by age, eloquence, and character as is Mr. Gladstone.

The Ministry of that statesman do at this crisis need all the support his popularity can give them, for as the debate on the Affirmation Bill draws to its close the prospects of carrying that measure seem worse and worse. It is now understood that the Irish members of every shade of opinion—not only the ultra-Protestant, Tory Orangemen, and the ultra-Roman Catholic section of the Home Rulers, but also the Protestant Nationalists and even the Ulster Liberals and moderate Catholics, who usually support the Government—will either vote against the bill or withdraw from the division. You will know tomorrow morning what the result has been, but, so far as calculations go now, it is believed by those who look closely into these matters that the Government will obtain a majority just sufficient to save their credit, but not sufficient to make it worth their while to go on with the bill. The House of Lords would of course reject it, or any other measure brought forward by the present Ministry, if the Tory leaders asked it to do so; and, according to our constitutional usages,

it would be within its right in rejecting what had passed the House of Commons by a majority considerably less than the normal one at the command of the Government. And if it were clear that the bill would fail to pass the upper house, it would be thought foolish to waste precious time in pressing it through its remaining stages in the lower. The Conservatives would, of course, give it a relentless opposition there; and, as the Ministry dare not employ the new rule of closure in such a matter, many nights might be fruitlessly consumed. So intense are any feelings that connect themselves with religion, and so little in the English Parliament can a majority effect against a resolute minority!

The debate has been tedious and uninstructive, illumined only by one remarkable speech, that of Mr. Gladstone, delivered a week ago. People talk of it as one of his greatest efforts, but perhaps this is because the merits of his oratory are more fully realized now when they must soon pass into the realm of tradition. It was less of a sustained effort than several other speeches have been of late years, those, for example, which he delivered on the Eastern Question. But there were in it several passages of wonderful power, and one or two which rose to the height of a philosophy worthy to be compared with Burke's. Perhaps the most striking thing was the way in which he recited six lines in which Lucretius sets forth the Epicurean conception of the gods, as far removed from human ken and interest in human affairs. There were probably not more than half-a-dozen people out of the four hundred who listened to him who followed the sonorous hexameters which he declaimed, but the way in which the solemn majesty of the poet seemed to penetrate him, and express itself through his voice, as it rose and sank in exquisite cadences, held the assembly spell-bound, and carried to its mind an emotion if not a meaning. The impression produced on the country by this speech has been profound. It has so far explained Mr. Gladstone's own views and principles, that he will not suffer in public opinion for having taken up the question; and it has probably decided the votes of a number of Scotch and Welsh members, who had previously feared to offend their constituents by appearing to "vote for Bradlaugh." But to the Irish members it has apparently made no difference. The people of Ulster are very largely Presbyterians, like their cousins in Scotland; but they are either more strictly orthodox or less disposed to regard ecclesiastical questions from a political point of view. Religious opinion is evidently a more potent influence in determining men's political course among Irishmen of all creeds than it is among the Teutonic population of England, or even the semi-Celtic population of Scotland and Wales. It is long since we have had a question which brings out more curiously the difference between the minds and tempers of the various races which make up the United Kingdom.

Y.

RENAN'S AUTOBIOGRAPHY.

PARIS, April 27, 1883.

I ONCE tried to analyze the influence of the Celtic genius on the modern literature of France, and chose for my analysis Chateaubriand and Lamennais, who were both pure Celts, and Victor Hugo, who is half a Celt and half a Frank (the name of Hugo is the same as Hugh, or Hughes). Renan would add many interesting elements to this study, and he has kindly consented to collect the "Memories of Infancy and of Youth"* which first appeared in parts in the *Revue des Deux Mondes*. There could hardly be a more interesting work than this study of himself by a superior man. In vain did Pascal say "le moi est haïssable"; the old philosophy answers him with its "γνῶθι σεαυτόν." We read such books as Rousseau's 'Confessions' with a passionate pleasure; it seems as if we were brought by such works deeper into the knowledge of human hearts than by any novel or any drama.

The greatest merit—in fact, the indispensable merit—of a personal "memoir" is an absolute candor. We cannot be deceived; we shall soon know whether an author is telling the truth or not when he speaks of himself. Renan is absolutely candid, and small merit to him for being so, as he has a profound disdain of public opinion. He does not take the trouble to distort the truth, though he does not understand the truth in the ordinary sense of the word. "All," he says, "is true in this volume, but not of that ordinary kind of truth which is required for a 'universal biography'"; by which he means that he has written many things *cum grano salis*, with reserves, sometimes altering proper names, or names of places, as many people are afraid of publicity. He has given us the history of his soul, of his ideas, with complete exactitude; his autobiography is a moral analysis. As such, it is invaluable, as it shows us the most extraordinary development of a man brought up in the Catholic Church and for the Catholic Church, and drifting into a sort of moral *Nirvâna* of indifference to all dogmas, and finally treating religion merely as a scientific and historical phenomenon.

At the beginning of his Preface he speaks of an old legend of Brittany, of the city of Is, which, in past ages, was swallowed up by the sea. On the days of great tempests the sailors think that they see in the trough of the waves the tops of the spires of its churches; on calm days one hears the distant sound of their bells, drowned by the ocean. "It seems to me," says Renan, "that I have in my own heart a town of Is, which still has its obstinate bells that ring for the sacred offices and call for men who hear no more. Often I stop and listen to these trembling vibrations, which seem to come from infinite depths, like voices of another world. As age comes on, I take pleasure, especially during the summer, in collecting these distant noises of a lost Atlantis." Is not this a beautiful and delicate comparison? This autobiography is, indeed, full of these exquisite memories of a past which is in full contrast with the present. Renan has in himself, and he has never been able to destroy it, the old Celtic spirit, the love of the miraculous, of the unreal, of the unattainable: the boundless idealism, the sincere contempt for facts, for wealth, for all the temporalities; he lives in a dream. Even when he is dealing with history, and follows the laws of modern philology and criticism, he is a pure spirit. What would be a heavy stone in the hands of another becomes in his hands an ornament in a fantastic structure. He is ubiquitous, diversified, full of contrasts; he contradicts himself incessantly; he sees things under a thousand different aspects. He is like a musician who cannot help modulating and going from one key to another.

Renan takes us first to his native place, Tréguier. An old monastery was founded there at the end of the fifth century by Saint Tual, Tugdual, or Tudwal; an admirable cathedral was built in the thirteenth century, and it surrounded itself with convents. There was nothing at Tréguier but the bishop, the priests, and the monks, with a few noblemen and sailors. Renan spent his early years in this little ecclesiastical town. "The cathedral, a masterpiece of lightness, a mad attempt to realize in granite an impossible conception, first disturbed my ideas. The long hours which I spent in it are the cause of my utter practical incapacity. This architectural paradox made of me a chimerical man, a disciple of Saint Tudwal, Saint Iltud, and Saint Cadoc, in a century during which the teaching of these saints has no longer any application." Renan grew up in the shadow of the old cathedral; he felt uncomfortable when he was taken at times to Guingamp, where he had relatives. In the neighborhood of Tréguier were some curious churches, which all had their legends. On the death of his father, his mother gave him Saint Yves as a tutelary saint. "I cannot say that Saint Yves marvellously conducted my affairs, nor that he gave me a remarkable understanding of my interests. I owe him something better than that: he gave me contentment, which passes wealth (*contentement qui passe richesse*), and a natural good-humor which has kept me joyous till this day." It is quite true that Renan, poetical as he is, is not addicted to melancholy, like so many Bretons; but we shall see that there were some southern and Gascon elements in his blood.

His spiritual teachers were all priests; all their words were oracles to him. He had never had a doubt till the age of sixteen, when he came to Paris. "I feel that my life is still governed by a faith which I possess no longer. Faith has this peculiarity, that, even when gone, it still acts. Grace survives by habit the living sentiment which it first produces. One continues to do mechanically what was first done in spirit and in truth. When Orpheus was torn in pieces by the Mænads, his lyre could only say: 'Eurydice! Eurydice!'" The point on which the good priests most insisted was chastity. "Their sermons on this point made me chaste during all my youth." The teaching of these sermons was itself enveloped in an extraordinary decorum; in order to warn men against all pleasures, the priest remembered the words of Jonathan, dying for having tasted a little honey—"Gustans gustavi paululum mellis, et ecce morior." The moral lessons were always in this style: "Tetigisse periisse," and so on. The youth of Renan was spent in a school of respect, of faith, of humility, of grave virtue; even superstition seemed to him natural. The Bretons of Tréguier believed of an old nobleman that he could cure the sick by touching them with his saliva. In order to have such a power it was necessary to have a great number of *quartiers de noblesse*. The poor old man would never receive any pay from the peasants who brought him their sick children, sometimes from a great distance. As he was almost in a state of misery, he would receive a few eggs, butter, potatoes, fruits. "The nobles of the cities laughed at him. They were quite wrong; he knew the country; he was its soul and incarnation." At the time of the Revolution, the "broyeur de lin" (the peasants always gave him that title, as he was usually occupied with preparing flax) emigrated to the Island of Jersey. He came back at the time of the Restoration, and, poor as he was, he would receive no part of the indemnity of the *émigrés*. He was the last representative of a race; he had but one daughter, who became mad. Renan gives us the sad history of her mental disease; but I prefer to select in his work what chiefly concerns him and his family.

His education and his surroundings had made him an idealist. He was born prematurely, so sickly and weak that it was thought he could not live. An old sorceress, Gode, took one of his little shirts and threw it into the pond. "He can live! he can live!" said she, because, thrown on the water, the little shirt swelled and did not sink at once. His ancestors were all peasants or sailors; his grandfather, though a patriot, would not buy any lands which had belonged to the

Souvenirs d'Enfance et de Jeunesse. Par Ernest Renan. Paris: Calmann Lévy; New York: F. W. Christern.

Church or to the nobles. His father was a sailor, who had been in the fleet of Villaret de Joyeuse, and spent several years in the English hulks. He was very poor, as was also the uncle, Pierre. Renan speaks of this uncle with entire freedom: "He was the best creature in the world, but he could not be made to work. He was always here and there, spending his nights and days in the cabarets; withal, good and honest. It was impossible to give him an occupation." He was the life and soul of the cabarets, very popular, fond of telling amusing stories, which he drew from books, arranging them for the men of the port. He finally became a "pur vagabond," but he was "gentle, excellent, incapable of hurting a fly." He was found dead on the road to Langoat. Renan imagines a conversation between himself and his own mother, and puts these details in the mouth of his mother. I cannot help thinking that he would have done as well to leave "Uncle Pierre" in oblivion, and I do not much like such remarks as this: "Poor Uncle Pierre! I have often thought of him. This tardy esteem will be his only recompense."

Let us complete the family circle. His father, he informs us, was very different from the joyful Pierre; he was mild and melancholy. Renan had a sister, called Henriette, who became one of the great affections of his life. He says in the preface: "The person who has had the greatest influence on my life—I mean my sister Henriette—occupies hardly any place in this memoir." In September, 1862, a year after her death, he wrote a little memoir of her, of which only a hundred copies were printed and given to intimate friends. His sister was so modest that Renan did not feel at liberty to republish this memoir. "I will not," he says, "expose a memory which is holy to me to the rough judgment which one who has paid for a book has a right to make on it." He informs us that this memoir will only be republished after his death.

On his mother's side, Renan touched the world of the bourgeoisie of Lannion. His grandmother had been handsome, never left off her bourgeois *coiffes*, and never would be called otherwise than *mademoiselle*. There were many aunts, unmarried. When the Revolution broke out, his grandmother, who had all the ideas of the old régime, lent her *salon* for the secret mass. She took the place of the noble ladies who had emigrated. The uncles of Renan, on the contrary, were great patriots. The good grandmother played for two years with the guillotine, and it was a miracle that she escaped the fate of her dear friend Mme. Taupin, who was guillotined at Lannion. Renan tells us that his mother was not as hostile as his grandmother to the Revolution. "By my descent," says Renan, "I was divided between contrary forces. There were in the family of my mother elements of Basque and Bordelais blood. A Gascon, without my knowing it, played terrible tricks with the Breton. . . . My family was divided. My father, my paternal grandfather, my uncles, were far from clerical. But my maternal grandmother was the leader of a society in which royalism and religion were not separated. . . . This complexity of origin is in great part, I believe, the cause of my apparent contradictions. I am double: sometimes one part of myself laughs when the other cries. . . . As there are two men in me, one is always contented."

Speaking of his own mother, he says: "My mother belonged quite to the old world by her sentiments and her memories. She spoke Breton admirably; she knew all the proverbs of the sailors. . . . She was all people (*tout était peuple en elle*), and her native wit gave a surprising life to the long stories which she used to tell." She lived to the age of eighty-five years without infirmities, when she was seized by a cruel malady, of which she died rapidly. We must now follow Renan into the details which he gives on the subject of his literary education, first in Brittany, and afterward in Paris.

Correspondence.

THE COLUMBIA SCHEME OF HIGHER EDUCATION FOR WOMEN.

To the Editor of The Nation:

Sir: Will you permit me to deprecate your comments in the *Nation* of the 10th instant upon the second report of the Committee to whom was referred the petition presented last February to the Trustees of Columbia College by the Association for Promoting the Higher Education of Women in New York?

The public has become so accustomed to trust the *Nation*, both as an organ of the soundest and most liberal opinions of our day and on account of the acumen which usually characterizes its own judgments, that the views editorially expressed in the present case are likely to reconcile the minds of many persons interested in the improvement of female education to a deplorable mistake.

It will scarcely be gainsaid that on this subject we have everything to learn from those who have conducted to such decisive results the reform in England; but these persons have been uniformly actuated by two main principles—common tests of proficiency for both sexes as a *sine qua non;* common instruction whenever, as is for the most part the case in superior education, the supply of a given quality of instruction is so small that there is not enough to divide between men and women students. The Columbia committee has reported in direct contravention of these principles; it has improvised a special programme of study, and special examinations, which, whatever their particular merits may be, are open to the radical objections that apply to all systems especially intended for women. Such systems command no public confidence, appeal to the ambition of no intelligent woman; they are as lifeless and as liable to abuse as other measures intended solely for a comparatively small and insignificant class. It is only extensive and important interests that compel vigorous administration.

I need not now refer to the subject of common instruction, or co-education, which, as regards Columbia College, seems to be, for the present, out of the question. Upon the importance of common tests—*i. e.*, common examinations, against which the Columbia trustees as a body have not yet irrevocably decided—no one is more competent to speak than the woman who, more than any other person, initiated and guided the English reform. I mean Miss Emily Davies, late Mistress and still Honorary Secretary of Girton College. In a pamphlet on "Special Systems of Education for Women," published in 1868, Miss Davies discusses the subject of examinations as follows (the italics are my own):

"Authority; wise choice of subjects; so much skill in the construction of questions that at any rate they do not invite shallow and unthorough preparation; practicability, and due severity—these are the requisites which most people will agree in regarding as essential. But the agreement does not go much further. As to authority, what constitutes it? Is it the personal reputation of the examiners, or is it their official position? Or is it the prestige acquired by prescription? Or has the quality of the candidates anything to do with it? It is as to the two last points that opinions differ. We can agree so far as this—that an examination by men of high repute will carry more weight than one by men unknown, and that an examination by an official body such as a university will be more readily believed in than one by any self-constituted board, however respectable. But supposing these two points secured, *is a new examination conducted by competent examiners appointed by a university all that is to be desired?* Will an unknown standard, having expressly in view candidates drawn from a limited and notoriously illiterate class, be worth much as regards authority? Mr. Matthew Arnold remarks that 'High-pitched examinations are the result, not the cause, of a high condition of general culture, and examinations tend, in fact, to adjust themselves to studies.' There is much reason to expect that such a scheme as has been supposed would from the outset be, whether justly or unjustly, regarded as in some way accommodated to the inferior attainments of the class, and that starting with small repute it would have to contend with the natural tendency of all things to justify their character. The most highly cultivated women would not care to submit themselves to an ordeal in which to fail might be disgrace, but to pass would be no distinction. The mere fact of its special character would in itself repel them. . . . An examination limited to a class, and with which the élite of that class will have nothing to do, is not likely to command very high respect."

Those who have watched the working of any system of education designed especially for women can bear melancholy testimony how true it is that such systems, "starting with small repute," tend to "justify their character." Such a system, when the attempt is made to connect it with any institution for the education of men, is soon felt to be a mere excrescence. Cut off from the life-current of the institution, it must become a dead member; the disproportionate amount of trouble that it involves relatively to the number of persons benefited, as compared with the regular work of the institution, soon renders it irksome to those officials who have charge of it. Irregularity, the uncertainty of continuance, every species of mismanagement, eventually extinguish what public interest the scheme awakened at the start.

An apparent exception to the rule that special examinations are inexpedient is found in the success of the Cambridge "higher local examinations," originally intended for women only, and still, I believe, mainly used by them; in that of the Oxford "examination of women over eighteen years of age," and in that of some other special schemes. It should, however, be remembered that these special examinations have flourished in the midst of numerous schemes of common instruction and examination; that female examiners have in England rapidly become a large and important body, and that the theory of sex in intellect has waned with corresponding rapidity, especially among examiners. If the special examinations had been instituted apart from the general movement in England, their history would probably have been very different.

The mere fact that a special scheme is officially organized does not show that it is entitled to compare in value with such opportunities as Girton offered before its recognition by the University of Cambridge, nor with such opportunities as the Annex students enjoy. To secure the regular tests of the College or University, whether by the decree of its ruling body or merely by their indulgence, is the prime point.

The statement that "The offer [contained in the plan of the Columbia Committee] is substantially more than the London University offers to men" must surely be an instance of that irony for which the *Nation* is famous.

The conclusion of your article urges the promoters of the movement which produced the petition to Columbia College to provide the means for a course of instruction corresponding to the proposed scheme of examination. I greatly fear that any who accepted this advice would find that they had built upon the sands. Every one is aware that in any educational scheme the

prospect of permanence is of the first importance; education cannot be rapidly forced into new channels, or abruptly adapted to the phases of popular opinion. Can it then be supposed that the plan improvised by Dr. Dix will continue for any considerable time to satisfy the needs of female education, or that schools will conform their preparation to a scheme that must be as ephemeral as the prejudices that gave it birth?

To sum up: If the indefinite and indefensible hypothesis of sex in intellect is retained, the whole basis of reform in female education is wanting; if this hypothesis has been abandoned, what advantage is gained by special tests of proficiency?

I have only to add that although I am a member of the Association for Promoting the Higher Education of Women in New York, I do not in any way represent that Association, and I write in entire ignorance of its sentiments with regard to the report of the Columbia Committee.

E. T. M.

New York, May 15, 1883.

THE BRICK-AND-MORTAR POLICY OF OUR COLLEGES.

To the Editor of The Nation:

Sir: The article in the *Nation* of May 3, on the "Real Weakness of American Universities," requires some qualification. Undoubtedly the poor salaries of the professors, as compared with the remuneration of any other skilled labor in the country, is one source of that weakness; but it is hardly fair to charge this wholly on the trustees as preferring a brick-and-mortar policy before the rights of the teachers. The buildings regarded by trustees with favor are dormitories, because they are profitable investments, bringing in the chief income available for the present wretched salaries of the professors. The fact is, that the attitude of the public toward college salaries compels the trustees to bid for cheap professors, and, until the community comes to their relief, no change for the better is open to managers of university trust-funds, usually appropriated to special objects, and generally insufficient for their appointed purpose.

It is, however, not true that enthusiasm will take the place of adequate buildings and apparatus, or that, given a sufficient thirst for knowledge, a modern university can be carried on without them. Nor will salary alone secure the services of an eminent professor. The facilities at his command for original research as well as for instruction will determine his choice of a residence perhaps more than anything else. A glance at the most fortunate German universities at the present moment will illustrate this. Why do students of all nations go to Berlin, to Leipzig, to Vienna, to Heidelberg, etc., etc.? Not simply because they find there Helmholtz, Bunsen, Hofmann, or Ludwig, but also because they find there the best-equipped laboratories for physics, chemistry, physiology, etc., etc. These laboratories owe their existence to these very men, who, when called to their present chairs, insisted on having the best tools they needed both for instruction and research.

This is the true object of the brick-and-mortar policy, and it will succeed in securing an eminent man when the mere question of salary will not affect him. Pay the professors good salaries, but by all means let them have all they want in the way of libraries, of collections, of apparatus, of laboratories, of facilities for publication, of assistants; and do not expect them to waste their time in applying a powerful stimulus from a barn or tent to students thirsting for knowledge in those branches of learning which require all the refinements of modern science for their successful prosecution. A.

To the Editor of The Nation:

Sir: The notice in your issue of May 3 of the meeting of Alumni of Cornell University to inquire for the "causes of decline in number of students, general interest, etc.," is indeed a significant fact; it would be of high value to touch the real point of difficulty and so establish a precedent. Each of the causes suggested carries with it a certain weight, especially "co-education, and the attacks of the religious press." The design of the founder also affords some clew to the difficulty—encyclopedic past hope of accomplishment.

Concerning the suggestion which found most favor with the *Nation*—viz., "falling off in quality of the professors owing to the smallness of salaries paid them"—is it not a fact that as soon as the professor's salary is made commensurate with his high ability, say from three to eight thousand dollars, he at once escapes from the drudgery of teaching, and we have, instead, the "assistant professor," or the "fellow," doing the duties of the chair, while the professor proper becomes a student at leisure, giving a few hours weekly to the lecture-room, or a student at large, or a sojourner abroad, or a foreign minister, etc.? Faithful teaching involves a drudgery which no one appreciates who has not performed it. Pegasus will not be harnessed willingly—he feels his wings. Great men have been teachers, but it was only a stepping-stone, only to fill a gap. How many first-class names have remained in the profession? Men like Emerson, Seward, Webster, Garfield, and a multitude more, entered it but to quit it speedily for higher or more congenial spheres. The President of the University in question is an apt illustration. The actual teacher at last will be the small salaried assistant.

There are hundreds of admirable and faithful educators all over the country, doing excellent service on moderate salaries; but if these salaries were raised to $5,000, the dignity of the position would at once call for the "assistant professor." It is a question, too, whether the man of brilliant talents, if he could be held to his post, makes the best teacher. The distance between him and his pupil is too great—intellectual sympathy is wanting. Patient, skilful plodders are best for the average brain to be trained in our schools and colleges. There is no question, however, that the profession of "educator" is entitled to greater honor if not to the larger stipend.

W. S. F.

Baltimore, Md., May 14.

WOMAN SUFFRAGE IN ENGLAND.

To the Editor of The Nation:

Sir: Will you allow me to correct possible misconceptions from your representation of the position of the woman-suffrage question in this country?

Women householders have *every* vote, in Great Britain and Ireland, except the Parliamentary franchise, which, by the by, they did *originally* possess. The agitation to regain this right is everywhere allowed to be increasing, and meetings grow more and more earnest every year. Only this spring, at Manchester, unanimous resolutions were passed by a gathering of 5,000 women citizens. Petitions in favor of the movement are largely signed by all classes, and it is very probable that the next extension of the suffrage may equalize men and women householders in Parliamentary, as they now are in local, matters. In local elections the proportion of women voters to names on the register is usually as high as among men. Women sit as poor-law guardians and as members of school-boards. So highly are their services appreciated, and so judiciously have women candidates been chosen, that few fail of election, while their reëlection is practically certain.

Is there not, possibly, a very close connection between the indifference of American women to this question and that of your "respectable" classes to general politics, of which, especially in former years, we used so often to hear? You justly condemned the latter, and now there is a decided change. But you seem to oppose such a change of view as to women's duties. Do not the arguments against the indifference of men apply with equal force to those women who regard an interest in politics as if it were meddling with pitch? My wife, an American lady, used to regard the question from precisely the standpoint which you seem anxious that American ladies should assume. Living in England has entirely changed her views, and she is now ready to do all in her power to favor a cause through which thinking English women wisely perceive that they can best further every reform affecting the status of their less-favored sisters. No small factor in her conversion was the good fortune of visiting the homes of ladies prominent in the movement—homes which specially struck her by the beauty of their family life. Thus a very common prejudice was entirely removed.

Turning to another matter, there is a slight error in your issue of the 12th of April, to hand this morning. Our one-shilling telegram of twenty words is *exclusive* of the name and address of sender and receiver, not inclusive.

J. Edmund Clark.

York, England, April 26, 1883.

CATHOLIC CASUISTRY.

To the Editor of The Nation:

Sir: I take the liberty of calling your attention to Letter XVII. in the little pamphlet, Witherspoon on 'Romanism,' in which there is a full account of Saint (!) Liguori's book, and several of the references of your Pittsburgh correspondent are confirmed. As you will see from the prefatory note, in the first issue of this letter there were some mistranslations, through the wrong MS. reaching the printer, which Bishop Keane (of Virginia) made the subject of a long rejoinder, thus *practically endorsing the accuracy of the quotations in other respects.* These quotations are sufficient to show that Jesuitism to-day is the same as in the days when the "Little Letters" exposed it to shame.

I am, sir, very respectfully,

Peyton H. Hoge.

601 W. Main Street, Richmond, Va., May 9, 1883.

To the Editor of The Nation:

Sir: Your correspondent H. L. Richards "thinks it time for our intelligent Protestant friends to cease taking the opinions of St. Alfonso de Liguori at second hand." Will you kindly allow us to quote the opinion of Cardinal Newman, who is certainly *now* a Roman Catholic, though doubtless his training as an Englishman and a Protestant must influence his views?

"St. Alfonso de Liguori, it cannot be denied," he says in his 'Apologia,' "lays down that an equivocation—that is, a play upon words in which one sense is taken by the speaker and another sense intended by him for the hearer—is allowable if there is just cause, that is, in a special case, and may even be confirmed with an oath. I shall give my opinion on this point as plainly as any Protestant can wish; and therefore I avow at once that in this department of morality, much as I admire the high points of the Italian character, I like the English character better; but in saying so I am not, as will be

seen, saying anything disrespectful to St. Alfonso, who was a lover of truth, and whose intercession I trust I shall not lose, though on the matter under consideration I follow other guidance in preference to his. . . . I plainly and positively state, and without any reserve, that I do not follow this holy and charitable man in this portion of his teaching."

Cardinal Newman then shows that he can quote from Protestant writers opinions that appear to justify equivocation in certain cases. We think, however, that it is no longer proper to accuse Protestants of misrepresenting the views of the Saint when Cardinal Newman declines to accept his teachings. M.

TO THE EDITOR OF THE NATION:

SIR: Allow me to express my surprise that the editor of a paper of such standing as the *Nation* should be so influenced by the vulgar prejudices of the ignorant as to pen the article about Catholic criminals in your issue of April 19.

You are surely wrong in asserting that Catholic criminals asseverate their innocence at the last moment after receiving the rites which the Church only gives to the penitent. There may have been cases in which so-called Catholics have asserted their innocence at the last moment, but such have not received the sacraments, and have not been accompanied to the scaffold by a priest. No arrangement *could* be made with their spiritual advisers to declare their innocence if they were guilty. There can be no condition of conscience in which a man can feel that he is a good Catholic and yet be engaged in the commission of crime; unless, perhaps, he is for the moment maddened by some excitement, or by a feeling of intense wrong, which might warp his judgment and lead him to an action which in his calmer moments he would deplore. The "admissions" of an informer are not always to be relied upon, and it is a well-known fact that no Catholic who is a member of a secret society can receive the sacraments. There can be no reservations in the confessional, and no pardon without a sincere sorrow for past sin, and a firm purpose of amendment.

I enclose an article which, I think, well explains why there are such criminals as those now under sentence of death in Dublin, and which, though published in a New York paper, may not have come under your observation.

Respectfully yours, A. B.

PIKESVILLE, MD., May 7, 1883.

HUMAN NATURE—NORTH AND SOUTH.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "L.," in the *Nation* of May 10, addresses himself to "the easy task of refuting" an "insulting insinuation" of mine in the *Nation* of the previous week. A word on that phrase, "insulting insinuation." What is his ground for the use of it? Simply that in endeavoring to account for what seemed to have surprised Mr. Plimpton, to wit, that at an examination in the University of Virginia a student from Indiana "was detected consulting his books while out, not by members of the Faculty, but by his fellow-students," and that "the sentiment among his classmates was so strong at what they considered an outrage, that they immediately warned him that, unless he left within so many hours, violence might be done to his person," I asked two questions:

1. "Is not a natural explanation of these facts suggested by the title ["College Honor and College Honors"] I have given this communication?" 2. "If not—if the action in this case proceeded purely from unselfish indignation—how happens it that these same students in a case of 'outrageous' violation of college law, *not* threatening their relative rank in scholarship, not only would not have taken the discipline into their own hands, but would, to a man, have refused to aid the faculty in it, even by so much as testifying to what their own eyes had seen; and that, too, when suspicion might fall, perhaps had, to their own knowledge, already fallen, on the innocent?"

Now, what is there "insulting" in the first of these questions? Have I suggested any unworthy motive as the "natural explanation" of the action that seemed so noteworthy to Mr. Plimpton? Would there be anything dishonorable in the students' being (to use "L.'s" phraseology) "indignant at any unfair advantage taken by one of their fellows"? On the contrary, such indignation would be highly honorable in them. The dishonorable thing would be the lack of indignation in the case supposed in my second question. But to that "L." takes no exception. He is shrewd enough to see that to answer that question would *not* be an "easy task"; so he very prudently gives it a wide berth. But the first question he thinks he can grapple with. "The mere fact that there is no competition whatever in the University of Virginia" seems to him destructive of my "theory." "All who attain the required standard of distinction are," he says, "on an equal footing" of reputed scholarship. Yes, and for that very reason they who attain it dishonestly do a personal injury both to those who attain it honestly and to those who fail to attain it; and therefore every honest student is *personally interested* in seeing that dishonesty does not succeed. The "natural explanation" suggested by me, then, is as applicable to the University of Virginia, with its pass examination, as to Harvard, with its competitive.

Having thus disposed of "L.'s" "easy task," let me suggest to him that he address himself to the difficult task of learning to state things without overstating them:

"The very fact," he says, "that a youth knows that he is watched seems to make him desirous of eluding that watch. At the Naval School in Annapolis, where a system of espionage is most rigid, there is probably more cheating than anywhere else in America. *But even here it is confined to the men from the North.*"

As we read the first of these three sentences, we assent to it mentally as a sound general observation; but when we come to the last, we find that we have been too fast—that the observation is not a general one at all, but only a very particular one; that while there is a good deal of human nature in "the men from the North," there is none at all in the men from the South. I doubt very much if the authorities at the Naval Academy will agree to these statements of "L."; nor do I think that the facts regarding the late disturbance there will bear him out in them.

"I, of course," says "L.," "agree with 'X.,' that 'to err is human,' but I believe that the average college student in the South is more free from the meanness of lying and cheating than is usually the case." Here "L." talks sensibly (though not very consistently, considering the last of the three sentences quoted above from his preceding paragraph), and I go along with him in believing it; and, what is more, I can account for it naturally. For "the average student from the South" comes from a higher social stratum than the *average* student from the North, or the West, where so many rise from the ranks. The comparison, to be a fair one, should be between institutions having a similar constituency. Take, for instance, St. Paul's School, Concord, N. H., where the high charge, $500 a year, makes its constituency a select one. Put it alongside of Mr. McCabe's University School, and I will guarantee that the student of the former shall be found the peer of the student of the latter in scholarship, in character, in breeding, in manliness and self-reliance, in chivalrous devotion to "whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report." Justice, however, requires of me one qualification. While the St. Paul's boys would undoubtedly send the cheat and the liar to Coventry, I do *not* believe they would threaten to lynch him. They don't do things that way there.

"Repudiation" "L.," in reply to "X.," admits to be a reproach, but he represents it to be the work of "a majority of ignorant negroes, led by reprobate white men." But from what stratum of society do these reprobate leaders come who now hold the chief offices of the State? Are they not mainly from "the youth of gentle nurture"? Such, at least, is my impression. If I am wrong in it, I should rejoice to be set right.

Very respectfully yours,

E. J. STEARNS.

FAULKLAND, DEL., May 14, 1883.

A TRANSLATOR'S GRIEVANCE.

TO THE EDITOR OF THE NATION:

SIR: Miss Marie A. Brown, of Stockholm, formerly of Boston, Philadelphia, and Chicago, has labored, with no little prodigality of hektograph circulars, to convince the American press, and through it the American public, that she has experienced some grievance at our hands in connection with our publication of Topelius's "Surgeon's Stories" in English. We have thought it not worth our while to notice these efforts to injure us, and have suffered enough by her financially to make us unwilling to contribute to her fondness for notoriety; but since a few journals have been deceived by her statements, and have made allusions to the matter which, in the absence of the facts, might be injurious to us, we will, with your permission, answer all Miss Brown's charges by a simple presentation of the facts.

Miss Brown's grievance, which she has paraded so industriously and with which she has sought to elicit the sympathies of two hemispheres, is no grievance. She owes us reparation, not complaint. She induced us to purchase her translations of "The Surgeon's Stories," and we paid her her price for them. In our transaction with her we trusted altogether too much to Miss Brown's supposed ability as a translator, and not enough to actual knowledge of the quality of her work. Her translation proved to be fatally defective. To publish it would have been disgraceful to us and a shameful injustice to the author. Without the slightest ill-will toward Miss Brown, we did the only thing that seemed left: having announced the stories, and having the fullest confidence in their literary merits, we procured new translations, and proceeded with the publication. We preferred to admit frankly that Miss Brown had got the better of us in the bargaining, and to shoulder the entire loss ourselves, rather than saddle any portion of it upon the public in the form of a poor translation. Miss Brown now thinks her name should appear upon the title-page of our new translation. Having got us to pay her for a translation which we could not use, she complains because we do not put her name upon a translation which she did not make.

Our grievance is a real one. Through our transactions with Miss Brown we have lost heavily. Yet we have made no outcry; we have employed no hektograph to assail her through the public press. We did not even make the matter public in any form until absolutely compelled to do so, in response to Miss

Brown's misstatements. For the publicity given to anything discreditable to her in the whole affair she has solely herself to blame.

The superiority of our new translation of 'Gustav Adolf' over the one purchased of Miss Brown has been authoritatively pronounced by some of the most expert critics in the country, and we feel ourselves clearly entitled to approval for our efforts in presenting these works to American readers in a form worthy of their high merits. If, as she pretends, Miss Brown has gained from Professor Topelius some expressions of sympathy, the fact will have but little significance for those who have had the fortune to know her, and who remember that she is now a resident of Sweden and has the good Professor's ear.—Respectfully,

JANSEN, MCCLURG & CO.

CHICAGO, May 12, 1883.

Notes.

PORTER & COATES, Philadelphia, have just received the concluding pages of the advance sheets of the third volume of the Comte de Paris's 'History of the Civil War in America,' and will be ready with their translation in about a month. The new volume represents the French volumes v. and vi., and deals with the operations of the Army of the Potomac in the East and the Army of the Cumberland and Tennessee in the West during the year 1863. In interest it can hardly be second to any other of the series.

Renan's 'Recollections of my Childhood and Youth' will be published by the Messrs. Putnam in a few days, from the authorized translation. The book is just now reaching this country in the original French.

J. R. Osgood & Co. will shortly bring out Mark Twain's new volume, 'Life on the Mississippi.'

Estes & Lauriat, Boston, will be the publishers of a work by Mr. Fred. S. Ober, describing his travels in Mexico and life among the Mexicans, to which the author is now giving the finishing touches on the spot. The illustrations will be from original photographs.

A 'History of Pembroke, N. H., 1727–1783,' by J. N. McClintock, editor of the *Granite Monthly*, Concord, N. H., is now in press. Only a small number of copies beyond those subscribed for will be printed.

John E. Potter & Co., Philadelphia, have in press an historical novel, 'The Life and Adventures of Lewis Weitzel,' Indian scout and Virginia ranger of a century ago.

'How to Get on in the World,' as demonstrated by the life and language of William Cobbett, is the title of a forthcoming work by Robert Waters (New York: J. W. Pratt). It will contain Cobbett's 'English Grammar,' with notes.

Robert Clarke & Co. publish immediately a 'History of Tuberculosis, from the time of Sylvius to the Present Day,' by Eric E. Sattler, M.D. In the main it is a translation from the German of Dr. Spina.

We have received some specimen pages of the new fourth edition of Chitty's 'Equity Digest,' or 'Index,' which will be brought out in this country (by special arrangement with the English publishers) by Soule & Bugbee, of Boston. The price to subscribers is much lower than the English price. The work will appear in five or six volumes, the first of which is to be ready in May; the others during the year. This edition will bring the work down to the date of publication. The title Bankruptcy is to comprise all the cases on that subject at common law, as well as in equity. The last edition was published in 1853, and since that time the number of cases has doubled. The work will unquestionably be one of great value.

The New England Manufacturers' and Mechanics' Institute will hold an art exhibition in Boston in September, and artists who contribute are invited to furnish one or more drawings of their pictures to adorn the catalogue, with which extraordinary pains will be taken. The direction will reproduce them without charge, and return the originals if desired. For particulars, Mr. Frank T. Robinson, P. O. Box 5340, Boston, should be addressed. "Besides the usual biographical and index contents of all catalogues," says the prospectus, "this will contain carefully prepared articles on contemporary art and such other matter as may be deemed suitable." The typography will be very handsome, and the edition large.

The two latest additions to the charming Parchment Library of the Messrs. Appleton are the works of Horace, and 'French Lyrics,' selected by Mr. George Saintsbury. Of the latter we shall have something to say hereafter. Of the Horace what need be said, except that it fully meets the intention of the Etonian editor, Mr. F. W. Cornish, "ne foris petendus liber utendo habilis formæque elegantioris"? It is without notes, and in the choice of a text Mr. Cornish has gone no further back than the best editions. In short, it is a handy book for one who knows his Horace and loves him; and why, we ask again, are not more books brought out in such a style and at such a price? Each of these volumes, by the way, has its etched frontispiece.

We must call the attention of the publishers of 'Harper's Handbook for Travellers in Europe and the East' to the liberties taken with the English language by the editor, Mr. W. Pembroke Fetridge. In the preface to the edition just issued for the present season, this gentleman says that he "spent most of the year 1880 in Switzerland, Russia, Sweden, Norway, and Denmark, and 1881 in Great Britain, Ireland, France, and Spain, and 1882 in Italy and the East. All of these countries have been entirely rewritten, as well as the whole of Vol. II.," etc. Long residence abroad has doubtless impaired the author's mastery of his mother tongue, for it is a fact that so far are the chapters in question from being "entirely rewritten" that it requires a very painful search to discover many changes in this, the twenty-second year of the book, from last year's edition. It gives one a sad idea of the laborious monotony of a guide-book editor's life to read in last year's preface that the author "spent most of the year 1878 in Switzerland, etc., and 1879 in Great Britain, etc., and 1880 in Italy and the East," and that "all of these countries have been entirely rewritten, as well as the whole of Vol. II.," etc. However, Mr. Fetridge has at last caught up with the St. Gothard Railway, and in other ways past easy discovery has improved his guide-book. Repeating the full index with each of the three volumes has the inconvenience of sometimes referring the reader to a page not within the two covers he holds in his hand.

Mr. Cable's inimitable 'Creole Days' has been brought out afresh by Charles Scribner's Sons in a pretty form with paper covers, and in two parts, each complete in itself. They are timely summer reading.

Cheap paper editions, too, of Longfellow's 'Evangeline' and Whittier's 'Snow-bound, and Among the Hills' initiate a "Riverside Literature Series" (Houghton, Mifflin & Co.). Holmes and Hawthorne will follow, with other authors associated with this Boston house.

Dr. Hugo Riemann, the author of the best musical lexicon in existence, and of several valuable theoretical works, has just published a 'Neue Schule der Melodik,' which teaches counterpoint according to an entirely new method. The first chapter is devoted to the question of modifying the system of scales, and the last contains remarks on *Metrik*, *Rhythmik*, and *Phrasirung*. The days of the artificial systems of harmony and counterpoint which have made the study of musical anatomy and grammar so irksome to gifted pupils, because they felt convinced of their unnaturalness, are evidently numbered.

An English translation of Haeckel's interesting 'Indische Reisebriefe,' by Mrs. S. E. Boggs, has been added to Lovell's Library, under the title of 'India and Ceylon.' As Haeckel forms his sentences after English and French models, rather than the complicated German style, he offers no great difficulty to the translator, who in this case has done her work smoothly, and, as far as we have compared it, correctly.

The 'Technological Dictionary,' in English, German, and French, first published about 1869 by Kreidel, in Wiesbaden, had reached a third and much enlarged edition in 1877. The first volume of a work rivalling this in elaborateness and importance, but confined to English and German, has just appeared in Brunswick (Fr. Vieweg & Sohn; New York: Westermann), under the editorial supervision of Prof. Gustav Eger. Architecture, engineering, mechanics, and chemistry are the departments most thoroughly represented; but, subsidiary to these, a great many others receive a fair share of attention, as, mathematics, astronomy, mineralogy, botany, commerce, political economy, navigation, etc. The print is very clear and accurate, and the characters Roman. It is to be remarked, also, that the *definition* as well as the corresponding word or phrase is given. We think the names of the various craftsmen might properly find place in such a dictionary, but this is all we miss. The work deserves a hearty welcome, if only for the enormous labor expended upon it.

We are glad to observe that M. Jules Lévy's *Le Français* (Cambridge, Mass.) has prospered so well as to warrant enlargement, with a slight increase of price. In this beautifully printed and exceptionally well edited journal there has been a growing tendency to take account of public affairs, while not forsaking the educational purpose of the editor. Next year (1883–84) *Le Français* will have a special Paris correspondence and special articles by French writers of repute. In other words, those already proficient in the language will have a motive for subscribing.

In nothing is the speed of this age shown so much as in the honors paid to authors and the efforts to explain their work. Homer waited for nearly thirty centuries before Damm compiled his lexicon. Herodotus and Plato waited almost as long for Schweighäuser and Ast. It was five centuries after the death of Dante, and two after the death of Shakspere, before the Dante Gesellschaft and the Shakspere Society were organized. But the Browning Society and Robert Browning are flourishing contemporaneously. Perhaps, as millionaires are advised to give their money while they are alive and can watch over the disposal of it, the Society last named thought best to commence the study of their idol's obscure verses while he was still with them to help them when they were utterly baffled. Victor Hugo has been apotheosized before he has ceased to be human; and Wagner is hardly buried when a Wagner-Lexikon is announced for the latter part of May. It is to contain all the words and phrases which he has used in a peculiar sense, and those which he em-

ployed to express his favorite ideas, both explained, so far as possible, in his own words. C. F. Glasenapp and Heinrich von Stein have prepared it. Cotta in Stuttgart will be the publisher.

The beauty of Spemann's Stuttgart publications is almost proverbial, and their extraordinary cheapness is well known. No handsomer magazine comes to our table from any quarter than this publisher's illustrated *Vom Fels zum Meer* (New York: F. W. Christern). The contents, too, are of a high order for popular reading, and very varied. In the March number the four-hundredth centenary of Raphael is commemorated by a fine series of examples from his works, particularly his drawings, several of which are reproduced *en sanguine* in the midst of the text—a feat which our best American monthlies have not yet essayed. On the other hand, the April number has some bird illustrations borrowed from our American designers and wood-cutters. It also contains an interesting article on stage-machinery, showing, for example, the contrivance by which the Rhine maidens swim under water in the opening scene of "Rheingold." In the May number, Moscow is described pictorially, in view of the approaching coronation.

Nature for April 26 is accompanied by the twenty-first steel portrait in its series of "Science Worthies," with the usual biographical sketch. The subject is William Spottiswoode, President of the Royal Society. From the same number we learn that Professor Tyndall has this month been giving a course of three lectures at the Royal Institution, on its originator, Count Rumford.

The bound volume of the *Century* for November-April (1882–83) makes the third of the new series. Cole's masterly portrait of Emerson would alone give it distinction, but those of Marshall, of Darwin, of Henry James, jr., of Florence Nightingale, of Leonard Bacon, of George William Curtis (though we regard this as the least happy), are superadded. Here, too, are to be found the fine engravings after the Pergamon sculptures, and here are the beginnings of Mr. Cushing's fascinating articles on the Zuñi Indians—to mention the merest fragment of the rich contents of this volume.

The latest publication of the Bureau of Education is 'Answers to Inquiries' about its work and history.

The pictures of B. Narishkine lately sold in Paris brought 1,072,830 francs. The largest price was for P. de Hooge's "La Consultation," 160,000 fr. Among famous names were Teniers, "Le Gastronome," 6,500 fr.; G. Dow, "La Marchande de Poissons," 50,000; a portrait by Dürer, 78,000; one by Reynolds, 18,100; Rubens, "Étude de quatre Têtes de Nègres," 55,000. The Aguado collection, with more famous names, did not bring such prices, the highest being a Murillo, 50,000 fr., and a L da Vinci, 34,000.

The artists who devised the topsyturvy and otherwise eccentric pictures of the Exposition des Arts Incohérents have extended their ingenuity to gastronomy; but it appears that they could invent nothing more novel than a banquet in reversed order, the cart before the horse, beginning with coffee and liqueurs, proceeding to fruit and dessert, then to the roasts and vegetables, ending with the hors d'œuvre and soup. It must require high spirits to extract amusement for any length of time—say the duration of a dinner of an exhibition—from such jokes.

Any student of sociology desirous to be brought face to face with the "human document," yet rejecting an introduction to it by Zola, would do well to subscribe for "Les Ouvriers des Deux Mondes," published by the Société d'Économie Sociale at 174 Boulevard St.-Germain, Paris. All the parts except the second of vol. i., which is out of print, are procurable. The plan is to interview the heads of mechanic and other laboring families, and make a faithful report of their domestic economy, their religious and social ideas, etc. Thus, the second *fascicule* of volume v. contains the monograph of a locksmith's family (*serrurier-forgeron*), and an abstract of the monograph of a bronze-mounter (*monteur en bronze*). The sceptical character of the Parisian workman is well exemplified, we are told, in both these families. The locksmith and his wife abstain from all religious observance; the bronze-worker thinks such observances are well enough for the rich with plenty of leisure, etc. Their earnings are respectively, say $725 and $925, but they make no savings, and sickness or loss of work throws them upon public charity and the hospital. The light thrown by these monographs upon the condition of the laboring class is clearly very great and of great utility.

—The highest qualities of Mr. Randolph Caldecott's draughtsmanship are perhaps not displayed in his designs for 'Some of Æsop's Fables, with Modern Instances,' newly translated by Alfred Caldecott (Macmillan). He is not at home with all the beasts, and occasionally his landscape is neither suggestive nor beautiful in line. But as a social and political satirist he is here seen to great advantage. With his customary versatility, he lavishes four designs upon each fable—a vignette at beginning and end, the illustration appropriate to the text, and the "modern instance" as an aside. Some of these last are extremely clever, and not unworthy to be compared with Cruikshank. Thus, the Fox and the Crow is parodied by the suitor who flatters mamma away from the sofa to the piano, and takes her place beside his adorable. The Lion and Other Beasts is reflected in a shareholders' annual meeting, at which the Chairman reads off the list of directors' fees and official salaries, and winds up with a dividend of one-eighth of one per cent. The Fox and the Stork is taken off by an exchange of gifts between Mr. F., who receives Harvey's 'Meditations among the Tombs,' and Mrs. S., who has had the *Sporting Magazine* imposed upon her. An odd fancy finds a parallel for the Cock and the Jewel in a storm-beaten traveller who encounters a tavern sign with "Beerseller" changed into "Bookseller." This last design has a truly Bewickian flavor. Mr. Caldecott's politics crop out in his finding a Jackdaw among the Doves when a reader of the *Daily News* disturbs a pleasant Jingo circle; and in his picture of the Irish clambering over the despised King Log of a Land Bill and entreating Britannia for the Stork Home Rule. Altogether this book, which might have appeared in the holiday season, will amuse both young and old.

—Mr. S. A. Schoff has recently, after a labor of nearly three years, completed a superb line engraving on steel after the late Wm. M. Hunt's much-admired picture entitled "The Bathers." This work cannot fail, we think, to awaken a renewed interest in the line-engraver's art, which has, under the influence of the modern mechanical processes of reproduction on the one hand, and of hasty and less exacting styles of engraving on the other, been too little cultivated of late. Such a work as this does honor to modern art. It is truly a masterpiece of interpretation and of technical skill, which will justly rank among the finest achievements of the burin. Mr. Schoff's command of the technics of this difficult art seems absolute. He appears to use the engraving tool as freely as an artist uses the pencil or brush. Such, indeed, is his mastery of means that they are thoroughly subordinated to expression; and hence this plate is raised out of the category of mechanical performances (against which there is a well-founded objection, and to which the productions of so many modern engravers, such as Raphael Morghen, for instance, more or less properly belong), and becomes a true work of art, in which the engraver's own poetic genius finds expression, while he yet remains faithful to the original. There is evidence in every part of this engraving that the artist has worked in that spirit, now certainly not as common as it ought to be, of single-hearted aspiration to do his very best, which is the fundamental condition of all genuine artistic accomplishment. The task of the engraver is not only that of producing delicate and finished effects of flesh, drapery, or accessories by cutting lines and dots into the surface of a plate of metal. It is also that of translating the qualities of a painting into the very different terms of simple lines, light and shade, and texture; and of passing everything of the original through his own mind, and rendering it into its nearest equivalents in another artistic language. It is this latter part of the task which calls forth the artistic rather than the technical ability of the engraver. But, in the work of a master, even the technical part of the art becomes highly interesting and instructive. In a design like this the choice of means by which are expressed the varying textures, the purity, transparency, and color in the flesh tones, the mysterious intricacy of the leafy background, and the surfaces of the quiet, and of the rippled, water—all bespeak the exercise of a high order of artistic intelligence and feeling. This plate will, we hope, receive the attention of connoisseurs which it so highly merits and will richly repay. It is published in Boston by John A. Lowell & Co.

—Mr. Theodore Bacon has reprinted two papers of considerable interest to lawyers: one on "professional comity," the other on "professional ethics"—the first originally read by him before the State Bar Association, the second before the Social Science Association, in September of last year. In both of them he strongly insists upon the low tone of the bar, and in the first urges that the discouragement of professional comity ought on this account to be one of the objects of respectable members of the profession. Professional "comity" is a very general term, and Mr. Bacon apparently means by it a special indulgence, growing out of membership in the same profession, for lapses from a proper standard of professional ethics. So limited, we can hardly conceive any lawyer believing that comity ought to be encouraged. In another sense, nothing is so likely to drive out comity altogether as the low condition of the profession of which Mr. Bacon complains. Comity in the sense of deference, good-feeling, a willingness to consult an adversary's convenience when it can be done without any sacrifice of a client's interest, grows out of a generally entertained assumption that all observe the same standard of honor and decorum and decency. But if the time should ever come when all such standards should be swept away, comity would go with them, because it could only be kept alive by a hollow mockery which would soon be felt to be useless. The bar, in its present condition, owing to the facility of admission, is said to be growing more and more like a trade; but no trade could really ever sink so low as a bar without professional standards. When we find, therefore, that it has been necessary for the Supreme Court of the United States to pass on the question whether a lawyer may be disbarred for lynching a prisoner in the custody of the court of which he is a member, or for the Court of Appeals of this State to decide that a convicted felon may be disbarred, notwith-

standing that he has been relieved by the Governor from serving out his entire term (86 N. Y., 536), it is the queerness of the fact that such matters are treated as doubtful that stirs our sense of the grotesque. There is one kind of "comity" not unknown in this city, which has never been thoroughly analyzed—we mean the "comity" by which attorneys engaged in receiverships or testamentary proceedings agree not to object to exorbitant bills drawn up by their adversaries, in consideration of similar favors in return. This, however, perhaps more properly belongs to the domain of criminal law than to that of professional ethics.

—Mr. Bacon calls attention to the curious fact that most of the questions which laymen think must give lawyers so many twinges of conscience rarely trouble them at all. Lord Brougham is responsible for a good deal of the ignorance which prevails on this subject, through having, in his celebrated defence of Queen Caroline, declared that an advocate's only duty was to "save his client," regardless of the consequences, even though he should involve his entire country in confusion. Mr. Bacon points out that this remarkable proposition was in reality a threat of Brougham's, which was understood well enough at the time of the trial by all concerned, that if the prosecution persisted, he would raise the question of the marriage of the King with Mrs. Fitzherbert, which would have been very confusing to the entire country. But few lawyers have ever to consider the question involved in Brougham's declaration, or, assuming them to be respectable, that other question, whether a good lawyer can undertake a case when he knows that his client is in the wrong, or guilty; as a matter of fact, he hardly ever does know anything of the kind. A much more difficult question is that of defences strictly legal in character, but supposed to be open to some moral objections—such as the statute of limitations, or the defence that a contract is against good morals. The courts used strongly to reprobate their use by defendants, but within the last generation they have wholly changed their tone, and the view generally taken in the profession now is that such defences are morally indifferent. That is to say, a lawyer is not thought worse of for interposing them. This, however, is due in a great measure to the fact that these defences are seldom presented singly, but are complicated with other grounds which are not open to any moral objection. A man, for instance, has a substantial defence on the merits, but may be poorly provided with evidence to sustain it, so that, if he relies upon this alone, he may be beaten. Shall he not resort to all the weapons which the law allows? Besides this, it is for the interest of society at large that stale claims shall not occupy the time of courts, and that contracts which involve a breach of morals shall not be enforced. But no universal rules can be laid down about such a matter. Such defences may be utterly unconscionable, and, when they are, a lawyer shows that he is himself as great a rascal as his client if he allows him to have the benefit of them.

—We extract from a biographical sketch in the April number of the *Deutsche Rundschau für Geographie und Statistik*, published in Vienna, the following particulars concerning the career of the late Purdy Pasha, an American officer in the service of Egypt. The notice is from the pen of the editor, Professor Friedrich Umlauft, and evidently derived from a trustworthy source, which is, however, not indicated. Erastus S. Purdy, who was born in 1838, in the State of New York, joined in 1857 the exploring and surveying commission under the future General Stone, sent by the Mexican Government to Sonora and Lower California. After two years' useful labor in this field he worked for some time as surveyor at the construction of the United States military road from New Mexico to the Colorado. On the outbreak of the civil war he entered the Union army, fought bravely in the Virginia campaigns, and attained the rank of major. In 1870 he accompanied General Stone to Egypt, entering the service of the Khedive as lieutenant-colonel and chief of the third section of the General Staff, which had the charge of geographical explorations. Soon promoted to the rank of colonel, he explored the regions east of the Nile from Cairo to Keneh and from Suez to Kosseir, traversing the desert in every direction, and exploring the shores of the Red Sea as far south as ancient Berenice. In 1874 he was placed at the head of an exploring expedition sent into the lately annexed territories of Darfur, a country previously very little known. The expedition returned in 1876 with stores of varied information—much of it personally gathered by Purdy—respecting the geography, climate, fauna and flora, mineral resources, and dialects of Darfur. For these excellent services Purdy was rewarded with the rank of pasha or general; but economical reasons prevented the publication of his charts, and, in 1878, even led to his dismissal from service. Reappointed in 1879, he was again dismissed early in 1881, and died in June of that year. Purdy's personal character is spoken of in very high terms.

—Herr K. J. Schröer has published an account of the production of "Faust" at the Burgtheater at Vienna. He is enthusiastic over its success, and so, it appears, was the audience, which was very large. The first part of "Faust" occupied two evenings, the second, one. There can be no longer any doubt, he says, about the fitness of the second part for acting. It carried away the audience, and has gained the same foothold upon the stage which the first part won fifty years ago. The first evening was made to end with the witch scene, the second was the *Gretchentragödie*. All the scenes of this tragedy deeply moved the audience. *Faust* was admirable; *Marguerite* (Fräulein Vessely) surpassed all expectation; *Helen* (Fräulein Wolter) was enchanting; the stage setting was all that could be desired, including the "Walpurgisnacht," which, as presented, was frightfully effective. In short, Herr Schröer, who wrote this account on the spur of the moment, was in a high state of excitement; but he is one of the most eminent of modern Goethe scholars, and he would not be satisfied with anything that is unworthy of his idol.

—The tables of the last census of Cisleithan Austria which exhibit the classes of the population according to occupation, are not without features of general interest. Out of the 22,000,000 inhabitants which the western division of the Austro-Hungarian Monarchy numbered on Dec. 31, 1880—the Transleithan or Hungarian numbered 15,700,000—there were 94,500 persons of the clerical order, counting all the members of their families, who cannot be numerous, considering that the vast bulk of the Cisleithan population are of the Catholic religion. There were nearly twice as many soldiers in active service—185,000. The number of teachers in all kinds of schools, and of all persons belonging to them, fell short of that of the active soldiers—but few of whom are married—amounting only to 152,000. There were 162,000 officials (always including the families) in the active service of the Empire, the provinces, or the communes, and 90,700 employees in non-official public service. There were nearly 70,000 gendarmes and other guardians of order and safety. Art—this is characteristic of Austria—was represented by 31,000 actors, dancers, musicians, and singers, and by 15,000 painters and sculptors, while literature and journalism supported only 6,000 persons. Architecture and civil engineering supported 20,000; the law, 37,000 (lawyers and notaries); the higher sanitary occupations, 39,000, and the lower just as many. The number of persons living on pensions was 188,000—that is, greater than the army roll—and nearly three times as many (543,000) lived on incomes from *rentes* and houses. Banking and other monetary business engaged 33,600; commerce, 840,000; transportation by land of men or merchandise, 315,000, and transportation by water, 44,000. Only 10,600 persons were sustained by the sea fisheries of the short maritime border, but mining sustained 316,000; manufactures and trades, 4,700,000; and agriculture and forestry, 12,000,000 (including 450,000 tenants and permanent farm hands)—that is, more than half of the entire population. There were 1,650,000 day laborers of varying employment, 202,000 servants not living with their employers, 67,500 persons of unknown occupation, 24,000 inmates of educational establishments and orphan asylums, and 98,000 inmates of other charitable institutions. The relative numbers of supported consumers and producers or earners in a thousand were 525 and 475.

—The professors in the University of France have often expressed their regret that nowhere could they find complete sets of the German academical dissertations. The Minister of Public Instruction has therefore made arrangements with thirty German, Swiss, Dutch, and Scandinavian universities by which he will receive eighteen sets of each of these publications for distribution to as many university libraries. They are already coming in at the rate of at least a thousand dissertations a year. A great deal of valuable matter appears in this most inconvenient form, and the German libraries are full of the little quartos; some even have a separate department for them, and the proper method of cataloguing and cheapest way of binding them is the subject of discussion in all the treatises on library economy. The custom of attaching a short discourse of each professor to the semi-annual programme of lectures in his department is almost exclusively German, although there is something similar in the Italian fashion of excusing one's desire for fame by issuing one's pamphlets *per le nozze*, on the marriage of one's friends. In this country the Boston University has added an occasional dissertation to its annual catalogue, but we have not seen that its example has been imitated. We hope it will not be; it is not a convenient practice. The *Bulletin* of Harvard College Library, the *Circulars* of Johns Hopkins University, perhaps hereafter the *Library* of Cornell University, and the ordinary periodicals, are much better vehicles of publicity, and they have the further advantage that they are, or will be, included in 'Poole's Index,' so that their contents will not be buried, but can be readily referred to.

AUTHORS AND PUBLISHERS.

Authors and Publishers: A Manual of Suggestions for Beginners in Literature; comprising Description of Publishing Methods and Arrangements, Directions for the Preparation of MSS. for the Press, Explanations of the Details of Book-Manufacturing, Instructions for Proof-Reading, etc., etc. G. P. Putnam's Sons.

A TREATISE of this kind could come from no house in the country with more appropriateness than from one the name of which was early

associated with the pleasantest relations existing between authors and publishers. The work itself, though a small one, is of great value. It modestly purports to be merely a manual of suggestions for beginners in literature; but there is much in it which the most experienced literary veteran can read with profit, not merely for the views it suggests, but for the information it contains. On the latter account, it is not going too far to say that the work ought to be in the hands of every one who purposes to make authorship either a vocation or an avocation.

We say this the more willingly because the treatise not unnaturally represents the publishers' view of the everlasting questions in controversy between them and authors. It is right that this view should be stated, and in the volume before us it is very temperately stated. Yet it is inevitable that a work so produced should be one-sided; and that the unavoidable inference drawn from reading it is that the complaints of authors about publishers are due to ignorance, to inexperience, or to the desire to impute to others a failure which is the result of their own misconduct or incapacity. The assertions made in it are precisely the ones which much reading of the special newspaper organs of the book trade, or of magazines that bear the imprint of publishing houses, has made rather drearily familiar to most of us. The real complaints of the author are either ignored or evaded, and the attention is steadily directed to those that can easily be shown to be mistaken or trivial.

We are assured, again and again, that the publisher is first and foremost a merchant. His mission is not to encourage literature, at least directly; not to rush to the relief of struggling authors; not to convince an indifferent or incredulous world of the merit which it has hitherto failed to recognize or reward. His business is to study the taste of the reputable reading public: to print what it likes, and to refuse to print what it does not care for or actually dislikes. On no other principles can he achieve success. It is, therefore, the height of unreason and injustice to ask him to rob or ruin himself out of a sentimental regard for unappreciated merit. Equally absurd is it to demand that he shall immolate himself on the shrine of personal friendship. On the other hand, it is self-evident that he has the keenest desire to get hold of anything new and good, and which he believes will succeed. He is on the look-out constantly for rising talent. He yearns for the sight of the new poem or the new novel which is to make the sensation of the season. Even if he has no genuine sympathy with letters, he is actually prevented from going far astray by the manifest fact that the interests of literature and his own personal interests are identical. Surely that must be a perverted nature which can find fault with a being so beneficent, who makes mistakes, it may be, but makes them only because the profession which fairly constrains him to be all-merciful cannot at the same time enable him to become all-wise.

This is the view honestly taken by the publisher, and constantly set forth by his advocates. Nor are we disposed to deny that the complaints made against him owe their origin more often to disappointed vanity than to lack on his part either of judgment or of good-nature. If anything would lead to a different opinion, however, it is a statement in this volume which is evidently looked upon as being a crushing reply to the complaining author. We are assured that, according to probable estimates, one-fourth of the books printed in the United States are a positive loss, one-half do no more than pay their cost, and whatever profit is made is made upon the one-fourth that are successful. We have little faith in a general statement of this kind, and no faith at all when an application of it is made to the transactions of any particular establishment. But, assuming the truth of the assertion, what an extraordinary picture of mercantile sagacity it presents! For it is to be kept in mind that, according to the view repeated with "damnable iteration"—to call in Shakspere—the publisher is above everything else a man of business, and it is on that ground that he asserts his superiority of judgment to the incredulous writer, and justifies himself against his complaints. But fancy a man engaged in any other trade than that of bringing out books furnishing to his fellow-men as a reason for placing the most implicit confidence in the wisdom of his conduct and conclusions such a statement as this: "From one-half of my ventures I get nothing at all; on one-fourth I lose money; on the remaining fourth I reap the pecuniary harvest which enables me to save myself from the consequences of the blunders and miscalculations I have made on the other three-fourths. You will therefore do well to embark in any enterprise I advise, and refrain from taking part in any of which I disapprove."

It is not, however, with this branch of the subject that we care to deal. Articles and books have been rejected in the past, and will be rejected in the future, sometimes unwisely, but usually with justice. Writers will continue to vent their complaints on that score, sometimes with reason, more often without. But it is not the grievances of authors who do not get their works published that are the real ones, but the grievances of those that do. These may be imaginary, but they are the ones to be considered. They are the ones that are constantly talked of by authors among themselves; they are the ones that breed that suspicion and distrust and dislike of which the publisher at times complains. The existence of such feelings is conceded at the outset in this very work. It is even admitted that there are things in the "reminiscences" of certain authors that might serve as a justification of the unfavorable opinion sometimes entertained of the publisher. Among these authors are mentioned Milton, Johnson, Goldsmith, Voltaire, Balzac, Heine, Byron, and Thackeray—none of whom, certainly, complained because men were unwilling to print what they wrote. It must be confessed that this is a rather formidable array of names, and it is without the intention of expressing the slightest personal disrespect that we remark that the counterbalancing favorable testimony found in this volume of the Rev. Julius H. Ward and Mr. Frederick B. Perkins is hardly sufficient to keep the balance even between the two sides. It is therefore the merest act of justice to the publisher to say that a fuller study of literary history would relieve several of the names in this list from the charge of seriously entertaining or expressing hostility to him. On the other hand, we confess to a good deal of incredulity as to the existence of "the hundreds of thousands of cases" that this volume mentions in which "authors have, through the successful coöperation of their publishers, received from the public a satisfactory return for their labors," and who in consequence have no criticism to make, but only praise to offer. It is certainly to be wished that this roseate picture were also an accurate one; but a tolerably wide acquaintance with writers has not as yet to us revealed the particular representative of the class who goes about telling people quietly he owes his little all to his publisher, and tenderly murmuring the latter's name in accents of gratitude. His existence we cannot deny, only it has not been our fortune to meet with him; and, unless directly in the pay of publishing houses, it is hard for us to imagine him.

On the contrary, we are disposed to say, in direct contradiction to what is asserted in this volume, that the complaints of authors which never come to the ear of the public are infinitely more numerous than those which are brought to its attention because recorded in published letters and journals; that the latter, indeed, are but a slight fragment of the great total. The first grievance is the inadequate share the writer receives of the profits. In the method of publishing generally adopted in this country—which is essentially a partnership between author and publisher—the highest rate ordinarily paid to the former is ten per cent. of the retail price of the number of copies sold. The author, then, contributes to the partnership his labor, his knowledge, his invention, his imagination—in fine, the very things which make the permanent success of the work, if it has any success at all. The latter contributes the money that is needed to bring this product of thought before the eyes of the public. If the book fails, the author has lost his time and labor, and any expense he may have incurred in preparing or working up his material. The publisher has lost the money paid for the material, the manufacture of the volume, and the subsequent agencies needed to put it in the hands of the purchaser. On the other hand, if it succeeds, the author receives at best ten per cent. on the price of the book sold as his payment for the time, the labor, the thought, and it may be the genius, that have been put into the work. The publisher's profits are made from the wholesale, and not from the retail price; and though booksellers assure us that in the volume before us the profits are understated, we accept for the occasion the account here given. According to that, they are just five times those of the author—that is to say, where the former receives fifteen cents, the latter receives seventy-five. On what principle that regulates the business dealings of men with one another is this (asks the complaining author) a fair division of profits?

It will be said on the part of the publisher that he cannot afford to give more than ten per cent. in the case of a writer whose reputation is yet to be made. But how often does he exceed it in the case of men whose reputations have been made? And again, a common practice of the publishers is calmly stated in this volume as the very quintessence of justice. This is to make no payment to the author at all until a thousand copies have first been sold, for it is not until this number has been disposed of that, according to the work before us, the expense of bringing out the book has been fully reimbursed.

> "The royalty," it says, "is paid simply as a commutation of profits, and it is in order, therefore, for the payments not to begin until the profits begin. . . . It seems reasonable that if the publisher has consented to assume the risk and investment of bringing a work before the public, he should not, if the venture bring loss instead of profit, be called upon to swell such loss by a compensation to the author. However much labor may have been invested in a work, it seems equitable that if it does not prove itself capable of earning anything, the author shall receive nothing for it."

This is a deliciously frank statement of the publisher's view of equity, and is important because it is the one universally held in theory and enforced wherever possible in practice. It may strike the author, however, that it is a legitimate corollary from this proposition that, if the eternal equities are to reign, he ought necessarily to receive, instead of a beggarly ten per cent., fifty per cent. at least of the proceeds after the first thousand copies have been sold and all expenses attendant on bringing out the book have been paid. We do not notice that there is any reference to such a possible inference in this volume.

The proportion of profit received is not the only grievance. There is yet another. The au-

thor has written his book, the publisher has accepted it, and sets to work to print it. The former has signed a contract, in the drawing up of which, however, he has never once been consulted, and it is needless to say its provisions are not strained in his favor. By the terms of this contract, the publisher is to furnish him semi-annually the amount due from the sales of the preceding half-year, though actual payment of this amount, it is usually provided, shall be made some weeks or months after the returns are rendered. At this point comes in a disturbing element, which has the peculiarity of operating entirely to the advantage of one of the parties to the agreement and to the disadvantage of the other. It has been stated over and over again in private, but it will bear a more frequent repetition in public. The author is not merely a business partner with the publisher so far as a particular investment is concerned, but he is often a personal friend—at any rate, the relations existing between them are understood to be the relations that are supposed to exist between gentlemen. The result is that during the negotiations for the bringing out of the book the publisher maintains the character of a business man pure and simple, but as soon as it is brought out, and his accounts come to be rendered, he poses at once as the personal friend or the gentleman. The author must accept without question his statement as to the number of copies sold, and the amount in consequence due to himself. To insist upon any examination of his books would be a direct imputation upon the honor of the man with whom he lives, perhaps, on terms of intimacy. The publisher is therefore at liberty to make any returns of sales he pleases. At best, he usually pays but ten per cent., but even of that ten per cent. the author cannot be sure, because he knows nothing at all of the success of his work beyond what his theoretical business partner chooses to tell him, nor outside of that has he, in most instances, the slightest means of knowing anything.

This does not imply that publishers are dishonest, or that they cheat authors; it would require far more than ordinary evidence to make us credit for a moment such a charge, if brought against any one of the leading houses of the country. Still, if the bringing out of a book is merely a matter of business, it had better be business throughout. Let the publisher act in accordance with the principles that regulate all other partnerships; let him not merely submit to but insist upon complying with the conditions of all fair dealing; let him not practically set up the plea of business when it inures to his own personal advantage, but the plea of sentiment when the business plea inures to the advantage of the author.

Much more might be said that must be omitted. We remark, finally, that by the nature of his profession the publisher is trading largely in the necessities and vanities of men. His object is naturally and properly to make money; and he is aided in it more or less by many who are influenced primarily by a desire of reputation which is indifferent to, if it does not actually spurn, all pecuniary considerations. This feeling, at once the source of the strength and the weakness of the author, not unfrequently makes him willing to submit to any terms whatever to get his book brought properly before the public. That the publisher should be under a constant temptation to take advantage of such a feeling is inevitable; that he should sometimes yield to it is not wonderful.

EGYPTIAN ART.

A History of Art in Ancient Egypt. From the French of George Perrot and Charles Chipiez. Illustrated with 598 engravings in the text and 14 steel and colored plates. Translated and edited by Walter Armstrong, B.A., Oxon. Two volumes. New York: A. C. Armstrong & Son. 1883.

THE authors of this admirable work remark truly, in their introduction, that the effort to fix the exact place which art occupied in the life of ancient times has never thus far been successful, because the historians who have treated of those times have not possessed enough special knowledge of the arts. Art, they say, has a method and language of its own, with which a scholar who would successfully deal with the civilization and culture of the past must acquaint himself. In the case of Greece, they say further, that the only competent one, from this point of view, of the many learned writers who have attempted to trace its history is Ernst Curtius; and they go on to show that "Greece without its architects, its sculptors, and its painters—without, in fact, its passion for beautiful form: a passion as warm and prolific as its love for poetry—is hardly Greece at all. . . . 'Literature,' we are told, 'is the expression of social life,' and so the history of literature is written for us. All this is true enough; but there is another truth which seems to be always forgotten: that the art of a people is quite as clear an indication of their sentiments, tastes, and ideas as their literature." This is an important consideration in its bearing upon general scholarship no less than upon that which relates to art. The fact that literature does not by any means include all that is of highest significance and value as an expression of social life and of feeling and thought, is not yet sufficiently appreciated. Consequently, the high importance of the fine arts as a branch of liberal culture is not yet practically and in an unqualified manner understood in our institutions of learning, though there are some signs that it may ere long become so. The remarks of our authors are therefore timely, and are especially instructive in showing that the mere study of art through literature is not enough, but that in order to acquire a real knowledge of the subject, so as to be able to think and speak of it with intelligence, one must cultivate an intimate acquaintance with actual objects of art, and must cultivate, also, in himself a love for beautiful forms. As an instance of the importance of art as a record of the life of a people, they cite the case of the Etruscans, whose whole literature has perished; and, in further illustration of this point, one may call to mind the fact that Venice, with all the nobility and beauty of her social life, produced no important literature whatever, but expressed herself entirely through the arts of architecture, sculpture, and painting.

The two volumes before us are but the beginning of an extended work which is intended to embrace the entire history of the arts, from the earliest historic antiquity down to the commencement of the Middle Ages. But the subject of Greek art will occupy the chief place, since it is on account of the light which they throw upon its formation and decline that the antecedent and subsequent arts of the world are treated. Prehistoric art is not included in the scheme, because, according to these authors, it belongs to a period much nearer to primitive barbarism than to that of civilization; and the arts of Japan and China are omitted because they have never been connected with those of Europe. The authors show that the various works upon ancient art already existing, though some of them are in many ways excellent, are incomplete in one respect or another. That of Winckelmann, for instance, is inadequate because he had but very slight knowledge of Egyptian art, and had none whatever of the arts of Chaldea and Assyria, Persia, and Phœnicia—all of which contributed largely to the formation of the art of Greece. Even the art of Greece was very imperfectly known to him. The painted vases were, in his day, yet hidden in Etruscan and Campanian cemeteries, and the Greek sculpture accessible to him was that of the post-Phidian time only—the art of Praxiteles, Scopas, and Lysippus. The works of Phidias and the other great masters of the fifth century were then wholly unknown in real examples. Winckelmann, however, did valuable service in opening the field for later investigators, through whose labors our knowledge has been vastly extended, so that whereas formerly the art of Greece had been chiefly known through that of Rome, the materials had, by the end of the last century, accumulated so abundantly that it could be studied extensively at first hand. About 1830 Carl Ottfried Müller, a scholar of rare and varied genius, wrote his 'Handbook of Ancient Art and its Remains,' a work so thorough and judicious, within the limits which the materials then accessible would permit, that there is as yet no other book to compare with it. But even Müller had not the materials for the study of the true antecedents of Greek art, and he was led to entertain the mistaken notion that "the Greek race extracted from its own inner consciousness all that made its greatness and its glory."

More recently the field has been greatly widened by the bringing to light of these antecedents. The discoveries in Egypt and in the other countries of the East have enabled archæologists to solve many difficult problems, and the discovery of the Tanagra figurines has enlarged our conception of the genius of the Greeks by showing its playful and lighter sides in the familiar treatment of domestic life, and by giving accurate information as to dress and social customs. Indeed, there is only one branch of Greek art remaining in which the paucity of materials is deplorably great. We have absolutely no means of determining the character of that art of painting which the ancient authors put upon the same level with their sculpture. By a comparison of the finest sculpture, and the outlines on vases, with existing remains of Etruscan and Pompeian mural painting, various, more or less plausible, conjectures can be formed, but that is all. In the departments of architecture and sculpture, however, recent discoveries have been so extensive and so important as to render it necessary that the whole history of ancient art should be rewritten in the manner which our authors have so ably undertaken. In this work they do not propose to go elaborately into details which would needlessly swell its proportions. Their task is rather to gather faithfully, from all sources of information, both in literature and remains, that which should contribute to a comprehensive and trustworthy compend. We are, therefore, warned that we should not look in these pages for any exhaustive treatment or circumstantial description of particular monuments, but only for that general presentation of the subject, founded upon trustworthy authority, which is necessary to a correct understanding of the origin, progress, and decline of Greek art. The present book is, by this wise limitation, relieved of that bewildering mass of dry details which makes the works of most Egyptologists so bulky and so tedious. The student, however, who may desire to investigate any part of the subject more closely will find abundant reference made throughout the work to the best authorities. And these

references constitute a bibliography from which the authors intend to omit nothing important.

The first of these two volumes consists of four extended chapters, which treat respectively of The General Characteristics of Egyptian Civilization, Principles and General Characteristics of Egyptian Architecture, Sepulchral Architecture, and The Sacred Architecture of Egypt. The second volume has six chapters, on Civil and Military Architecture; Methods of Construction, the Orders, Secondary Forms; Sculpture; Painting; The Industrial Arts; and The General Characteristics of Egyptian Art, and the Place of Egypt in Art History. Almost every page gives evidence that the authors are eminently qualified for their task, both by native aptitudes and by cultivation. Their justness of perception is shown most clearly, perhaps, in their occasional remarks upon the character of Greek art, as where, on page xi. of the Introduction, they call attention to the fact—too little noticed by other writers—that emphasis and striving for effect mark the decline of sculpture very soon after the time of Phidias; so that the art of Praxiteles, Scopas, and other later sculptors is inferior, not simply because these artists were less highly gifted, but also in consequence of a growing tendency to disregard the just restraints which had governed design in the forming and fully formed art. They call attention, also (vol. i., p. 60), to the discriminating particularization by which the Greek sculptors distinguished one god from another—a characteristic which, under the imperfect idea that has widely prevailed concerning a predominant generic ideal of form in Greek sculpture, has received insufficient attention, so that some of the most instructive lessons of Greek sculpture have not yet had their due effect upon the arts, and the art ideas, of modern times. The authors show (p. 67) that "the Greek sculptor had nothing beyond the bodily form and features of man with which to give a distinct individuality to each god and goddess of his mythology; he was, therefore, obliged to make use of the most delicate and subtle distinctions of feature and contour." This faculty for clear definition and individual expression they rightly affirm to be among the most important qualifications for the attainment of high excellence.

Not the least interesting portions of the work are those in which the light of recently acquired knowledge is thrown upon certain traditional theories of architectural construction—as upon the theory of the antiquity of the voussoired arch, which is shown, upon the authority of Mariette, to have been constructed as early as the sixth dynasty. This investigator, too, gives it as his opinion that the true arch was well understood from the earliest times. Our authors conclude that we have no reason to believe that the *offset* arch is older, in Egypt, than the voussoired arch. Again, as to the hypothesis of Champollion regarding the derivation of the Greek Doric shaft from the Egyptian fluted column with square abacus, it is shown that the two forms are not really alike; and the opinion is advanced that, as these fluted shafts were archaic at the time when the Greeks penetrated into Egypt, it is not likely that they would have been taken as models.

The developments of the pier and column respectively are minutely traced; and the manner in which the capital is allied to the shaft below and the architrave above, is considered with artistic as well as scientific acuteness. The twofold function of the capital, as marking the point where the upward lines of the column terminate, and where it prepares itself to carry superincumbent weight, is admirably illustrated; and the fact that it must so fulfil this function as to satisfy the eye, no less than the actual constructive requirements of the material—that, in short, in architecture "what seems to be necessary is so"—is clearly recognized. Nor do the authors fail to remark upon the singular fact that the broad upper surface of the campaniform capital, the most beautiful of all Egyptian capitals, is not used for the support of the architrave, which is, on the contrary, carried on the comparatively small cubic abacus. And they justly add that "without this fault the composition of which it forms a part would be worthy, both in proportion and decoration, of being placed side by side with the most perfect of the Greek columns." A possible explanation of this singular form is offered in the course of some remarks concerning the resemblances which exist between certain details of architecture and the forms of some plants—as the lotus and papyrus. These resemblances have given rise to various well known theories respecting the direct derivation of the forms of column and capital from those of these plants. But MM. Perrot and Chipiez think it improbable that the slender and yielding forms of growing plants should have inspired the architects. They suggest, however, that on fête-days they may have been used to decorate pillars and posts of more substantial construction, by being bound around them, and that from the square pillar thus decorated the architectural forms in question may, very probably, have been derived.

The belief has extensively prevailed, as far back as the time of Plato, that Egyptian art was of a uniformly immobile and unprogressive character throughout its course. But upon this point the light of modern research is clearly thrown, and the art of Egypt is shown to have a progressive history no less than that of other civilizations, notwithstanding its long periods of convention and apparent fixedness. This history, however, is of a very puzzling character, especially so in the department of sculpture, the oldest of which is the most remarkable for likeness to nature, and consists, apparently, of portraits only. Some of these are "masterpieces of realistic expression," and they are certainly wonderful for animation, for articulation of form, for freedom of attitude, and for diversity of character. A number of figures from the Memphite tombs, brought to Paris by Mariette as lately as the year 1878, exhibit these characteristics in a remarkable degree.

To painting, which formed so large a part of the Egyptian modes of decoration and expression, we think the authors hardly do full justice. They remark very truly upon its conventional and elementary character, its entire failure to express rotundity of form, recession of planes, tonic relations, etc.; but they do not appear to recognize how good and instructive it is in its very limited way—how in frankly resolving the colors of objects into their simplest conditions, it establishes the fundamental principle which underlies all good painting whatever.

The style of the book is perhaps a little too diffuse, but it is everywhere clear. The translation is smooth, and the typography is excellent. The abundant illustrations in the text are good enough for their purpose (those on architecture are drawn to a uniform scale), and the steel plates are uncommonly good.

THE EARLY MANHOOD OF CAVOUR.

Lettere edite ed inedite di Camillo Cavour, raccolte ed illustrate da Luigi Chiala. Volume Primo [1821–1852], dall' Accademia Militare alla Presidenza del Consiglio. Torino: Roux e Favale. 1883.

As the years carry us away from that period in which Cavour worked for and achieved the unification of Italy, we are able to estimate more justly the vastness of his ability and the acuteness of his perceptions. If he seemed great in the midst of his activity, he seems greater now that his acts have become history, and that he is measured by the dispassionate standards of a new generation. In the formation of the Italian kingdom there were three factors—Victor Emmanuel the King, Cavour the statesman, and Garibaldi the popular hero. Of the three, each did his part manfully, but Cavour alone was indispensable. Without Victor Emmanuel and Garibaldi the liberation might have been postponed; without Cavour it would hardly have been possible. Such a man was needed to harmonize the discordant elements, to understand, as if by intuition, when the time was ripe, and to convince Europe, by serious and calm determination, not only that this great movement toward constitutional liberty was just and commendable, but also that it in no wise resembled the chaotic convulsions of Mazzinians and Carbonari.

The first volume of Signor Chiala's work brings Cavour's correspondence down to the year 1852, when he became President of the Council of Ministers and the acknowledged backbone of the Italian cause. Nearly two hundred and fifty letters are here given, many of them for the first time, which throw much light upon that part of his career which is least known. As we read them now, we are struck upon almost every page with the unmistakable proofs of the genius of the writer, and we wonder that his contemporaries did not earlier recognize his remarkable character. We are also astonished and puzzled to watch the development, in that retrograde, Jesuitical, despotic, enervating court of Turin, of a character as honest, practical, cool, and self-sustained as Lincoln's, and endowed also with oratorical and diplomatic gifts of the rarest kind. In the present review we shall confine ourselves to a hasty glance at the first thirty years of Cavour's life, which is made particularly clear and interesting by the letters now published. Signor Chiala prefaces the correspondence with a biographical commentary, in which he follows year by year Cavour's career, illustrating it by copious extracts from all previous memoirs and records. In this way, while his work is not so polished as the more pretentious biography by Massari, it is rich in anecdotes and details which are usually wanting in more finished books; and it is safe to predict that any future biographer of Cavour must perforce go to Signor Chiala for many of his materials.

Camillo Benso di Cavour was born in Turin, August 10, 1810. His father, Don Michele, married, in 1805, Adele Susanna Sellon, a young lady of Geneva, sprung from a French family which had emigrated to Switzerland after the revocation of the Edict of Nantes. Camillo was the second child, and had for sponsors Prince Camillo and Princess Paulina (Buonaparte) Borghese. When six years old, the boy was taken to Geneva. He was already remarkable for his decided opinions, but, beyond this, gave no signs of juvenile precocity. At ten years of age he entered the Royal Military Academy at Turin, where he proved himself fond of pranks and averse from studies, except mathematics. His father wished him to be enrolled among the royal pages, and his wish was granted on July 9, 1824, when the "polite and interesting" Camillo was appointed to the service of the Prince of Carignan. The youth was ill-pleased with the service, and in later years Cavour used to relate his feelings of disgust at having to wear livery like a lackey. When, in 1826, he was appointed sub-lieutenant in the royal corps of engineers, he expressed his satisfaction at escaping from his menial office so loudly as to incur the displeasure of the King. He was first

stationed at Ventimiglia, and then at Genoa, where he formed many warm friendships and became acquainted with the political situation. In 1829 he writes to an English friend:

"While all Europe journeys on the road of progress, our wretched Italy is ever crushed under the same system of civil and religious despotism. Pity those who, with a soul made to nourish the generous principles of modern civilization, are constrained to see their country ravaged by Austrian bayonets. Tell your countrymen that we are not unworthy of liberty, and that, if we have rotten members, we have also men worthy to enjoy the benefits of light."

For a moment the French revolution of July led him to hope for the dawning of a new era in Piedmont; but he soon saw how vain were his hopes. Added to his disappointment was a personal inconvenience, since the new King, Charles Albert, transferred him from Genoa to Bard, in the Val d'Aosta, a lonely place, where for eight months the young officer passed his time in solitude. Finally, in November, 1831, he resigned from the army and returned to his father's house. The loss of two well-loved relatives plunged him into temporary melancholy, and convinced him of the "nothingness of the vanities of this world." But, though he renounced every idea of glory, he added, in a letter written toward the end of 1831, "I will continue to uphold liberal opinions with the same warmth, without hoping, or even desiring, to make a name for myself. I will uphold them through love of truth and through sympathy for mankind." At this time Northern Italy was secretly getting ready for an insurrection, under the occult direction of Mazzini and his emissaries. From the first, Cavour saw that they must fail, and in nothing did he show his sagacity more clearly than in refusing to be drawn into the alluring but fatal vortex of lawless agitation. That the temptation was great, his own declarations testify, but that his power to resist was greater, is shown in all his actions. He had the enthusiasm of the young reformer, without his extravagance. His dreams were equal to the boldest, but he did not mistake them for realities. Witness this prophetic paragraph from a letter dated October 2, 1832, addressed to the Marchioness di Barolo:

"When one throws one's self quite young into the world and into politics, bringing thereto a fresh heart and proud spirit, it is not astonishing that one should indulge in the most deceptive illusions of vanity, celebrity, glory, ambition, and I know not what besides. I, for my part, fell into them completely, and I will acknowledge to you—at the risk of making you laugh long at me—that there was a time when I did not deem anything beyond my strength, and when I should have thought it quite natural *to awake some fine morning the directing minister of the Kingdom of Italy.*"

The unsuccessful rising in Piedmont in 1833 taught Cavour the inadequacy of underhand methods, and the inability of Piedmont, unaided, to overthrow absolutism. Already, in the preceding year, he wrote to his English friend: "The intervention of France does not seem sufficient to obtain even the smallest and most reasonable concessions from the Pope: only the *voice of England*, raised in a firm and positive tone, could obtain for the people at least a bearable government, and one in harmony with the ideas and customs of our century." Thus, at twenty-two, he had discovered the necessity of interesting England in the cause of Italy before ultimate victory could be expected. Touching the futile insurrection, he wrote in April, 1833:

"They have seized some papers, and arrested a good number of under officers—matter eminently revolutionary. This conspiracy of madmen, which had no chance of success, will have no other result than to send backward our Government still further. . . . The saddest result of the July revolution, and one which nearly balances all its benefits, is the birth to which it gave place of a frantic, fierce, and absurd party, which, chasing a chimera, wishes by forestalling the future to make triumph, at any cost, a system now impossible, and which on this account pushes society to a fearful chaos whence she can only recover by means of a power absolute and brutal, despotic or aristocratic. Notwithstanding this tirade against the Republican party which does us so much harm in Italy, I will tell you that I preserve entire faith in the future of the human race and in the law of social progress, and therefore each day I applaud more and more those persons who, like my uncle, strive to hasten it by wise, impartial, and reasonable writings."

A month later Cavour defined the situation and his own position with unmistakable precision:

"Among my friends and the acquaintances who surround me an inconceivable change has followed: some, moderate reformers, have thrown themselves bodily into the movement, and now are contented with nothing short of a complete revolution; others of the same stripe have retreated in fright toward ultraism; some, who would have been enchanted with reasonable concessions, now wish the republic; and others, who fear only too much precipitation in reforms, have gone back as far as the age of Louis XIV., evoking the recollections of the great King to govern the peoples of the nineteenth century. As for me, I was long undecided among these contrary movements. Reason held me back toward moderation; an immoderate desire to make our backsliders advance cast me toward the revolution; finally, after numerous and violent agitations and oscillations, I finished by fixing myself, like the pendulum, in the *juste-milieu*. . . . My position of *juste-milieu* will not, however, hinder me from wishing as soon as possible the emancipation of Italy from the barbarians who oppress her, and consequently from foreseeing that a crisis—though it may be of the least possible violence—is inevitable; but I desire this crisis with all the caution which the state of affairs requires, and I am, besides, *ultra* persuaded that the mad attempts of the men of the movement only retard and render more doubtful the crisis."

In the early spring of 1835 Cavour visited France and England. At Paris he had an unusually good opportunity of studying the political and social aspects of Louis Philippe's Court. Mme. de Circourt, a lady whose salon was for many years one of the most brilliant in the French capital, quickly recognized the ability of the young Piedmontese, who brought an introduction to her, and tried to induce him to make Paris his home. Cavour replied in a letter of rare force, burning with patriotism, and yet displaying a calmness and self-knowledge marvellous in a man not yet twenty-five. He asks:

"What good could I do for mankind outside of my country? What influence could I exert in behalf of my unhappy brothers, strangers and proscribed, in a land where egoism occupies all the principal social positions? . . . No, no; it is not in fleeing one's fatherland because it is unhappy that one can attain a glorious aim. Ill-luck to him who abandons with disdain the land which gave him birth, who renounces his brothers as unworthy of him. For myself, I am decided. I will never separate my lot from that of the Piedmontese. Happy or unhappy, my country shall have my whole life. I will never be unfaithful to her, even though I should be sure of finding elsewhere a brilliant career. . . . How (in France) should I find a reputation and glory? The sole means in my reach would be literature. Now, madam, I tell you frankly I feel that I have no literary genius; my brain is reasoning and little inventive. I should seek in vain to develop in me the talents of the imagination; I do not possess the least germ of it. In all my life, I have never succeeded in making up the merest fable, the smallest tale to amuse a child. Whatever efforts I might make, I should never be more than a mediocre writer, a third-class man of letters. Now, madam, that is a prospect which does not tempt me. In point of art, I conceive only one tenable position—the first rank. But if literature could not be my refuge, should I not have all the vast domain of science? It is true, I might become a savant, a profound mathematician, a great physician, even a distinguished chemist. . . . 'Tis a way quite like another of obtaining renown; only it has little attraction for the Italian with his rosy complexion and child's smile. I forgot the moral sciences, a vast field where one finds many a furrow to plough. I love the moral sciences—I love them passionately—but do you believe they can be cultivated only in Paris? I think not; on the contrary, it seems to me that this artificial society is an environment little favorable for him who wishes to study the laws of humanity. The great philosophers, the great moralists, the celebrated economists, have not lived in the large capitals. They worked in the silence of their obscure retreats; it was thence that they caused the rays of their genius to burst upon the world."

Guizot was the only Frenchman who awakened Cavour's enthusiasm. In England he studied the policy of Sir Robert Peel; he examined the poor-laws; he visited the centres of trade and commerce; he familiarized himself with the system of education and suffrage; and, in a word, he profited by all he saw in that country, which he recognized as the most advanced and liberal in Europe. Upon his return to Piedmont, Cavour, in accordance with the wishes of his father, took charge of the large family estates. He would have preferred to devote himself to intellectual pursuits, but before many weeks he threw himself into his agricultural duties with all his natural energy. "There are doubtless more brilliant careers," he wrote a friend, "but *in my position* there is none that suits me better." His position, it may be surmised, was one of unpopularity at the despotic court of Charles Albert, where the well-known liberal views of young Cavour were not passports to royal patronage. As early as 1833, the man who was destined to drive Austria out of Italy had the honor of incurring the enmity of the Austrian legate at Turin. The latter wrote to the Governor of Milan that Cavour was about to undertake a journey through Lombardy, adding: "I consider him a very dangerous man; and all the efforts made to reclaim him have been fruitless. He merits, therefore, a constant surveillance." So great became the anxiety of the Austrian authorities that they finally refused to give the very dangerous young man a passport, and his trip was accordingly abandoned.

In 1836, however, he was permitted to go as far as Villaco, in Lombardy, on business. He returned shortly, and once more buried himself with his farms. Twice in the succeeding year he was called to Paris upon matters connected with the financial affairs of his family. He already foresaw the benefit which the Piedmontese must derive from closer relations with the French capitalists; "for it is from France," he wrote, "that must necessarily come the impulse destined to develop the immense unworked resources which our country still possesses." In 1839, with Boncompagni, he helped to found the infant asylum at Turin—a work in which he took a life-long interest. "A good start to a hundred children costs far less," he said twelve years later in the Piedmontese Senate, "than to repair the misfortunes of a single man who, not having received the benefits of education and instruction, follows the paths of vice." In 1840 he again visited Paris, staying there six months. Even earlier than this Cavour had assumed the methodical habits of a student to whom every waking moment is valuable. He rose at five, swallowed a cup of black coffee, and then gave himself up to Lord Mahon's 'History of England,' which he interpreted by means of a dictionary, word by word, thus learning English and English history at the same time. It was this regularity which, years afterward, enabled him to discharge the functions of four or five cabinet ministers with amazing ability and indefatigable promptness.

Here, for the present, we must leave him. At thirty, he was recognized by a few far-sighted persons as a man bound sooner or later to take a leading position. His opinions bore the stamp of profound knowledge of human nature and of the times; but it seemed scarcely possible, in 1840, that his calm and unalterable views of a constitutional government in Italy could ever take definite shape. It seemed even less probable that the young Piedmontese noble should awake one morning to find himself the Prime Minister of the Kingdom of Italy. But already, as we have seen, at thirty, he had mastered himself; he had judged aright that salvation could never come by republican turbulence and Carbonarism; and he had displayed that faith in the ultimate triumph of justice which is the secret of the success of all great reformers. He was already, by acquainting himself with the practical needs of the Piedmontese peasantry, accumulating a mass of information which was to make him the most effective legislator of Italy—perhaps of his age. He was learning by experience the exact nature of abuses to which he afterward was to apply the remedy. In closing, we give two more brief, prophetic extracts, reminding the reader that they were written nearly fifty years ago by a man of twenty-four:

"The republicans, in a distant future, may become dangerous, for they have evidently with them the tendency of the century and the movement of material and intellectual levelling which is working among all the classes of society. We cannot deceive ourselves: society is marching at long strides toward democracy; it is perhaps impossible to foresee the forms which it will assume, but as to the upshot, to my eyes at least, that is not doubtful."

"What remains, then, to fight against the popular torrent? Nothing solid, nothing powerful, nothing durable. Is it a good? is it an evil? I know little enough: but it is, in my opinion, the inevitable future of humanity. Let us prepare ourselves for it, or at least let us prepare our descendants, whom it concerns more than us."

Chapters on Evolution. By Andrew Wilson, Ph.D., F.R.S.E., etc. G. P. Putnam's Sons. 1883. Pp. 383. Illustrated.

ACCORDING to Mr. Wilson, the principal aim of his book is to present in a popular and readily-understood form the chief evidences of the evolution of living beings. In other words, it is his purpose to give an exposition of the theory and main proofs of evolution as far as zoölogy and botany are concerned. There is abundant reason to congratulate the author on his success. At present there is no other work on the subject which so fully meets the wants of all classes of readers as this, giving a very clear and comprehensive view of the question as it stands at the present date. The plan adopted is good, and is admirably followed. The first four chapters are devoted to the Statement of the Problem, the Study of Biology, the Constitution of the Animal Kingdom, and Protoplasm. The remaining twelve contain the evidence, which relates to Rudimentary Organs, Tails, and Limbs and Lungs, Homologies, Missing Links, Development, Life Histories, Colonial or Compound Animals, Fertilization of Flowers, Degeneration, and Geology. The author makes little or no claim to originality in the evidence, but his authorities are of the strongest and most reliable, and will themselves find little fault with the manner in which their ideas or researches are presented, either in text or illustrations. In what is to be credited to the author himself there is room for difference of opinion, and we shall indicate some of the views to which objection may reasonably be urged.

Discussion of plan or design in the processes of evolution is cautiously (and wisely) avoided. The theory of special creations, however, is so vigorously dealt with that at times one wonders whether previously it had not been killed, but only scotched. A little of the intolerance of its advocates may have been inherited by its opponents. Apparently, we are to take it for granted that evolution and selection are synonymous terms, and that the history of the one is that of the other. This is hardly fair. Selection is most generally regarded as a factor in evolution the value of which has not as yet been sufficiently determined—important, but only one of a number. On page 7 the author remarks that "the gist of the process may be summed up in the statement that in the process of selection the weeded-out units die off, whilst the 'selected' and stronger units, coming to the front, perpetuate their race, and thus tend, through their superiority and strength, to evolve new races and species." On page 34 "the evolution theory postulates, what observation confirms—the operation of 'a struggle for existence,' in which the weakest forms (which are those that do not vary) go to the wall, whilst the strong (those that do vary) survive." On page 345:

"Differences of opinion certainly exist as to the share which the internal constitution of the living being plays in the drama of life and progress. It seems, however, most reasonable to conclude that two parties exist to this, as to every other bargain; and regarding the animal or plant as plastic in its nature, we may assume such plasticity to be modified on the one hand by outside forces, and on the other by internal actions proper to the organism as a living thing. Examples of such tendencies of life are freely scattered everywhere in nature's domain. For instance, we know of many organisms which have continued from the remotest ages to the present time, without manifest change of form or life, and which appear before us to-day, the living counterparts of their fossilized representatives of the chalk, or it may be of Silurian or Cambrian times."

Terebratula, Lingula, Limulus, and Beryx are examples. It would seem as if the right of the so-called "persistent" types to the title of strongest and fittest was as well proved as that of any other type. In fact, however, we know no species which do not vary or which may not become extinct. We may not calculate the death-rate or predict the time, but we know that the disappearance of the present species, and their replacement by others, is inevitable. And there is every reason to suppose the present species of men are not to be excepted. It is not yet proved that a great deal of the weeding-out is not due to what we at present, for want of a better name, call accident, and that the principal result of competition is not to force into exercise diversifying characteristics or features. Adaptation and compensation give A with strength no better chance than B with activity, or C with intellect, or D with local abundance, or E with fewer requirements, and so on. But suppose these to represent species locally distributed, and suppose one or two to be exterminated by pestilence, famine, stress of weather, tidal wave, subsidence, or elevation, and what splendid examples of the "survival of the fittest" the others become. When one has admitted that the weeding-out of certain species, causes aside, has rendered possible the continuation of others, fitness aside, and that in certain cases what we might consider the fittest survive, he has gone about far enough for safety in the present state of zoölogy. To say that the cause of the existence of the present species was the non-existence of others, and that because the former have survived they were the fittest, is absurd. Throughout nature the strong exist by the side of the weak and insignificant, and interdependence is the rule. The effect of the struggle for existence varies under different circumstances: in some cases its tendency is to extinguish, in others it produces wider distribution, and thus insures safety from extinction that might occur from local causes. A tidal wave that sweeps the species of one island out of existence may carry those of another beyond the reach of such dangers. Weather that freezes or starves one species impels another to migration that perpetuates it. An epidemic, such as is not unfrequent among men or lower animals, as that among the marine forms on the coasts of Florida, may close the account of certain races, while others in more extensive or varied dwelling-places are apparently unaffected. The able-bodied go to war and fill the trenches; the weak remain at home and continue the family. In such case, can we accept the fact of survival as proof that the survivor was the fittest? Carried too far, the theory becomes nearly or quite as unscientific as was the "wonderful display of goodness and wisdom," etc., of pre-scientific times.

In illustration of interdependence, on page 339 we have the following:

"British brain and sinew depend (according to a foreign estimate) on home-fed beef, whilst the quality of that nutriment is said to be dependent upon the clover on which the ox subsists. But clover owes its continuance to humble-bees; humble-bees, in turn, are killed by field-mice; whilst cats extirpate the rodents. As old maids conserve the feline race, it is alleged that the continuance of the British intellect is dependent upon such conservation—so that a scientific justification of spinsterhood is thus rendered possible."

A good deal of selection argument is fairly represented by this; you are simply required to admit the premises, allowing them to be selected, without proof.

Life is defined as "a collocation of the forces and energies and of the material substances which make protoplasm. Life is a property of protoplasm—such is the latest product of scientific thought and research. The forces which make protoplasm are regarded as those which make life; and, although the exact relationship of these forces is as yet unknown, analogy leads us to believe that they are not materially different, if they are different at all, from those which have made the world of inorganic matter what it is." Why not define life as a combination of modes of motion? Segmentation might then be defined as a resultant of the rhythmic waves or pulsations, and the extent and number of the segments might be said primarily to have been determined by those of the beats or waves, while some, or many, of the resemblances in the generalized beginnings of animals might be said to have been impressed upon them by peculiarities of the constituent modes.

The following, from page 349, is likely to convey an erroneous idea: "We may not fail to note, lastly, that the simpler and more uniform these latter [external] conditions are—as represented in the abysses of ocean, for example—the less incentive is there for the progress and evolution of the races which dwell in their midst." In the light of recent developments, it would seem as if the conditions at great depths favored variation and differentiation, possibly results of competition. Many strange additions to the oceanic fauna, mere suggestions of what is yet to come, have been brought to light by recent investigations, and those who have followed them hesitate before saying that the variety is so very much greater anywhere else. The statement that the Port Jackson shark (*Cestracion*) of the Australian seas is "elsewhere known only by fossil representatives from the Oolitic rocks" (p. 30), is not sufficiently exact. It is found in Japan, the East Indies, and China. A closely-allied species of the genus occurs in the

Galapagos Archipelago, and another is common along the shores of southern California.

"Occasionally horses are born with several toes—this fact being explicable only on the idea of reversion to a multiple-toed ancestry." Here one looks for an explanation of cases in which there are more than the normal number of digits, as in men or cats with six fingers or toes; and for contrasts between organs useful from their inception—which have their origin in use, in necessity, which are never rudimentary—and the superfluous which are dropped, and also the rudimentary, formerly useful, remaining for a longer or shorter period as marks of descent.

Heretofore a work such as this would not be considered complete without a genealogical tree. Of late some of the best minds, classing it with early ideas, which, as Spencer puts it, are not usually true ideas, are inclined to regard the single tree as a better expression of our ignorance than of our knowledge. Our inability to detect distinguishing characters—which may or may not have existed—in the earlier generalized stages, is insufficient proof of common descent in a single line, as represented in the trunk of the tree; and it is about all we have. Conservative minds see a better representation of the present state of our knowledge in a horizontal section through the tops of a grove of trees, at whatever levels the various roots may be. Mr. Wilson's scheme includes two trees, both rooted in the protozoa: one reaching upward from the Sponges to the Cœlenterates—Corals, Anemones, Hydræ, and Zoöphytes; the other from the Infusorians upward to the Worms, whence a branch leads to the Molluscs, another to the Vertebrates, another to the Articulates, and another to the Echinoderms. The Molluscoida—Polyzoa and Ascidia—are placed at the end of a branchlet leading from the lower part of the vertebrate stem.

The illustrations, mainly copies, form a valuable feature of this work.

Mexico To-day. By Thomas Unett Brocklehurst. With colored illustrations from sketches by the author. London: John Murray; New York: Scribner & Welford. 1883.

Mr. Brocklehurst tells us that when he arrived in the United States, at the conclusion of a tour around the world, from England, he had not thought of going to Mexico. His friend, the Belgian Minister at Washington, however, was appointed to Mexico, and he was glad to accompany him. He passed seven months in the country, kept a diary there, and the very handsome book he puts out is the result of it.

Mr. Brocklehurst is a very amiable traveller. Whatever may have been his views of the rest of the world, with Mexico he was much pleased. He is even inclined to apologize for seeing things so much *couleur de rose*, and accounts for it by saying: "During my residence in the country I enjoyed perfect health, was introduced to most agreeable society, and enjoyed opportunities for seeing something of the home-life of various classes, besides all the ordinary objects of interest presented by a great capital." The characteristic of his book is a careful and appreciative observation. He does not philosophize a great deal, but tells in a frank, engaging way what he saw. At the present moment information about Mexico has to be gathered from many sources; there is no one book that can be called comprehensive. The work of Mme. Calderon de la Barca, though written in 1839, is as yet the best that has appeared. Though apparently so remote in date, too, a great deal that it relates of manners and customs and habits of feeling is nearly as true to-day as ever, since it deals with a country that has but recently felt the first impulse of change. Mme. de la Barca, Scotch by nativity, but of American education, married the Spanish Minister to Mexico, and went to that country to reside. Much of what she has to say owes its value to her exceptional social opportunities. The present work appeals, though in a less degree, not being at all so detailed or voluminous, to the same personal kind of interest. Mr. Brocklehurst mentions by name his various travelling companions, and they seem to have been very agreeable people. He saw statesmen, dinner-parties, clubs, balls, capitalists, ecclesiastics, librarians, and heads of scientific departments, at one end of society, and peons, market girls, hospital patients, and prisoners at the other. If he falls in with an Englishman from Manchester, gaining his livelihood by keeping a bit of a restaurant after having served as an operative in cotton mills for many years, or with a Cornish miner, at Pachuca, he does not fail to take down his views of the country.

This universality of his interest bespeaks a happy balance of faculties in the author. At one moment we find him inquiring into the condition of the finances or of an institution for the blind, and giving an entertainment at his hotel for which the pupils of this latter furnish the music. The next he is poking over the collections of the junk dealers in the plaza of San Domingo for an old head painted on copper, or a silver spur. Not a few of his descriptions have a picturesque force, though wholly unpretentious:

"A rose-pink light crept into my apartment, robbing me of my last forty winks. With the light came the clang, clang, clang of the harsh and discordant bell attached to the little belfry on the Profesa church, my next-door neighbor. On gazing out of my window I found the main street thronged with pedestrians all en route for 6 o'clock mass, the ladies in veil, mantilla, and high comb, as it is *de rigueur* to attend early service in this most graceful of costumes. Later in the day, however, the señoras and señoritas don gaudy and singularly unbecoming French fashions, of which more anon."

Mr. Brocklehurst urges the reëstablishment by England of diplomatic relations, which, it will be remembered, were ruptured, by a question of debt, at the time of the joint occupation, and the imposition of Maximilian on the throne. There has been no English Minister in the country since, the duties of the place falling somewhat, on account of a common language, upon the American Minister. This subject might have been further developed. The oversight will no doubt soon be remedied, as a nation can hardly afford to sulk like an individual. Perhaps even the writer of these accounts might not inaptly fill the place, the conditions of which he has so well investigated. His volume can hardly be a popular handbook, as it appeals to rather long purses. It is beautifully got up. The numerous illustrations alone give a graphic idea of what he has seen. The colored plates, it is true, here and there raise a volcano some few thousand feet above its natural level, to be the more imposing; but this is a slight matter compared with the once extensive license of "tales of a traveller." The author has engraved elaborately the bits of potteries, arrow-heads, and the like, sometimes even of an insignificant character, which he brought home.

BOOKS OF THE WEEK.

American Cottages. Forty-four Quarto Plates. Wm. T. Comstock.
Anderson, Dr. J. W. Lectures on Medical Nursing. Second edition. Macmillan & Co. $1.
Art, L'. Vol. xxxii. J. W. Bouton.
Ashwell and Wilberforce. Life of Samuel Wilberforce, Lord Bishop of Oxford, etc. Abridged from the English edition. E. P. Dutton & Co. $3.
Authors and Publishers: a Manual of Suggestions for Beginners in Literature. G. P. Putnam's Sons.
Barnett, Matilda J. Tontine. London: F. Pitman.
Battle of Coney Island; or, Free Trade Overthrown. A Scrap of History, written in 1900. Philadelphia: J. A. Wagenseller.
Brehm's Thierleben. Chromo-Ausgabe. Parts 77-80. B. Westermann & Co.
Browning, R. Jocoseria. Boston: Houghton, Mifflin & Co. $1.
Burnett, Mrs. Frances Hodgson. Through One Administration. Boston: J. R. Osgood & Co. $1 50.
Cable, G. W. Old Creole Days. In two parts, each complete. Chas. Scribner's Sons.
Caldecott, R. Some of Æsop's Fables, with Modern Instances, shown in Designs. Macmillan & Co. $2.
Carnegie, A. An American Four-in-Hand in Britain. Chas. Scribner's Sons. $2.
Century Magazine. November, 1882, to April, 1883. The Century Co.
Chalmers, M. D. Local Government. Macmillan & Co. $1.
Church and Brodribb. Livy. Books 21-25. The Second Punic War. Macmillan & Co. $2.
Ciccolina, Sophia M. A. Deep Breathing, as a Means of Promoting the Art of Song, etc. M. L. Holbrook.
Clarke, Rev. J. F. Ten Great Religions. Part 2. A Comparison of all Religions. Boston: Houghton, Mifflin & Co. $3.
Club Almanach: Annuaire des Cercles et du Sport. Première Année. Paris: W. Hinrichsen: New York: E. Steiger.
Cobb, J. F. Martin the Skipper: a Tale for Boys and Seafaring Folk. Thomas Y. Crowell. $1 50.
Cook, M. Vandyke-Brown Poems. Boston: Lee & Shepard.
Croffut, W. A. A Midsummer Lark. Henry Holt & Co.
Douglas, Amanda M. Whom Kathie Married. Boston: Lee & Shepard. $1 50.
Ellis, T. J. Sketching from Nature: a Handbook for Students and Amateurs. Macmillan & Co. 90 cents.
Fetridge, W. P. Harper's Handbook for Travellers in Europe and the East. In 3 vols. Harper & Bros.
Flint, Dr. A. Medical Ethics and Etiquette. D. Appleton & Co.
Freeman, A. C. The American Decisions. Vol. xliii. San Francisco: A. L. Bancroft & Co.
Fremantle, W. H. The Gospel of the Secular Life. Oxford Sermons. Chas. Scribner's Sons. $1.
Galton, F. Inquiries into Human Faculty and its Developments. Macmillan & Co. $3.
Gizycki, G. von. Grundzüge der Moral. Leipzig: Wilhelm Friedrich.

Henry Holt & Co.

JUST PUBLISH:

Palmer's Folk Etymology.

A Dictionary of Verbal Corruptions, or Words Perverted in Form or Meaning by False Derivation or Mistaken Analogy. By Rev. A. Smythe Palmer, Curate of Staines. 8vo, $6 50.

Croffut's A Midsummer Lark.

By William A. Croffut. 16mo (Leisure Hour Series), $1.
A Humorous Account of a European Trip.

Lacombe's The Growth of a People.

A Short Study in French History. By Paul Lacombe. A translation of the 'Petite Histoire du Peuple Français.' By Louis A. Stimson, M.D. 16mo, $1.

Macloskie's Elementary Botany.

With Student's Guide to the Examination and Description of Plants. By George Macloskie, D.Sc., LL.D., Professor in Princeton College. 12mo, $1 60.
Suited for general readers and for class use in High Schools and Colleges.

Maine's Early Law and Custom.

By Sir Henry Sumner Maine. 8vo, $3 50.

Porter's Outlines of the Constitutional History of the United States.

By Luther Henry Porter. 12mo, $1 50.

BOOKS PURCHASED.

IN any family, whether large or small, but especially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Professor J. B. Fonssagrives's 'Mother's Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1 25 for two volumes. Address Publisher of the Nation.

BOOKS.—E. W. NASH, 80 Nassau Street, New York, Dealer in Works relating to America, Genealogy, Indians, etc., has issued a new Catalogue, which he will mail to any one sending for it.

G. P. Putnam's Sons,

27 and 29 West Twenty-third Street, New York,

HAVE NOW READY:

1. ITALIAN RAMBLES. By James Jackson Jarves, author of 'The Art Idea,' 'Italian Sights,' etc. 16mo, cloth extra, $1 25.

2. GOLDEN SANDS. A Collection of Devotional and Practical Counsels for the Duties of Daily Life. Translated from the French, by Ella McMahon. With illustrations engraved on wood from designs by C. E. Wentworth. Small 4to, cloth extra, $1 50.

Three different series of this work have been published in the United States, and translations have been made into various languages. Probably no similar work has had, during the past ten years, so extensive a sale. The present edition has been planned to present, in one attractive volume, the most beautiful and touching of the thoughts and practical suggestions contained in the original work. The illustrations will be found to add not a little to the attractiveness of the book.

3. SHAFTESBURY & HUTCHIson. By Professor Fowler. Vol. V. in the Series of English Philosophers. 8vo, cloth, $1 25.

"English Philosophers" is a series presenting a comprehensive and detailed statement of their several views and contributions to philosophy, together with brief biographical studies of the men themselves.

4. The GOLDEN CHERSONESE, and the Way Thither. By Isabella [illegible] (Mrs. Bishop), author of 'Life in the Rocky Mountains,' 'Unbeaten Tracks in Japan,' etc. With 24 illustrations and 2 maps. 8vo, cloth, $2 25.

Sketches of travel in the Malayan Peninsula.

"Miss Bird is the ideal traveller."—*London Spectator.*

"It is that wonderful way this lady has of making herself at home, under the strangest conditions, which makes her travels so markedly interesting. Whether on account of her sex or not we cannot say, but she gets into places where men have no entree. . . . 'Golden Chersonese' is one of the choicest books of travel of the year, and in some respects even more amusing than her 'Unbeaten Tracks in Japan.'"—*N. Y. Times.*

"To those who have read the author's other volumes this needs no commendation, and those who have not have missed a great pleasure."—*N. Y. World.*

5. AUTHORS and PUBLISHERS:

A Manual of Suggestions for Beginners in Literature. Comprising a description of Publishing Methods and Arrangements, Directions for the Preparation of MSS. for the Press, Explanations of the Details of Book Manufacturing, with Instructions for Proof-Reading, and Specimens of Typography, the Text of the United States Copyright Law, and Information concerning International Copyrights; together with General Hints for Authors. 12mo, cloth extra, $1.

"Full of valuable information for authors and writers. . . . A most instructive . . . and excellent manual."—*Harper's Monthly (Easy Chair).*

"On every point treated we can conscientiously recommend this book to every one desiring information upon the subject of which it treats. It answers many questions which are frequently asked of editors of newspapers, and answers them much better than most daily editors are able to do."—*Providence Press.*

"The idea of the publication is a happy one, and, being well executed for the benefit of a field which is unnaturally large nowadays, it will prove a profitable one."—*Boston Globe.*

THE

CAMPAIGNS OF THE CIVIL WAR.

PUBLISHED THIS DAY.

I.

THE FINAL VOLUME.

12. *The Virginia Campaign of '64 and '65.*

THE ARMY OF THE POTOMAC AND THE ARMY OF THE JAMES.

By ANDREW A. HUMPHREYS,

Brigadier-General, Chief of Engineers, and Brevt. Major-General U. S. A.; Chief of Staff, Army of the Potomac; commanding Second Corps, etc., etc.

1 vol. 12mo, with 11 maps, prepared under the direction of General Humphreys, price $1.

The volume describing the series of operations which ended with the capture of Lee's army and the downfall of the Southern Confederacy may, therefore, be considered, from the interest of its subject, the most important of the series of war histories which it brings to a close. It is fortunate in having for its author the one man who, by universal consent, is preëminently qualified to be the historian of the military operations of this difficult and decisive campaign.

The universal confidence in his personal character and abilities that has given General Humphreys an almost unique place among military men has caused this volume, his most important contribution to the literature of the [illegible] be awaited more eagerly than any other [illegible] the military operations of the great conflict [illegible] as yet appeared.

The size of the book necessarily largely exceeds the limits of those of the series that precede it. The maps are numerous, and are unusually minute and accurate.

II.

A SUPPLEMENTARY VOLUME.

Statistical Record of the Civil War.

1 vol. 12mo, . . $1.

This Supplementary Volume to the Campaign Series, an exceedingly valuable and complete "Statistical Record of the Civil War," has been compiled with the greatest care and accuracy from official sources, by Colonel Frederick Phisterer, late Captain U. S. Army. The nature of the volume, and its value to every student of the war history, may be gathered from some leading heads in the list of its contents, which includes the figures of the quotas and men actually furnished by all States; a list of all organizations mustered into the U. S. service; the strength of the army at various periods; its organization into armies, corps, etc.; the divisions of the country into departments, etc.; chronological list of all engagements, with the losses in each; tabulated statements of all losses in the war, with the causes of death, etc.; and full lists of all general officers.

NOW COMPLETE.

The Campaigns of the Civil War.

13 vols. 12mo, cloth (in a box), $12 50.

THIRD EDITION NOW READY.

History of the People

OF THE

United States,

FROM THE REVOLUTION TO THE CIVIL WAR.

BY

JOHN BACH McMASTER.

McMaster's 'History of the People of the United States' continues to be received with enthusiasm by scholars and the general public. A distinguished critic declares it to be "*one of the most important, one of the most necessary, certainly one of the most fascinating and entertaining volumes that the literature of this country is enriched with.*"

Volume I. Third edition. 8vo, cloth, gilt top, price $2 50.

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond Street, New York.

NEW YORK THURSDAY, MAY 24, 1883.

The Week.

MR. WALTER EVANS, of Kentucky, the new Commissioner of Internal Revenue, seems to have been President Arthur's second choice for that place, the appointment having been offered to Mr. Silas B. Dutcher, of this State, who declined. The choice of Mr. Dutcher, who undoubtedly is a man of great business capacity, was not a fortunate one, inasmuch as it would have exposed the President to the suspicion of intending to use the patronage of the Internal Revenue Office for political purposes in this State. This suspicion might have been ever so unjust, yet the President would hardly have escaped it, as few men would have been willing to believe that Mr. Dutcher, as Commissioner of Internal Revenue, could resist the temptation of using his official power and opportunities for some political end. This suspicion, a very injurious one in these times, will not attach to Mr. Evans unless he provokes it by the management of his office. He is described by those who know him as a man of undoubted integrity, of active and industrious habits, and a good lawyer, possessing general business ability enough to encourage the hope that he will fill his office with credit. The duties of the Internal Revenue Commissioner are among the most complicated and difficult in the Government, and in no branch of administration is it more necessary to guard against a mixing up of politics and business, if the integrity and efficiency of the service are to be maintained.

It is pleasant to learn through the *Tribune* that Mr. Chandler, the Secretary of the Navy, has appreciated the compliment paid him by Mr. Dezendorf, who addressed him as a hearty and zealous friend of civil-service reform—a compliment which by some was suspected of an ironical flavor. Mr. Chandler has answered Mr. Dezendorf's letter complaining of the use Senator Mahone makes of public servants in the employ of the Navy Department, and promises to have the charges concerning the violation of the Civil-Service Law and the use of the Norfolk Navy-yard for political purposes "thoroughly investigated." The Secretary is further credited with the declaration "that the navy-yards shall not be used for political purposes by anybody, if he can prevent it." And as there cannot be the slightest doubt as to his power to prevent it, if he so desires, nor as to his thorough knowledge of the things to be prevented, it may justly be said that complete success in performance will be the only conclusive proof of the sincerity of intention.

Colonel Bob Ingersoll began his speech in the Star-route trial on Monday with a withering denunciation of informers, and he declared that he had "an absolute contempt for any government that called for informers and spies." As all civilized governments are under the disagreeable necessity of sometimes doing this, it seems to follow that the gallant Colonel's scorn must embrace all existing systems. This is very painful, but it can, of course, be remedied by any government that desires to do so by the simple passage of a law forbidding the use of the testimony of accomplices. The reason such testimony is used is, of course, that it is needed to secure a conviction, and that if it were not used crimes would go unpunished; but then a government that would use an informer as a witness would always have some such low practical reason to defend the practice with.

The Republican Harmony Committee has at last furnished an excellent plan of reorganization in this city. It provides for a complete new enrolment on the first three Tuesdays in September, 1883, on which every voter shall be entitled to place his name, if he voted for the Republican candidate for the Presidency and Vice-Presidency at the last Presidential election, or if, not having done so, he declares his intention to vote with the Republican party at the election next fall. But he must fortify this declaration by pledging himself on oath not to take part in the primaries or caucuses of any other political organization during the year. When this enrolment is made the books are to be open for inspection and challenges for six days, at the expiration of which the enrolling officers are to strike out, on proof, all names improperly placed there. The existing "district associations" are then to pass out of existence as primaries or caucuses, though "the boys" may still keep them up as clubs, if they please. A County Committee, elected by the enrolled voters, will take charge of the party management in the county, and will provide for another new enrolment in 1884 and in every year afterward. Each year there is to be a new enrolment and a new County Committee; so that it will be impossible, if the voters now do their duty—that is, take the trouble to get themselves enrolled and to vote for the County Committee—for any more professional Jakes, Mikes, or Barneys to arise. Of course there will always be men in politics known by these names, but there need never again be men wearing them as quasi-official titles.

The new plan has evidently been framed on the great theory that it is desirable for a political party to be numerically as strong as possible. This seems at first blush so patent a truism as to be a little ridiculous when produced as a basis of reorganization. But it is not at all ridiculous to those who know that for over twelve years the Republican party has been managed in this city on the theory that it ought to be difficult for voters to get into it. Access to it was accordingly impeded in a variety of ways which Mr. George Bliss has more than once described in print, some of them simply tricky or fraudulent, others downright oppressive. The story of the Connecticut deacon who discouraged a converted scapegrace from joining the church, on the ground that "it was about full," has always been considered a good one, but it is not half as good as the story of the arrangements made by Republican workers in New York to keep the party small and select. They acted, in fact, as if it was a great privilege to be allowed to vote the Republican ticket, and that applications for it ought to be discouraged. All this, if the new plan be adopted, will end. There will be no difficulty now in the way of any one's voting the Republican ticket and taking part in nominating the party candidates, who has ever voted it, or who means to do so in future, except the inevitable precautions which every party must take against having its primary meetings perverted or overwhelmed by fraud.

The presence of "No. 1," otherwise Tynan, in this city has been settled by a correspondence between his counsel, Mr. Roger A. Pryor, and Mr. Marbury, the counsel for the British Consul. Mr. Pryor says his client, who is a modest, unobtrusive man, with eight children, is here, and ready to surrender himself at any time if called for. What his occupation is Mr. Pryor does not know. His willingness to surrender is doubtless based on a belief that he will not be extradited, for there appears to be little question that if he can be got over to Dublin, where he has been indicted, it will go hard with him. According to Mr. Marbury, no application for him has yet been received, but that he will be applied for seems very probable. The indictment in Dublin would not have taken place if it had not been intended that an attempt should be made to bring him to trial. Perhaps the most extraordinary thing about him is the size of his family. Usually a large family turns a man's attention away from the organization of murder societies, and inclines him to some money-making business. If he should be asked for by the British Government, he will be useful as a text for the discussion of the important question what is and what is not a political offence under the treaty.

It seems now as if there was really nobody behind Tynan, and that he was in fact, as well as in name, the "No. 1" of the conspiracy. Nothing appeared on the trials to show that the murderers knew of any higher authority for their performances than he. If this be true, it would really seem as if, in the present state of the Irish mind, it was possible for any man with plausible address to go over from this country or England and found a secret society, and find plenty of men ready to be "sworn in" by him, to obey his orders of whatever kind, and even commit murder under his instructions, without ever inquiring where he came from or who sent him. In fact, a certain amount of mystery about the head man, or "inner circle," combined with a little glamour of patriotism, seems to be all that is necessary to secure conspirators among the class from which the Careys, Bradys, and Curleys were drawn.

There could hardly be a better illustration of the condition in which the city of Chicago is to-day, as regards the essentials of good government, than the acquittal of Dunn for the murder of Elliott. The jury apparently held that because Elliott had been heard to threaten Dunn's life at some time or other, Dunn was justified in lying in wait for him and killing him by taking him unawares, just like a savage in the woods. The verdict is of course tantamount to notice to all the dangerous and brutal class of the city that the law will not meddle with their quarrels, and that they may fight with deadly weapons and butcher each other with impunity. It is not surprising, therefore, that there was a festive gathering of roughs immediately afterwards to celebrate the acquittal in bumpers of champagne. In fact, one hears nearly every week now of verdicts in various parts of the country which seem to sanction the notion that the law makes no provision for the protection of threatened men, that there is no process by which ruffians who put people in bodily fear can be reduced to harmlessness, and that the peaceable citizen has to secure himself against them, just as the first settlers did against the Indians, by going armed and keeping a sharp lookout.

In the London *Economist* of May 5, Mr. Thomas B. Moxon criticises Mr. Goschen's speech on the "appreciation of gold," by showing, first, that there are sufficient causes to account for the slight fall of general prices which has taken place since 1873, irrespective of the transactions of the German, American, and Italian Governments; and, second, that the observed course of prices does not show any general correspondence with those governmental transactions. The causes which have lowered prices have been in part reduced cost of production and transportation, in part a reaction from the speculative activity which existed prior to 1873, and in part a reduction of middlemen's profits. If the absorption of gold by Germany, the United States, and Italy had been the determining factor, or even an important one, the decline in prices ought to have been continuous, and ought to be more marked in the present year than at any other time, seeing that Italy has only within a few months accumulated the stock needed for resumption. If any business man were asked at what time the depression following the panic and crisis of 1873 ceased to be felt, and times began to grow better, he would say at the beginning of 1879, in corroboration of Mr. Moxon's table. This period, indeed, happened to coincide with the resumption of specie payments by the United States, but the importations of gold by this country continued to be heavy for more than a year after that event, and must have had the same general effect as the previous accumulations of the Government in preparing for resumption. These importations continued until near the time when the operations of Italy began, yet general prices advanced 15 per cent. in 1879–80, and although there has been a slight reaction since, they have at no time been as low as they were in January, 1879.

The stern tone which the Pope has taken in dealing with the Irish clergy, touching their support of the Parnellite agitators, is apparently a triumph of English diplomacy at Rome, and will undoubtedly be so regarded in Ireland. It can hardly have been taken under sound advice or information from Irish quarters, for the best observers of what is passing in Ireland agree that the adhesion of the Catholic clergy to the Land League was a necessity of their position, or, in other words, the only mode of retaining their already greatly diminished influence over the people. Those bishops and priests, in fact, who have ventured to hold aloof from the agitation or denounce it, have been rudely reminded—in one instance by half the congregation rising and leaving the church—that the good old days of clerical power in Ireland are gone. The Irish people were really led in politics by the priests down to 1850. Under O'Connell they were all-powerful. The Young Ireland movement was the first sign of a desire on the part of the laity to act independently. Since the American Irish appeared on the scene, the displacement of the clergy as political leaders has been very rapid, and is probably now an accomplished fact. Priests are still prominent at meetings and conventions, but not, as formerly, as priests, with their sacred character kept constantly prominent, but as some of the very few men of any education or of speech-making power the new agitation possesses. It is in some of its aspects, in fact, the most democratic attempt at revolution ever made, for its promoters are now nearly all peasants or sons of peasants. All Irish revolutionary movements since 1688 have suffered for lack of leaders of the higher social grades, but none of them have had nearly so few as this one. The Irish clergy are well aware of the change in their position. The hostility to the secret societies, like the Fenians, is due largely to the fact that these societies help still further to diminish their influence. They know, too, that the breezes which blow from the United States are charged with hostility to clerical as well as other authority. In taking part with the Parnellites they are, therefore, beyond doubt doing what is best for the Church under the circumstances. That the Pope should not know this shows how ill informed he probably is with regard to a very important part of his spiritual dominions.

Mr. F. H. O'Donnell, the Parnellite member of Parliament, whose opinions are of no particular consequence, except as they reflect in a rough way those of his colleagues, has written one of his savage letters to the *Freeman's Journal*, denouncing the Pope's circular to the Irish bishops as the work of Mr. Errington, an English Catholic gentleman who has been acting during the past year as a sort of unofficial emissary of the British Government to the Vatican. He accuses him of having imposed on his Holiness. This is probably the view which the Parnellites and their press will take of the affair. They will treat the Holy Father as the victim of misinformation and imposition. They would probably take even stronger ground if Parnell were not a Protestant. This makes his position very delicate indeed, as there are probably not many even "bad Catholics" in Ireland who could bear hearing the Pope criticised by a heretic. The Irish-American Catholics will probably be bolder and follow the lead of Mr. Finerty's paper, the Chicago *Citizen*, which abuses the Pope roundly almost in the terms which are employed for Gladstone and Forster, and proposes to hold indignation meetings against him, and stop his Peter's pence. We suspect he will be sorry before long that he has meddled in the Irish question, if it be possible for the Pope, as Pope, to regret an official act—which, we suppose, is doubtful. But he will, at all events, regret it as a man, and he will certainly find out that, humanly speaking, he has accomplished nothing.

The Special Commission appointed to try the Phœnix Park murderers finished its labors on Thursday, having convicted every man engaged in the affair except the two informers, and also a batch of the conspirators who made the attack on Mr. Field, the juror, and plotted the murder of Judge Lawson. In fact, the only one of them who seems to have got off thus far is Tynan, or "Number One," and Carey, the informer, whose future is pretty dark, although he has got a pardon. The way in which the panel of special jurors did their duty appears to have been admirable, although there was enough in the situation to try very strong nerves. The brother of Brady threatened the life of the foreman of the jury who convicted him, but was caught, pleaded guilty, and has been forgiven. Another group of young men, who distributed circulars holding up the members of the jury panel to reprobation, have also been caught, and will probably get a little penal servitude. In fact, the police arrangements seem now to have been brought to such perfection that the murderers and intimidators have hardly time to open their mouths before they are nabbed, and they are probably thoroughly cowed. But the evident sympathy of the populace in Dublin with the condemned murderers is a painful symptom of deep-seated social disease. How deep-seated it is may be inferred from the fact that an Irish Catholic priest in this country the other day publicly glorified Brady as a martyr.

The acquittal of Little Phil Thompson by the jury at Harrodsburg, amid the enthusiastic plaudits of the audience in the court-room, was, of course, what was expected. All trials of this kind have somewhat the same character in the eyes of some Kentuckians as the great state trials in which the principles of constitutional liberty were vindicated had in England. That is to say, all such trials are attempts to restrict the exercise of what they think their dearest right—the right of every man to kill his own enemies Their failure, therefore, always causes some popular rejoicing, like the acquittal of the Seven Bishops. The occasion is, of course, all the greater when there is a woman in the case, because this gives the killing an air of being a bit of social police. This is not necessary to make a homicide justifiable, but it adorns it, and makes it easier to put a good face on it to the carping critics of other

communities. The interest of such trials as Little Phil's is also increased by the fact that there is always danger of a regular set-to with firearms in the court-room between the friends of the slayer and those of his victim. There was much fear of it in the present case, every one present, probably including the Judge and jury, being fully armed. The Judge's charge, if we infer from the heads of it as telegraphed, was fair enough. The greatest speech of the occasion was that of Senator Voorhees, of Indiana, known in politics as the "Tall Sycamore of the Wabash." The Sycamore maintained two propositions, which were, for him, rather coherent: namely, that the killing of Davis was justified by all laws, human and divine, and that Thompson when he did it was "emotionally insane." He also laid it down that there was only one period in history, to wit, the reign of Charles II. of England, when it was considered proper, or not improper, to do what he said Davis did, showing that the Sycamore is more erudite and a sterner moralist than most people in this part of the world have been in the habit of considering him.

One paper in Louisville—the *Commercial*—to its honor be it said, keeps its head cool amid this general blood mania. It points out, in answer to some of its local contemporaries, the contrast presented by the Judge's expression from the bench of his deep sympathy with Thompson, and the article apropos of the murder in the *Courier-Journal*, glorifying the shot-gun, written just as the editor was starting as a university lecturer against homicide, with the spirit which in Pennsylvania "has made Dukes an outcast in his native town, and driven away the jurors" who acquitted him. This is part of the *Courier-Journal's* contribution to the literature of the Thompson case, written while the trial was pending. It reads like a Zulu's apostrophe to his assegai, during a war dance, after a double ration of grog:

> "The shot-gun is mightier than the courts. It is a universal leveller. It simplifies and cheapens the law, and brings it to the door of the poorest when need is, and long may its policy prevail, mute sentinel by the fireside, guarding the honor of our women, protecting our cradles and our children; a menace to wives that are weak, and a perpetual terror to libertines and libertinism."

They have been having a terrible time with the pistol and knife at the South. Last November C. M. Burgess killed R. M. Donley at Henrietta, Tex., but, having jostled W. R. Curtis the other day, when the latter was getting his mail at the post-office, Curtis killed him. Then Deputy United States Collector W. S. Gravely, losing patience with Dr. Q. C. Hall at Floyd Court House, Va., killed him promptly. In Louisiana also, when old Mr. Pierce Lanier was killed last winter, James and William Curley were suspected of doing it. Consequently, young Pierce and Guion Lanier resolved to murder the said James and William by way of avenging their father's death. They murdered James first; but William then lay in wait for them with a friend, and, in the fight which followed, three were killed, which seems to settle that little matter. At Petersburg, Va., however, one Newson, a colored man, having asked S. Lewis, a white Readjuster, for payment of a little bill, Lewis as a Readjuster felt that such conduct on the part of a creditor could not be quietly passed over, so he killed him at once, which disposed of that claim. We are sorry, also, to have to record the murder of Sam Thompson, the editor of the Oxford *Eagle* (Mississippi) by Butler, the City Marshal, who had him under arrest. Finding him unwilling to go with him, he put a pistol to his prisoner's heart and killed him. We are sorry, too, to hear that the citizens of Vicksburg are deploring the death of Joseph T. Hazelett, who has just been shot down in the street, and whose "honored father," the Vicksburg *Evening Post* says, "was borne from his threshold to the grave a few years ago, also the victim of the deadly pistol on our streets." The *Post* adds:

> "To our poor human minds it would seem that this distressed family had, before this last calamity, suffered more than enough from the dread custom which curses our section; but the ways of God are inscrutable, and we can only bow in humble submission to his will."

Our "poor human minds" do not see it in that light. Our advice to the *Post* is not to set down these awful crimes among "the ways of God," and wail over them, but to get these wretches who do the killing tried and hanged. Enforce the law, and you will soon find out that "the deadly pistol on our streets" is not one of the instruments of God's Providence.

A less cheerful feeling has prevailed during the past week in regard to trade and industrial prospects, and yet it is difficult to specify a single feature less favorable than it was a week ago. On the contrary, there has been an actual improvement in several respects, for example, the crops. The speculation in wheat, which was the means of advancing prices beyond the exporting margin, has begun to subside, and the legitimate course of trade in that line may soon be resumed. There have been some strikes among the coal miners at the West, and the proposed strike among the iron workers in the Western mills on June 1 is still pending, but the coal strikes are in a fair way for adjustment, and that among the iron workers is likely to be compromised. The past week has witnessed the advent of the usual season of plethora of loanable funds at the banks, and money has loaned at lower rates than at any time for the past ten months. Call loans have been made at 2 per cent. per annum, and the rates of discount for mercantile paper have declined ½ of 1 per cent. in the week. The extreme ease in the money market here—making money cheaper than in London—together with the scarcity of exchange, owing to the decrease of exports of breadstuffs, has caused an advance of 1½ cents on the pound for foreign exchange. The effect of the large expansion of the railroad system—especially by the increase of lines parallel to the previously existing lines—during the last year or two, has been shown in the prices of stocks during the fortnight more perceptibly than at any previous similar period. Within the last two days many stocks have touched lower prices than at any time since January, 1881. Declining prices for grain and stocks have doubtless had some influence in creating the less cheerful feeling at first referred to, but the result of these lower prices will unquestionably be a healthier situation.

The despatches from South America on the subject of the treaty said to have been signed between representatives of Peru and Chili, read somewhat as if they were the result of a championship "news" match between some rising young South American journalists. First one of the contestants declared that the "provinces" of Tacna and Arica were to be taken by Chili, but that their ultimate fate was to be decided by a plébiscite after ten years. As "news" this was very fair, because Arica is not a province but a city, and nothing was said about the disposition of Tarapaca, so that it looked as if the combatants had suddenly forgotten all about it. But presently a new man went to work, and sent a despatch saying that it was Tarapaca (or "all territory south of the River Camarones") that was to be ceded; that at the end of ten years a plébiscite was to be taken to decide which of the two countries Tarapaca was to belong to, the country getting it to pay 10,000,000 pesos to the other, notwithstanding which the cession is to be "unconditional" in the first place. The Peruvian Minister in Washington, Mr. Elmore, as was no more than fair, had his attention called to the treaty by a reporter two or three days ago, and stated that he had received no advices on the subject, but that it was not impossible that some secret understanding with a view to a treaty might have been arrived at. According to Sunday's despatches, it is an "agent" of Iglesias who has signed the treaty, subject to his approval. The secrecy with which the negotiations have been conducted accounts for the difficulty in guessing accurately at the result of them.

Rear-Admiral Garcia, of the Peruvian Navy, and Secretary-General of Pierola during his short term of power, has written to the London *Times* describing the process by which Chili has been completing the conquest of Peru; and if his story be anywhere near accurate, there is something very thorough about the Chilian policy. Not only have the Chilians, he says, levied enormous war contributions, but they have pillaged every literary, scientific, and artistic collection in the country. They have carried off the State Library and the University Library, containing together 300,000 volumes, and used the bookcases to make packing boxes. They have also carried off the instruments from the Observatory and from the laboratories of the Medical College, also its collections, and those of the School of Arts and Manufactures, and have even levelled the University buildings. They have removed the national archives, and the national collection of pictures, and all portable statues, bronzes, fountains of every description. In short, either Admiral Garcia is a man of very vivid imagination, and fond of exaggeration, or the Chilians have been exercising the rights of conquest in ways unknown to the modern world. The exactions of the first Napoleon, which were considered so barbarous, never went nearly as far as this.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 16, to TUESDAY, May 22, 1883, inclusive.]

DOMESTIC.

PRESIDENT ARTHUR on Monday afternoon appointed Walter Evans, of Louisville, Ky., Commissioner of Internal Revenue to succeed Green B. Raum, resigned. It is said that the place was refused by Mr. Silas B. Dutcher. Mr. Evans is a native of Kentucky, about forty-two years old. He was a Union officer during the war, and is a lawyer by profession. He has been a State Senator, and a candidate for Congress, for United States District Attorney, and for United States Marshal. He was a Grant man at Chicago in 1880.

Secretary Folger has under contemplation the reduction of the number of Internal-Revenue collection districts from 126 to 92. The Cabinet considered the question on Saturday, but took no formal action.

Attorney-General Brewster on Tuesday decided that national banks under the new tax law are not required to pay any taxes on their deposits and capital stock for the period between the date of the act of March 3, 1883, and January 1, 1883, and that the tax on the deposits and capital of other banks and bankers is not to be paid for the period between the date of the same act and December 1, 1882.

The Civil-Service Commission on Thursday published certain regulations which they have adopted for guidance of the Chief Examiner, Secretary, and local Boards of Examiners.

Postmaster-General Gresham has issued an order directing all postmasters to coöperate with the custodians of public buildings in aiding the Civil-Service Commissioners in all reasonable ways in the discharge of their duties.

A naval review of the North Atlantic Squadron of United States vessels took place at Fortress Monroe on Wednesday.

Advices received in Washington on Monday say that General Crook is now in Sonora, Mexico, in pursuit of the Indians who murdered Judge McComas, and that he will in all probability remain across the border until he either subdues the hostiles or is routed by them.

Complaints to the Signal-Service Office at Washington, that the weather predictions have not been as trustworthy of late as they formerly were, are answered by the statement that Congress refused to make an appropriation sufficient to maintain the service, and that for that reason the operations of the bureau have been materially restricted. The consequence is that there is insufficient information at hand to make strictly accurate reports.

A reunion of the Society of the Army of the Potomac was held in Washington on Wednesday and Thursday. There was a procession on Wednesday of 2,500 men, 700 being members of the Society. They were reviewed by the President. A business meeting was held in the afternoon, at three o'clock, at which General Newton was elected President, defeating General Grant. There was considerable opposition to the latter because it is alleged that he has not shown great interest in the reunions. Brooklyn was selected as the next place of meeting. The Society went on an excursion to Mt. Vernon on Thursday.

In the Star-route trial, Mr. Wilson concluded his speech for the defence on Wednesday. A sick juror on Thursday caused an adjournment of the court. Colonel Ingersoll spoke for the defence on Friday, Monday, and Tuesday.

The quarrel among the colored men on account of the call for a convention of that race is increasing in bitterness, especially in Washington. Fred. Douglass, who is the promoter of the plan for the convention, published on Tuesday an open letter in which he sharply attacked Professor Greener, one of the few colored men who have ever had the courage to place themselves in opposition to the views of Douglass. This is to be followed by a reply from Professor Greener.

The deaf mutes of the United States raised a subscription of $1,400, in sums ranging from one cent to one dollar, for a bust of General Garfield. This bust was unveiled on Wednesday at the Government Asylum at Kendall Green, Washington.

There was a rumor in this city on Thursday morning that a warrant had been issued for the arrest of P. J. Sheridan, of the *Irish World*, on a demand for his extradition to England, and that Sheridan was missing from the city. Sheridan, however, made his appearance at the Astor House at 2 o'clock. No arrest has yet been made.

Governor Cleveland has signed a number of important bills during the week, among them the bill to suppress political assessments, dividing the State into Congressional districts, and amending the act establishing Cornell University. He has vetoed the bill transferring to the Court of Appeals the duty of making contracts for the publication of its reports; also, the bill to extend the scope of the securities in which fire-insurance companies may invest. On Saturday he vetoed the Page bill extending the list of securities in which savings banks may invest.

President White, of Cornell University, has declined the appointment as State Civil Service Commissioner, because of duties to which he is already pledged.

A memorial has been prepared by a committee appointed for the purpose at the April meeting of the Council of the University of the City of New York, setting forth the needs of the University, as well as referring to the work that has been accomplished during the past fifty years of its existence. The aggregate sum asked for to supply present needs is $250,000.

The General Assembly of the Presbyterian Church of the United States met at Saratoga on Thursday. The annual sermon was delivered by the retiring Moderator, Dr. Herrick Johnson. The Assembly of the Southern Presbyterian Church met on the same day in Lexington, Ky. A delegation of the Northern Assembly was present—the first since the war. A delegation from the South was also present at the Northern Assembly. Organic union of the two bodies was deemed impracticable by one of the latter committee. Another member, Dr. Hoyt, expressed the sentiments of those who desired such a union.

J. Proctor Knott was nominated for Governor by the Democratic State Convention of Kentucky on Thursday. A tariff-for-revenue-only platform was smothered in committee, and a revenue plank adopted capable of almost any interpretation. Capt. J. R. Hindman, late of the Federal army, was nominated for Lieutenant-Governor on Friday. There has been considerable dissatisfaction expressed with the way in which Mr. Knott secured his nomination. It is charged that the necessary votes were purchased.

At a Democratic joint caucus of the Illinois Legislature on Thursday night a resolution was passed endorsing Mr. Springer for Speaker of the Forty-eighth Congress.

The mystery which has for so many months surrounded the personality and whereabouts of Tynan, the famous "Number One" of the Dublin Invincibles, has at last been removed. It is now definitely known that he is not only in this country, but that he holds himself in instant readiness to deliver himself up for examination whenever the British Government makes a demand for his extradition. Gen. Roger A. Pryor, his counsel, so informed the British Consul in this city on Saturday, but the latter replied that he had no instructions to proceed to his arrest. Mr. Pryor says that Tynan is a quiet, scholarly gentleman who desires to avoid publicity, and that he has been in this country for about a month. He denies, it is said, being connected with any revolutionary society.

An Inter-State Convention of coal miners was in session at Pittsburgh, Pa., during the latter part of last week. About fifty delegates were present. On Wednesday they passed a resolution sympathizing with the striking miners of the Pittsburgh district.

The United States Brewers' Association met in Convention in Detroit, Mich., on Wednesday, with a good attendance. A report was made on the Association's contest against prohibitory legislation.

The Harper High-License Bill, providing for a license of $150 for beer saloons and $500 for whiskey saloons, was ordered to a third reading in the Illinois House after a hard fight on Thursday.

Jerry Dunn was acquitted at Chicago on Friday of the murder of James Elliott, the prize-fighter. The verdict occasioned much surprise, as the Judge's charge was against the accused.

Congressman Thompson, who recently shot Mr. Davis, was acquitted at Harrodsburg, Ky., on Wednesday, the jury being out a little more than an hour. The ground of the verdict was emotional insanity. The verdict gave satisfaction in that city.

The steamer *Granite State*, which runs between New York and Hartford, was burned about five o'clock on Friday morning while approaching her dock at Goodspeed's Landing, forty-one miles from Hartford. Five lives were lost, and the complete cargo. She was valued at $55,000; insured for $40,000. Her owners were the New York and Hartford Transportation Company of Hartford.

A terrible cyclone passed over the city of Denison, Texas, and its neighborhood on Thursday, causing great destruction of property. The eastern portion of Nebraska was visited on the same day, and valuable buildings were wrecked. At 7 o'clock on Friday evening a cyclone struck Racine, Wis., passing through its extreme northwestern part, demolishing 150 houses and barns and killing about 25 persons, besides injuring 100 others more or less seriously. Great damage to life and property was done in about a dozen counties of Illinois and in Minnesota. There was a heavy snow-storm in Ohio and Indiana on Monday afternoon, and at Hagerstown, Md. At Lima, Ohio, the snow was twelve inches deep, and the trees were breaking down. On Tuesday many wrecks were reported on the lakes.

A steady rain and the melting snow caused a great rise in White Wood Creek, that runs through Deadwood, Dakota, during the latter part of last week. More than one-half of Deadwood was swept away, but, fortunately, the substantial part of the city, on Main Street, was left standing. The loss in the city is estimated at $200,000. Three persons are known to have been drowned. Other towns in the gulch suffered severely.

Bishop Jesse T. Peck, of the Methodist Episcopal Church, died in Syracuse on Thursday, at the age of seventy-two. He was at one time President of Dickinson College, Carlisle, Pa. He was one of the founders of Syracuse University, and a short time ago presented it with all his property.

Dr. John Dickson Bruns, one of the most eminent of the physicians of New Orleans, died at 7 o'clock on Sunday morning of congestion of the brain.

FOREIGN.

The police of St. Petersburg have been informed of a plot to frighten the horse of the Czar during the coronation procession, and in the confusion to kill him. An officer of the Erivan Regiment has confessed that several

officers of the Guards are members of a revolutionary club, but says that they have no connection with the terrorists. A number of the officers were on Friday arrested on suspicion. The Czar wanted to postpone the coronation, but has been dissuaded.

The Czar and Czarina arrived at Moscow at six o'clock on Sunday evening, and proceeded to the Petroffsky Palace. The Czar was received at the station by a number of grand-dukes, princes, and generals. The city is decorated with flags, and the streets are crowded with people who have collected to witness the coronation. Great precautions are being taken to prevent the execution of Nihilist plots.

The ceremonies in connection with the coronation of the Czar of Russia began on Tuesday in Moscow. An unconfirmed report was published on that day that previous to the departure of the Emperor from St. Petersburg for Moscow an explosion occurred under the washstand and in the fireplace in his dressing room, but nobody was injured, the Emperor and Empress having been in the dining-room at the time. Tuesday morning found Moscow crowded with visitors. The city was elaborately decorated for the state entry of the Czar. The route of the procession was from the Petroffsky Palace to the Kremlin, 4¼ miles in length. The Czar left the former place at noon, riding a magnificent charger, and wearing the uniform of a general. He was greeted by the people with unbounded enthusiasm. The Empress was also greeted with cheers. The entire route of the procession was lined with troops. The Governor-General of Moscow met the Emperor at the city boundary. The procession reached the Kremlin at 1:25 o'clock P. M.

A meeting of the Irish National League was held in Dublin on Wednesday, at which Mr. Biggar, member of Parliament, commented on the Pope's recent letter, saying that it should be received with respect, but at the same time they should express their opinions in plain language. Mr. Mayne, a Parnellite member of Parliament, said the Irish people should take their theology, but not their politics, from Rome. Mr. O'Donnell, member of Parliament for Dungarvan, in a letter to the *Freeman's Journal*, referring to the Pope's circular to the Irish bishops, says that the Vatican has been misled by the specious mendacity which has availed itself of the monstrous ignorance of Irish affairs prevailing at Rome.

Michael Davitt, in a letter, says the Pope's letter is unjust, and must evoke a strongly painful resentment on the part of the people. There is a strong sentiment against it all over Ireland, and subscriptions for Mr. Parnell are still solicited and received. The fund now amounts to £9,000, and it is proposed to raise £50,000.

A correspondent at Paris has had an interview with Archbishop Croke, in which the latter said that he returned to Ireland from Rome with unchanged and unchangeable views. He denied that he had been rebuked by the Pope. He admitted, however, that at present the result of his visit to Rome did not look very favorable to the national cause.

The Papal Propaganda has issued a supplemental circular to the Irish bishops, enforcing previous injunctions and containing answers to many priests who asked for advice on matters of conscience.

Daniel Curley, the second man convicted of participation in the Phœnix Park murders, was executed in Kilmainham Jail, Dublin, on Friday morning, at 8 o'clock. He made no statement. There was a crowd gathered outside the jail at the time of the execution, many praying for the condemned man.

James Carey, the man who was concerned in the Phœnix Park assassinations, and who turned informer and was the principal witness for the Crown against his companions during their trials, was on Saturday released from custody. He declares that he intends to remain in Dublin. The reward for the detection of the Phœnix Park murderers is to be distributed among the informers. Carey is still held as a witness for the cases of Sheridan, Tynan, and Walsh.

Fitzharris, the cab-driver, was convicted in Dublin, on Wednesday, as an accessory after the fact to the murder of Lord Frederick Cavendish and Mr. Burke, and was sentenced to penal servitude for life.

Delaney, one of the Phœnix Park murderers, has been reprieved.

James Mullet, Edward O'Brien, Edward McCaffrey, Daniel Delaney, William Moroney, and Thomas Doyle, all of whom had pleaded guilty in Dublin on Wednesday to the charge of conspiracy to murder, were arraigned in court for sentence on Thursday. The first five mentioned were each sentenced to ten years' penal servitude, and Doyle to five years' penal servitude. The Crown decided to drop the criminal charge against McCaffrey of having participated in the murder of Mr. Burke.

Patrick O'Brien, formerly Secretary of the Liverpool Land League, Michael Hynes, a printer, and Patrick Slater, the foreman of Hynes, were arrested in Liverpool on Wednesday for printing and spreading the circulars forwarded to tradesmen in Dublin recently, which were termed "An analysis of special juries on eighteen trials under the Crimes Act," and in which persons having goods of those jurors were threatened. They were remanded for trial and admitted to bail. Six persons were arrested at Ballina on the same day charged with conspiracy to murder landlords. An infernal machine and a number of firearms were seized.

The dynamite conspirators, Kennedy, O'Herlihy, O'Connor *alias* Dalton, Deasy, and Flanagan, were arraigned in court in Liverpool on Saturday, and formally charged with conspiracy to murder, as well as treason-felony.

A murder conspiracy was unearthed in County Mayo, Ireland, on Tuesday, and a quantity of arms and cartridges were discovered under a bridge at Sligo.

The police of Liverpool on Wednesday denied the story of an infernal machine having been placed on board a transatlantic steamer. The London *Times's* correspondent, however, reaffirmed its truth.

The London *Pall Mall Gazette* asserted on Monday that the Governor-Generalship of Canada, in succession to the Marquis of Lorne, had been offered to the Marquis of Lansdowne, who had accepted it, and will probably sail for Canada next October to assume the duties of the office.

The London *Times* says the Irish emigration scheme proposed by Canadian capitalists hangs fire because of the objection of Mr. Gladstone to the system of state aid.

William Chambers, LL.D., the well-known Edinburgh and London publisher, is dead, at the age of eighty-three.

Sir John McNeill, G.C.B., is dead. He was born in England in 1795, and was the author of 'Progress and Position of Russia in the East to 1854.'

Arthur Matthison, actor, author, and journalist, died in London on Monday. He at one time acted in this city. He was part author of the successful play, "The Great Divorce Case."

Emperor William of Germany has given his consent to the retirement of many high officers of the army. This, it is thought, shows that the Government despairs of passing the bill increasing pensions.

The Berlin *North German Gazette*, Bismarck's newspaper, attempts to prove by statistics that the danger of contracting trichinosis from American pork is sixty times greater than it is from German pork, and refers to the latest reports of the sanitary officers at Chicago, Erie, and Boston, and to publications in the New York *Medical Journal*, to prove the correctness of its statements.

A commercial treaty between Germany and Madagascar was formally signed on Wednesday.

The village of Duenkirchen, Germany, was burned on Monday.

It was semi-officially announced in Berlin on Thursday that the reply of Prussia to the last note of the Vatican makes no reference to an organic revision of the May laws. It is said that Prince Bismarck has informed the friends of the Vatican that it will never again receive such favorable offers from Prussia as those now under consideration, and it will surely repent if it rejects them.

Cardinal Lavigerie, Archbishop of Algiers, has been authorized by the Pope to call the attention of the French Government to the difficulty the Pope has in preventing the tension between the Vatican and France from becoming an open rupture, and to show it how impatiently the enemies of the Republic await such a result. The Government has made an amicable reply to the Cardinal's communication.

The rumor that the Comte de Chambord is dying was denied on Wednesday. On Sunday he went to Frohsdorff by an express train.

The London *Times's* correspondent at Paris says the reactionary utterances of the Comte de Chambord, which have been heard frequently of late, lend credibility to the rumor that he intends to make the son of Don Carlos heir to his claims as King of France, to the exclusion of the Orleanist princes.

Six French Anarchists were arrested in Paris on Wednesday for circulating seditious pamphlets among the troops.

The Paris *Figaro* on Thursday published a letter from Count de Lesseps, asserting that the Suez Canal Company propose to cut a second canal across the Isthmus.

The Governor of the Sudan has telegraphed to the Khedive of Egypt that a majority of the native chiefs have submitted to the Egyptians.

Lord Dufferin will visit Vienna and Paris, on his way to England from Constantinople, to exchange views with the Austrian and French Governments on the Egyptian question.

The Sultan of Turkey has agreed to convoke a parliament, which will resemble the Assembly of 1876, and will consist of representatives of all religions. It will meet in October.

The Spanish Government has agreed to pay the American indemnity. Provision will be made in the Cuban budget for upwards of $526,000, being the remainder of the award fixed by the Washington Commission.

The Spanish Chamber of Deputies has rejected Señor Moret's amendment to the budget.

The Brazilian Ministry has resigned. Señor Sarawa will probably be the next Prime Minister.

It was telegraphed from Chili on Wednesday that peace with Bolivia had been assured as well as with Peru. Later advices about the treaty with the latter country say that the principal bases are the unconditional cession of all territory south of the River Camarones to Chili. At the end of a certain term a plébiscite is to decide to which republic these places belong, the country possessing them to pay an indemnity of 10,000,000 pesos to the other. The preliminaries are signed subject to Iglesias's approval.

News has been received at Durban, South Africa, that King Cetewayo, having advanced to attack Oham and Usibepu, the latter chiefs combined their forces and utterly routed Cetewayo. The first accounts of the engagement put the loss at 6,000 men, but this is probably exaggerated. There were reports on Monday of another disastrous defeat for Cetewayo.

THE NEW VIEW OF BOOKS.

THE *Atlantic Monthly* for June contains an article on "Authorship in America" which deserves, and we have no doubt will attract, wide attention. The object of the writer is mainly to show how perfectly just and proper it is that there should be a duty on books. Last winter, when Congress was engaged in revising the tariff, a publishers' petition against the removal of the duty made its appearance, which excited a good deal of curiosity. It was a document full of interest in many ways, but what made it most talked about was the fact that among the signatures appeared the names of two or three well-known New England authors. There was a startling novelty about literary men coming forward to beg that books might be kept out of the country; and as the remonstrance itself did not explain this, it looked very much as if there must be some new view of literature at the bottom of the movement, which would sooner or later come out and make it all clear —some view which the publishers had perhaps explained to the authors privately, but for some reason had thought best not to embody in the remonstrance.

Such, it seems, was really the case, and the writer in the *Atlantic* tells us what the new view is with great plainness, so that the dullest reader may easily master it. Taking up the text of the publishers' remonstrance, he quotes the following striking passage: "The removal or essential reduction of the existing tariff on books would give the foreign publisher an advantage over the American publisher by enabling him to occupy the American market with books written and made abroad at a lower rate than they can be made in this country," and observes upon it: "This statement looks to a simple commercial fact. It assumes books to be purely objects of merchandise, subject to the laws which govern merchandise. . . . It assumes that a book is a book, and almost eliminates the element of authorship."

The writer frankly admits that this is a new view of literature; that hitherto books have been supposed to differ from other manufactured products mainly in having what he delicately calls the "element" of authorship, and that the number of readers who bought books by the pound, without any inquiry as to who wrote them, was very small. But the fact is, says our writer, that all this is a mistake. The "great public that supports bookstores" (a phrase which itself very neatly suggests what he thinks is the final cause of the existence of books) does not buy a book for any such silly reason as that "they know about the author," and want to get at his views, enjoy his humor, or imagination, or read his poetry, or fiction, but simply because they "want something to read." He admits that there are here and there exceptions; but these count for very little, for, he goes on conclusively, "the very men who have most to do with the distribution of literature" — the booksellers — "know that with the exception of a few books by men of world-wide note, and a few that are immediately advertised in an extensive way, a pound of books is a pound of books, and the public at large buys by the pound."

Every one has heard of the story of the enterprising vender of books who, on being asked whether he had a copy of Bossuet, said, "No, but we have Balzac." This story is usually told, among those who hold the old-fashioned view of literature, as an amusing illustration of the low mercantile way in which people who sell books come to look at them; but the writer in the *Atlantic* throws an altogether new light upon it by explaining that the man gave this answer because he "knew that nine out of ten chance buyers would have taken another French book by an author whose name began with B, if the one they had heard of was not to be had." In other words, the moral of the story is, that readers don't care what they read as long as they get books of the right length and price. "That young man," he says approvingly, "knew how to keep store."

Such is the view of literature and authors on which one of the best-known publishing firms in the country supports the duty on books; and now that we see what it is, we see why so few authors signed the petition. It is hard, for many reasons, to get an author to take this view of books, even when it is fully explained by a very clear-headed publisher. The publishers of the *Atlantic* are indeed very fortunate in having secured an author—for the writer declares that he is an author of some kind—through whom to put forward this frank and manly statement of their views. We are very curious, however, to know how far these views are shared by publishers elsewhere. They are views which, so far as we know, have never been seriously advanced in print before. Last winter we suggested that only some such idea as that a book was merely "something to read," would account for a belief in the desirability of putting a tax on foreign books; but that such a view should be seriously put forward in a magazine published in a literary centre like Boston, is something we did not expect, and we cordially congratulate the publishers of the *Atlantic* on the author they have caught and got into such good training. He does not disclose his name, and in his case we entirely agree with him that it is unimportant who he is, because what he calls the "element" of authorship has been apparently entirely eliminated from him.

It is, however, probable that he is not a product of our universities, for, among the gems of thought in his article, is one to the effect that authors would probably do far better work if it were not for the baleful influence upon them of the institutions of learning at which so many of them get their education. "The effect of university life upon authorship," this remarkable person observes, "is on the whole a repressive one. The university man is," he declares, "undermined by his disposition to perfect his work, and by the air of criticism which prevails about him." Fortunately, however, there is hope in another quarter—from "the publishers." "In this respect more is to be hoped from them than from the universities." The publishing houses are in the good time coming to be "great centres of intellectual force, collecting the scattered powers of literature, and redistributing them in ordered form." Yet he would not altogether do away with Harvard, Yale, Columbia, and the rest. He thinks that "the university might well range itself among the forces which are to stimulate and control letters." They have been so demoralized, probably, by their pursuit of perfection and devotion to criticism that they have altogether overlooked this. Now that their attention is called to it, we hope that they will make some effort. The publishers ought not to be left to fight the battle single-handed.

ITALY AND THE ART TARIFF.

THE French have already shown a disposition to retaliate for what they regard as a prohibitory advance in our tariff upon works of art, by excluding Americans from the gratuitous advantages of their Government schools of art, and their works from the awards of the Salon. But there is another quarter in which more decided retaliation will very probably be resorted to. The Italians are as likely as any people to object to our national theory that all nations may help our boys, teach them and reward them, but purely gratis—no favors allowed in return. They have as many of them to house and to teach as any nation has; and then there is a treaty, and under that treaty, or in despite of it, things take place which give the Italians very great dissatisfaction. This treaty of 1871 provides, as is usual in such cases, that no discrimination shall be made by either the United States or by Italy unfavorable to the imports from the other nation; that no higher duties shall be levied on Italian goods entering the United States than on similar goods, "being the produce or the manufacture of any other foreign country." This treaty being in force, the United States continues to lay a tax of 50 per cent. on Italian marble manufactures, such as fountains, tombs, and mantelpieces, and on Italian marble statuary a tax which was 10 per cent., and is now 30 per cent. Meantime, the free-list, brief as it is, includes "works of art, paintings, statuary, fountains, . . . the production of American artists." In this way there is allowed to enter, *free of duty*, into our fenced and guarded bounds any work of art in marble of which the model is the work of an American sculptor, even when all the marble cutting and finishing (a considerable piece of work) is done by Italians. All sorts of marble manufactures, also, can be entered free, if it can be made out that they come within the same category.

A drawing-room mantelpiece, with a cubic metre of foreign marble and an hundred days' work of highly-trained foreign labor in it, comes in free, if the designer of the great marbleyard who sells it to you can be sworn to as an "American artist." In Carrara the workmen get perhaps one-third of New York wages. Carrara marble is cheap, but coming rough to New York it pays sixty-five cents a cubic foot, a tax which is avoided by the neat arrangement above described, according to which the cheap foreign material and the cheap foreign labor come in free to compete with our "protected" marble and marble-cutters. That there is also plenty of room for abuses, seems pretty clear; for what is there to prevent a Carrara factory of mantel-

pieces from having its books of patterns in the hands of all marble dealers in the United States, or the marble dealers from ordering "your No. 36 B, at 1,100 lire," or the same from taking out false papers and swearing itself in as of good American parentage? But, disregarding the possible abuses, our affair is with the natural *uses*, which appear to the Italians very different from the reciprocity they look for from the treaty of 1871. They apply the *argumentum ad hominem:* if an Italian capitalist were to start a great cotton factory in Georgia, of which nothing but the owner and his money should be Italian, the rest all American—workmen, materials and processes of manufacture—would it be approved by the United States and their cotton spinners that all the produce of that factory should enter Italy free, while a solid duty was laid upon all other similar goods? If not, the Italians go on to say, and if this would produce such an outcry as to force upon Congress some change in the treaty, why is the present anomaly allowed to continue?

The American authorities refer to the letter of the treaty as justifying their interpretation of the law and the retention of it side by side with the treaty. But, urge the Italians, the spirit of the treaty is surely violated by these provisions: is this reciprocity? Put it in this way: if pictures painted, say, in England enter the United States with a lower duty than those painted in Italy, or free, while those from Italy are taxed; or if a portrait-bust designed and made in Paris enters the United States free, while one made in Florence is taxed 30 per cent., evidently the treaty is violated. But, now, what difference does it make who is the painter of the English picture, the modeller of the Parisian bust? No matter whose name is signed on the French piece of statuary; there it is, the produce of a French atelier, the handiwork of Parisian workmen who have been paid in French money; and it enters the United States untaxed, while a bust shipped from Florence at the same time pays perhaps $300 into the Federal Treasury before it can pass. The fact that some such busts going from Florence are also allowed to enter free does not change this view of the case at all. The greater part of Italian-made statuary is discriminated against in a way wholly contrary to the meaning and spirit of the treaty.

The Italian Government appears to have under consideration some kind of retaliatory measure. The subject has been discussed in the Italian Chamber. If, for instance, a heavy export duty should be laid upon the production of American artists in Italy, would the United States have any right to complain? The unfortunate artists would; for it is not they who have been heard in Congressional committee rooms. Certainly the *lex talionis* is not the choicest bit of international law, but is there any way out of the difficulty except by that sort of disguised warfare? But we are not done yet with the complaints of the Italians. The uncertain interpretation of the law, and the varying definition of the phrase "works of art," are the cause of many and earnest protests. Take the common case of a marble tomb, containing, say, $20,000 worth of simply-worked marble, and a little sculpture on frieze and pilasters of doorway. This may be brought into the United States free of duty. It *may* be—that is, such an interpretation of the law has often been given and acted upon. If the exporter will swear that the designer was an American artist, the American Consul has then to decide whether it is a work of art, and free of duty, or a manufacture of marble at 50 per cent. Ten thousand dollars or nothing in Uncle Sam's pocket! Is it surprising that there should be differences in the views of our different commercial agents in Europe, or that what is good law in 1875 may somehow be looked upon differently in 1880?

Manufactures of marble are not so easy to define as people think. Our supposed tomb may be such a manufacture, or it may be a work of art; but what should one say of a carefully-made copy of an antique statue in an Italian museum? Suppose that an American sculptor in Rome has made a reproduction of the bust of the "Young Augustus," so well known and so popular, or of the "Spinario" of the Capitol, and suppose that he employs upon the work the best skill he can procure—namely, the same workmen who transfer to marble his own original thoughts—would the resulting copy of the antique be a work of art? Not at all. But take the case where the regulations admit of no making of casts and no marking of the original for purposes of measurement; the sculptor has to take his clay to the museum, and there, beside the antique masterpiece, build up his own "free-hand" copy of it—an artistical process if there ever was one. Not a work of art at all. By the decision of the Secretary of the Treasury, any copy of an antique statue is a "manufacture of marble." How else? In order to get out of the difficulties always arising in this absurd medley of arbitrary ignorance it has been settled that a "work of art" must be the "original production" of the artist who has made the model. Comparing this instance with the former one, the odd result is reached that, while our supposed tomb has a good chance of getting in free, bringing in free tons of marble which ought to pay 65 cents for each and every pound weight, and thousands of dollars' worth of the "pauper labor of Europe," against which, as is well known, American labor must be protected, our Treasury stands by to tax at the rate of one-half of its total value a thing which the United States cannot produce at all, namely, a copy of an antique statue in a European gallery.

It is in vain to expect people who suffer in their pockets, and who tried to make with us a treaty which should be mutually beneficial and just, to comprehend the elaborate reasoning by which such incongruities are defended. Retaliation upon arbitrary decrees of mediævally-minded governments of Europe, or upon the ignorant self-seeking of as yet immature Washington legislation, will be always evil—always as hurtful to those who enact it as to those it is aimed at; but, at the present moment, it seems inevitable. The world will now proceed to take a step backward in political economy, preparatory to going forward again.

RENAN'S AUTOBIOGRAPHY.—II.

PARIS, May 3, 1883.

I HAVE said that Renan received his first education in a small college in Brittany. The priests, who were his professors, taught him Latin in the old fashion (which, he says, is the best) with detestable elementary books, without method, without grammar, as Erasmus and the great Latinists of the Renaissance learned it. He received from these good priests lessons which were better than grammar. Not a word was said to him of contemporary literature: he lived in the past. The name of Chateaubriand was sometimes pronounced, but even he was dangerous—Lamartine even more so; the priests felt that he would some day be something else than the author of the 'First Meditations.' Renan received in 1830 the education which was given in 1630. "The basis of these old educations was a severe morality, considered as inseparable from religion, a way of looking at life as involving duties to truth." His masters taught him, he says candidly, something better than philosophical criticism—love of truth, respect for reason, the seriousness of life. "This is the only thing in me which never changed. I came out of their hands with a moral sentiment so well prepared for all trials that Parisian levity could only polish it without changing it." His masters, he also says, made him unfit for anything but a spiritual and intellectual life; any lucrative profession seemed to him servile and unworthy of him. Renan pays the highest homage to his classical professors: "I spent thirty years of my life in the hands of priests, and I never saw the shadow of a scandal; I have known no priests but good priests."

In the little college of Tréguier, all good scholars were looked upon as future priests. Renan was born priest, he says himself, as others are born soldiers, lawyers. In the year 1836 Renan obtained all the prizes of his class. The Abbé Dupanloup, who was looking everywhere for recruits for the seminary which he then directed in Paris, heard of this young scholar, and he offered him a place in his seminary of Saint-Nicolas du Chardonnet, and young Renan, who was fifteen and a half years old, was sent to Paris. He was thrown out of his natural orbit into a new sphere of attraction. Renan was like a tree transplanted to a new soil; he felt very unhappy at first, he became very ill. He was saved by M. Dupanloup himself, who took a great interest in him, and showed him much kindness. Renan says that the Abbé Dupanloup literally transformed him; he opened his provincial mind. After having finished his rhetoric at Saint-Nicolas du Chardonnet, Renan went to Issy, which was the country-house of the Seminary of Saint-Sulpice. Here he fell under new influences. Renan paints very exactly this extraordinary establishment of Saint-Sulpice, "which is more separated from the present time than if three thousand miles of silence guarded it." He began his Biblical and exegetical studies, and prepared himself for the priesthood.

The great Seminary of the Diocese of Paris has two great houses—the house in Paris, which stands by the church of Saint-Sulpice in the Latin Quarter, and the house in Issy. Saint-Sulpice owes its origin to Jean-Jacques Olier, a contemporary and a coöperator of Vincent de Paul, of Bérulle, and of various founders of congregations who had for their object the reform of ecclesiastical education. The result of this great movement was the creation of the clergy who filled the second part of the seventeenth century—"the most disciplined, the most regular, the most national, and the most learned clergy." Port-Royal was a sort of rival of

Saint-Sulpice; it had the same virtues, but it had no docility. Olier, the founder of Saint-Sulpice, wrote a book called 'Christian Catechism for the Inner Life'—an extraordinary book, in which the ideal life of the Christian is called "the state of death." Humility is the great virtue: the corruption of the flesh must be always before our minds. Olier himself was a saint, an apostle, an organizer, which is rare in a mystic. Saint-Sulpice stood aloof from politics, even after the Revolution and in the nineteenth century. It was neutral; it cared really for nothing but the orthodox faith; it lived by routine, and instinctively disliked all novelties. It was even afraid of excessive zeal, of enthusiasm. No attenuation of the dogma was admitted; the only sources of Christianity were the holy fathers, the councils, the doctors. The divinity of Christ was not proved by modern arguments. The Sulpicians were serious Christians; they ignored the theological pathos which has been invented by fashionable preachers; they did not care for literary effect; they wrote in the most modest, self-effacing style. They saw the vanity of talent and of words. Saint-Sulpice, says Renan, is the last place where people write like the Port-Royalists, totally forgetting care for the form, and thinking only of ideas. Before all, Saint-Sulpice is a school of virtue. "What there is of virtue in Sulpice," says Renan, "would suffice to govern a world. . . . People will never know what treasures are contained in these old schools—of silence, of seriousness, and of respect for the conservation of good in humanity." Renan speaks with tenderness of the place where he spent four years—the most critical of his life. With the plasticity of his nature, he entered at once into the spirit of the Sulpician philosophy and scholastics. The two first years were spent at Issy, near Vaugirard, in a house which once belonged to Marguerite de Valois (the first wife of Henri IV.), surrounded by a park.

The relations between masters and pupils in the Sulpician establishments are very intimate and friendly. The directors and the young men lead exactly the same life; there are hardly any examinations—all competition seems to encourage too much vanity. The pupils are free to work, or not to work; they are treated like men. The two years spent at Issy were devoted chiefly to philosophy. Cartesianism and the Scotch philosophy were the atmosphere of the place, but philosophy was completely imbued with Christianity. Malebranche, who was a Cartesian, said his mass every morning during all his life. The Sulpicians did not dread a philosophy which could live in such perfect harmony with their faith. Renan gives us the portraits of all his professors, and among them were very original types. The young pupil showed an extraordinary ardor for study and for discussion; he never played, he never went to Paris.

"M. Gottofrey (one of the professors) spoke very rarely to me, but he observed me with much curiosity. My Latin argumentations, made with a firm tone and much accent, astonished him, made him uneasy. Sometimes I triumphed too much: sometimes I showed how weak I found the reasons opposed to me. One day, when my objections had been made with much vigor, he interrupted the discussion. In the evening he took me aside. He explained to me with eloquence how anti-Christian was confidence in reason, how dangerous rationalism is to faith. He became very animated, and reproached me with my fondness for study. 'What are you looking for? Why so much research? All the essential things have been found. It is not science which saves the soul.' Then, becoming more and more agitated, he said to me passionately: 'You are not a Christian.'"

Renan felt much frightened, unbosomed himself to another professor, M. Gosselin, who calmed and reassured him. This incident shows what moral tempests can break the calm of these quiet paradises of faith. M. Gottofrey was right, as Renan confesses: the germ of unbelief had been planted in his heart; science had begun its work.

After two years of philosophy, he went to the great Seminary of Saint-Sulpice, in order to pursue his theological studies. Renan confesses now that he ought to have followed the impulse given him by M. Gottofrey. "He alone saw clearly into the future, for he was altogether a saint." "At Saint-Sulpice," continues Renan, "I learned German and Hebrew; and all was changed." Saint-Sulpice is a fragment of the seventeenth century kept in the midst of modern Paris; not materially (as the present building is not very old), but intellectually and morally. It is something like Port-Royal and the old Sorbonne together. M. Garnier, the Director, a learned Orientalist and exegete, never spoke of Bossuet otherwise than as Monsieur Bossuet, of Fénelon otherwise than as Monsieur Fénelon: it seemed as if he had lived with them.

Renan speaks at length of M. Le Hir, "who was certainly the most remarkable man that the French clergy has produced in our time." M. Le Hir, he says, was at the same time a savant and a saint; he was perfectly well versed in the German exegesis, he was a great linguist, he knew the doctrines of Gesenius and of Ewald; he remained orthodox to the end, and died prematurely in 1868, while preparing to go to Rome to the General Council of the Church. Renan speaks with a penetrating emotion of the time he spent at Saint-Sulpice. He speaks with emotion also of the mortal agitation which led him by degrees to rationalism, of his first doubts, of the first struggles between his faith and his reason. His masters, who became his spiritual directors, told him that such temptations were only too common. They did not press him to take his first vows; they told him to wait, to pray, and be patient. Renan took only the first degrees of clericity; he did not become a subdeacon, for he would thus have taken the first of the sacred orders which constitute an irrevocable engagement.

He spent the vacation of 1845 in Brittany. He felt there that his doubts were becoming more and more embarrassing, and he determined to continue his studies freely, and not to return to Saint-Sulpice. His masters showed him much kindness; M. Le Hir offered him money, if he needed any. His sister Henriette gave him 1,200 francs to help him during the first months of his independence. He left the Seminary on the 6th of October, 1845, and took a room in a little hôtel near the Seminary, called the "Hôtel of Mademoiselle Céleste"; it received chiefly priests, and was a sort of annex of Saint-Sulpice. The Abbé Gratry offered Renan a place of proctor (*surveillant*) in his school; he accepted it, but soon found himself in the old bonds, threw it up, and became a *répétiteur* in a large institution of the Quartier Saint-Jacques, a dependence of the Lycée Henri IV. He received no pay, but had a room, and took his meals with the young men. The little pension of the Rue de l'Abbé-de-l'Épée would have been a paradise for him, as he cared for nothing but study, if he had not been tormented by his religious scruples and doubts. It is hard to leave a doctrine which embraces life with as much force as does Catholicism, and to find yourself alone in the terrible struggle. "The universe," says he, "made on me the effect of a dry and cold desert. Since Christianity had ceased for me to be the truth, all the rest seemed to me indifferent, frivolous, unworthy of interest." He felt like a lover whose love had been shattered. He knew that his conduct gave much pain to his mother—her letters broke his heart. He was fond of his mother; he used to ask her ten times a day, in his childhood: "Mamma, are you pleased with me?" and now she was no longer pleased with him.

His ignorance of the world was complete. He did nothing at first to improve his humble condition. The buoyancy of youth, the love of work, a friend whom he found in his new life, preserved him from sadness; he also had the approbation of his sister, of whom he was passionately fond. The moral direction of his life remained the same; he still was a priest of the soul, though he did not wear the gown of a priest. He still kept the first vows he had taken: he remained a Sulpician in his mode of life.

There would be much to say on the last pages of this curious memoir; they constitute a sort of public confession, too proud in its assumed modesty, too unconscious in its assumed analysis. Renan examines himself on the four points which were the basis of the Sulpician code of virtue: first, disinterestedness or poverty; second, modesty; third, politeness; fourth, chastity. He prides himself on having essentially kept these four virtues of clericity. Those who are curious to verify the truth of Pascal's saying, "Le moi est haïssable," had better read this extraordinary examination of conscience. Much as I admire Renan, I confess that it has made on me a disagreeable and almost painful impression. It could be easily ridiculed, but something besides irony is mingled with the impression which is left on the mind by the 'Souvenirs d'Enfance et de Jeunesse.'

Correspondence.

FEMALE EXAMINERS IN ENGLAND.

To the Editor of The Nation:

Sir: May I call attention to a slight misprint in my letter on the Columbia scheme of higher education for women, published in the *Nation* of May 17, which made me appear to say that "female examiners have in England rapidly become a large and important body"? For examiners, read examinees. The other statement would be quite untrue. As far as I am aware, the first instance of the appointment of a woman in England as a university examiner was the recent case of Mrs. Humphrey Ward. The English *Journal of Education* of April 1 remarks that

"The University of Oxford, in the matter of Local Examinations, of University Extension, and generally of Educational Reforms, has allowed the sister university to take the lead; but, for once, Cambridge will have to follow in the wake of Oxford. A lady has been appointed Examiner for the Taylorian scholarship of next year. The number of Spanish scholars in England is limited, and it would be difficult to find a man who knows the language and literature so thoroughly as Mrs. Humphrey Ward."

I remain, respectfully yours, E. T. M.

New York, May 18, 1883.

PROFESSORS' SALARIES.

To the Editor of The Nation:

Sir: Your correspondent "W. S. F." is unquestionably right when he claims that the salary of a college professor has, within certain limits, comparatively little to do with the quality of his work. A faithful teacher will never say: "I will not do my best, because I do not receive as large a salary as I think I ought to have." Experience, I think, proves that $5,000 divided among three men will, in nine cases out of ten,

be much more fruitful in good results than when given *in toto* as salary to a single professor. This statement would probably not hold good in the case of institutions so situated as to make the cost of living exceptionally high. There are scores of colleges in the country in which several professors receive the same compensation; yet nobody will claim that they are therefore equally efficient and successful as teachers. It is well known that many German professors who are now eminent did their best work, so far as concerns their personal teaching, when they were obscure and poorly paid, and that in many cases men whose reputation has spread over two continents are found to be very unsatisfactory teachers. The American who selects his university and his professors before going abroad often finds that he has not chosen wisely, because ability to teach and scientific attainments do not always go hand in hand. Some men's writings are more stimulating than their presence.

It is claimed, too, by the advocates of small colleges, and with much show of reason, that these turn out a larger proportion of relatively distinguished men than the more numerously attended universities. This result must be chiefly attributed to the personal influence of the teachers. It is often charged that the influence of those universities which are now well endowed and able to pay large salaries has by no means kept pace with their material enlargement. Certain it is, that some of the most efficient teachers in our large institutions are graduates of small colleges, and, though they have perhaps in most cases pursued post-graduate courses elsewhere, the work which had most to do in shaping their subsequent success was done before they had left college.

I should be sorry to be understood as advocating small salaries for college professors, but I must protest against the injustice of judging this class of men or their work by the size of their pay. To the man who deliberately chooses the vocation of teaching, pecuniary considerations are usually of secondary importance.

C. W. S.

Athens, O., May 19, 1883.

FRENCH DUELLING.

To the Editor of The Nation:

Sir: Thanks for your article in No. 932 on "Duelling in France and Elsewhere." I think it puts the homicide question on a somewhat broader basis, and will soothe the sensibilities of some good people which the previous discussion in your columns had left a little sore. I am glad, too, that you have in your last issue very neatly balanced the Thompson and Dunn cases against each other. This leaves the honors easy between the "sections."

I had not intended the letter to which you were kind enough to reply for publication, or I should have written less flippantly, and have foreborne the unwarrantable use of the name of the editor of the Richmond *State*, for whom I entertain both respect and esteem.

Very respectfully yours,

C. J. Harris.

Lexington, Va., May 19, 1883.

PUBLISHERS' PROFITS.

To the Editor of The Nation:

Sir: Will you permit us to correct an error of figures in the review recently published in your columns of our little manual 'Authors and Publishers,' an error which is the more material as it forms the basis for some of the more important of the conclusions reached by your reviewer?

In speaking of the division of "profits" on a volume retailing at $1 50, and sold at wholesale at 90 cents, he states that the customary 10 per cent. copyright arrangement produces for the author 15 cents, while the publisher retains for himself 75 cents, or "five times as much"; and he asks, "On what principle that regulates the business dealings of men with an author is this . . . a fair division of *profits?*" This misapprehension as to what constitutes profits occasionally troubles a young writer in connection with her first book, but we should not have expected to find it causing perplexity to a reviewer in the *Nation*. It was for the purpose of meeting such occasional misapprehension that the following figures were given in the manual which your reviewer was considering:

"A customary royalty for a work of current literature is 10 per cent., which for a book published at $1 50 brings to the author 15 cents a copy, or $150 per thousand copies. It has sometimes been rather hastily imagined that under such a copyright arrangement the share of the publisher was $1 35, as against the 15 cents conceded to the author. A moment's calculation will, however, show how far this is from being the case. The publisher receives from the wholesale dealer for a book published at $1 50, not $1 50, but 90 cents, and sometimes (on special arrangement for works of fiction and books for young people) only 75 cents.

"After deducting from this the cost of manufacturing the volume, and the proportion belonging to each copy sold of the cost of the copies printed and not sold, and of the stereotyping, press copies, advertising, etc., there would rarely remain as much net profit as 30 cents, and of this 15 cents would go to the author. In fact, the customary royalty of 10 per cent. has apparently been calculated on the basis of securing for the author about half the net profits."

And although under the present much reduced prices of books it is most frequently the case that, even after the stereotyping has been paid for, the margin of profit to be divided no longer amounts to as much as 25 per cent., the customary royalty to the author remains 10 per cent.

Excepting for the greater complication of accounts and greater possibilities of friction, publishers would, as a rule, have no objection to a half-profit arrangement, and it is probable that under such arrangement the author would most frequently realize less than from a royalty of 10 per cent. of the retail price.

We will not take up your space by considerations on the general conclusions of your reviewer, but it is not out of place to say that the erroneous calculation on which these conclusions are in large part based, is a very fair example of the class of misapprehensions which form the foundation for many of the doubts and criticisms of authors.—Respectfully,

G. P. Putnam's Sons.

New York, May 19, 1883.

[It is evident, from the hastiest glance at this letter, that in the publisher's eyes the 10 per cent. received by the author is pure net profit; that while every dollar he himself has directly or indirectly vested in the material manufacture of a book must be estimated at its full value, the time, the labor, and the money invested by the author in the mental manufacture of it must be reckoned at little or nothing—at very much the same rate, indeed, as if he had accidentally picked up a manuscript somewhere in the street, and had brought it to be printed. Yet, from the business point of view, the time and labor and money spent by the author in gathering his materials and putting them into shape must be paid for out of his 10 per cent. The result is that in the large majority of instances his net profits are nothing, and he is sometimes actually brought in debt to his publisher. It is clear, therefore, that in the author's eyes five to one is an understatement of the difference between profits rather than an overstatement. On the other hand, the time and labor and money spent by the author may be honestly deemed by the publisher to be worth nothing. But this is naturally not the author's view, and it was his view that we sought to set forth. We did not say that his complaint was well founded, but we endeavored to make it understood.—Ed. Nation.]

Notes.

G. P. Putnam's Sons will publish immediately a novelette entitled 'X. Y. Z.,' by Anna Katherine Green, whose 'Leavenworth Case' has met with such exceptional success among first novels.

Anson D. F. Randolph & Co. have nearly ready, 'The Jews; or, Prediction and Fulfilment, an Argument for the Times,' by the Rev. Dr. S. H. Kellogg.

The international publishing house of Cassell, Petter, Galpin & Co. has been reorganized into a limited joint-stock company, under the abbreviated style—surely no small gain in itself, in this hurrying world—of Cassell & Co., Limited.

A weighty appeal is made for subscriptions to the proposed publication of a 'History of St. Paul's Parish, Baltimore,' compiled and left in manuscript by the late Rev. Ethan Allen, D.D. This work "is virtually a history of the Church in the city and county of Baltimore" for a century and a half (1686-1854), St. Paul's having been a metropolitan church. It will be issued at $5, and will be edited by Prof. H. B. Adams, of Johns Hopkins University. Subscribers, of whom there should be some four hundred, may send their names to Mr. George T. Hollyday, Secretary, No. 1 Rialto Building, Baltimore.

In Professor Adams's "University Studies" series, the latest issue is 'Old Maryland Manors,' with the records of a court leet and a court baron.

L. Prang & Co., Boston, have got out a very pretty "John Howard Payne Souvenir," consisting of a facsimile of "Home, Sweet Home," in the poet's own hand, facing a facsimile reproduction of a very striking pencil portrait drawn from life in 1848 by A. M. Freeman. Payne's head, as here shown, is markedly intellectual.

Two more volumes will complete the new Riverside Edition of Hawthorne's works (Houghton, Mifflin & Co.), vols. ix. and x., just issued, consisting of the American and the French and Italian Note-Books, respectively. Mr. Lathrop's introductions reveal the habit out of which grew the sources of these selections—a heterogeneous assortment of memorandum books—and report some retrenchment upon the original edition of the American Notes as edited by Mrs. Hawthorne. In the index to the ninth volume the late George Ripley might have been more precisely designated than as "Ripley, Mr."

J. W. Bouton has received copies of the usual illustrated Catalogue of the Paris Salon, with its 300 sketches by the artists of their own paintings or statuary. Few of these suggest extraordinary merit in the originals, but the collection has a psychological interest, and this record an historical value. "Revanche" is typified in Delanoy's picture of an empty suit of armor, with flag and sword beside it, and all resting on a battle-map of Alsace-Lorraine. The dedication is, "To the glory of a general of the past—or of the future." Perhaps, too, Benner's sad-faced "Alsatian Woman" is intended for a mute appeal. Our distinguished countryman, Mr.

Evarts, is shown in Bartholdi's bust of him, but, by one of the rare errors of this catalogue, his name is transformed into Evarst.

Paris Illustrée is the title of a new monthly just begun, and carrying its programme on its face. Apparently it will make a specialty of color designs—"somptuosités de coloration" is the exact phrase. The editor is F. G. Dumas, who also edits the Salon Catalogue; the publisher, A. Lahure, 9 Rue de Fleurus.

From Mr. Christern we have the first *livraisons* of two popular works undertaken by the Librairie Illustrée: one, a 'Nouvelle Histoire des Voyages,' by Richard Cortambert, to be finished in forty parts; the other, 'Les Nouvelles Conquêtes de la Science,' by Louis Figuier. Of the former, the pages before us do not warrant us in speaking very hopefully. It is intended to overcome the proverbial French ignorance in matters geographical, and has little to recommend it to English readers. The two illustrations already given are of a kind which ought to be discarded as worthless in such works. M. Figuier's enterprise, on the other hand, can safely be recommended on the strength of this writer's knowledge and experience. He will probably take a too national view of the origin of the great modern inventions which he is going to describe, but that is the fault of every nation. He begins with the electric light. Portraits and other genuine helps form the illustrations in this case.

Mr. Spofford's annual report on the Library of Congress has been issued from the Government Printing-office. The latest census of the volumes reckoned 480,076, and there were about one-third as many pamphlets; and still Congress does nothing to provide a proper receptacle for them, and more than 130,000 are piled upon the floor or stowed away behind other books—a source of endless confusion and delay. Dr. J. M. Toner's private library of 27,000 volumes, a gift to the nation, had to be temporarily stored in the crypt under the rotunda. This is the first instance, remarks Mr. Spofford, of private giving to the National Library on a large scale.

The April Bulletin of the Boston Public Library, just issued, contains the beginning of an index of articles upon American local history, which promises to be very valuable. We hope that, when complete, it will be issued in separate form. The mere list of works referred to fills six pages. These are not merely serial historical publications, but include many State and county histories in which the town or county histories are separately treated. The extent of the work can be seen from this, that four and a half pages bring the alphabet only to Ayer.

No. 101 of the List of Additions of the Boston Athenæum is devoted to the periodicals currently taken, 265 in number, giving the title, frequency of issue, editor's name, date of the first volume which the library owns, and, when necessary, brief descriptive notes.

From the thirtieth annual report of the Secretary of the Massachusetts Board of Agriculture has been extracted for separate reprint Prof. C. S. Sargent's chapter on "Forest Fires." It is a timely tract, for even as we write we read of widespread conflagrations in New England woods. The locomotive is the chief agent in this destructiveness.

Henry Stevens used to make fun of the hitherto unknown author, Ander Schiffahrt (second voyage), who appeared in one of Henry Harrisse's indexes. We find a similar increase in the literary population of the world in the catalogue of the Post Library, just issued (Leavitt & Co.), where No. 9, "Auschaung's Unterricht sur Jugend," may be conjecturally emended to "Anschauungs-Unterricht für die Jugend." The same catalogue adds a new sect of heretics to the already long list—No. 283, "Hilarius de Trinitate adversus Arianos et anos hæreticos."

Mr. Arthur Gilman, 5 Waterhouse Street, Cambridge, Mass., is prepared to furnish a pamphlet describing the courses of study for 1883-84, with requirements for admission, of the Society for the Collegiate Instruction of Women. The list of instructors is curtailed only in the case of Elocution, and gains in Hebrew and Oriental Languages, Divinity, Philosophy, Chemistry, Engineering, and Physical Training. It embraces the cream of the college professional corps.

—The *Atlantic* for June contains the end of an international play, in the last instalment of Mr. James's dramatized version of 'Daisy Miller,' and the beginning of what appears to be an international story or sketch, by Mr. R. G. White, called "Mr. Washington Adams in England." The first number of this introduces an amiable and very well-bred, but (in American matters) very ignorant English duke and two American travellers, who, it is needless to say, converse with him in such a way as to completely expose his ignorance. As Mr. Adams is evidently to appear in the next number, and is a new type in literature, we may mention in advance that his full name and title is the Honorable Washington Jackson Adams, and that he is a member of the New York Legislature. His father's name was Phelim McAdam, the owner of two well-known Mackerelville "gin-mills," a sober man, however, who saved money, and finally became so respectable that, though an Irish-American, he joined the Republican party. Phelim married the daughter of a Division Street pawnbroker, and at her suggestion he changed the family name first to Adam and then to Adams. The Adamses soon after made their appearance in the fashionable quarter of the city. The son of this couple went into politics at an early age, and we must say that we shall be rather curious to see what Mr. White makes of the type against an English background. He rather exaggerates the duke's ignorance as to the general features of American life and geography. This nobleman is, in fact, a duke of the ante-bellum period, a sort of survival from the generation which saw few Americans in England, and sent few of its own representatives to this country. "Daisy Miller," the play, brings out more distinctly than the story did that a vindication of the American girl abroad from the odious suspicions aroused by her extreme freedom of conduct is intended by the author. The Miller family, it must in fairness be admitted, does not represent the highest level attained by "culture" in the United States. There are probably few American families travelling abroad who would be capable of allowing a rascally, impudent courier like *Eugenio* to become their confidential adviser and friend; but undoubtedly it is by virtue of certain very American traits that this becomes possible—one of them being an ignorance of what a courier is, that could only come of an American bringing-up. At the Miller level there is probably as much ignorance of European ways, and customs, and conventionalities in the United States as there is at the duke level in England of many of the features of American life. What a tame world it will be when the charge or insinuation of international ignorance ceases to arouse the sensitive patriot on either side of the water!

— Mr. Frederic G. Mather has an article in *Lippincott's* for June on the "Vagaries of Western Architecture." He takes the architecture of the town of "Joinwater," "a fair specimen of a Western American city," as a text for his remarks, and shows how it developed between 1790 and 1880, and how in this brief period it produced one strictly local type of dwelling—the log-cabin; but imported types representing various incongruous orders of architecture, from that of the New England farmhouse to that of the Grecian temple, with pediment and columns. The article is written in a vein the satire of which will apply fairly enough to much modern architecture outside the limits of Joinwater. With regard to the vexed question of the roof, which has caused as much trouble to critics and occupants of houses as any other, Mr. Mather declares that the citizens of Joinwater have been "nearly one hundred years in finding out that the various Grecian and Italian roofs that they used year after year were totally unfitted for a climate in the northern latitude of Joinwater. The Joinwater roof has been too generally constructed as if the true function of roofs was to collect snow. The snow has a partiality for flat roofs, and it clings closely to gingerbread work and foolish ornaments on cornices, windows, or piazzas." This is very true; but if Mr. Mather desires to encourage the introduction of the "peaked" roof in Eastern city architecture, he will have to meet the difficulty presented by "snow-slides" such as fill the wayfarer in the older parts of Boston with such dread. A peaked roof, which first accumulates snow and finally discharges it in an avalanche upon the heads of passers-by, may be architecturally superior to a flat roof, but is open to serious practical objections in cities closely built up. In Joinwater, apparently, there is more room, and the houses of the wealthier classes are very likely set back a considerable distance from the line of the street.

—The June *Century* contains the conclusion of a little story of "moonshiner" life, by Mr. Joel Chandler Harris, whose 'Uncle Remus' has already made him well known as a close observer of one side of Southern life. It is not among the negroes that "At Teague Poteet's" takes the reader, but among the mean whites, who produce illicit whiskey in the mountains. The plot of Mr. Harris's sketch is simplicity itself. It concerns the love affair of a daughter of a leading Hog Mountain moonshiner and a young United States officer, sent down to do what he can to break up her father's business. His affection for her, however, proves too strong for his sense of duty, and he saves Hog Mountain from a raid, and in the end reaps his reward. The sketch is marked by a pleasant humor which throws a glamour over the wonderfully degraded life of the mountaineers, and makes us almost forget how degraded it is at bottom. Hog and other similar mountains, it should be said, have now been inhabited by outlaws for some twenty-three years. Before the war the mountaineers lived there to escape from the asphyxiating conventionality of town or even village life. Their most marked peculiarity, next to the affection of the men for whiskey, and of the women for snuff, was a hatred of "'ristercrats" and a genuine passion for liberty. This quality it was which led the Mountain, when it found that the inhabitants of the Plain (with which it had been on terms of a somewhat distant civility) were going to secede from the Union, to determine for itself to remain in it. The mountaineers constituted, during the war, the "Unionists" of whom we heard so much more at the North in the early stages of the conflict than we did later on. When the war was over, however, they ceased to be Unionists simply because the Plain had fallen into Unionist hands, and a new race of "'ristercrats" had appeared in the shape of army officers and revenue agents. Precisely the same democratic spirit which had led to their hostility to the Confederates, now made them enemies of the United States, and the raids upon their

mountain stills, directed from Washington, did not tend to conciliate them. All this would seem to furnish rather unpromising materials for fiction, but Mr. Harris has done very well with them. His humor and treatment, indeed, are above his subject.

—Mr. W. Gordon McCabe, Head Master of the University School, Petersburg, Va., sends us a reply to Mr. E. J. Stearns's communication last week, on the single point of an implied assertion that cheats and liars are lynched at the school in question, instead of being sent to Coventry. Mr. McCabe denies and resents this, and refers to his former letter describing the judicial method actually resorted to by his pupils. We do not publish his letter in full because we apprehend that Mr. Stearns's remark was not intended for the University School; and our readers have perhaps had enough of this controversy.

— An interval of fourteen years separates the first edition of Mr. Henry C. Lea's 'Studies in Church History' from the second, which has just been issued in Philadelphia (Henry C. Lea's Son & Co.). No part of this learned and authoritative work has escaped revision in some degree. Alterations are visible upon the very first page, and as, throughout the book, they are almost invariably in the shape of additions to text and notes, the result is an enlargement even apart from the new chapter on the relations of the early Church to slavery. The portions which show the greatest amount of reëlaboration are those on the Benefit of Clergy and on Excommunication—especially, in the latter case, in the sections on Temporal Penalties and the Abuse of Excommunication (in which the Spanish field is noticeably taken more account of), Emancipation, and the Reformed Churches. The new matter strengthens, illustrates more copiously, and enlivens with anecdote the original argument, and, by adducing modern instances, brings the work quite up to date. These instances prove the survival of the superstitious and persecuting spirit of which the growth is traced in the 'Studies'; nor are they all drawn from Europe or from Romanism. We remark that at no point, so far as a rather close comparison may be depended upon, has Mr. Lea confessed himself in error, and his candor makes it certain that this arises from his painstaking and accurate scholarship rather than from pride of opinion. There are corrections, it is true, but they are confirmatory, and such as will recommend the 'Studies' still more strongly to the Index Expurgatorius, if, indeed, they are not already under the ban. The chapter on slavery, much as it relieves the general tone of condemnation which was unavoidable in the previous discussion, will not of itself save the book from this fate. It is, however, full of instruction for a nation like our own, so lately involved in the guilt of human bondage; for it shows how far the institution, as sanctioned and guarded by law and custom at the South, and freely apologized for at the North by professors of religion, transcended Roman slavery in barbarism. Some of these not too venerable apologists may still be a little startled to find Mr. Lea citing Paul's return of the fugitive Onesimus as, in spirit and tendency, an anti-slavery action.

—Remarkable among books of its own or of any other class is the 'Club-Almanach: Annuaire des cercles et du sport' (Paris: W. Hinrichsen; New York: E. Steiger). This small quarto, if we may so describe it (the leaf is 4½ by 5½ inches), contains more than 1,300 pages, so that it is not far from being as thick as it is broad. Its scope may well be supposed to be world-wide, and so it is. Primarily, it is a guide for "the man of the world, in his two-fold capacity of club-man and sportsman"; but the statesman and the journalist have also some interest in it. It opens with a double calendar, showing on one side the significant events day by day of last year, and on the other the sporting appointments for 1883. Then comes Part 1, with (*a*) its genealogies of reigning and princely houses, giving trees, arms, etc.; (*b*) "monographs" on the nobility of various countries, a select 'Burke's Peerage'; (*c*) the orders of chivalry; (*d*) a most convenient chapter, "Parliaments and Diets," containing the *personnel* of legislative bodies, including our own Congress; (*e*) the Cabinets of the great Powers; (*f*) the membership of the French Academy; (*g*) the grandees of Spain; (*h*) the Scotch and Irish peers not sitting in the House of Lords. Still, we are but one-third through this repository. Part 2 is devoted to an account of *cercles de société* and *cercles sportiques*, with names of officers and often of members, and all necessary particulars: of yacht and rowing clubs, with lists of boats, owners, signals, etc. Part 3 is a record of international sport, and here, amid a world of information implied in the caption, we find tables showing the winners of the principal English and Continental courses from 1862 to 1882. A somewhat meagre index closes the Almanac, which must be pronounced a prodigious undertaking, and as free from typographical errors as such a mass of names and dates can reasonably be expected to be. The inertia to be overcome in starting such a compilation can hardly be imagined; but its renewal from year to year will, of course, be comparatively easy. The 'Club-Almanach' is beautifully printed, and has three photographic portraits (at second-hand, after sketches by C. de Grimm), of the Prince of Wales, the Empress of Austria, and the Duc d'Aumale. It will take an honored place on reference shelves beside the 'Almanach de Gotha,' 'Whitaker's Almanack,' Vapereau, and 'Men of the Time,' with all of which it competes while supplementing all.

—A writer in the May number of the Chicago *Dial*, reviewing the 'Imperial Dictionary,' says: "The first dawning of pictorial illustrations as an auxiliary method of defining words that I have been able to find is in the dictionary of Thomas Blount, 1656, in which three simple cuts are introduced to illustrate certain parts of an escutcheon." It is odd that a critic who claims familiarity with one hundred and thirty dictionaries should not mention Amos Comenius, whose 'Orbis sensualium pictus, hoc est omnium fundamentalium in mundo rerum et in vita actionum pictura et nomenclatura,' was published in Nürnberg in 1657. The reviewer traces Blount's three dawning stars—borrowing some light from Locke in 1690, swelling to a constellation in Bailey's dictionary of 1726, but then eclipsed for more than a hundred years, till they shone out splendidly in more than two thousand cuts of the 'Imperial Dictionary.' But in no edition of the 'Imperial,' or any other modern dictionary, is the proportion of words illustrated by cuts so great as in the 'Orbis pictus.' That is to say, the high noon of the "dawning" was just one year after Blount.

—The haste with which plausible archæological discoveries are often accepted as demonstrated truths and further built upon, needs no special illustration. Nowhere, however, are precipitate conclusions of this kind as frequent as in the domain of Biblical inquiry, in which finds confirmatory of ancient traditions are valued as antidotes to dangerous scepticism. We remarked, in No. 925 of the *Nation*, on the delight with which Reginald Stuart Poole received M. Naville's identification of the "treasure city" Pithom with Succoth and the Heroöpolis of the classical writers, believing that the French explorer had "found the very walls on which the enslaved Hebrews worked." We added that Bible critics of a more sceptical turn of mind would at most think he had "only found walls on which the enslaved Hebrews of the story of Exodus are *related* to have worked." Miss Amelia B. Edwards—like Mr. Poole, reporting and commenting on M. Naville's identification in the *Academy*—was fully as enthusiastic about it, and subsequently, in a brief notice, in the same journal, of the second edition of J. Baker Greene's 'Hebrew Migration from Egypt,' asserted that his theory of the exodus, like others, had "perforce become in some degree obsolete since M. Naville's important discovery." To this really rash assertion Mr. Baker Greene demurred in the *Academy* of April 28, justly observing that, so far as his views respecting the exodus were concerned, Egyptologists might place the "treasure cities" on which the Israelites worked in Egypt in any part of the Delta they pleased. Miss Edwards, in the same number, politely retracted her assertion so far as it referred to Mr. Greene's theory, but defended it so far as it concerned one of his chapters, dealing with Ramses, Pithom, Succoth, etc. Mr. Greene's statement, though far from lengthy, recapitulated the main points of his general view of the Hebrew migration, including the conclusions that "the released captives . . . proceeded by the ordinary caravan route across the Desert to . . . the head of the Gulf of Akaba; that the Sinaitic peninsula was never entered by them; that the so-called Desert of the Wanderings was traversed, and was forever quitted by them, in about a week's time"; and that "Mount Hor, Har ha har—the Mount of Mounts"—in Edom, is the true Mount Sinai of the Bible.

—In our review, in No. 791 of this journal, of the first (anonymous) edition of 'The Hebrew Migration from Egypt,' we pointed out the more obvious objections to the author's theory, which he supports by destructive and reconstructive arguments of equal boldness. As to Sinai, we asked, if that was a mountain of Edom—a country reigned over by David and Solomon, passed through by Jehoshaphat and Elisha, subdued by Amaziah and again by the Hasmonæans, ruled by Herod (himself an Idumæan)—"how is it that Mount Sinai is not once mentioned in connection with one of those reigns? . . . that the prophets [whose books we have] are all silent about it? . . . that the rabbis of the Mishnah knew it only, like a myth, from Scriptural accounts? that 'all that Paul and Josephus knew about the mountain was that it was somewhere in Arabia'?" And in regard to the legendary account, as we have it in Exodus and elsewhere, we remarked: "Why was the 'Mount of God' placed so far out of any natural route which the Hebrews, coming up from Egypt, would have chosen? Probably because the Hebrews only *heard* of such a mountain; hence also the vagueness in names and locations—none of the poets and narrators had seen Sinai." We are induced to reproduce these lines partly in reference to Mr. Baker Greene's succinct reassertion of his view, and partly in order to point out the close agreement with them of some remarks by the traveller Burton, contained in the *Academy* of May 5, though entirely unconnected with the former's communication in the preceding number. Captain Burton presents some "Personal Reminiscences" of the lamented E. H. Palmer, in the course of which he mentions 'The Desert of the Exodus,' containing the account of that Orientalist's walking journeys in 1869 and 1870, and says: "He had not then learned that the so-called 'Sinai' [of the peninsula] is simply a modern forgery, dating probably after the second century A. D.; that the

Jewish nation never knew where the true 'Mountain of the Law' was; that it is differently placed by St. Paul and his contemporary Josephus, who describes it after the fashion of Sinbad the Sailor. . . ." Captain Burton adds: "Much friendly banter upon these points passed between us as often as we met in London, and finally he seemed to agree in opinion with me."

—The Archæological Institute of America held its annual meeting on May 19 in Boston. Encouraging reports were read upon its work in Mexico and Central America, and particularly upon that of the Assos Expedition, of which the labors are now drawing to a close. The latest excavations at Assos have been upon the Street of Tombs, and have revealed many unopened sarcophagi, in which have been found a number of small objects of great interest, particularly some admirable archaic terracottas and several very perfect glass vases. It was decided that the discoveries brought home from Assos should, in recognition of a generous contribution made by the Boston Art Museum to secure the purchase from Turkey of as large a portion as possible of the Assian antiquities, be placed in that institution. The recent subscription from New York, and the important accessions of New York names to the list of members, are received with especial satisfaction, as indications that the metropolis is beginning to recognize the claim of the Institute to national, not merely to sectional, support. The following members were appointed a committee to endeavor to promote the interests of the Institute in New York, and, if possible, to secure the means to send out to Cyrene, or to some other rich Greek site, a New York expedition, of which the discoveries would be preserved here, and would be a permanent honor and ornament to our city: Mr. Frederic J. de Peyster (chairman), Rev. Henry C. Potter, Prof. William M. Sloane, and Messrs. Edward F. de Lancey and Thomas W. Ludlow.

—The semi-annual meeting of the Managing Committee of the American School of Classical Studies at Athens was held on May 19, in Cambridge. Dartmouth College, and Cornell, Michigan, Virginia, and California Universities have joined the nine colleges already pledged to support the School, of which the income during the next year will amount to $3,500. This will admit of an appropriation of $1,000 toward the increase of the excellent nucleus of a library owned already in Athens by the School; but it is desirable that contributions should be secured to render possible the supply of special needs in the library which cannot be covered by the regular appropriation. The publication of the Bulletin of the School will be begun in the autumn. At Athens the School has been received with the highest consideration, and is believed to have accomplished, during its first year, work creditable to America and to its founders. Six regular students have been in attendance during the term, and one outsider has enjoyed its privileges. Each member has pursued some definite subject of study, and will embody the results of his work in a thesis, which may be published by the Committee. Among the subjects which have thus received attention are the new inscriptions found at Assos, the Dionysiac Theatre, the works of Theokritos, with a view to an edition of them, the Erechtheion, and the Pnyx. Besides these special studies, the School has met weekly to discuss papers upon archæological subjects by the Director or by its members, and also on Friday evenings for critical study of various ancient authors. Excursions have been made on Saturdays to places of historic interest near Athens, and longer tours in Continental Greece and in the Peloponnesus have been planned for the last part of the term. Professor Lewis R. Packard, of Yale, sails in June to succeed Professor Goodwin as the second Director of the School, and there is good prospect that he will have under him at least as many students as his predecessor. It is hoped that a fund may soon be procured to provide a salary for a permanent Archæological Secretary, to reside in Athens, and to coöperate with the successive directors sent out by the united colleges. Professor M. L. D'Ooge, of Michigan University, has been elected a member of the Managing Committee.

— The director of the ethnologic section of the Berlin Royal Museums, Dr. Adolf Bastian, is now busy in giving to the world the results of his last visit to the East (1880–'81), in the shape of ethnic monographs, especially on mythology and customs connected with religious ideas. Among the latest volumes of this series is 'Inselgruppen in Oceanien' (illustrated, Berlin, 1883, 8vo, 282 pages), whose rich contents are grouped under the following headings: Tahiti, Tonga, Samoa, Melanesia (Fiji), and Micronesia; Australia, New Zealand, Hawaii. The new material gathered on these Eastern shores is so oppressively large that an adequate idea of it could be conveyed to our readers only in several pages, but of the ethnologic principles which the author follows in this volume, the most important may be briefly given. Our century, he says, is still far from being able to establish general views or principles of ethnology, for many of our recent discoveries tend to upset the ethnologic theories in vogue among scientists to-day; what we have to do is to gather as much new material as possible, critically sifted. Anthropologic science must rest on the physical basis, ethnology on the psychic basis of the human race. However, the foundation of ethnology is not the psychology of the individual man, but the psychology manifested by tribal communities, by the spirit of nations, by the genius of nationality. In psychology we have to start from the characteristics of man as modified by the society in which he lives and grows up, and from the ideas he forms concerning his surroundings; in the same manner, sociological investigations have to start, not from the family as the microcosm, but from the people or nationality. Three fundamental stages underlie the social constitution of all nations, and these the ancients have expressed as follows: *gens* (γένος), *curia* (φρατρία), *tribus* (φύλη). Our task is to discover and describe their equivalents among the nations to be investigated, and whatever in any branch of ethnic inquiry is found to be similar among nations the most unlike has to be brought side by side and compared. It will then appear that customs referring to the family were subsequently put to sociological and political uses.

—Although Vienna is a sort of German Paris, Viennese *chic* is quite a different thing from French *chic*. It is less keen, smart, and pungent, more sentimental, insinuating, and roguish than the Parisian article, which is deficient in *Gemüthlichkeit*. The difference is well illustrated by the manner in which Suppé's pretty operetta, "Boccaccio," is interpreted by Frau Geistinger and Mme. Théo, with their respective German and French companies. Frau Geistinger's *Boccaccio* is well known in New York, and was seen on the 15th inst., when she made her last appearance this season at the Thalia Theatre. Mme. Théo's *Boccaccio* was on May 16 seen for the first time at Daly's Theatre. Suppé's work differs from most French operettas in not only having an excellent plot, but also some beautiful music of enduring value. It is here that Frau Geistinger scores her first point. She has a good voice and can sing. The French seldom have good voices, and Mme. Théo is in this respect excessively French. Her voice is disagreeable not only when she sings, but even when she speaks. It requires all her personal charms to make one forgive the harsh dissonance of her high, shrill, unmodulated utterances. But these personal charms are so great, she has so much of the true Parisian *chic*, and such a sprightly way of acting, that no one can help gazing at and admiring her as long as she remains on the stage. Hitherto her principal characteristic has been a naïve, girlish frolicsomeness. As *Boccaccio* she gave an equally dainty exhibition of frolicsome boyishness. But she was not an Italian boy. The French always remain French, and this may be one of the reasons why they neglect foreign dramatic art. Of course it is true generally that the Italians can best interpret Rossini, the Germans Wagner, and the French Offenbach. But the French are the least cosmopolitan and protean of these nations, and, in the higher forms of art at least, they are much less skilful in adapting themselves to exotic conditions than the Germans, at whose opera-houses the repertory includes the art of all countries. In a work like "Boccaccio," of course, nationality is not of absolute importance. It is bright and interesting even as presented by Mr. Grau's company; but it lacks the true Viennese-Italian local color, the undertone of sentiment, the regard for musical beauty, and, above all, the command of the coquettish Viennese rhythm, which is quite *sui generis*, and even eludes the grasp of the North Germans.

LYALL'S ASIATIC STUDIES.

Asiatic Studies, Religious and Social. By Sir Alfred C. Lyall, K.C.B., C.I.E. London: John Murray. 1882.

If the impression made on the public by a book could be measured by the weightiness of its contents, 'Asiatic Studies' would be the work of the day. It is one of those rare publications which are valuable for the information which they contain, but which are even more valuable for the new lines of thought, of speculation, and of feeling which they suggest. The 'Studies' have probably not been read by one-tenth of the number of persons who, rather more than twenty years ago, devoured Mr. Buckle's loud-sounding and pretentious crudities; but while no intelligent person would probably now attribute any marked influence over his beliefs or manner of thought to the 'History of Civilization,' it may well be believed that of the limited class of persons who have studied Sir Alfred Lyall's short work, not one has been unaffected by the marvellous mass of facts and reflections which our author has crammed or packed into little more than three hundred pages.

The first and most salient characteristic of 'Asiatic Studies' is that it is a repertory of facts gathered at first hand by one who has had the rarest opportunities of observing the phenomena of a state of society as strange as it probably is transitory. Sir Alfred Lyall is a trained Anglo-Indian official, who has spent his life in the minute observation of certain provinces of the Anglo-Indian Empire. He has observed a society in which still exist forms of political, of religious, and of social life that carry us back to a state of things which, in Europe, vanished long before Rome became the mistress of the world, and in which, side by side with these survivals from primeval times, is to be seen the working of a government based on the most modern ideas of European life, and supported by all the appliances of modern civilization. Sir Alfred Lyall, in short, has lived among

races many of whom entertain religious ideas which had long been discarded by the most ignorant Romans of the age of Cicero. He has been, and is, the servant of a government which represents moral ideas, and commands physical forces, utterly unknown, and we may say incomprehensible, to the most civilized of the Greeks and Romans. Nor does the peculiarity of the position occupied by a writer and thinker such as Lyall end here. He sees Asia as Asia has been for centuries. He sees before his eyes in actual existence a society in which, as among the Jews of old, religious conceptions form the interest of life, and to the study of this Asiatic world he brings all the knowledge and all the methods of inquiry produced by centuries of European thought and progress. He has, therefore, unrivalled opportunities of noting important and interesting facts, and these opportunities he has obviously turned to the very best advantage. If every theory propounded in his book were erroneous, it would still be a storehouse of curious information about the religious and social customs of India.

But while few readers would probably admit the correctness of all Lyall's conclusions, there is no reason to suppose that his theories contain more of error than must inevitably be found in all speculations which are concerned with the most subtle and the most difficult of historical and moral problems; for if the first characteristic of 'Asiatic Studies' is that it is a storehouse of facts, its second (though to our minds less important) feature is that the details in which the book abounds are dealt with by a thinker who is thoroughly conversant with the speculations of modern historical inquirers. Hence the unpretentious essays which make up the 'Studies' have a twofold importance: they throw light on the history of the past; they afford some guidance as to the probable course of the future. The latter is the more tempting subject, as prophecy excites more interest than research; but, though on some future occasion we may recur to Sir Alfred Lyall's speculations with regard to the effect to be expected from the collision between English and Asiatic civilization, we believe that we shall best perform our duty to our readers by calling attention to the mode in which our author's observations tend to modify, or in any case to influence, current and received modes of historical speculation.

That Sir Alfred Lyall's practical experience should enable him to overset at one stroke one of those theories based by Mr. Buckle on what may fairly be called undiscriminating literary credulity, is not in itself a matter of great surprise, though certainly the author of the 'History of Civilization' fell into a conspicuous blunder when he asserted that deification forms no part of ancient Indian religion, and went on to assert that deification of human beings could not be "expected" to exist "in a tropical civilization, where the aspects of nature filled man with a constant sense of his own incapacity." This unfortunate dogma proves that Mr. Buckle's "expectations" fell a good deal short of a measure of reality, for a "very remarkable and still flourishing offshoot of Buddhism, the Jaina faith, . . . is nothing else but the worship of deified men, and the deification of men is universally characteristic of the cults of the wild non-Aryan tribes in India." What is noteworthy is, that experience of Asiatic life leads Sir Alfred Lyall into something like conflict with two different doctrines, represented, at any rate to the English and American world, by the names of George Grote and of Max Müller.

The fact which leads Sir Alfred Lyall to question the absolute validity of the different theories propounded by these two eminent writers is, that he has observed the deification of human beings to form an essential and living part of modern Indian polytheism.

"The Bunjâras," he writes, "a tribe much addicted to highway robbery, worship a famous bandit, who probably lived and died in some notorious way. Any renowned soldier would certainly be worshipped after death, if his tomb were well known and accessible. M. Raymond, the French commander who died at Hyderabad, has been there canonized after a fashion; General Nicholson, who died in the storming of Delhi, 1857, was adored as a hero in his lifetime, in spite of his violent persecution of his own devotees; and there are other known instances of the commemoration of Europeans who have been feared or loved. Nor do I make out that the origin and conception of those local deities are at first connected with the Brahmanic doctrines by the unlettered and unsophisticated crowd who set up these shrines at their own pleasure. The immediate motive is nothing but a vague inference from great natural gifts, or from strange fortunes, or from power during life, to power prolonged beyond it; though when a shrine becomes popular the Brahmans take care to give its origin an orthodox interpretation."

The inference based by Lyall on this fact, and others like it, is that there lies much more truth than is now commonly supposed in the theories of Euhemerus, an Asiatic traveller of classical times, who explained all mythology as being a process of deification or hero-worship, and represented both gods and heroes as having been earth-born men superior to the ordinary level in respect of force or capacity, and deified after death as a recompense for services or striking exploits. Now, this theory of Euhemerus, though applied by its author in a loose and presumptuous manner, seems to Lyall to describe "very nearly the conclusions which would be drawn from looking narrowly at the process of the generation of gods in India in the present day; and if there be ground for supposing that this process has been going on more or less in India for thousands of years, the effect is worth considering." Nor, if Lyall's view be correct, is it possible to escape from a conclusion which he rather suggests than explicitly draws out. A great deal of myth and legend must, it would seem, have a considerable basis of real fact; and the true question for a scientific historian is how far it be possible to disentangle the truth on which legend is based from the mythical fiction under which that truth is hidden. Here it is that Lyall comes to a certain extent into conflict with Grote.

"To suppose," writes the historian of Greece, "that these religious legends are mere exaggerations of some basis of actual fact—that the gods of polytheism were merely divinized men, with qualities distorted or feigned—would be to embrace in substance the theory of Euhemerus"; and to embrace the theory of Euhemerus means undoubtedly, with Grote, the same thing as falling into unpardonable error. Here, then, we have certainly something like a conflict between Lyall's Asiatic experience and the results of Grote's historical studies; and we do not think that any one who has fairly reflected on the contents of Sir Alfred Lyall's work will ever be able to share with confidence Grote's obvious feeling that mythology has little or no connection with history. Still, we have purposely used the expression "something like a conflict," for the necessary opposition between Lyall's knowledge and Grote's theories is less than the reader might at first sight suppose. "Grote did not deny," as Lyall himself points out, "that myths taken in a mass contain real matter of fact. He only said that in any particular myth you cannot distinguish fact from fiction." You may, on Grote's view, think it more than probable that Hercules was a man who performed some extraordinary exploits, but you can no more tell what were the real exploits he performed than you could reconstruct Scottish history from fragments of the "Lay of the Last Minstrel" or of the "Lady of the Lake." We do not much doubt that, to a certain extent, Lyall and Grote do disagree as to the possibility of extracting history from legend, but on the point which Lyall discusses there is no direct disagreement between them. The Anglo-Indian official says "many legends are grounded upon fact"; the historian of Greece retorts in effect, "when once fact has become embedded in legend, you cannot separate truth from falsehood." It is quite possible for a sensible man to agree with both statements. An impartial inquirer will be anxious to learn whether Sir Alfred Lyall's experience can tell us anything about the trustworthiness of oral tradition, and also about the relation between undoubted historical events and the myths (if any) to which they have given rise. On this all-important topic 'Asiatic Studies' tells us nothing. We commend it most earnestly to the author's attention.

Sir Alfred Lyall's leaning toward rational Euhemerism brings him into far more direct antagonism with Max Müller than with Grote. The plain truth is, that the comparative mythologists attempt to trace all the figures and narratives of mythology to personifications of the worship of inanimate nature. As you read their speculations, you are almost forced to the conclusion that in early ages men thought about the sun, the moon, the stars, the clouds, and thought about nothing else. To such a view of prehistoric man Lyall's whole Asiatic experience is opposed. Here it would seem that common sense and special experience go hand in hand. Believe as you may in the great sun myth, it is quite impossible to imagine that the rising and setting of the sun was at any period of the world's annals the only matter which occupied the mind of man. Men and women must always have been of interest to their kind. When investigation into the lowest form of polytheism shows that in matter of fact nothing impresses human imagination so forcibly as human actions, we may venture to dismiss the idea that all legends, myths, or traditions may ultimately be resolved into stories about the day and night. But it is one of Lyall's great merits as a thinker that he does not overpress his own views. "The main objection," he writes, to the theory of Euhemerus, as to the theory opposed to it,

"seems to be that its author insists upon an exclusive monopoly of the whole province of myths, that it leaves no room for the other; that because it does explain a part of mythology it has been applied to the whole; that it endeavors to explain not only mythology in one phase or of one period, but the whole course of its evolution into actual polytheism. Upon this subject the comparative method and philology have thrown a flood of light. Nevertheless, the high authorities who appear to assign to the whole family of divine Aryan myths their birthplace in personifications of inanimate nature, may be unaware of the quantity and weight of evidence that an Euhemerist could, even in these days, produce on his side."

This sentence applies far beyond its immediate scope; it touches the root of the whole matter. The master error of theorists in mythology, as elsewhere, is to seek for a cause when they should look for causes, and to fancy that theories which are logically coherent are suited to explain the complexity and variety of nature. If Sir Alfred Lyall's investigations into the Asiatic tendency toward the deification of distinguished men had simply corrected the excesses of received historical theories, these investigations would have had great value; but they in fact lead to much more than mere negative results. They go a great way toward explaining some of the most curious phenomena of ancient history. There is nothing, for instance,

more perplexing to modern students than to account for, or even to imagine, the state of belief under which the Roman emperors received divine honors. Every page of Sir Alfred Lyall's work is a picture of a society in which the deification not only of a ruler but of any eminent person is the natural outcome of popular feeling. He does not conceal the conviction that the British Government might, if it chose, easily become an object of worship throughout India. Even as it is, the Administration, if it does not receive divine honors, incurs something like providential responsibilities. Cholera, famine, and great sea inundations bring the Government great discredit, because of a dim feeling that "the Government has undertaken the gods' business, and is breaking down. . . . The multifarious functions assumed by a modern administration . . . lay it open to every kind of imputation against its wisdom and its benevolence. It is like a great divinity in whom are absorbed and concentrated a great number of attributes."

The tendency to deification may, again, be looked at from another point of view. From time to time, or rather (if we understand Sir Alfred Lyall rightly) very frequently, there arise spiritual teachers who denounce the gross errors of the prevailing creed; but the reformer himself becomes entangled in the gross materialism of the people. "No spiritual teacher of mark can evade being reckoned a god (or a visible embodiment of divine power) by the outer ring of his disciples, and an atheist or blasphemer by his enemies; he may disown and denounce, but the surrounding atmosphere is too strong for him." If his teaching succeeds, the prophet's foes, no less than his friends, insist on regarding him as a manifestation of Power and paying him worship. "When he dies, he is canonized, and may fall into the grip of the Brahmans after all, and be turned into the embodiment of a god." In what light he may appear to his own future disciples is quite uncertain. There is a sect in India which worships Krishna as an incarnation of Vishnu. "By the outer disciples he is certainly held to be himself an embodiment of Vishnu, but the initiated still know him to have been a spiritualist who scorned gods and Brahmans."

As we read these and similar passages, we can well agree with Lyall that at a time when pagan tribes and communities pressed into the Church, nothing but a supreme ecclesiastical authority saved Christianity from falling back into a sort of polytheism. This is one, but it is certainly not the only, inference suggested by the phenomena of Asiatic polytheism. From whatever side the student looks at India, he is again and again reminded of the curious points of similarity between the state of India in the nineteenth century, and the condition of the whole civilized world during the ages which witnessed the rise of Christianity under the rule of law maintained by the Roman Empire.

SIMCOX'S HISTORY OF LATIN LITERATURE.

A History of Latin Literature, from Ennius to Boethius. By George Augustus Simcox, M.A., Fellow of Queen's College, Oxford. 2 vols. Harper & Bros. 1883.

If Mr. Simcox's volumes shall fail to make Latin literature intelligible and attractive to the "cultivated laity" for whom he professes to have written, it will be partly because he has been too faithful to the theory contained in his first sentence: "An ideal history of anything would tend to be a history of everything." Certainly, for the general reader, the value of the work is greatly impaired by its discursiveness and emphasis of irrelevant matter. Again and again we seem to be reading essays on disputed points in Roman history, or sections of a work on heathen philosophy, rather than just so much of a historical setting as is necessary for understanding the authors and their writings. Among many other chapters, those on Cicero, Livy, Juvenal, and Persius will illustrate this point. The remarks on side issues are often very interesting and acute; but they have so little pertinence to the subject-matter that Mr. Simcox's judgment of Sallust must often be applied to himself: "The main subject is a peg to hang disquisitions and portraits upon."

It is always a question where such a history shall end. If the history of Latin literature means the history of those who have written in Latin, then the list must be added to with each generation of Latin scholarship. It is not apparent why Mr. Simcox closes with the unsavory verses of Maximianus of the sixth century. From the reign of the Antonines to the reign of the Ostrogoths, what is left in Latin of the Church fathers, poets, grammarians, and historians has great worth for here and there a specialist, but from the point of view of literature it is, in the main, dreary and artificial. More than once in his last two hundred pages Mr. Simcox congratulates his readers on the loss of portions of his characters, who are mostly forgotten because they do not deserve to be remembered. The ends of the history would have been better served if the last twelve chapters had been epitomized in a general view of the ages of bronze and iron and driftwood.

On the other hand, the account of the earliest writers in Latin is altogether too meagre. The fragments themselves are so numerous, and the researches of scholars have been so rich in results and suggestions, that more ought to have been done to gratify the present disposition to go back to the beginnings of things. The pre-Ennian writers are altogether too important to be so summarily disposed of; nor is the treatment of the Saturnian verse and of other varieties of the earlier vernacular expression at all adequate. The chapter on Ennius is sketchy and vague. Even if a historian of Latin literature may "wonder in what sense Ennius is a poet at all," he has no right to ignore the grandly patriotic vein which runs like a thread of gold through the fragments, nor his peculiar—often happy, and sometimes grotesque—experiments in rhythm and diction, nor the pervasive influence which he had on the development of the Latin language and the Roman literature. Mr. Simcox nowhere shows that he appreciates the far-reaching effects of the adoption into Latin of the dactylic hexameter, or the subtle and reciprocal influences of thought and form. Lucilius, too, deserves much fuller recognition. From the few pages given to this Campanian knight, no one would gather that, of all Latin writers, he alone enriched the world's literature with a new form, by raising to an independent department of letters what in previous writers had been incidental or subordinate. As satire—both the name and the thing—comes to us from Rome, and is a prominent and unique feature in Latin literature, we are surprised not to find in this history any clear statement of its essential characteristics.

Nearly everywhere in the book we have noticed a strange want of proportion. Thus, more space is given to the musty and pretentious declaimers in the elder Seneca than to Varro, Quintilian, Cicero's letters, and Aulus Gellius combined, while Quintus Curtius, Celsus, and Ampelius are utterly ignored. There are special literary or linguistic reasons for a somewhat full presentation of all these writers, while Seneca's complaint that no quotation could do justice to his characters suggests the peril of a modern attempt to galvanize them into interest or importance. We have been interested in the treatment of many out-of-the-way authors, as Calpurnius, Manilius, Statius, Petronius; the pages on Fronto are exceptionally attractive and fresh; but the glory of Latin literature is not with such names, and it was a mistake to champion them so generously, if thereby far more important and representative writers have been slighted.

A like disproportion appears in the notices of many writers. Thus, twenty pages are given to the philosophy of Lucretius, but not as many lines to his poetry—except on its purely mechanical side. Here and there a "cultivated layman" goes through the arid reaches of the argument of Lucretius: very many readers would gladly know more than they can here find of this great writer's wonderful freshness of feeling and expression, his many bursts of the highest poetry. Of the forty pages given to Cicero, a large part is taken up with a somewhat rambling essay on Roman history, and with such fruitless guesses as why Cicero exchanged Terentia for Publilia, and why Hortensius refused to plead for Verres; ten pages consider Cicero as an interpreter of Greek philosophy; less than a third of a page is given to his letters—certainly a serious blunder.

Another peculiarity of the history is its concreteness of treatment. Here and there, as in the cases of Catullus and Vergil, it is possible to carry away from Mr. Simcox's sketches a tolerably clear and comprehensive idea of the authors and their writings; more frequently there is a series of minute and detached views, selected without apparent principle, and put together without much symmetry or coherence. If the reader is already familiar with, *e. g.*, Plautus, Ovid, Martial, and Persius, what is said under those names may serve as an excellent review, and be very stimulating; for one who is trying to learn the significance and rank of these writers, the account is so taken up with fragmentary details and so lacking in perspective and *ensemble*, that much of it must be tantalizing and unintelligible. The chapter on pre-Ciceronian oratory is learned and interesting; but we are served with running comments on bits of lost speeches, instead of a clear statement of the sources and qualities of Roman oratory. We must regret that the rare opportunity was not improved of tracing the rise and development of oratory at Rome, first, as a national product, and then as modified by Greek influences.

As Mr. Simcox has passed in review a vast number of writers, representing nearly every variety of thought and style through eight centuries, his judgment will naturally be challenged at many points. He gives evidence of intimate study of his characters and of the discussions to which they have given rise, and the tone almost everywhere is candid and judicial. The translations (of which we have too few) are vigorous and racy. The best part of the whole work seems to us the account of the writers, particularly the poets, of the Augustan age. We have greatly enjoyed the hearty recognition and sympathetic analysis of Vergil's abiding excellences, though here, too, there is great discursiveness and an ambition to develop literary parallels. Under Ovid, it is a mistake in taste to give such prominence to his erotic poetry, nor can those who do not already know the scope and charm of the 'Metamorphoses' be more than languidly interested in the dozen pages which are given to a minute account of parts of a few legends.

The long chapter on Tacitus is a painful surprise. If Mr. Simcox is correct, Tacitus has none of the historian's essential qualities; he

"takes a sort of malicious pleasure" in telling the story of his country's shame; his style is "a systematic exaggerated mannerism"; the 'Annals' are "a masterpiece of detraction"! The editor does not go the lengths of Mr. Beesly in trying to reverse the verdict of history in regard to Tiberius, but he does fall into the common injustice of not keeping distinct the statements of Tacitus as a historian and his reflections as a man and patriot. Nor is there any sign that he appreciates the genuine pathos and unrivalled dramatic power and picturesqueness of the 'Annals,' or that marvellous style which puts Tacitus apart from all who have ever written in Latin. It is a relief to turn from Simcox to Macaulay, who calls the 'Annals' "a miracle of art," and says of the account of Tiberius: "The task was one of extreme difficulty; the execution is almost perfect." (By what slip, by the way, in the introductory chapter, is Tacitus called a Spaniard?)

There is a like disposition to belittle the younger Pliny. It is sheer assumption to say that Pliny was "only a quasi-success as an orator." If this is proved by the loss of his speeches, as Mr. Simcox implies, then Rome had no orator but Cicero. Elsewhere it is said that Tacitus "ranked among the first orators of the day" because the Senate chose him to conduct the prosecution against Marius: but Tacitus and Pliny were jointly chosen. Certainly dogmatism is out of place, in view of the important cases on which we know that Pliny was retained, and the references to his oratory as late as the sixth century. Quintilian (spelled Quinctilian throughout the book) has less than four pages, and the tone toward him is depreciatory and patronizing. Not to speak of the practical character of his great work, in a history of Latin literature we ask for an ampler notice of this chief of the conservative or neo-classical school of style, and calm judge of the literatures of Greece and Rome. Against all probability, it is assumed that the man for whose daughter Pliny gave a marriage portion was Quintilian, the rhetorician.

But we have not the space to continue our objections to Mr. Simcox's treatment of individual writers. If, from the details of this history, we try to look at the literature of Rome as a development or organic unity, the result is unsatisfactory. We miss any proper appreciation of such important modifying influences as the introduction of Greek learning and letters, the Scipionic circle, the adoption of foreign forms of verse, the "recitationes" of Pollio and his imitators, the patronage of some emperors and the repression of others, the great political and social changes through which Rome was constantly passing. We must consider it a serious mistake, too, that Mr. Simcox pays so little attention to the Latin language, either to its essential, distinguishing features, or to its success in naturalizing alien modes of expression and becoming the vehicle of new ideas and emotions, or to its steady transformation from age to age in texture and genius.

The history of Roman literature has received such close and successful attention in the last few years that the credentials of any new-comer are sure to be closely scanned. Not to speak of labors on single authors and periods—like Mr. Sellar's masterly volumes on Vergil and the poets of the Republic—Mr. Cruttwell, with rare candor of judgment and in a style of great clearness and freshness, has furnished the general reader with an admirable picture of the literature in its essence and in its relations to the language and events. Wagner's faithful translation has brought to the reach of English readers the succinct presentation of historical and personal factors, the vigorous and impartial criticisms of individual authors, and the bibliographical wealth of Teuffel's monumental work. Mr. Simcox's object is different from that of either of these, but he does not seem to us, in plan or in execution, to have clearly apprehended, much less to have occupied, the middle ground between the two.

Thomas Jefferson. By John T. Morse, jr. [American Statesmen.] Boston: Houghton, Mifflin & Co.

THE constitutional history of the United States has yet to be written. What is generally understood by that term is the history of the formation and adoption of the Constitution. The later histories are for the most part mere chronicles of events. What has been the part of this country in the development of the great principles of popular government which are as much a characteristic of the nineteenth century as the applications of physical science, and which in Europe have been studied by the ablest writers, remains a subject almost untouched except so far as Europeans like De Tocqueville, and in a much inferior degree Von Holst, have directed their attention to it. These biographies of "American Statesmen" are furnishing, however, the materials for such a study, and, better still, making this study attractive. More readable books than the editor's Adams and Jefferson we have seldom taken up. In vigor of style, selection and arrangement of details, and unity of narrative there is little left to be desired. In comparison with the common run of biographies, the subject stands out like a portrait by a master beside a colored photograph.

It is a curious and most dramatic circumstance, that two men of the first intellectual rank should have appeared at the outset of the Government representing such diametrically opposite principles as Jefferson and Hamilton. It can never be sufficiently regretted that the latter did not, like the former, live to maintain to the end his side of the contrast. Both men had, moreover, the defects of their qualities. Hamilton was an organizer, and we remember hearing one of the older generation of senators say not long since in Washington that the whole machinery of the Government administration was running to-day upon the impulse given to it by Hamilton. But, like most organizers, Hamilton had but slight respect for the multitude. He believed in an aristocracy, at least of intellect and social position, carrying on the Government for the benefit of the people, indeed, but with the minimum of intervention on their part. Jefferson, on the other hand, was no administrator at all. The only considerable measure accomplished by him was the purchase of Louisiana, which was a single bargain, conducted with the keen instinct of a trader, and that too with an avowed renunciation of the constitutional principles for which he had most steadfastly contended. Whenever a political crisis occurred, we find him getting into a state of disgust, and anxious to get away to his farm; and during the last three months of his Presidency, according to Mr. Morse, at a time when action was most necessary, he allowed matters to drift, so that the responsibility might fall upon his successor.

He had, however, an abiding faith in the people, not as a demagogue and hypocrite, combining contempt for popular ignorance and passion with skill in flattering them for his own purposes, but honestly believing in his theories of government and society. This is a quality which we are inclined to rate much more highly than Mr. Morse, who, while he states it very fairly, has apparently not much sympathy with it. It does not follow because the mass of the people are poor that they are any more ignorant, at least of right and wrong, than their so called betters, or that they are any more selfish or swayed by prejudice and passion. We think instances are not wanting in the recent history of this country and Great Britain, and even of France, in which the popular voice has served as a distinctly controlling element in the direction of right. Reliance upon the people fails only when they are looked to for that which they cannot possibly do. It is here that our quarrel with Jefferson begins, as one of the most fatal influences in our history. His natural tendencies were increased on the one hand by a residence in France during the early years of the Revolution, and by a stay in England with Mr. Adams in 1786, when the English temper, never too conciliatory, was in full bitterness toward our countrymen. The result is stated by Mr. Morse in strong terms: "He was a radical even among radicals, and a democrat of the extreme class. He could hardly bring himself to declare that the people should govern, because he had a lurking notion that there should be no government at all. 'The rights of man,' the favorite slang phrase of the day, signified to his mind an almost entire absence of governmental control." He gives Jefferson himself as authority: "Were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter." And again, "I am convinced that those societies (as the Indians) which live without government enjoy, in their general mass, an infinitely greater degree of happiness than those who live under European Governments."

Mark, now, the practical consequences of these theories, which we can best give in the words of Mr. Morse:

"At last the Republicans had become thoroughly consolidated, and now, cheered by the spectacle presented by their discordant adversaries, they were united, enthusiastic, and confident. It had taken time for discipline and organization to become perfectly established throughout their masses, more especially because the labor had fallen almost exclusively upon one man; for Jefferson had been obliged to assume the task with very little assistance. At last, however, by tactics and policy, intangible and indescribable, but wonderfully efficient, the immense multitude which constituted the Republican raw material had been moulded into an irresistible array; and he who had done this feat still justly enjoys the reputation of being the ablest political leader who has ever lived in this country. The secret of Jefferson's control of the ignorant populace was undoubtedly his honest faith in them. They instinctively felt that his profession of belief in the lower two-thirds of the community was genuine; in return, they gave gratitude and confidence, and for years patiently submitted to the drill which he conducted with admirable temper and untiring perseverance. Thus he had now at length made them an invincible body, accomplishing in politics with the voters of the United States very much the same thing that Napoleon was doing in military matters with the untutored militia of France, inspiring them with the irresistible spirit of victory."

We venture to complete the picture by one more extract:

"In any matters of substantial importance there was very little more real democracy under the sway of the Democrats than there had been under that of the Federalists. The democrat Jefferson enjoyed and exercised a personal authority infinitely greater than had been wielded by the 'monocrat' Adams. Indeed, even to this day, no President since Washington has ever been able to dictate to Congress as Jefferson could do, and, upon sufficient occasion, actually did. No President since Washington has ever led the people in such unquestioning obedience. But these facts were not clearly recognized at the time. Congress did not appreciate that it was receiving orders; the people had not the slightest notion that they were being guided; for Jefferson never used the accent of command or assumed the bearing of a leader. . . . It

is a singular circumstance that the body which has chosen to declare itself the guardian of democratic principles has always from the outset been peculiarly prone to fall beneath the dictation of a single individual. No leader among the Federalists, the Whigs, or the Republicans (the present party of that name) has ever had a personal supremacy equal to that of Jefferson or that of Andrew Jackson."

Thus it appears that the no-government theories ended in a very near approach to paternal despotism. History contains no more important political lesson for the United States. It involves two propositions: first, that the "no-government" theory is nonsense, and that there is no political organization which needs, and is certain sooner or later to have, strong government more than a popular republic, because nowhere do more powerful and conflicting interests require to be compelled to keep the peace; and, secondly, that the strength of popular support can never be effectively secured for abstract questions which the people do not understand and about which they cannot agree, but can always be aroused and wrought to a high pitch of enthusiasm by individual personality. It is, however, Jefferson's theory rather than his practice which has laid hold of the country. "A government of laws, and not of men," is the pet phrase of the platforms. The tendency of all the State constitutions has been to steady disintegration, and if the process has not reached the Federal Constitution, it is because that instrument is less easily dealt with. Not merely politicians, but the most respectable part of the community, are enamored of government by legislatures, standing committees, and commissions, evolving by majorities and minorities laws which carry no sanction but their own, and from which all personality is jealously excluded. It has come to be considered a sort of disgrace for a man to seek public office on the ground of his personal merit. And then, while the public interest in politics and the quality of public men are steadily declining, if any able demagogue appeals to the first principles of human nature and attracts a following among the multitude hungering and thirsting for hero-worship—preferably good, but at any rate of some kind—we encounter gloomy shakings of the head, lamentations over the ignorance of the multitude and the dangers of universal suffrage.

The strength of the English Government, that which distinguishes it from all others which have ever existed, lies in this, that it places immense power in the hands of individuals, and then, placing those individuals in the strong light which was formerly said "to beat upon the throne," leaves it to the suffrage of the nation to say whether those individuals shall be continued in power or be replaced by others.

Autobiography of Erastus O. Haven, D.D., LL.D., one of the Bishops of the Methodist Episcopal Church. Edited by Rev. C. C. Stratton, D.D. Phillips & Hunt. 1883.

The Life of Gilbert Haven, Bishop of the Methodist Episcopal Church. By George Prentice, D.D. Same publishers.

THERE were so many parallelisms in the lives of Erastus O. and Gilbert Haven that the simultaneous appearance of their memoirs is such an epilogue as one might naturally expect. They were cousins, and the difference in their ages was not great. Erastus was born in Boston, November 1, 1820; Gilbert in Malden, Mass., September 19, 1821. Both of them were in turn teachers, preachers, editors, bishops. They were students of the same university—the Wesleyan—in Middletown, Conn.; they taught in the same seminary, at Amenia, in Dutchess Co., N. Y., Gilbert succeeding Erastus as principal of this modest seat of learning, and later in life succeeding him as editor of *Zion's Herald*. They were busy, earnest men, Gilbert the coarser-grained and the more pushing and ambitious of the two. They had great faith in education, great interest in educational projects, and they apparently did much to elevate the standard of education in the Methodist Church. But from neither of them do we get the impression of a well-educated man. In neither were there any refinements of culture. They were rough men for rough work, capable of various sacrifices and of surprising industry. They loved each other well—so well that when, in 1872, they were rival candidates for the bishopric, and Gilbert was elected by a small plurality, if there were any heart-burnings they have left no sign in either biography. The contest was a heated one. The political methods of the canvass then in progress in the country were introduced into the General Conference. Erastus was not made a bishop till a few months before his death in 1881. Strangely enough, the day of his death is not given.

The memoir of the elder cousin is mainly autobiographical. We are led by the gentlemen who edit and continue it to expect a humorous narrative. The humor of the writer is much insisted on, but it does not appear. Instead, we have—and the same is true of Gilbert—a plentiful jocosity and a flow of animal spirits that is not easily checked. After teaching and superintending at Amenia, Erastus entered on the work of preaching, from which he withdrew in 1853 to become Professor of Latin in Michigan University, then in a weak and struggling condition. His next employment was in Boston, where he was editor of *Zion's Herald*. Returning to Michigan, he assumed the presidency of the University, and finally succeeded in initiating that financial relation of the University to the State which has since been productive of the best results. A full account of his presidency by Prof. Winchell gives a much better notion of the trials of his position, and his way of meeting them, than his own briefer mention, which, however, is not lacking in frankness or in self-respect. As if the Methodist must be an itinerant, whatever his occupation, we find Mr. Haven successively President of the Northwestern University, Secretary of the Methodist Board of Education, and Chancellor of the University of Syracuse. In 1880 he attained to the Bishop's office, which in 1872 and 1876 he had desired in vain. He entered on his work with characteristic energy, but died in the first flush of his enjoyment of his new position.

The 'Life of Gilbert Haven' is written in a swift and easy style. It duly sets forth his birth and parentage, his early training, his fluctuations between business and study, his education at Wilbraham and the Wesleyan University, his teaching at Amenia, his preaching at Northampton, Wilbraham, Westfield, Roxbury, and Cambridgeport, his love and sorrow, his chaplaincy of Benjamin Butler's regiment, etc., etc. The liveliest episode in his career was his editorship of *Zion's Herald*. He always had a chip upon his shoulder, and had a special predilection for stirring up the Boston Unitarians by parading the heresies of their more radical men. He had a much larger stock of *odium theologicum* than his cousin, who was remarkable for his liberality. His editorial success was such as to bring him invitations to edit various papers; he succeeded in making a bright, scrappy, noisy, belligerent paper. In a chapter on his "Literary Career," his biographer is singularly frank and just. The chapter begins: "The first thing to be said about Gilbert Haven as a literary man is, that he never properly was one." "Some obvious faults in writing adhered to Mr. Haven throughout his entire life. Nobody had to read far to come upon errors too palpable to be defended, and negligence too gross to be excused." It was not alone the form of his writing that was hasty and ill considered: the substance was equally so. He objected to the positive and comparative degrees; he was nothing if not superlative. "If the Book of God," he said, "is the Book of God, it must be personally, directly, exclusively his book, his idea, and his expression; his in its minutest word, his in its perfect totality." He was a voracious reader, and a lover of good books. He called Emerson and Grant the two greatest men in America. Bishop Haven's admiration of Grant was boundless. He was an ardent politician, a Stalwart of the Stalwarts, and regarded the nomination of Grant for a third term as a proper subject for denominational prayer. But he was an abolitionist before he was a Stalwart. Indeed, these volumes are in no respect more creditable to the cousins Haven than in the matter of their anti-slavery thoughts and feeling. When the Methodist Church was least disposed to deal courageously with the question of slavery, these did not bow the knee to Baal. They were abolitionists in the grain. A pleasing story is told of Gilbert's boyish indignation at his teacher's treatment of a colored workhouse child. It was the keynote of his lifelong humanity. A chapter called "Mary in Heaven" is made up largely of passages from his journal relating to his wife, too early lost. The biographer proceeds to analyze these passages, and to argue that they are much superior to certain famous literary portraitures of grief. His success is easy, but the argument is a jarring note. Gilbert Haven died January 3, 1883, thanking God with his dying breath that Don Cameron was the chairman of the National Republican Committee, for that, he thought, meant Grant's renomination.

Letters and Memorials of Jane Welsh Carlyle. Prepared for publication by Thomas Carlyle. Edited by J. A. Froude. 2 vols. Charles Scribner's Sons. 1883. The same. Harper & Brothers.

THE publication of Mrs. Carlyle's correspondence has once more drawn attention to the relations between Carlyle and his wife, and throws them into very vivid relief. We knew already, from the previous Carlyle publications, that she married from ambition, rather than love; that the great disparity between the pair in birth, breeding, and early associations made the match an ill-assorted one; that Carlyle treated his gentle and delicate wife in the way that he had been accustomed to see wives used in the class in life in which he had been brought up; that he was, besides this, so engrossed with himself, his work, his ambition, his struggles, that he had little or no consideration to spare for the feelings of anybody else, and consequently was entirely unaware, as long as her life lasted, that he was neglecting his wife, or falling short of his duties as a husband in any respect. We learn from these letters, for the first time, that at one period he caused her many an acute pang of jealousy by finding time to devote to Lady Ashburton, when he had none for her. They are unquestionably "mighty interesting" reading. They are a great deal more entertaining than most of Carlyle's, and they are excellent specimens of that kind of intimate correspondence in which women excel, while the picture of domestic life which they give is so full of minute detail that nothing is left to inference or the imagination. When we have closed the book we feel that we know the Carlyles as if we had lived with them. We know not only what they said, thought,

hoped, and desired, but what they ate and drank, and how it agreed with them; what money they had, and how they used it; who were their friends, and what they spoke of them behind their backs; what were their bodily ailments, and what medicines they took to cure them; what servants they had, and how they managed them; and even how much trouble Mrs. Carlyle had in ridding her house of vermin. The interest in such matters as these can hardly be called strictly literary, but it is no doubt universal.

The book suggests, however, a question of literary ethics which is, in these days, of considerable interest, and that is, how far such posthumous publications can be justified. Mr. Froude replies to all questions by reminding the reader that Carlyle himself designed the letters to be published. But this only removes the difficulty one step. What right had Carlyle himself to form any such design, or Mr. Froude, when he found what the correspondence was, to publish it? Surely there are circumstances under which the most devoted literary trustee may throw up his trust, and one of them must be when its execution is certain to bring discredit and odium upon the reputation intrusted to his care, and to withdraw the veil of privacy from matters which ought to be sacred from every eye.

Mr. Froude's function seems, in fact, to be to burlesque the literary executor. His first publication, intended to magnify Carlyle's reputation as a philosopher and writer, very nearly destroyed it. This one, designed by a husband as a memorial and loving tribute to his wife, confirms the impression produced by the first, that he was a neglectful and selfish husband. But, more than this, the Carlyle publications, taken altogether, are a sort of *reductio ad absurdum* of a theory of the relation between literature and life and character, on which so much modern literary biography seems to be based—that the more you know about the private life of an author the better. The public may always be relied upon to do what it can to foster the growth of this theory in a practical way, and criticism cannot refuse to pass upon questions directly proposed to it; but it is certainly a very poor theory for the literary executor to act upon, and one, moreover, which must in nine cases out of ten turn the attention of the public away from the purely literary questions presented by the career, and for the time being rivet it upon its deflections from commonly received moral and social standards. The old theory of a literary executorship was to present as pleasing a picture of the subject as was consistent with a regard for truth; and no doubt truth often suffered in the attempt. But it was at least less productive of scandal and general dissatisfaction than the opposite theory seems likely to be.

James Nasmyth, Engineer: an Autobiography. Edited by Samuel Smiles. Illustrated. Harper & Bros. 1883. Pp. xvii.–461. 12mo.

In one important sense James Nasmyth differs from the most of Dr. Smiles's heroes, in that he was not a self-made man. His success in life was in large part owing to his father's influence and careful training, and the stimulating mental atmosphere in which his boyhood was passed. His father, Alexander Nasmyth, was an artist by profession, of such merit that Sir David Wilkie said of him that "he was the founder of the landscape-painting school of Scotland." In addition to this, he was an architect and mechanical engineer of no mean ability. The "bow-and-string" bridge, for instance, now used in spanning large spaces, was his invention. Of an old Edinburgh family, his varied talents and genial manners won him an entrance into that brilliant circle which made Edinburgh famous in the first part of the century. His strongest ties, however, were not with Scott and Jeffrey, though he was the intimate friend of Burns, but with Sir David Brewster and Professor Leslie. Among the pleasantest reminiscences of the author's childhood are the rambles about Edinburgh of these friends, in which he was often permitted to be their companion. The most of Alexander's children followed his profession, and his oldest son, Patrick, attained a high rank as an artist. James, the youngest, while inheriting a talent for drawing, which the illustrations in this volume show to have been very considerable, developed early a strong bent toward mechanical and scientific pursuits. In these he received every encouragement from his father. "When the weather was ungenial," says the son, "he took refuge among his lathes and tools, and then I followed and watched him. He took the greatest pleasure in instructing me. Even in the most humble mechanical job, he was sure to direct my attention to the action of the tools and to the construction of the work he had in hand, and pointed out the manipulative processes requisite for its being effectually carried out. My hearty zeal in assisting him was well rewarded by his implanting in my mind the great fundamental principles on which the practice of engineering in its grandest forms is based." Besides this, "he taught me to sketch with exactness every object, whether natural or artificial, so as to enable the hand to accurately reproduce what the eye has seen."

While it is plain from this that the lad had advantages far greater than most now enjoy even in the technical schools, yet it would be a mistake to suppose that to these alone he owed his future success. Not only did he avail himself to the utmost of his father's aid, but from a child he eagerly sought every opportunity to gain a practical knowledge of his favorite pursuits. His inventive genius, as well as what he terms his "faculty of resourcefulness," also received constant stimulus from a rule which he made when a boy of thirteen. He and a schoolfellow were then interested in chemistry, and the rule was "that, so far as was possible, we ourselves should actually *make* the acids and other substances used in our experiments." So rigidly was this principle carried out, that a few years later he turned his bedroom into a brass-foundry, to make the castings for steam-engine models. So when, in middle age, he began to give his attention exclusively to astronomy, he preferred to construct his own telescope, even to the casting of the speculum, though there was then no lack of means to buy what he needed. From the first, too, he spared no pains to perfect whatever work he undertook. The spinning-tops with the turning of which he began, when nine years old, his apprentice-life, reached the highest point of excellence, in that they would "sleep" when at full speed.

Mr. Nasmyth's story from this point up to the time of commencing business on his own account in Manchester, as a maker of machine tools and mechanical engineer, has a special value for every young mechanic ambitious of becoming a master workman. It would be doing a service to our mechanical industries, we are convinced, if this part of the book could be published separately to bring it within the reach of this class of workmen. He is able to make even the unscientific reader's breast glow with pleasure as one difficulty after another is overcome and success is reached, not by "streaks of luck," but by patient, hard labor and undivided attention to his task. A "workingman's library," composed of books like this, would go far in many cases toward neutralizing the evil effects of the bad literature circulated among the young. We are not able to trace Mr. Nasmyth's career from the workshop of Henry Maudsley in London to the cottage in Kent where he is spending the last years of a busy life in astronomical pursuits. Nor have we the space to tell the story of the invention of the steam-hammer by which he is best known to the world, though it is remarkable as showing the marvellous quickness with which his mind worked. "In little more than half an hour" after the idea suggested itself, a sketch of the hammer, "not only in the general structure but in the details," was in his "scheme-book." The same success with which he carried on his foundry and machine-shop attended him in his astronomical pursuits. His observations of the moon and drawings of its surface as shown in his book on this subject, published in 1874, when he was sixty-six years old, would of themselves give him a high rank among amateur astronomers. But he has done a more important service to this science in the discovery of the "willow-leaves" on the solar photosphere. This discovery led to what he calls "one of the little bits of romance" in his rather prosaic life. When in Rome in 1865 he called upon Father Secchi, in company with Struve, the celebrated Russian astronomer. "Secchi gave me a most cordial and unlooked-for welcome. 'This,' he said, 'is a most extraordinary interview, as I am at this moment making a representation of your willow-leaf-shaped constituents of the solar surface!' He then pointed to a large blackboard, which he had daubed over with glue, and was sprinkling over (when we came in) with rice-grains."

Mr. Nasmyth's style is generally plain and straightforward, betraying very few evidences of the garrulousness of old age. Nor does he ever offend by a display of an over-confidence in his own powers. His pictures of life and men in Edinburgh in his boyhood are often graphic and always interesting. He is not without a certain dry humor and shrewd Scotch common-sense which give a pleasant flavor to his book. A good judge of character, he selected his workpeople carefully, and was always solicitous of doing his duty by them as an employer. In this way he was able to resist successfully the dictation of the powerful trades-unions. At the end of the autobiography is a chronological list of the more important of his inventions and "technical contrivances," beginning with "a model of applying steam-power for the traction of canal barges," made in 1825, at the age of seventeen, and closing with a proposal for the use of "chilled cast-iron shot," forty in all. Following this is a chapter on the "Sun-Ray Origin of the Pyramids, and the Cuneiform Character." It should be added, that the hand of the editor, Dr. Smiles, is not apparent in the book, except in a brief preface.

The Forests of England, and the Management of them in Bye-gone Times. Compiled by John Croumbie Brown. Edinburgh and London.

French Forest Ordinances of 1669. With Historical Sketch of Previous Treatment of Forests in France. Translated by John Croumbie Brown. Edinburgh and London. 1883.

Mr. Brown is a profuse maker of books; he has written upon all sorts of subjects more or less closely connected with the Forest, from the Hydrology of South Africa to an account of different European Forest Schools. He has made many books, and many bad ones. He is, however, as a writer upon forests by no means alone in want of natural fitness or training for his self-imposed task. There are cartloads of works written every year upon the forest in Russia, Spain, Italy, Germany, France, England. Some few are purely technical and important; more are simple compilations, and too often betray ab-

solute ignorance of their subject. In his 'Forests of England,' however, Mr. Brown at least makes no pretence to originality; and if the student of forest management sees nothing of practical value in these pages, the general reader and the antiquary will find much curious and heretofore inaccessible matter in regard to the ancient forests of that country and the laws by which they were governed.

Many of these forests were maintained or originally established as game preserves and hunting grounds for the sovereign. And it was not until the reign of Henry VIII. that the fact was recognized that the English forest had any place in the economy of the nation. In Chapter 17 of the thirty-fifth year of that reign, however, we find:

"'The King, our Sovereign, perceiving and right well knowing the great decay of timber and wood universally within the realm of England, and that unless a speedy remedy in that behalf be provided, there is a great and manifest likelihood of scarcity and lack, as well for building houses and ships as for firewood; it is enacted, that in a copse of underwood felled at twenty-four years' growth, there shall be left twelve standrells or store oaks on each acre, so many elm, ash, or beach, etc.; and that they be of such as are likely trees for timber, and such as have been left at former fellings, if there have been any left before; under pain of forfeiting of 3s. 4d. for every such standard not left, one-half to the crown, and the other to the party who may inform, and may choose to sue for it in any court of record, which might be done as in an action for debt. When cut under fourteen years' growth, the ground shall be enclosed or protected for four years, by the proprietor, or the lawful possessor of the wood, under pain for not enclosing for every rood so left unenclosed 3s. 4d. for every month it may remain so unenclosed. No calves are to be put in for two years after felling, and no other cattle for four years. Wood cut under fourteen to twenty-four years to be six years enclosed under the same penalty; after twenty-four years twelve trees to be left, under penalty of 6s. 8d. each tree, the moiety to the crown, and the informer may recover as before. The ground to be kept enclosed for seven years, under penalty of 3s. 4d. per rood per month as before.' And cutting trees on waste or common lands was to be punished by forfeiting 6s. 8d. for every tree so cut; but in the county of Cornwall, within two miles of the sea, trees might be felled when dead on the top."

The condition of the North American forests was early the subject of home legislation, for

"Ninth of Ann, chapter 17, is for the preservation of white and other pine trees growing in Her Majesty's colonies of New Hampshire, Massachusetts Bay and Province of Maine, Rhode Island, Providence Plantation, the New Narragansett Country or King's Province, and Connecticut, in New England, New York and New Jersey. No person within the said colonies shall presume to cut, sell, or destroy white or other sort of pine tree fit for masts, not being the property of any private person, such tree being the growth of twenty-four inches and upward at twelve inches from the ground, without the royal license for so doing, under the pain of forfeiting £100 for every such offence, one moiety to the crown and the other to the informer, who may recover the same in any court of record. The Surveyor-General to mark the trees to be cut with the broad arrow; but no other person than he or his deputy to make any mark, under the penalty of £5."

This law, however, was soon repealed. At an earlier day the colonists themselves perceived that forests, which must then have covered Massachusetts in one almost unbroken sheet, could not last forever; and the inhabitants of Groton, by town ordinance, endeavored to check, Dr. Greene tells us, that wasteful destruction of timber which, almost from the first settlement of the country, became a part of the American principle of rural management, and from which we are still suffering. We have become, through "inherited instinct," a race of forest destroyers. Nor is this surprising; the forest offered to the first settlers on the coast the greatest impediment to easy agriculture, and made every step taken toward the West slow and difficult. It is not, then, unnatural that the descendants of the men who, in the very luxuriance of the forest covering of the country, found the greatest bar to material prosperity, should be at least indifferent to forest protection, in spite of the changed conditions which surround them.

The above extracts will serve to give an idea of the information to be found in Mr. Brown's compilation, which is, by the way, injured by a want of chronological arrangement; this renders the description of the different forests somewhat confused and difficult to follow. The second of the works of which the titles are given above treats of an important subject, and we are certainly indebted to Mr. Brown for placing Colbert's famous ordinance, the basis of all subsequent forest legislation in Europe, in convenient reach of students unfamiliar with the technical French forest language. No such important contribution has before been made to English forest literature by our author, or "compiler and translator," as he calls himself. The ordinance is preceded by a sketch of the French forests from the time of the Gauls down to the reign of Louis XIV., translated from Cézanne's classical 'Étude sur les Torrents des Hautes-Alpes.' To this is added the best description we remember to have seen in English of the different methods of forest management adopted in France and other Continental countries, as well as a brief account of the various royal ordinances relating to the care of the woods and waters issued previous to that of 1669. Did space permit, it would be interesting to add a few extracts from Colbert's statutes. They would show that two centuries ago the woods of France were suffering from the same evils which to-day are gradually destroying those of North America, and that we have really learned nothing in forest management from the experience of other nations. Our civilization, as shown in our care of the forest, is in no way superior to the French civilization of Colbert's day. Indeed, as a nation, the French of the seventeenth century appreciated the value of their forests more clearly than we in America do to-day. Such a comparison does not argue well for the future prosperity of the United States.

Guesses at Purpose in Nature. By W. Powell James, M.A. London: Society for Promoting Christian Knowledge.

THIS is, in its general effect, a very exasperating book. "An outward-bound steamer was pursuing an unruffled course from Southampton to Barbadoes. The voyage had been one long pleasure-trip." Three of the passengers are an English vicar and his daughter and a young doctor who had just taken his degree in London. It is with these alone that the volume deals. One day Mr. Trevor, the Vicar, and Mr. Ross, the doctor, fall into conversation about the floating gulf-weed through which they are sailing, and then all at once our old friends Mr. Barlow and the good Harry of 'Sandford and Merton' are before us in the flesh.

After some facts of an instructive character have been communicated by the Vicar, we have the following, which will be recognized at a glance:

"*Ross.* This is really an interesting subject. Please give me any other information you have about the gulf-weed.

"*Vicar.* Certainly. Here is a page which I will read to you with pleasure. My daughter, you see, has the 'Voyage of the Sunbeam' to occupy her; and a charming book it is."

And shortly after:

"*Vicar.* But I make you this offer: If you care to hear them, I will read to you a connected series of lectures in which I have tried to state my views about design in the vegetable kingdom. I have been asked to deliver them in my friend's parish school-room in Grenada, and so have them in my trunk.

"*Ross.* I shall be much pleased to hear them, and, as the luncheon-bell is ringing, I shall claim the first this afternoon."

That is the gist of it. It may be fairly asked whether this is strictly honest in the author. Just as we are waiting anxiously for the appearance of some Tommy Merton who merits at least mild reproof, if not condign punishment, we are put off with a set of lectures to *us*. And when we find that the lectures are well arranged, and that the botanical statements are remarkable for accuracy, the feeling of disappointment gives way to that of exasperation. A writer who is so well informed, and who can state facts clearly and forcibly, should know better than to clothe his argument in such a puerile garb.

The fifth chapter brings us back from "the sweltering tropics to the cool green borderland of Wales in the mellow brightness of September." And glad enough they all seem to be; for, as Miss Trevor says, "the tropics are a mistake, except for a short visit." In Wales the lectures are resumed, and in fact are uninterruptedly kept up until Mr. Ross is summoned away "to appear before certain officials as candidate for a medical appointment," and the young man escapes from the lectures to his impending examination. At this hour he should have been left to himself and allowed to get into good trim for the officials, but no:

"By the time breakfast was over, and Mr. Ross's portmanteau packed, John had brought the Vicar's modest little trap round to the front. On taking leave for a time with deep regret of his agreeable hosts, Mr. Ross received from the Vicar a small manuscript roll to read on the way. On opening it in the train it proved to be the last and concluding lecture, and its perusal beguiled the time pleasantly until he reached the wild and dreary scene of his future labors."

The last sentence is unpardonably obscure. By "wild and dreary scene," are we to understand the encounter with the examiners?

When characters are introduced into an argumentative treatise, it is well to keep them up to the subject in hand, unless they are managed skilfully in by-play, after Mr. Ruskin's happy fashion in his 'Ethics of the Dust.' But what advantage can the author gain from such passages as this, which serves as an introduction to the last lecture on shipboard?

"*Vicar.* So, Sal, by this time to-morrow you will have crossed the Atlantic, and seen with your own eyes what your poor mother never saw.

"*Miss Trevor.* I shall be glad of it."

If the well-considered and well-stated scientific propositions in 'Guesses at Purpose' had been put by themselves, and not served up with these silly accompaniments, a good and useful book might have been the result. But as it is, the whole must be numbered with the goody-goodies.

BOOKS OF THE WEEK.

Geikie, Rev. C. Hours with the Bible. Vol. v. From Manasseh to Zedekiah and Contemporary Prophets. James Pott.
Greenough, Mrs. Richard. Mary Magdalen: a Poem. Boston: J. R. Osgood & Co. $1 50.
Hallett, Caroline M. The Upward Path: a Book for Boys. James Pott.
Halliwell-Phillips, J. O. Outlines of the Life of Shakespeare. 3d ed. London: Longmans, Green & Co.
Hammond, W. A. A Treatise on Insanity in its Medical Relations. D. Appleton & Co.
Hole, S. R. A Book About Roses: How to Grow and Show Them. Wm. S. Gottsberger.
Holloway, Laura C. Charlotte Brontë. Funk & Wagnalls. 15 cents.
Horati Flacci Opera. [Parchment edition.] D. Appleton & Co. $1 25.
Index to All the Reported Cases in Equity and Bankruptcy. Boston: Soule & Bugbee.
Jeaffreson, J. C. The Real Lord Byron. New Views of the Poet's Life. Boston: J. R. Osgood & Co. $1 50.
Joly, N. Man Before Metals. D. Appleton & Co.
Koolman, J. ten D. Wörterbuch der Ostfriesischen Sprache. Part 18. Norden: Hermann Braams.
Lacombe, P. The Growth of a People: a Short Study in French History. Henry Holt & Co. $1.
Lamb, C. Essays of Elia. With Introduction and Notes by Alfred Ainger. Macmillan & Co. $1 75.

The Nation.

NEW YORK THURSDAY, MAY 31, 1883.

The Week.

THE earnestness and zeal of Mr. John Jay in the advocacy of civil-service reform are so well known that, by appointing him as a member of the Civil-Service Commission in the place of Mr. Andrew D. White, who declined, Governor Cleveland has once more demonstrated his good faith in executing the civil-service law passed at the last session of the Legislature.

The London *Economist* returns to the examination of Mr. Goschen's speech on the Gold Famine, and shows that his figures, relating to the absorption of gold by Germany, Italy, and the United States, are erroneous to the extent of at least £60,000,000, and probably more. Mr. Goschen stated that this absorption or withdrawal of gold from its former and customary channels had amounted to £200,000,000. By a careful examination of details, the *Economist* shows that this absorption could not have been more than £139,000,000, and that even this sum includes £45,000,000 of new gold obtained from the mines of the United States during the period embraced in Mr. Goschen's calculations. This showing certainly detracts much from the terrors of Mr. Goschen's gold famine, and unless answered by him in some effective way must be looked upon as a humiliating exposure of carelessness on the part of a distinguished and really able man. One point not noticed by the *Economist* is this: Mr. Goschen's statistics and arguments are intended to show certain great disturbances in the natural distribution of gold, or what would have been its natural distribution but for the action of the three Governments named—viz., the introduction of a gold currency instead of silver in Germany, the resumption of specie payments in the United States, and resumption in Italy on a gold instead of a silver basis. In these transactions Germany, according to Mr. Goschen, absorbed £84,000,000, Italy £16,000,000, and the United States £100,000,000; total, £200,000,000. But he has overlooked or omitted to state the fact that the United States were formerly a gold-standard country, and that if we "absorbed" gold after we resumed specie payments, we only took back what we had previously parted with—that is, our share of the world's stock of gold; such share as our industry, trade, and resources demanded, and could rightfully win and hold in competition with all other gold-using countries.

The most important feature in the general financial and commercial situation during the past week or ten days has been the diminishing volume of foreign trade. The official report of the Bureau of Statistics for the month of April showed the total exports from the United States for that month to have been $60,860,588, against $77,657,160 in March and $57,952,376 in April, 1882. The total imports in April were $57,029,723, against $60,780,603 in March and $66,361,167 in April, 1882. The large decrease of nearly $17,000,000 in the exports as compared with March has been continued, and both the exports and imports for May will show a further decrease. Exports of breadstuffs have been retarded by the revival of speculation in wheat in New York and Chicago, which has advanced the price much above a shipping margin. The reports of the unfavorable condition of crops at the West have probably been exaggerated in the interest of speculators for higher prices. Speculation in petroleum has been very active during the past week, and prices were advanced from 104¼ to 109¼. Mining shares, also, after many months of inactivity, have recently become active, owing to the improved prospects of the Comstock mines; and all the most prominent Comstock mining stocks have advanced from 100 to 200 per cent. in the last week, while Chollar has advanced 450 per cent., and Sutro Tunnel 60 per cent. All these speculations have withdrawn a large amount of that class of capital from the railway share market, and this fact, together with the apprehension of rate-cutting wars in several quarters, has had a depressing effect upon railway stocks; and, though prices of stocks are much below the average of the past two years, there is as yet no indication of an improvement.

The Philadelphia *North American* attempts to answer the recent assertion of Mr. David A. Wells, that not a scintilla of evidence can be adduced to prove that money has ever been sent from England to influence political action in respect to the tariff in the United States, by referring to a statement in the London *Times* in 1844 to the effect that about £440,000 was subscribed in that year in England to circulate free-trade tracts in foreign countries. Now, as Cobden, Bright, and their associates had not succeeded in their work of converting England to their free-trade doctrines in that year, and as a proposed fund of £100,000 for the prosecution of their home work, which was started in 1843, had only amounted to £86,000 at the close of 1844 (see Cobden's Life), we should like the *North American* to be a little more definite in its references, and specifically mention the number and date of the London *Times* in 1844 containing the statement referred to. Will it also be kind enough to tell where some copies (even one copy) of any free-trade tract distributed in this country through the agency of this same fund can be seen? What library has them? If the *North American* cannot tell at once, can it tell in a week or so?

Governor Pattison sent a very sensible veto message to the Pennsylvania Legislature on Friday. For some years that body has passed a bill granting pensions to Pennsylvanians who served as soldiers in the Mexican war, but the bill has never reached the Statute Book, and will not reach it during the term of the present Governor. The message very well says that the war with Mexico, however brilliant and successful, was an affair not of the State of Pennsylvania, but of the United States. If pensions are to be given to the survivors of it, they should be paid by the Federal Government. But if the State had profited by the war in an exceptional way, such as would warrant a special recognition of military services in its behalf, the vetoed bill is curiously indiscriminate and reckless in its bounty. Rich survivors as well as poor, the able-bodied as well as the feeble and sick, are to get the same gratuity. Widows who have made opulent remarriages may draw their pensions as regularly as the relict who has worn her weeds with scrupulous fidelity. Although this measure is an unusually loose one of its kind, Governor Pattison has done something more than a local service in directing attention to the subject of pension legislation.

It might be supposed that women would be opposed to strikes, since the distress which results from enforced idleness is felt first and most severely in the homes of the laborers. At all events, hitherto women have not been unwilling to end these costly movements. In Illinois, however, three hundred of the wives and daughters of the striking miners on Monday appeared at the Rosehill mine, armed with clubs, and threatened to strip and drive through the town any man who tried to enter the mine. Some of the miners were prepared to resume work, but quailed before this formidable and unfamiliar expression of public opinion. The deputy sheriffs did the like, and "retreated in good order." Setting a guard upon this mine, the women marched to another, the Reinecke, seven miles distant, stopped the work which was going on, shut the proprietor up in a shanty, and refused to disperse until the militia turned out and fired over the heads of the crowd. This energetic proceeding furnishes a very alarming suggestion of what may happen if women ever do get their rights at the polls and elsewhere.

Judge Sharswood's death deprives the country of one of its best judges. He was made a judge before the elective system was introduced in Pennsylvania. He was continued on the bench for nearly forty years by successive elections, which he secured solely through his professional merits. Outside of Pennsylvania he was most widely known, perhaps, as the author of what was considered the best edition of Blackstone published in this century. He was an industrious, painstaking, and learned lawyer, and his career was often used by advocates of the elective system to show that it worked well. The argument was not worth much for this purpose, for the elective system generally works well at first, in the way of retaining conspicuously good judges on the bench. The old traditions of the bench make it impossible for the politicians to drive off good judges who

are already there. It is when the old judges are all dead or off the bench that the politicians begin to put in their effective work, and "fix" the bench, as they do in some cases in the interest of one party or the other, or put in noisy, incompetent lawyers who can pay for the position in one way or another. We must protest, by the way, against the constant misuse of the term "jurist" as applied to men like Judge Sharswood. A jurist, if anything more than a fine word for lawyer, means a lawyer who is mainly eminent through his familiarity with the theoretic side of the law. Savigny and Austin, for instance, were jurists in this sense. But Judge Sharswood made his reputation, as most good English and American judges have done, by having a wide practical acquaintance with cases, and knowing how to administer the law he found in them. He was not a "jurist," but an excellent lawyer and judge.

The Presbyterian General Assembly has been sitting at Saratoga this year, and receiving the reports of the various boards of the Church. One of these is the Board of Ministerial Relief, whose function is the raising of money to supplement the salaries of the ministers of poor congregations. The need of this is apparent from the fact that many hundred — some say 2,000 — Presbyterian churches are now to be found within the jurisdiction of the Assembly who cannot get ministers. This is, of course, partly due to a scarcity of ministers, but one reason why there is a scarcity of ministers is undoubtedly to be found in the fact that it is so difficult for ministers to obtain a decent livelihood. All the Protestant denominations in this country have somewhat the same story to tell. In the Catholic Church the difficulty is got over by the celibacy of the clergy, a single man being able to exist comfortably where a married man would starve or be driven to despair. Moreover, the Protestant denominations call for a much better educated clergy than the Catholics need, because they test them a good deal by their sermons. A priest does not need to preach at all, or may, in consideration of the vastly greater importance of his strictly sacerdotal functions, preach as badly as he pleases. The Protestant minister, among all but the Methodists, has to be a man of some scholarship, and a man who is anything of a scholar and has a wife needs more money than a very large number of churches can or will give. Moreover, the loss of the social consideration once enjoyed by Protestant ministers in this country needs to be compensated for in some way, and no way has as yet been suggested. The congregations treat them much less well and pay them no better than they ever did. In spite of all this, however, the Presbyterian Board of Ministerial Relief last year raised only $18,000, while the Board of Foreign Missions raised $648,000.

It appears that an attempt is now to be made to attack the evil of ministerial scarcity nearer to its source by the formation of a new Board, which is to devote itself to looking after the training and preparation of young men for the ministry—which means, we suppose, that it is to seek actively for recruits for the ministry, instead of waiting for them to be attracted by the inducements now held out by theological seminaries. Those who are about to engage in any such work would do well to read President Eliot's article on the training of ministers, in the last number of the Princeton *Review*. It contains a very valuable and impressive warning against the policy of bribing young men to enter the ministry by any pecuniary inducements of any kind, such as free education, or free board or lodging. Apart altogether from the question whether it is well for any man to choose the ministry as his calling under external suggestion or pressure, or, in fact, in obedience to any motive except his own strong sense of fitness, the effect of a system in any degree eleemosynary in attracting weak and weedy youths who are of but little value in any calling, and in repelling the strong and energetic, has to be seriously considered. No young man who is worth much likes to begin his career *in forma pauperis*. There never was a time when weak men were less fitted for the ministry than they are now, because there never has been a time when a minister's success and influence depended so much on his individual character and equipment.

The text of the decision of the Supreme Court of the United States in the Wall disbarment case has at length been printed. Mr. Wall, it will be recollected, was a member of the bar in the Southern District of Florida, and in the course of his practice had occasion to murder a prisoner who was in the custody of the Court, while the Judge was absent at dinner. The Judge, on returning from his noon-day meal, had his attention called to the matter by finding the late prisoner hanging by the neck from the limb of an oak tree directly in front of the Court-house door, "whereby," as he declares in his quaint, old-fashioned judicial way, "he became personally informed of the commission of a most serious offence against the laws." The murder was done by a little lynching party, in which Mr. Wall took an active part. It must be admitted that the matter was one which few judges, however well disposed to lynching in general, could have afforded to pass over without notice of any kind. The right of an attorney as such to murder a prisoner has never been recognized, even in communities where lynching is most common, and a little reflection will show that the consequences of the recognition of such a right would be serious. It would be difficult, for one thing, to confine it to murder. It would, in fact, probably have to be extended to all kinds of crime, and this would surround the administration of justice with many difficulties.

Perceiving all this, Judge Locke had Mr. Wall brought before him to show cause why he should not be disbarred as a murderer; and Mr. Wall, being unfortunately not able to say that he was innocent of the crime, was disbarred. Reflecting on his case, however, he became convinced that a great wrong had been done him, and applied to the Supreme Court for a mandamus, and the matter was solemnly argued in that tribunal, and resulted in a decision that Mr. Wall could not be reinstated. Before the opinion of the Court was published we ventured to suggest that Mr. Wall's theory of his rights as a lawyer must be founded on a new constitutional view of the subject—the idea that a lawyer was not a public officer charged with the duty of assisting in the administration of justice, but a plain business man, vested with a right to make money by practice, which could not be taken away from him summarily by a judge for murder any more than the right of a shoemaker to make shoes or a stock-broker to sell stock could be—that he was entitled to a jury trial under the Constitution of the United States. The report of the case shows that this view of the matter was seriously pressed upon the attention of the Supreme Court, Mr. Wall contending that his disbarment was a violation "of the fifth amendment, which forbids depriving any person of property" without due process of law. The Supreme Court, however, points out, in reply to this, that, even conceding that the business view of the matter is the correct one, in such case summary disbarment has from the earliest times been regarded as "due process of law." The Wall case, therefore, seems to settle the point that in the Federal courts a member of the bar who murders a prisoner when the judge goes out for dinner, and leaves the body hanging in front of the court-house door, and, when charged with the offence, neglects even to deny it, is not protected from disbarment by the fifth amendment to the Constitution. Lawyers and candidates for admission to the bar in Florida had better not overlook this in future.

A writer in the *Sun*, who employs the signature of "Derry," makes a spirited appeal to his fellow-citizens of Irish extraction to have the boycotting clause of the Irish National League against British goods carried into effect. One year's thorough operation of this pledge, he thinks, "would break the middle-class power in the British Parliament, which now supports the landlords in their resistance to measures of justice to Ireland." It is very much to be desired that any power which opposes justice to Ireland should be broken, but the inadequacy of the measure devised by the National League to break it is as humorous as any Irish bull ever turned loose for the gayety of nations. The pledge requires the signers to refrain until July, 1884, from purchasing any article of British manufacture, "or any article the materials of which are either in whole or in part the product of British labor." Now, printing paper is composed in part of bleaching powders which are a product of British industry, and it is altogether probable that the *Sun*, which admits this ringing appeal to its columns, is printed on paper which has been treated with the detested chemical. It is probable that the blankets on the paper machine were made in England, and also those on the *Sun's* printing machines, and that these machines themselves were composed in whole or in part of British steel, and that the tin and antimony in its types and type

metal were British contrivances also. In order to make the pledge of any value whatever, the League ought to appoint a committee to decide the numerous questions likely to arise as to the origin of goods and materials of all kinds found in the wholesale and retail markets, and exact a further pledge that no member shall buy anything until assured that it is entirely clear of the British taint.

The *Times* has a despatch from Ottawa, announcing the discovery of an "extraordinary organization" in the village of Markam, Ontario. It consists of a number of local boys, who have "formed themselves into a band" for purposes of burglary. Their fall was caused, of course, by "yellow-back literature." They are all sons of respectable—though wealthy — Canadians; they had a "cave," close by a graveyard, where they met, and had already "burglarized" the store of the father of a member of the gang. Their mode of operating was simplicity itself. When bed-time came they disarmed suspicion by going to bed just like any other boys; but as soon as their parents were asleep, they would stealthily arise, dress, and arm themselves, and repair to the cave, graveyard, or other point of meeting. One of these youths was, it is said, "employed in a banker's office"—we presume in a capacity not unconnected with the duty of taking down and putting up the shutters—and he was discovered by the banker's wife "hiding some of the booty." Owing to the "high social position" of the offenders, a compromise was effected, so that there will be no criminal proceedings. Altogether the story closely resembles that of the gang of Connecticut boy-burglars whose business was broken up a few weeks ago. The case shows that boys, if not carefully looked after by their parents, will go astray, no matter what the form of government is under which they live. If the Canadians supposed that their monarchy was any protection against boys, they are now undeceived. The settlement of the matter, too, by a "compromise," just as if the boys were adult New York or Washington politicians, is very interesting as showing what Mr. Freeman calls the essential unity of the race.

The story that Oscar Wilde, having put by some $50,000, has cut off his hair, and "gone out of the business," looks as if there must be a belief in some quarters that he merely took up the cause of reform to make money out of it. If he did, what an enormous relief it must be to him, after his hard-working æsthetic career, to be able to settle down to quiet, real life again. Popular favorites like Tug Wilson and Sullivan always sigh for the day when they can gratify their simple tastes by ceasing to pound and knock each other out, and can set up a bar-room or a "public"; but the relief which a champion feels in retiring with his gate-money can be nothing to the joy that an æsthete would know when the time came that he could cut off his hair, change his clothes, and stop talking with religious fervor about the spiritual significance of dress, and lecturing with earnestness on the depravity of stoves and the moral worth of the felt hat. Fifty thousand dollars seems really a small sum in these days to retire on, but the relief in getting out of the business must be a great temptation to retire early.

The Republican State Convention of Kentucky on Wednesday adopted a platform resolution in favor of "an adjustment of the tariff that will not only provide a revenue sufficient to defray the expenses of the Government, but afford just and reasonable protection to the industrial classes of our country without being oppressive to the agricultural and other interests of our people." Those who have experience in the interpretation of platforms will agree that the difference between this and the platform adopted by the Democrats of Kentucky is not sufficient to bring on a campaign between the two parties on the distinct issue of the tariff. If the Democrats should be accused of being free-traders, they will answer that they did not say anything about the matter in their platform, but smothered an unequivocal revenue-reform resolution in committee, for the very reason that they did not want to commit themselves in favor of free trade or anything like it. And if the Republicans should be accused of favoring monopoly in the shape of high protective tariffs, their answer will be that they favor protection to the industrial interests of the country only so far as that protection is "not oppressive to the agricultural and other interests of our people." And the Kentucky Democrats, according to present appearances, will maintain that this expresses their sentiments too.

Mr. Joseph Cook, who is now in the West on a lecturing tour, is reported by telegraph as having had a scrimmage of a very painful character with a commercial traveller, commonly called a "drummer," named Gill, at Monmouth, Ill. The origin of the affair is, like that of most historic events, involved in obscurity. The drummer's story is that he takes a piece of raw meat for his supper—a peculiar but certainly harmless practice—and that Mr. Cook, who was at the table, commented on it with the force and asperity with which the frequenters of the Boston Monday Lectures are familiar, and this led to recrimination and threats of violence on the part of Gill. Mr. Cook's story is somewhat different. He maintains that his original remarks were drawn forth, not by the rawness of Gill's meat, but by his behavior, and that he referred to the meat simply by way of enforcing and illustrating his criticism. There is a substantial agreement between the parties as to the conclusion of the affair. Gill threatened to see Mr. Cook "later," by which Mr. Cook understood, with a pistol, and therefore asked for police protection, but maintained, at the same time, that he could "thrash five such men" if all were unarmed. We cannot help feeling that this is one of the rhetorical exaggerations for which the Boston Monday Lectureship has become famous. Three is as many as the most powerful pugilist can thrash at a time, because he can, with a little agility, keep three in front of him; but there is nobody, whether pugilist or lecturer, who can contend with three in front and two assailing him in the rear. Gill's behavior was probably bad. His language was undoubtedly profane, but Mr. Cook put himself in the wrong by alluding to the rawness of his meat. The food on a man's plate has been held in every age and clime sacred from observation or hostile criticism by bystanders, and Mr. Cook's forgetfulness of this shows how imperfect his studies in the field of minor morals have been.

The text of the Pope's letter to the Irish bishops certainly hardly accounts for the rejoicings with which it was received by a portion of the English press. It is full of ambiguous phrases, which leave plenty of means of escape for those who wish to avoid its condemnation without withdrawing from the agitation. Parnell himself is not condemned, but some of his followers are accused of having behaved improperly, which is something that probably nobody would deny; but then it is true of all popular movements. So also the circular acknowledges the right of the Irish "to seek for the redress of their grievances and strive for their rights," but not by illegal means, which is what the chief Land Leaguers have frequently said. Then again, the clergy are to curb the excited feelings of the multitude, "and by timely exhortations to recall them to the justice and moderation which are necessary in all things," but it would be difficult for them to do this effectively if they totally abstained from participation in political meetings. Perhaps the most direct prohibition in the letter is that which forbids the clergy to take part in the collection of money which is likely to "arouse hatred and dissension" or to expose distinguished men to insult, and in the making of which no "censure is passed against crimes and murders." It is easy to see, however, that prohibitions of this kind, which are all conditional, can be readily expounded by the bishop in a way to adapt them completely to the temper in which the Irish laity receives them. If, as now seems likely, they produce widespread defiance, they will undoubtedly be explained in a way that will save the influence of the clergy, and it is even possible that the Pope himself will assist in the process.

M. Laboulaye, the news of whose death came on Friday, was first made known to the American public during the war, as one of the few writers of prominence in Europe who ventured to espouse the American cause when its prospects looked very dark. His books and articles, as well as those of Count Gasparin, were received during that period in this country with an eagerness and welcome of which the generation which has since grown up remembers nothing, and perhaps would, on looking at them now, find it difficult to understand, in spite of the undeniable ability of nearly everything he wrote. The truth is that his forte there lay mainly in his perspicacity, and reputation secured in this way does not long survive the realization of a man's predictions —things seem so easy to foresee after they have come to pass. But his sagacity during the American war really was one of his highest titles to fame, in spite of the excellence of his general literary work, for it was proof of statesmanship. He understood the conflict as very few of his countrymen did, and foresaw its issue as still fewer of them did.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 23, to TUESDAY, May 29, 1883, inclusive.]

DOMESTIC.

THE event of the week was the formal opening, on Thursday, of the great suspension bridge, across the East River, uniting New York and Brooklyn. In Brooklyn the day was made a holiday, and business in New York was partly suspended. Both cities were decorated, the former in great profusion. In New York the exercises of the day began at 12:35 o'clock with a procession, consisting of President Arthur, Mayor Edson, and other dignitaries, under the escort of the Seventh Regiment, which left the Fifth Avenue Hotel and marched to the bridge. A review was held in City Hall Park. When the President and party marched upon the bridge, salutes were fired and church bells rang. When the Brooklyn tower was reached a similar procession from that city was met. The exercises of the day were then begun at the Brooklyn approach. After music, and a prayer by Bishop Littlejohn, William C. Kingsley, on behalf of the Bridge Trustees, delivered the presentation speech to the chief magistrates of the two cities. Mayor Low, of Brooklyn, then delivered an address of acceptance, on behalf of his city, and he was followed by Mayor Edson, on behalf of New York. Abram S. Hewitt, orator of the day, for the city of New York, delivered a long and interesting address. The Rev. Dr. Storrs, the orator for Brooklyn, followed with an eloquent speech. The ceremonies were concluded with music. Great crowds were present everywhere throughout the day. In the evening, between 8 and 9 o'clock, a splendid display of fireworks was made from the tops of the two towers and the centre of the bridge. This was witnessed by thousands of people from the neighboring streets, from hundreds of illuminated boats which dotted the river, and from house-tops all over the city. One of the events of the day was a reception at the house, in Brooklyn, of Col. W. A. Roebling, the invalid Chief Engineer, who has directed the great work since his father's death. About 1,000 guests attended, including the President. A reception was given to President Arthur and Governor Cleveland in the Brooklyn Academy of Music at 9 o'clock in the evening. The bridge was thrown open to the public at midnight, and thousands of people went across in the early hours of the morning. All day Friday the crowds continued to cross, and for several days the regular traffic was very great. The ferry companies noted a great falling off in receipts.

President Arthur has given an order that the $100,000 fund for the prevention of yellow fever shall be disbursed under the direction of the Secretary of the Treasury. This is a precautionary measure. It is believed that if the yellow fever visits the country this season, it will first appear along the Rio Grande.

The saving to the banks from the recent decision of the Attorney-General that no taxes are due since January 1 last is estimated at $3,000,000.

Civil-Service Commissioner Gregory and Joseph H. Blackfan, Superintendent of the Foreign Mail Department, established a local Board of Examiners for the Albany Post-office on Thursday.

The State Department at Washington on Friday night received a despatch from Minister Cornelius A. Logan, at Santiago, Chili, asserting that a treaty of peace had finally been signed between Chili and Peru, General Iglesias acting on behalf of the latter country. The terms of the treaty are the same as those lately announced.

Secretary Chandler, of the Navy, in a reply to ex-Congressman Dezendorf, of Virginia, in regard to Mahone's abuse of patronage in that State, says: "The tone of your letter, which you have made public, indicates that you take a very strong interest in the reformation of the Navy-yard at Norfolk. That you should, although now for the first time, invite the attention of the Department and the public to such abuses, after you have ceased to expect any personal benefit from the management of the yard, is a most commendable performance of public duty by a private citizen." Mr. Dezendorf, in reply to these insinuations, says: "Referring to the last paragraph of your letter, I am constrained to say your memory needs 'readjustment.' From time to time during my term in Congress, I had the pleasure of calling your attention to sundry abuses in the Navy-yard and to the many wrongs being perpetrated on Republicans in Virginia, to which, I regret to say, you turned a deaf ear, as did the President, being, as I am bound to believe, committed to the support of Senator Mahone by an arrangement which could not be violated."

Local elections held in Virginia on Thursday were not encouraging to Mahone. Seven counties which had previously given Readjuster majorities went Democratic. The battle-ground was Norfolk County, where ex-Congressman Dezendorf heads the opposition. The latter was defeated, but others on his ticket were elected. Readjuster gains, however, are reported in the southwestern part of the State. The Bourbons showed lack of organization.

Senator Anthony, of Rhode Island, is convalescent.

Governor Cleveland on Wednesday appointed John Jay, of New York, to be Civil-Service Commissioner, in place of Andrew D. White, declined.

Information was received on Friday that General Crook had an engagement with a large body of Indians near Guacanope, in the Sierra Madre Mountains, about ten days ago. He had sent forward some of his San Carlos scouts, who were surprised by the hostiles and driven back to the main body. A general advance was then made by the entire force, and the hostiles were driven from their intrenched position with a loss of fifty, when the remainder broke and fled. General Crook immediately started in pursuit. There have been rumors of subsequent disaster to General Crook, but they are not credited. The reports of the battle were confirmed on Tuesday.

The National Exposition of Railway Appliances was opened in Chicago on Thursday evening in the presence of 5,000 people.

Mr. Ingersoll continued his argument in the Star-route trial at Washington on Wednesday, Thursday, and Friday, and attracted large crowds to the court-room. His analysis of Rerdell's testimony was especially severe. Mr. Merrick began the closing argument for the Government on Monday and continued it on Tuesday.

The Presbyterian General Assembly continued its sessions throughout the week at Saratoga. On Friday the Committee on Temperance recommended the putting down of the rum traffic by the strong arm of the law and by constitutional enactment. They did not, however, recommend pastors and church members to insist on prohibition at all times and seasons, but on the enforcement, with diligence and impartiality, of existing laws for the suppression of the liquor traffic. The report was adopted on Tuesday.

The fifty-fourth anniversary of the Brooklyn Sunday-School Union was held on Wednesday. The exercises were as successful as in former years. It is said that more than 50,000 children were in line in the various processions.

The Harvard College Overseers on Wednesday postponed the award of degrees at Commencement, including a decision of the question of granting to the Governor the degree of LL.D., until May 31.

The Trustees of Williams College, Williamstown, Mass., received on Wednesday a check for $50,000 from A. D. Germen, of Albany, to found a Professorship of Natural Theology in memory of his son, who was a student in Williams College.

Patrick Joseph Percy Tynan, the alleged No. 1 of the Irish Invincibles, invited a number of reporters on Wednesday to his house, No. 191 West Baltic Street, Brooklyn. After the ceremony of introduction, Mr. Tynan said: "I regret very much to say, after consultation with my counsel, General Pryor, that I most respectfully decline to be interviewed about myself or Ireland."

The steamer *Pilot* blew up near Lakeville, Cal., on Friday. Eight were killed, seven wounded, and ten are missing. The cause was insufficient water in the boiler.

Strikers having taken possession of the mines around Belleville, Ill., the militia were ordered there on Monday. On their arrival near Belleville they were fired upon. The fire was returned. One man was killed and a number injured. Twenty-six prisoners were taken. Quiet was restored on Tuesday.

A tornado in Indiana on Monday, near Clay City, killed six persons and injured twelve. Other places in central Indiana were visited by the storm, which was very destructive.

The annual parade of the New York Coaching Club took place in this city on Saturday afternoon. Eleven coaches were in line.

Ex-Chief-Justice George Sharswood, of Pennsylvania, died at his residence in Philadelphia at 6:45 o'clock on Monday morning, of apoplexy. He had been unconscious since Friday. He was seventy-three years of age. His career as a judge covered thirty-seven years and nine months. He was on the Supreme bench of Pennsylvania from 1860 to 1882. As a writer on legal subjects he attained great eminence. His edition of 'Blackstone's Commentaries,' first published in 1859, is considered one of the best editions of that work ever published.

Col. Frank E. Howe, formerly well known as the Pension Agent in New York, and a once prominent member of the Union League Club, died suddenly on Wednesday in Washington. He was born in Dorchester, Mass., in 1829. At the opening of the Rebellion he became widely known for his exertions in caring for the soldiers on their way to the front.

FOREIGN.

The ceremony of blessing the imperial flag was performed in the Kremlin, at Moscow, on Wednesday, in the presence of the Emperor, the Empress, the imperial family, and the Emperor's military household. The Czar on that day sent a telegram to Emperor William, of Germany, notifying him of his safe entry into Moscow, and in return received the latter's congratulations. On Thursday the imperial proclamation, formally announcing that the coronation of the Czar would take place on Sunday, was issued by heralds from a circular platform before the Kremlin. The Emperor and Empress remained in semi-seclusion until that day. The imperial insignia were conveyed to the throne room on Saturday in preparation for the coronation.

The coronation ceremonies were brilliantly carried out on Sunday. The day was begun with the ringing of bells and the salutes of artillery at 7 o'clock. About a half-hour later the dignitaries of the realm who were to take part in the ceremony assembled in the Cathedral of the Holy Assumption, in the Kremlin. By 8:30 o'clock the Cathedral was filled with officials and nobles of the highest rank in Russia. The appearance of the interior was magnificent. In the centre, between the four great columns, was a scarlet canopy with a double-headed eagle and emblazonings and plumes in black, yellow, and white. Under this stood the throne and before it a table for the regalia. After a short time the shouts of the crowd and the booming

of artillery announced the arrival of the imperial procession. The Archbishop of Moscow welcomed the Emperor and Empress at the door of the Cathedral. They entered the church, and, after kissing the images, took seats on the throne. The Emperor then declared his faith to the Metropolitan of Novgorod. A liturgy followed with impressive music. The Emperor then received from the Archbishops the mantle of imperial purple and placed it on his shoulders. The crown was taken from the table by the official appointed for the purpose and carried on a velvet cushion to the Metropolitan of Novgorod, who in turn presented it to the Emperor. The latter took it in his hands and placed it upon his head, while the Archbishop repeated: "In the name of the Father, Son, and Holy Ghost, Amen." Then the Archbishop, at the Emperor's command, gave him the sceptre and orb, one into his right hand, the other into his left. The Emperor then crowned the Empress. A prayer followed, and then all the bells were set ringing, and the cannon fired 101 rounds. After a further liturgy the Emperor and Empress were anointed, and received the sacrament. After concluding their religious duties the Emperor and Empress returned to the palace, accompanied by the procession as before. On the steps the Czar turned and bowed his acknowledgments of the enthusiastic cheers of the spectators. In the afternoon the state banquet was given in the palace banqueting hall, which was magnificently decorated and adorned with a superb display of plate exhibited on buffets. The Czar's manifesto was issued at 6 o'clock in the evening. It granted amnesty to all the Polish exiles who are willing to submit to police supervision for a period of two years. No other political prisoners were pardoned. It granted the remission of a large number of penalties for non-political offences, fines, and arrears of taxes due from the poorer classes. The cost of the coronation is estimated at $10,000,000. On Monday an imperial rescript was issued by the Czar conferring many honors on his friends and advisers.

An official denial was published at St. Petersburg, on Wednesday, of the report that an explosion had taken place in the Czar's dressing-room at St. Petersburg before his departure for Moscow.

There were anti-Jewish riots in Rostoff, Russia, last week.

Paris was startled on Saturday by an official telegram from Tonquin asserting that Captain Rivière, commander of the French forces in Tonquin, had been killed while making a sortie from Fort Hanoi, and that Captain Devillers had been dangerously wounded. General Bouet has been ordered from Saigon to take the place of Captain Rivière. Twenty-six men were killed and fifty-one wounded in the sortie. Hanoi is surrounded by a large force of Anamites. French reinforcements have been ordered to the seat of war. The credit for the Tonquin expedition was immediately voted unanimously in the French Chamber of Deputies. In China war preparations are also progressing. Li Hung Chang was summoned to take command of the Chinese troops in the provinces bordering on Tonquin, and he arrived at Shanghai on Monday, on his way to his new post to begin operations. It is believed that the French Minister at Pekin and the Chinese Minister at Paris will soon receive their passports. On Monday news was received from China that 6,000 troops, armed in the manner of European troops, have already arrived at the Tonquin frontier, and that the feeling throughout China is intensely hostile to the French.

News has been received in Paris from Madagascar that a French detachment landed and carried several military posts which had been erected by the Hovas on Sakalava territory in defiance of French rights. It is also said that Admiral Pierre has occupied the custom-house at Majunga, thus securing the road and waterway leading to Tananarivo, the capital of the island. The Malagasy Embassy in London were greatly surprised at the news, and asserted that the natives would fight the French to the death.

The Suez Canal Company, of Paris, have announced that they propose to begin the cutting of a parallel canal across the isthmus forthwith, and have applied to the English Government for their support in obtaining the necessary concession of land from the Khedive.

M. Édouard René Lefebvre Laboulaye, the well-known French jurist, died on Friday, at the age of seventy-two. He first made himself known by a work entitled 'History of the Law Relative to Landed Property in Europe.' He became a great student of American political history and wrote much in regard to it. During the civil war his writings in the *Débats* did much to influence French opinion in favor of the Northern States. In French politics he was a moderate Republican.

Abd-el-Kader, the famous Algerine chief, died in Damascus on Saturday, in the seventy-sixth year of his age. He was an able opponent of the French, but was defeated in 1843. For many years he was imprisoned, but lately has lived at Damascus on a French pension.

The Cologne (Germany) *Gazette* has published an article which attracts much attention, pointing out that Germany, Austria, and Italy can together muster 1,318 battalions of infantry, 740 squadrons of cavalry, and 4,464 field guns, while the forces of France and Russia together amount to 1,339 battalions of infantry, 620 squadrons of cavalry, and 4,840 field guns; but, it says, the last two states can only operate with divided forces. The tripartite alliance can thus outweigh the whole remainder of Europe.

It is announced in Berlin that Prince Bismarck will visit the Emperor William during the stay of the latter at Gastein, and that if the Emperor Francis Joseph goes to Gastein, Count Kálnoky, the Austro-Hungarian Minister of Foreign Affairs, will accompany him. It is rumored that King Humbert and Signor Mancini, the Italian Foreign Minister, may also visit Gastein during the Emperor William's stay there.

The German Reichstag on Friday, when considering the Workmen's Sick Fund Bill on its third reading, rejected, by a vote of 136 to 134, an amendment introduced on the second reading, which the Government opposed, extending the operation of the measure to agricultural and forest laborers. It was reported in Berlin on Monday that Prince Bismarck contemplates the radical remodelling of the entire Constitution of the Empire, abolishing the Reichstag.

The Vatican, in its reply to the note of Prussia, complains that while its request for explanations relative to the jurisdiction of bishops and the training of priests was unanswered, Prussia suddenly made new demands. The Vatican declines to consider any new proposals until an agreement has been reached on matters first mooted.

Prof. Gabriel Gustav Valentin, the noted German physiologist, died on Monday at the age of seventy-three.

The Swedish Ministry have resigned in consequence of their defeat in the Diet on the Army Organization Bill.

Professor Nordenskjöld's Greenland Exploring Expedition sailed from Gothenburg, Sweden, on Thursday, on board the *Sophia*.

Mr. John Dillon, in a letter to the Dublin *Freeman's Journal*, advises the Irish people to make the Parnell fund such a success that the Pope will realize how grievously he has been deceived by the English Government and the miserable pauper landlords who infest Rome. The belief is current in Montreal, Canada, that, notwithstanding the action of the clergy, the local Irish societies will form themselves into League branches. In the British House of Commons on Thursday, Lord E. Fitzmaurice, Under Foreign Secretary, said he had already stated on the 19th of March that the Government had never entertained a scheme to establish a British resident at the Vatican, and Mr. Errington had not since been a channel of communication between the Foreign Office and the Vatican. The Pope's circular to the Irish clergy, he said, had not been issued at the request of the British Government. Mr. Gladstone said that Earl Granville's letter of last year, recommending Mr. Errington to the Vatican as a gentleman of honor and intelligence, would remain in force so long as Mr. Errington answered that description. Archbishop Croke, preaching from his own pulpit at Thurles, Ireland, exhorted his people not to speak a word of condemnation of the Pope, who was their best friend. The Pope, it is said, is satisfied with the result of his circular.

The police of Tralee, Ireland, on Wednesday, seized the plant of the Kerry *Sentinel* and prevented the publication of that paper, which is the property of Mr. Harrington, member of Parliament for Westmeath. The cause of the seizure, it is supposed, was the publication of a notice in the *Sentinel* asking persons desirous of joining the Invincibles to attend a meeting. The publication was resumed on Saturday.

John Behan, the correspondent of the *Irish World*, of New York, for the West Clare (Ireland) district, has been arrested on a charge of intimidating the driver of a mail wagon, whom he called a spy and an informer.

Only one agrarian outrage against the person occurred in Ireland during the month of April.

Michael Fagan, who was convicted of the murder of Mr. Burke in Phœnix Park on the 6th of May last, was hanged in Kilmainham Jail on Monday morning. He made no statement.

Mr. Kennard, at the desire of the leaders of the British Tory party, has decided to abandon for the present session his motion offered in the House of Commons in relation to the disposition of the surplus of the *Alabama* award. It is thought that the question can be raised more conveniently at the expiration of the Fishery treaty in 1884.

At a meeting of the Liberal party in London on Tuesday, Mr. Gladstone announced that it would be necessary to drop for the present session the Government's bill for remodelling the corporation of the city of London. He said he could not expect that this would be a brilliant session, but he thought it would be a good and not discreditable one.

Signor Savelli succeeds Signor Zanardelli as Italian Minister of Justice and Ecclesiastical Affairs, and Signor Genala succeeds Signor Baccarini as Minister of Public Works.

Phillippe François Xavier Théodore Heuschling, the Belgian writer on political economy, is dead, at the age of eighty-one.

The Dominion of Canada Parliament was finally prorogued by the Governor-General on Friday afternoon. He congratulated the country and its legislators on the general prospects. Regarding the settlement of disputes between the Dominion Government and the province of British Columbia, the Dominion Government have agreed to give a money grant to the province amounting to $1,000,000, of which $750,000 is to indemnify the province for the loss sustained in carrying out the terms of the confederation and for the delay in building the Canadian Pacific Railway.

The bombardment of Miragoane, Hayti, has begun, and is making havoc among the insurgents. The rest of the republic is reported quiet. The public believe that the real state of affairs is unfavorable. Volunteers are swelling the ranks of the Government army.

BUTLER AND HARVARD COLLEGE.

HARVARD UNIVERSITY finds itself in a position of considerable difficulty with regard to the customary bestowal of the degree of LL.D. on the present Governor of the Commonwealth. The connection of Harvard College with the State Government has always been close—so close, indeed, that it might almost be called a State institution. It was in reality founded by the State, and endowments or donations from the State Treasury were made to it down to 1814. From the adoption of the State Constitution, too, in 1780, down to 1865, the Board of Overseers was composed in part of members of the Council and State Senate; so that it is easy to see how it became the custom for the Governor to go out in a sort of state from Boston on Commencement Day, to be entertained at the Commencement dinner and receive from the College the honorary degree of Doctor of Laws.

There has, of course, been a great variety in the Governors thus honored. There have been men among them of high attainments and men of no attainments at all; scions of what Bostonians call their "patrician families," and men who began life in strange cities as poor boys with their baggage tied up in a pocket handkerchief. But it can be safely said that the Governors of Massachusetts have been until now, without exception, men of good repute in the State, honored and trusted by their neighbors for their truthfulness, integrity, and public spirit. So that it is not strictly correct to say that the honorary degree hitherto bestowed on the Governor has been simply a tribute of respect from the College to the highest office in the State. It has been more than this. It has been an acknowledgment by the College that the holder of the office, even if not wise or learned or accomplished or polished, was a worthy citizen, whose personal career, however inconspicuous, was free from reproach, and who had rendered services to the Commonwealth which fairly entitled him to some public mark of respect and confidence, and whom no father needed to be ashamed of offering to his son as an example.

Now, the difficulty the College has to encounter in Butler's case is that he constitutes an exception to this rule. If he gets the degree, he will furnish the first case on record in which the degree has been bestowed on a Governor between whom and his office the College authorities have to make a distinction, in order to save their own credit, and in order to be able to look their young men in the face when charged with having prostituted the College honors. In no other case has the Corporation or its friends had to plead that though the man was unworthy, the Governor had to be treated with a show of respect. In other words, Butler will be the first person, on whom this honorary degree has been bestowed, who has been pronounced, by the general verdict of his neighbors, untruthful, tricky, and dishonest, both professionally and politically. In short, if the standards either of private or political ethics which Harvard College holds up to its undergraduates be not simply a mockery and a snare, Butler, as described during the last thirty years by nearly every organ of opinion in Massachusetts, is one of the very last men in the State whom a great school of learning and morals, and we will add of religion, ought to single out for an unprecedented mark of respect—for unprecedented it is.

The distinction which is made between the man and the office in this case, as in most others in which questions of morality are involved, is a sorry one at best. Even if it have any value at all, however, it imposes on an institution like Harvard College no duty towards Butler but the offer of the ordinary marks of external deference due to every magistrate. It does not and cannot impose on it the duty of bestowing on him the highest honor in its gift —the one it offers, and the only one it has to offer, to genius, to learning, to piety, to public spirit, to patriotism, to great orators and poets, to great philanthropists, and scholars, and soldiers. It cannot possibly bestow this on a Governor whom it believes to be a knave, in such a way that the Governor will get the whole of it and the knave get none. What makes the situation all the worse is, that Butler has not for thirty years lost an opportunity of publicly testifying his contempt for the College and all its belongings, and that there is much reason to fear that he will make the bestowal of the degree now the occasion for a fresh expression of this contempt. All his doings since he became Governor show that he is quite capable of marking Commencement Day by a disgraceful display of his scorn of everything the College most honors.

Those who are disposed to give him the degree on grounds of expediency will do well to consider this. There is a higher and lower expediency in this as in other things. To maintain that a conspicuous refusal to give Butler its chief mark of respect, on grounds which every one knows to be moral grounds, will seriously damage the College in the eyes of the people of the State, and so bring upon it material loss, is to maintain that the people have undergone a change so radical, both in mind and manners, as to make Massachusetts unfit to contain a university at all. For a university which practically tells its students that it is better to condone baseness than lose money certainly forfeits much of its value to a civilized community.

The whole matter is full of suggestion as to the practice of bestowing honorary degrees on anybody for anything but services to learning. The practice of giving them to high State officers and to soldiers has been borrowed from England, but it ought never to have found a footing here. Making the Duke of Wellington a Doctor of Civil Law because he won the battle of Waterloo was a ridiculous process, but not so ridiculous as making B. F. Butler a Doctor of Laws because he was elected Governor of Massachusetts would be. If his case puts an end to this abuse of university honors, he will not have lived in vain.

MORALITY AMONG ECONOMISTS.

THERE is something about the tariff, as about horsedealing, which seems injurious to the morality of even the best men who engage in the discussion of it, and the reason why, we take it, is the same in both cases. Horsedealing tempts men into fraud and deception because the facts of a horse's condition are so difficult to discover. This is simply another way of saying that the prospect of impunity promotes lying, as well as other vices. The facts of the tariff controversy are very hard to get at, and are really within the reach only of a few, and the mere collection of them requires a good deal of skill and acumen. Consequently the public is rarely in a position to judge which side has the true and reliable facts, and is apt to be bewildered rather than enlightened by the controversy. We do not mean to say that the free-traders are in this matter above reproach, but we do mean to say that it is seldom that they have a personal interest in the result. Most English manufacturers are free-traders, it is true, but the great bulk of free-traders everywhere are persons whose interest in free trade is simply that of the great body of consumers. They want simply to escape taxation, while the leading protectionists expect to put some of the taxes in their own pockets, and have on their hands the arduous job of persuading the taxpayers that this will be a good thing for them also, and that the higher their taxes are the better off they will be. The protectionist temptation, therefore, to tell lies is, we think it must be admitted, much stronger than the free-trade temptation, and we are consequently not discriminating unfairly when we say that more protectionists than free-traders succumb to it. The protectionists are, in fact, very much in this matter in the position of the man who is trying to sell the horse, and the free-traders in that of the man who proposes to buy him. In all such cases the vender undoubtedly makes grosser departures from accuracy in praising the animal than the vendee in running him down; and it was, in fact, to stimulate the vendee's vigilance that the common law laid down the great and familiar rule of *caveat emptor*.

We have been led into these remarks by a recent letter in the *Tribune* from the Rev. Cyrus Hamlin, the President of the not very famous University of Middlebury, Vt. Why Mr. Hamlin should have rushed into the tariff controversy, it is hard to see, as he has, as far as is known, no special equipment for it, and has spent thirty years of his life in Turkey. But rush into it he did a little while ago in a letter to the *Journal* of the American Agricultural Association, in which he fell a victim to the worst of the temptations by which protectionist controversialists are assailed—the temptation to tell stories about the use of British gold by the Cobden Club to spread free-trade doctrines in the United States and corrupt members of Congress. Mr. Hamlin's particular story was that "the Cobden Club had expended vast sums during the last twelve or fifteen years to incite our farmers against the Government and the manufacturers." There was a certain absurdity in this story which is, perhaps, not unnatural on the part of a gentleman who, having passed the flower of his years in Turkey, is revealing an attempt to "incite the American farmers against the Government," which they themselves are. This, however, was the slip of a writer who was long used to thinking of "the Government" as a popular enemy. The important

point is that Mr. Hamlin announced the expenditure of vast sums by a certain organization on a particular object. If Mr. Hamlin had been longer in the country he would have been warned away from this class of statement by Dorsey's fate. When Dorsey was Secretary of the Republican National Committee in 1880, he concocted, or circulated, a pamphlet for campaign purposes pretending to give extracts from a publication of "the Free-Trade Club of London" which was never issued, there being no such club in existence. When this was exposed, as it was promptly, he publicly denied that any such pamphlet had ever been circulated by the Republican Committee. The falsehood of this also was soon exposed, and then he relapsed into dead silence. But all this while he was robbing the Government, and is now in the hands of the law. One lie, as we see, entailed the telling of another, and when any one else tells lies about the Cobden or other clubs, may not people ask, What other things of this kind is he doing?

Mr. D. A. Wells has exposed Mr. Hamlin's statement by showing that the income of the Cobden Club never exceeded in any one year $22,000, and that its average income was about $6,000; that the expenditure of this has been all accounted for in published reports, and that the members are men of the highest character, belonging to every European country, as little capable of inciting farmers against their own Government as Mr. Hamlin himself. Now, what answer does Mr. Hamlin make to this? Remember, he is an old clergyman and the President of a religious college; and now mark the effect of the tariff on his moral constitution. He has not one word of proof of his assertion. All he has to say is that "in affirming that the Cobden Club had expended vast sums during the past fifteen years to excite the farmers against the Government, he only asserted what was popularly known and believed." He then goes on to be indignant, just as Dorsey was, that Mr. Wells should have accused him of falsehood, but says that having lived thirty-five years among the Turks, he is less troubled by such violations of "the rules of gentlemanly intercourse" than "those who have lived in a civilized and Christian country." But then indifference to rudeness of speech is by no means the only effect of long residence among Turks. The remainder of his letter is an attempt to show, by the *à priori* method, how natural it would be for the Cobden Club to do what he untruly said it had done—a means of escape from his difficulty the use of which by an instructor of youth is really painful.

PROFESSORIAL SALARIES IN AMERICA.

We publish in another column a letter from a correspondent touching the effect on the condition of the American universities of the small pay received by the professors. He contends that a man who has the stuff of a good professor in him, or, as "N. N." calls it, "the grit of spontaneous scholarship," will not allow the smallness of his salary to "cool his ardor or check his enthusiasm"; and he points to the vigor and industry of the German professors as showing how little effect poverty really has, or ought to have, on the quality of university teaching. Unfortunately, this illustration overlooks the fact that professors, like other people, are influenced largely by their environment. They are not monks or soldiers, and do not form communities apart living in monasteries or barracks. They are part of the society which they serve, and share in its tastes, habits, and standards. The German professor cares little about money, because plain living is the rule not simply of his own class but of the official and professional class; that is, of the best society throughout Germany. In other words, it is "the thing" to be poor, and live as if you were poor, in Germany. The military and civil officers who form the flower of German society are poorly paid, and not only make no attempt at display, but look on display or luxury as vulgar. They get the consideration which they enjoy not from their means, but from their position. The possession or acquisition of money is, therefore, not a sign of social success. A man's wife and children are not troubled by his not possessing it. Some of the most highly placed and respected men in the community live no better than the German professor does, entertain no better, and have as little money as he has. Consequently the world at large in Germany does not associate failure or small value with a small salary. It has constantly before its eyes great and successful men who are also poor. It does not place the money-making power highest or even high among the human faculties. There has undoubtedly been a change in this respect since the war, but nevertheless it is in the main true that in Germany no one thinks as yet of estimating a man's worth by the pay he gets, or thinks of measuring the amount of respect due to him by the way in which he lives.

Now, we wish very much that this state of things existed here or in England. But it does not exist. Moreover, it is passing away more or less rapidly in all the countries in which it does exist. All civilized societies in our day tend to the commercial type, and more and more adopt the commercial standards and tests. Consequently we see no chance of introducing it here, and, though it is everybody's duty not to drift idly with the current, it is sheer waste of strength to try to row dead against it. The people, or perhaps we should rather say the farmers, of the United States, who are not used to handling or spending large sums of money, have been making a gallant effort during the last three-quarters of a century, in fixing the salaries of public offices, to rebuke the notion that money ought to be the main consideration for an American officeholder. Accordingly, in nearly all the States the salaries of judges and other functionaries have been fixed with reference to the wants of an ideal man of really lofty soul, utterly absorbed in the pursuit of things not seen, and by no means in reference to the wants of the ordinary American man of our time, whom we have to get to fill nearly all our salaried positions, with a wife who likes comfort and expects some share in the social life around her, and children who chafe, as all children do, under poverty, and like a taste of the good things that are going. The result has been simply that the leading lawyers hardly ever go on the bench, and that the ablest business men will not accept political positions, but take service with the great moneyed corporations. There is, in fact, in our time an immense and most unfortunate diversion of the talent of the country away from the administrative service of the Government, mainly owing to the smallness of the pay and the precariousness of the position.

Our colleges have largely fallen into the same mistake. Not only have they overlooked the great loss of influence which has overtaken the ministry, and with it the professorial calling which was at one time so closely connected with the ministry, and the great changes in the manners and customs and standards of living of the community which have taken place, but they have persisted, like our correspondent, in setting up an ideal professor of their own construction, asking him how much salary he needed, and paying all the others accordingly. What the Ideal Professor always says is, that the merest trifle is enough for him and his family; that they are in fact so absorbed in study that they hardly know what they eat or wear, and that they should be ashamed of themselves if they needed much money. The actual professor is, however, a totally different person. He is mostly a modern American, fond of books and teaching and study, it may be, but also fond of such of the social and æsthetic pleasures of his time as he can afford. The proof is that there is, we believe, no case on record of a wealthy professor living with the Spartan simplicity which college trustees try to persuade themselves that all professors love.

In fact, poverty and very plain living are things which, as has been wittily observed about *mariages de raison*, everybody thinks good for other people, but which hardly anybody thinks good for himself. It does not follow from all this that a life of luxury or of devotion to money-getting is good for professors any more than for other people. There is a measure in salaries and in money-getting, as in everything else. Man was intended to be a moderate animal. But it does follow from it that it is in our time, and in our country, bad policy for the great institutions of learning to hold out the teaching profession to the young men as a little corner reserved in the midst of our luxurious American society for the practice of endurance and fortitude. It ought to be held out to the rising talent of every generation as a calling in which, like all others, a man who loves it and pursues it with zeal can have not only its special and peculiar pleasures, but also a fair amount of the material comforts which the bulk of his countrymen seek, and are praised for seeking by all contemporary moralists and theologians.

THE FRENCH EXPEDITION TO TONQUIN.

In 1840, while the power of Mehemet Ali was being overthrown by the intervention of the Quadruple Alliance, M. Thiers, then Prime Minister of France, proclaimed it as his task to reconquer Egypt on the Rhine. At the present moment the leading idea of French

statesmen seems to be, that the prestige of France which was lost on the Rhine in 1870, must be reconquered in Africa and Asia. M. Challemel-Lacour, Minister of Foreign Affairs, in his reply to a recent interpellation, almost confessed this in saying that the reverses of twelve years ago had rendered it necessary for France "to make her influence felt among distant populations, which had been misled as to her situation." Hence the occupation and virtual annexation of Tunis, and at this moment fighting on the Niger, war on the Hovas in Madagascar, a conquering expedition up the Congo, and a greater warlike enterprise for the subjection of Tonquin, and probably of all Anam, in Further India. Concerning this last enterprise—by far the most important—Challemel-Lacour declared that France had been provoked by the Emperor of Anam. He had violated the treaty of 1874, and recognized the suzerainty of China. He had permitted the persecution of French subjects, and encouraged brigandage. France had sent out an expedition to restore order and enforce respect for treaties. It had met with hostilities from Chinese and Anamese, and was now forced to repel aggression, convincing the Chinese that the French did not mean to withdraw, but to occupy permanently certain points of the country. To explain the complication, an historical retrospect is necessary.

Tonquin and Cochin China, which now form the main portions of the Anamese Empire, or Kingdom, were dependencies of China down to the early part of the fifteenth century, when they shook off the foreign yoke and established a native dynasty. Rival dynasties arose in the following three centuries, and about a hundred years ago the earlier ones had been almost exterminated. The last scion of the Cochin-Chinese house of Nguyen, Nguyen-anh, having been educated in the Christian religion—which the persecuted missionaries and converts from Japan and other countries had largely propagated—by an ambitious French bishop, Pigneau de Béhaine, Apostolic Vicar of Cochin China, invoked against the reigning dynasty the aid of France. The Bishop concluded a treaty with Louis XVI.—the pretender ceding to France the Peninsula of Turon and some islands—returned with a French squadron in 1789, acted as the military guide of his pupil, and, after a long war, succeeded in firmly establishing him on the throne. Nguyen-anh became also master of Tonquin, and proclaimed himself Emperor of Anam, under the name of Gya-long. His successor, however, who reigned from 1820 to 1841, was so disgusted with the intrigues of the missionaries that he began a bloody persecution of the Christians, and his son, Thieu-tri, imitated his example. The French repeatedly interfered with armed force, but without lasting results. The present Emperor, Tu-duc, who in 1847 robbed his elder brother of the succession, renewed the persecutions, and in 1857 put to death a Spanish bishop, whom Napoleon III. determined to revenge. The French captured Turon, south of the capital, Hué, in 1858; subsequently stormed Saigon, in Lower Cambodia, and other places; and in 1862 forced Tu-duc to cede to them the principal parts of the territories now constituting their great Eastern possession, French Cochin China.

What mainly compelled Tu-duc to submit to the invaders was a simultaneous rising of the Tonquinese, under the lead of Pedro Phuong, a Catholic Christian, descended from one of the old native dynasties, and their advance from the north toward the central province of his empire, while the French were pressing him from the south. The latter subsequently extended the borders of their new possession, and in various ways exasperated the Anamese monarch, who finally made an attempt to secure the aid of China by acknowledging the ancient suzerain rights of the Celestial Monarch, and sending him presents as tribute. The French, provoked and alarmed, extorted a new treaty in 1874, which, though it nominally recognized the sovereignty of Tu-duc, virtually made him their vassal. He bound himself to place his foreign policy under their control, to revoke his anti-Christian decrees, to open to them the principal ports of Tonquin, to admit small French garrisons into those ports, and to allow French vessels free navigation on the Red (or Yellow) River, the main artery of that northern province—a province abounding in tropical products and rich in mineral wealth. The French, however, did not succeed in gaining the favor of the Tonquinese, and have of late been repeatedly harassed by hostile movements, variously designated by the French authorities as attacks by rebels or brigands, Anamese hostilities, and invasions from China, which has not ceased to consider itself the suzerain of Tonquin and of all Anam. Tu-duc is now accused of having broken the treaty of 1874 and joined forces with China, and there is an official French report according to which the French garrison of the citadel of Hanoi, on the Red River, repulsed, on March 28, with great loss, an attack by 4,000 "Anamese or Chinese."

To remove the difficulty with China, the French representative at Pekin, M. Bourée, undertook, on his own responsibility, the negotiation of a treaty, and obtained from the Chinese court the following draft: China recognizes a French protectorate over Tonquin; a neutral zone is established between the province and the empire, with some privileges for the latter. She allows free navigation on the Red River, and receives, in compensation, the possession of the town of Laokai, in Tonquin. M. Challemel-Lacour rejected the treaty, as recognizing Chinese sovereign rights over Anam, and recalled M. Bourée. At the same time a special envoy, M. Kergaradec, was sent with a letter from President Grévy to Tu-duc. This letter, according to explanations made on May 9, by the French Minister of Marine and the Colonies, before the Tonquin Committee of the Assembly, notifies the Anamese ruler that his inability to insure tranquillity in Tonquin forces the French to undertake the task and establish themselves definitively in that province. It invites him to abstain from opposition, and order the mandarins to remain at their posts. He is asked to sign a protocol recognizing not only the intended occupation, but "a French protectorate over the whole of Anam," and the right of the French to impose customs duties and taxes. For all this he is guaranteed the integrity of his dominions, and about a third of the revenues. The Minister estimated that 30,000,000 francs might annually be collected in Tonquin, now supposed to contain 15,000,000 inhabitants, or nearly three-fourths of the total population of the empire. Of this sum one-third would be devoted to the expenses of the administration, another to public works, and the rest given to the Anamese monarch—"if he adopted French views." If he refuses to sign the protocol, from aversion to French views, and in reliance on his army of more than 100,000 men, there will be a new war, and "the glorious sons of France" who, with their commander, Rivière, fell a few days ago in a reconnoitring sally from the fortified position at Hanoi, will soon be avenged by the bombardment of populous cities. An impassable belt of forests and swamps will prevent China, even if she dares to be openly hostile, from doing great things, and England can afford to look on. We venture to predict, however, that the French Minister's financial expectations will not be realized.

THE ASTOR AND LENOX LIBRARIES.

THE spring crop of complaints of the Astor and Lenox libraries is coming up with its usual luxuriance. The first charge against the Astor, which we find in the Boston *Transcript* (April 17), is that there is in print only an author-catalogue, and that the card author-and-subject catalogue is so inaccurate and so injudiciously planned as to be nearly useless and entirely unfit to print. The instances given are the same that were cited by the same writer a year ago, and have no doubt long since been corrected. Still, we have reason to think that those who are competent to judge of the requirements of the present day in the matter of cataloguing would find the existing basis of the proposed new Astor catalogue regrettably deficient. The writer proposes "a full investigation" on the part of the Board of Trustees, who are, however, unfortunately, committed in favor of the *status quo* by their order, two years ago, to prepare the card catalogue for printing in the form and style of the four volumes of Dr. Cogswell's already published—a catalogue which even when it was issued was behind the times, and now is antiquated by several generations.

But the *Transcript* writer has another remedy, which is truly heroic—and which, we may be sure, will never be applied—and that is, to burn up the cards and recatalogue the library. He advocates it on the ground that this would be less expensive and surer than to correct at least half of the cards. We do not think so, provided that the correction is made by plenty of brains, assisted by plenty of hands to do the mechanical part of the work and save the time of the brains. We have no means of knowing if this latter is actually the case; but, if we may judge by what we have seen in other places, we should think it likely that the revisers now at work are not provided with the mechanical appliances that would abridge their labor; that they are not put in that part of the library where they would work to most advantage; that they are not furnished underlings who would be to them what the scullion is to the cook, or the cash-boy to the salesman; and that they are not allowed to work on in that quiet in which good work best grows, free from the hurrying which inevitably produces mistakes.

The other charge is that both the Astor and the Lenox are not open often enough and long enough. In regard to the Astor the reproach may be soon undeserved, for we have heard that it is proposed to open one room at night, where persons not at liberty during the day can consult works which they have asked, by postal-card or otherwise, to have laid aside for them. It is true, we heard the same thing a year ago, yet it is no longer spoken with bated breath, but is boldly published in the newspapers. About the Lenox we hear no such rumor, nor does the pressure of visitors at that library at present appear to call for any such extension of time. The Lenox has a peculiar character. We have once before urged that it should be called a museum rather than a library. It is in large measure a collection of curiosities of the history of typography—of books not without value for their contents, yet got together less for their intrinsic worth than because they show the progress of the arts of printing, of engraving, or of binding, and sometimes, it would seem, simply in order to have a *complete* collection of certain things, which is the highest power (or, as some would prefer to call it, the lowest depth) of collecting. This museum-making is a part of the purpose of every large library—a very large part of the work of the European libraries ; and to listen to a certain class of bibliophiles, one would fancy that there was no branch of learning more important than the quesion whether Haarlem or Strassburg saw the first printing, whether the Coverdale Bible was printed at Antwerp or Zurich. Nay, they will even go further, and manifest a certain contempt for all less recondite inquiries, just as in France those who devote themselves to what the public calls "mere textual criticism" claim for their work no humbler title than *les hautes études*. When we began to have libraries in this country, of course a certain amount of this way of thinking grew up with them, but it never flourished, because the antiquarian taste had little material to gratify it. Our libraries have run into other grooves, most of them more practical, and all of more general interest. And even in England the rise of rate-supported libraries has led to a state of feeling in which the library is considered quite as much one of the instruments of popular education as a place for the exclusive study of one very limited subject, and praise is meted out to it rather for its success in circulating than for its capacity for preserving books.

In this country certainly, though it is to be hoped that the work of the collector and the preserver will never cease, the library that devotes itself wholly to this object ; that seeks to obtain only what is rare ; that does not, as it were, hide its bibliomaniac features under a veil of popular utility ; that resists the demands of the people, reasonable or unreasonable, for greater privileges, and does not follow popular bibliothecal fashions, must be looked upon as a survival. Just now it provokes irritation in some minds, because the fashion which it represents is recent enough to appear ridiculous rather than venerable, as all fashions do which have just vanished; but to our children it will be most interesting, possibly may even find imitators. This is by no means to be desired, because, unless imitations are made with the greatest care, they may provoke laughter and bring a good thing into disrepute, like our stage-coach driving and our anise-seed hunts. Besides, if anything is to be done to preserve antiquity, it is best that all efforts should be concentrated on one library to make that a perfect success, and the Lenox bids fair soon to have the field all to itself. The Astor and Columbia College have been dangerous rivals to it, but the Astor is becoming gradually modernized. Its additional hour granted two or three years ago, its evening study-room almost promised now, show that it cannot resist the spirit of the age. The libraries of Columbia College were, and still are, even less modern in management, but a revolution is impending there. Rumors fill the air of most wonderful changes in contemplation, which shall make of the consolidated collections a library inferior in plan, and perhaps ultimately in size, to none in the country. The Lenox alone is left as the representative of the past. It is another excellent example of the survival of the fittest to survive.

THE PROSPECTS OF THE GOVERNMENT.

LONDON, May 9.

THE defeat which the Government suffered in the division on their Affirmation Bill has set people thinking seriously about their future and that of the present Parliament. It is the first heavy check they have encountered, and our experience is that a Ministry which has once been beaten in a pitched battle seldom recovers its strength and never its prestige. Had this battle been one of a distinctly party character, the Ministry must of course have resigned. But the bill they were beaten on was no part of their political programme. They did not take the matter up because they regarded it as one of political consequence, but merely in order to extricate the House of Commons and the constituency of Northampton from a deadlock which was disquieting both to Parliament and to the country. As they contended that the House of Commons had erred in refusing to permit Mr. Bradlaugh to take the oath after his reëlection for Northampton, they might perhaps have left it to bear or to settle for itself the consequences of that error. But there is a general feeling in England that when any screw gets loose, it is the business of the Executive to put it into its place again, and the fact that the question of Mr. Bradlaugh's admission remained open was damaging the Ministry in both directions. It was discrediting them with a section of the religious public by making them appear as the people who wished to bring him into Parliament; it was also offending some of the extreme radicals among the working classes, who thought that the Government were not sufficiently zealous in taking every step to vindicate the rights of a constituency to seat whatever member it pleased. Thus the Government, believing that an Affirmation Bill would pass without much difficulty, resolved to get the matter out of the way before a general election approached, and to relieve the House of Commons from a source of embarrassment and loss of time which was apt to reappear at the wrong moment. This was very different from bringing forward one of the measures promised by them when they came originally into power, or one of those which the Liberal party has ever committed itself to, or one which they took up, so to speak, of their own motion, without the happening of any difficulty which required a solution. Hence, their defeat was not taken as a defeat which, according to constitutional usage, indicated the withdrawal of the confidence of Parliament from them and demanded their resignation.

Even had it borne somewhat more of a party character, there were strong reasons why a resignation would have been inexpedient. If the Tory party had come into power, it could not have gone on with the present House of Commons, because in that House the Liberal majority is so decided that it would have had frequent defeats to face. The alternative—the necessary alternative—would have been a dissolution. But the Tories are not ready for a dissolution. In the first place, the land-owning country gentlemen, who compose so large a part of their body, have been suffering from the depression of British agriculture, and do not desire the expense of a general election. Further, they think that the reaction toward Conservatism which they believe to be in progress has not yet had time to work fully, and will be more in their favor two or three years hence than at this moment. And lastly, they cannot, any more than the Liberals, contemplate without anxiety the probable results of a general election in Ireland. The Nationalist party there now counts something over thirty members. A general election would probably raise its strength to sixty or seventy. If the two great British parties were at all nearly balanced (which is the most probable result of a general election), these Nationalists would hold the balance of power, and would be able, by always opposing the party in office, to turn out first one Ministry and then another. There are restless spirits in the Tory party who would face this risk, or any risk, for the sake of having their revenge on Mr. Gladstone. But such is not the judgment of the Tory leaders, who know how difficult their task would be under such conditions, and how serious the strain on parliamentary institutions. Hence Sir Stafford Northcote expressly declared that he did not regard the question of the Affirmation Bill as a party issue. And what has happened is exactly what he and the more judicious Tory chiefs desire—Mr. Gladstone's Ministry remains in power, but it is damaged. Its hold over its followers is weakened. Its capacities for revolutionary change are diminished. It may continue to reign, but will be less able to govern. And this lessened force and energy, preventing it from redeeming the promises of legislation which it made, will be but the prelude to its fall when the next general election comes.

These are the views of the Conservatives, and also of many Liberals, some unhopeful by temperament, some disaffected to Mr. Gladstone, and glad by the openness of their prophecies to help to make those prophecies come true. There is, however, also another view, which I give for what it is worth. It insists that the Government have not really suffered. They have had a shake, but nothing more than a shake. Their check was not due to any blunder of their own, such as they must be admitted to have made in South Africa, but to an outburst of religious prejudice in the country which no one could have foretold. The people of England and Scotland know well enough that Mr. Gladstone has as little sympathy with Mr. Bradlaugh's infidelity and Lord Granville with his Republicanism as any Evangelicals or Tories in the country, and are not, therefore, misled by the attempts to daub the Ministry with the brush of Bradlaughism. Thoroughgoing Liberals, such as the bulk of the Nonconformists and the working classes, honor and trust the Ministry all the more for being willing to face unpopularity for the sake of principle. As for the defeat in the House of Commons, it was due to two sets of persons. One set is the disaffected pseudo-Liberals, consisting of some eight or ten persons who mostly (it is thought) from personal motives take every opportunity of injuring the Ministry, and might really be classed with the Tories. Their defection has no moral significance. The other set of deserters are the Irish Roman Catholic Liberals and the Ulster Presbyterians. Both these groups of Irishmen are in ordinary cases the most faithful supporters of the Government, bound to them by the strongest ties of interest, because they have every motive for trying to delay a dissolution. There is no other question likely to arise on which they would fail to follow Mr. Gladstone, and their absence from this division is therefore of no evil omen for the future. With these arguments the more eager

Liberals seek to comfort themselves, and they have so far succeeded that the loyalty of the party to its leaders remains undiminished, as well in Parliament as through the country.

There is, however, another and perhaps a graver danger which the Government have to face. It is that of getting little or no legislation out of this session. Except as regards the Bradlaugh question, there have been no special troubles this year. Ireland has been fairly quiet. The resettlement of Egypt has gone on as well as, or better than, could have been expected; nor has Parliament been interrupted by debates respecting it. Yet in spite of this immunity from executive difficulties, the business of law-making does not advance. The middle of the session has been reached, for to-day the Whitsuntide vacation begins, yet some of the most important bills have not yet been introduced, while with others very little progress has been made. These are not contentious bills, raising political issues. They are bills which might almost as well have been brought in by Tories as by Liberals. Bankruptcy, the establishment of a Court of Criminal Appeal, the codification of our criminal procedure, the reform of the Scotch universities, the prevention of floods, the provision of adequate compensation for improvements made by agricultural tenants, the stricter repression of corrupt practices at elections—these are the chief subjects on which the Government has presented or is presenting bills, and none of these ought to be fought on party lines or with that bitter tenacity which party feeling inspires. Moreover, the Government spent six weeks last autumn in framing and carrying a new set of rules of Parliamentary procedure intended to prevent obstruction and to save time in a variety of ways. They have not, therefore, the same excuse as formerly for the delays which occur and which they used to blame on the faulty regulations of the House of Commons. Yet the broad fact remains that business moves as slowly or more slowly than ever, and that there is likely to be a very poor show of work done when the session closes.

To what is this due? The Ministerialists say, to obstruction, Conservative obstruction (for the Irish Nationalist members have done very little in that way lately), but obstruction too skilfully manipulated to be dealt with by the new rules of procedure. It is obstruction, they say, which consists not so much in talking against time on any one particular measure, as in using all the opportunities which the forms of the House of Commons give for wasting time upon every measure and every question, so that all business is delayed. It is impalpable—too impalpable for our new rule of closure to seize and throttle it—but it is none the less real and mischievous.

Then what is to be done? The first result will doubtless be to discredit the present Government. However true it may be—I do not say that it is true, but present the case as the Ministerialists present it—that the Government cannot help themselves, and are prevented by this persistent obstruction from giving the country the measures which it desires, still the country will lay the blame at the door of the Government. The country will remind them that it gave them a majority of fifty or more at the last general election, and will ask them what they have done with that majority. If the rules of the House were in fault, why not have reformed the rules of the House in a bolder and more stringent fashion? If the minority is obstinately obstructive, why not crush the minority? Anything is better than Parliamentary impotence. For this is the further and more serious result to be apprehended. If the Tories play the game of obstruction now so successfully, will not the Liberals play it in turn when they are in opposition? Between the wranglings of these two factions nothing will be done. Then the country, disgusted with the selfishness and imbecility of Parliament, will take the matter into its own hands. It will turn the Prime Minister of the day into a sort of dictator, make the House of Commons a mere congeries of delegates, whose majority is charged to obey the dictator. Parliamentary control over the Executive will almost disappear, for the Executive will feel responsible not to Parliament, but to the constituencies; and the constituencies will of course mean the local wirepullers and party managers, who will by that time have perfected themselves in the art, still rudimentary here, of managing the constituencies.

Such are the forecasts which we are beginning to hear. Nor can any one say that there is not some ground for them. Still, there are those who hold that it is not so much Parliament in itself that is to blame, as the principle of parliamentary government—as this present Parliament of ours, which is not sufficiently amenable to the nation, containing many members who sit for small boroughs, and others for counties which return them rather on social than on political grounds. These persons insist that what we want is a bold measure of Parliamentary reform, which shall sweep away all the small constituencies, and bring popular force more directly to bear upon the House of Commons. I have, at any rate, said enough to show you that there is much disquiet here among politicians and political thinkers, and that the grounds for disquiet lie deeper than any mere anticipations of misfortune for the present Government. In fact, the better opinion seems to be that Mr. Gladstone's Ministry is in no immediate danger, and probably will not be so long as it is Mr. Gladstone's. Y.

NEW SOCIAL TYPES IN ENGLISH LIFE.

LONDON, May 14, 1883.

YOUR account of the Dude, that newest social type in New York life, has been read with interest in England, and has set some of us thinking how far any creature corresponding to it can be discovered among the fauna of contemporary England. So far, our researches have been rewarded by no success. The name is unknown here, and the thing seems to exist only sporadically. There are individuals answering exactly to your description, possessing all the specific characters of the Dude as well intellectual as external, who, if transplanted to Fifth Avenue, would doubtless be undistinguishable from the specimens observed there. But our naturalists have not taken note of the species as a species; we possess no name for it, and its very existence might have remained unnoticed but for your careful and instructive account. It would be interesting to inquire what are the causes which have developed into a large and well-marked class peculiarities which here occur only in isolated individuals; but it is perhaps more profitable to throw together some remarks on other social types which have latterly become conspicuous in England, so as to direct the attention of American observers to them, with the view of ascertaining how far they exist west of the Atlantic, and whether, like most American species of animals and plants, they present, along with a general resemblance to the Old World species, certain distinctive features of their own, due to the conditions of transatlantic life.

The first of these types, and the only one which has received a special name, is the Masher. He resembles your Dude in being characterized chiefly by his dress, but is unlike him in the style and aspects of that dress. Quietness, which would seem to be the "note" of the Dude, is absent in the Masher. His dress is pronounced, calculated not to escape, but to attract, attention. In some specimens it goes the length of becoming what is called "loud," in others it is no more than up to the top of the fashion. In all the chief elements of masculine attire, and particularly in the tight frock coat, this character appears, but the specially distinctive point is the collar, which the Masher wears low but erect, and enclosing his neck all round with no perceptible aperture in front. He may also be recognized by his stick, and by the fact that he is usually to be seen with something in his mouth, either a cigarette, or a toothpick, or one end of his (usually double-headed) stick. He is observed to the best advantage in Hyde Park, on the footpaths which border the riding and driving roads in Rotten Row, where he stands leaning on the iron railings, and watches the fashionable world pass by him in carriages or on horseback. His name has excited much controversy. Some explain it as expressing his power of reducing others to pulp by his superior chic, but this is far too obvious to be true. Another school connects it with the French verb which means to chew, referring to his habit of keeping something between his lips, while others again trace the word to the Gypsy language, that last desperate resort of baffled etymologists. Although he is commonly treated as a perfectly new appearance, I doubt whether he is not rather to be regarded as a revival of the "dandy" of the last generation, of whom, as the readers of 'Sartor Resartus' will recollect, Bulwer's Pelham was taken as a type, just as the dandy himself recalls the "buck" or "blood" of last century.

The Masher, however, is less obtrusively offensive than was the dandy: his finery is not so gaudy, his manner less elaborate, and noticeable rather for complacent inanity than for conceited self-assertion. Not, indeed, that the Masher is necessarily a fool; he may be and sometimes is a sufficiently sharp fellow. But his aim is to appear completely indifferent to everything; superior not so much in being more fashionable than other people as in being untouched by the common emotions of mankind, careless of what fortune may have in store for him. He expresses on their social side those cynical tendencies which are always powerful in an over-cultivated and overluxurious capital, and which the scepticism of the time has stimulated and heightened in people who have themselves nothing to do with speculative thought. He is not necessarily fast, much less consciously vicious, but he has few interests and no enthusiasms. His languid manner seems to tell you that at twenty-three he has drained to its dregs the cup of life. But though the world has little to detain him, he will be true to himself while he remains in it; will keep at least abreast of every fashion; will go through the regular round of amusements—not because he expects to be amused, but because it is the thing to do so. His conversation is as curt as his manner is impassive, and he carries to its highest point the English gift of keeping every inflection, every rise or fall of musical key, out of his voice.

American readers who have enjoyed Mr. Du Maurier's social studies in *Punch* and Mr. W. S. Gilbert's "Patience" will naturally ask whether the "Æsthete" does not constitute another type, more original and more clearly marked. Well, the truth is—and the truth, however mortifying, must be told—that the Æsthete never existed out of *Punch*. He is the creation of Mr. Du Maurier and Mr. Gilbert. Individuals, indeed, there were and are who possessed one or other of the marks which those ingenious artists grouped to-

gether, but these marks never met in the same person, except in the case of a few people who consciously posed for the part. A consciously self-created type has of course no interest for the naturalist, because it is not really a type, not a creation of nature, but an artificial product. It is of no more scientific value than a made shell. There were, no doubt, a certain number of young ladies who dressed fantastically, a certain smaller number of people of both sexes who talked affectedly about poetry, painting, and music. The Grosvenor Gallery and the Browning societies, which have started up in London, Cambridge, and Oxford, are the most conspicuous *Erscheinungen*, as the Germans would say, of this tendency. Any one who visits the Grosvenor Gallery on its private-view day, or listens to the conversation of the members of these societies, will see fashions in dress and hear fashions in talk which are no doubt curious, and give matter for remark to the student of taste and manners. With some affectation, there is also a really quickened perception of what is beautiful and harmonious in color, and perhaps a more subtle discernment of shades of feeling, a livelier interest in abnormal phases of thought. But the reality is so much less amusing than the caricature which *Punch* and "Patience" have given us that one must not attempt to describe it, nor could it be described without a dissertation on a hundred other tendencies in modern England.

There are, however, two other new, or almost new, types among our young men and young women, which may be noted. The former is to be found only in the universities and in London, and even in London only among university men from whom their mint-stamp has not yet been worn off. Its "note" is a certain sort of finish and polish, a refinement in thought, speech, manner, which seems to be the result of a critical habit of mind, a carefully-cultivated taste, and a keen self-consciousness. These youths have the air of being older than their age; they are men of the world, yet not necessarily worldly, for many of them are unselfish and full of interest, not only in art and literature, but in projects for improving the condition of the poor. They are too critical to be enthusiastic, too sensitive to ridicule to betray themselves in any vehement expression of zeal; but scepticism has not gone so far as to make them cynics, much less pessimists. Their minds have been softened by literary and artistic influences into a lively susceptibility to what is beautiful or good, but the fire and force of their natures seem to have been chastened away in the elaborate process of culture which not only their education, but still more their social intercourse with one another, has brought to bear upon them. Those seniors who compare them with the university youth of twenty or thirty years ago, say they have less steam and go, but much greater skill and delicacy. They may be less able to wield a broadsword, but they can more effectively handle a rapier. Without profound knowledge, they have the air of knowing all that it is necessary to know about all human subjects; they are equally at home in the ancient and in the modern world. Their taste in art is catholic, and their observations such as one can hardly venture to differ from. They rarely care much about politics, and oscillate between a mildly cultivated Conservatism and a mildly discriminating Liberalism, though some few, while despising the current politics of the day, have an interest in Socialism, and may be heard to enunciate alarming opinions in reassuring tones. They are clever speakers as well as writers, with a considerable fondness for epigram; indeed, their talk is apt to suffer from a too obvious desire to "score," as they express it, off their interlocutor, although the object is not to wound him, but merely to display their own smartness. Such young men are produced more abundantly at Oxford than at Cambridge, where the type is always a little more robust or more rough than at the sister university. Their contributions to literature have been so far mostly anonymous, and the best fruit they have yet borne is to be perceived in several volumes of verse, full of delicacy and grace, and agreeable by the finish of the workmanship even when the ideas are not remarkable.

The type of cultivated young lady which has developed side by side with this type of young man would need a more careful analysis, because she is less distinctly the outgrowth of particular educational institutions and the particular life they embody. If she is emancipated, it is by no means in the vulgar sense of the word. There is nothing startling about her manners. Her dress, though it would have been thought *outré* a few years ago, is less masculine than that of the fashionable "fast" girl, and her language, too, is far less loud and slangy. She is mostly an adherent of the female-suffrage party, and of what may be called the "woman's-rights programme" generally, but she does not press it upon you in an obtrusive way. Her specific mark, next to the passion for art which she shares with the Æsthete, is the freedom, or perhaps the total absence, of her religious opinions. Till lately it was tacitly assumed in England that whatever men might think, women at any rate, and especially young women, were pious, and, being pious, were also orthodox. Now, one finds them avowing their rejection of all faiths more openly than most men would do, perhaps because they care more about the matter, and are less absorbed in the ordinary avocations of life. Of course it is but few who do so; yet that even a few should do so is a new and notable feature in the life of our time, when so many of the old silences and conventions have vanished, and when women have claimed and taken a share in so much which men had formerly kept to themselves. Yet few will say that Englishwomen have so far suffered in the respect they inspire.

Y.

BISMARCK'S LITTLE GAMES.

BERLIN, May 13.

YOU know the tale of the Egyptian kings who, immediately after death, were wrapped in their royal robes, and, with crowns upon their heads, were put on the throne, where they were represented as still living and ruling the people. The courtiers and officers of the deceased monarch kept up the feint as long as possible in order to help themselves to the crumbs of their master's table. This same stratagem is almost repeated here, for the old Emperor, although bodily in comparatively good health, is intellectually daily failing more and more, and only offers the appearance of an independent ruler. Bismarck avails himself of this state of affairs to fortify his position by royal messages, like the one of April 14 last, which interfere with the Reichstag's order of the day, or others which contain only his own (the Chancellor's) commands and wishes. There are several dodges which he uses for that purpose. The most common of them is the pretence that the Reichstag assails the reserved rights of the crown, and especially that it tries to interfere with the Emperor's most sacred prerogative, viz., the appointment of the commanders of the German army. Thus the old Emperor was made to believe that the former Secretaries of the army and the navy, Generals Kameke and Stosch, had not energetically enough defended his rights; and even after their retirement he informed them in a private letter that he had felt bound to dismiss them for these reasons. Another interesting item in this respect is the fact that when the latter of these gentlemen was to have his last audience with the Emperor, General von Albedyll, Chief of the Military Cabinet, although he had already secured the discharge of Stosch, nevertheless sent it to him post-haste, a few minutes before the appointment, because he apprehended that if the interview took place the old Emperor, who was particularly attached to Stosch, would not stick to his resolution and would revoke his order. Whenever the Ministers plead before the Reichstag for the adoption or rejection of a bill, they appeal to the Imperial message as binding the vote of every loyal member, and call their adversaries red republicans or American democrats.

A few days ago Prince Bismarck, who is seriously afflicted with neuralgia, played a new card in sending a message to the Reichstag in his own name. It was ridiculed as a second-class message, which, under the Constitution, the Chancellor had no right to send. It was therefore laid on the table after its unconstitutionality had been demonstrated. In it Bismarck blamed the Reichstag for having required "the Secretary of War" to act, while the Chancellor was the proper authority to be addressed. The mover of this proposition withdrew its original wording, amid the cheers of the House, and, in its place, inserted the words, "to call on the Chancellor." This was the well-deserved end of a petty sticking to technicalities.

Such tricks of a statesman who hitherto has never been small in his dealings prove how utterly at a loss the Chancellor is in his home policy. All his pet measures have been defeated, and none of his favorite aims attained, as his supposed conservative-clerical majority has never achieved a victory. Only a few subordinate bills were carried by them by a small majority of two or three votes, while in the more substantial ones they suffered one defeat after another. The Compulsory Bill for nursing and assisting sick workingmen is the only one which has a prospect of final adoption, while that on the assurance of workingmen against accidents is doomed to defeat, as the Committee has unanimously rejected the proposal of the Government to contribute 25 per cent. toward its objects. Bismarck has now to frame a new one, so that it is doubtful whether the amended bill will reach the Reichstag in its next and last session. The bill for taxing the Exchange and its dealings has even been defeated in Committee, and is past recovery. The budget, instead of being immediately voted upon, was, after a short debate, referred to the Committee of Ways and Means, and not a single item was exempted from a second reading in that Committee. It will be several months before the latter will send the budget back to the House. Thus the biennial budget so much coveted by Bismarck has in fact turned out a failure. The heaviest, however, of the several defeats which the Government has suffered within the past month is the rejection of the threefold increase of duties on timber and wood. In a house of 330 members a majority of 28 decided the doom of that bill. The Liberals were assisted by the Poles, who were not willing to hurt the interests of their Galician brethren, and by the Social Democrats. On the other hand, some of the Conservatives absented themselves, and several Ultramontanes did not dare to face the indignation of their constituents. Thus, in spite of the joint endeavors of the large real-estate owners of the eastern provinces and of the Government, a new and heavy burden was thrown off. Important as

this result is on its own merits, it gains additional weight by reason of its consequences. The agrarians, ironmongers, weavers, and spinners were waiting for a favorable vote of the Reichstag on increased duties on timber, in order to ask likewise about a threefold increase of those duties which benefit their own respective trades. The plan was well arranged and had the approval of Bismarck, but now, since the battering-ram has been put out of harm's way, the prospects of the parties interested in a new draft on the public purse look rather gloomy, and the patriotic protectionists are quite despondent.

The most interesting part of all these transactions is played by the Ultramontane party (the Centre of the Reichstag). They temporize with Bismarck, never vote directly against him, but secretly intrigue behind his back, and try by every means to find their reward in the repeal of the so-called Falk laws. The Chancellor has already once declared his willingness to remove the existing restrictions attending the administration of the sacrament and the saying of mass; but at the last moment Herr von Gossler, Minister of Public Worship and Instruction, objected to this concession, and insisted on its being granted only on condition that the Pope should announce to the Government the names of the priests appointed to fill clerical vacancies. Under the existing circumstances Prince Bismarck could not disregard Herr von Gossler's opposition. As word, however, had already been sent by one of his minions to the Conservatives to vote in accordance with their master's sudden swinging round to the Roman view of the case, Bismarck was compelled to revoke his order. The Conservatives, of course, now left the Ultramontanes to shift for themselves, and, to cover their sudden retreat, declared in favor of an organic revision of the Falk laws—an obscure expression, at which Bismarck himself could not help laughing. Thus nobody knows what will be done, and Rome, which a year or two ago would have been happy to accept unconditionally such a far-reaching concession, now refuses to meet the Chancellor's conciliatory wishes, as it expects to reach its end by continued obstinacy.

I apprehend that in the long run the Church will be right, for Bismarck cannot wait much longer, and he is in such a state of mind that he will finally sacrifice everything if he can realize his social political dreams with the help of the Centre. He handles principles from a practical point of view, and uses them as considerations for obtaining political advantages or as weapons against his opponents. I have no doubt that he will ultimately overcome the scruples of Herr von Gossler, and that the latter, or his successor, will yield to his dictates. A late occurrence connected with the vote on the timber duty will fully illustrate this disposition of the Chancellor. Having been informed that the Poles would vote against the Government, he ordered the Civil Governor (*Oberpraesident*) of Posen by telegraph partly to abolish the regulation compelling the Polish youth who attend the public schools in that province to learn German. When, nevertheless, the Poles voted against the duty on timber, although their vote was not decisive, the permission was withdrawn, and the bargain frustrated. Bismarck and the Catholics distrust each other, but the latter are too sharp to be caught by his semi-concessions, and insist upon full payment, which Bismarck, as things now stand, cannot render. The Kulturkampf, therefore, is far removed from settlement. Nothing is settled or certain, everything is in confusion, and every day may change the aspect of public affairs. Unsatisfactory as they may be, Bismarck is losing the faith and confidence of the masses in his social measures. They begin to be frightened by the state omnipotence which is to devour all private enterprise. Thus a new bill is framed for revoking all the charters of the fire-insurance companies, which, in the Chancellor's eyes, make too much money and will work more cheaply and faithfully if conducted by the Government. The whole insurance interest is, of course, roused against this plan, which fully answers the extravagant dreams of Communists and Socialists.

The dissolution of the Reichstag, which at the opening of this session seemed imminent, will not take place, for Bismarck cannot expect by new elections to get a successor which will help him to carry out his policy effectually. † † †

Correspondence.

PROFESSORS AND THEIR PAY.

To the Editor of The Nation:

Sir: In your issue of May 3, "The Real Weakness of American Universities" is discussed from the standpoint of professional emolument without any reference to other and, as it seems to me, more potent causes for the present low standard of our higher education. The discouraging effects, in the end, of a poor salary cannot be doubted, even for the most enthusiastic and zealous promoter of any department of science. To feel that earnest and continued effort is rewarded through years by only a meagre pittance sufficient to "keep the wolf from the door," without any possible prospect of being able to provide a small surplus for the contingencies of the future—to see the responsibilities of life grow heavier every day with no hope of meeting them and rising above them by patient, earnest labor—is surely disheartening in the extreme; and yet I apprehend that this is not the worst thing that can happen to a man whose life is devoted to his calling as a professor. This is merely an external source of anxiety, which will cool the ardor and check the enthusiasm of one who has not the grit of spontaneous scholarship in him. Such an one, in his thought for the material comforts of life, will lose sight of that lofty ideal which has fired the imagination of the noblest minds under adverse circumstances, and stimulated them to still more heroic efforts.

We only have to look across the water, however, to our German professors to realize how insignificant a part the mere salary plays in their excellent system of higher education. Here the privat-docent, in his preliminary training for the professorship, though perhaps doing even more university work than the professor himself, receives no stipulated salary, and gets nothing for his services except the nominal sum for tuition from the individual students of his department; and yet he considers himself fortunate in a majority of cases to be able to get such a position at all when he looks to his chances for development in the future. And even when he has become full professor, the recompense for his work is often so small as to render it next to impossible for him to live, especially if he has a family. Still, notwithstanding these drawbacks, he works on with indomitable courage, and other younger men are constantly coming forward ever ready to fill his place should he drop out, though they are well aware of the scanty stipend attaching to the office. I mention this case simply by way of illustration, to show that there is a deeper motive than mere pecuniary considerations which may, and does, actuate the scholar who is imbued with the full spirit of his subject, provided only that other circumstances surround him which are congenial to the healthy growth and sustenance of his intellectual life. And this brings me to the point which I wish to urge above all others as the efficient cause of our lack of vigor in matters of university instruction. The source of it is internal: it is the want of legitimate stimulus fostered by a strong sympathy and interchange of ideas among the members of any given department. The incentives to vigorous, untiring effort that are found in the keen mental friction with our fellow-workers are lost sight of in the overruling tendency to isolation, where indifference, apathy, and the ultimate neglect of high aims and a lofty ideal are the natural results.

Another cause of inactivity and inefficiency in university training in America is connected with the university system itself. Healthy criticism of one another is almost wholly unknown among its professors as a body. It is true, we have exceptional cases where judgment is passed upon the labors of a co-worker in a given field, but it is generally done in such a way as to provoke a quarrel in the end; and even this occurs, as a rule, only between the members of rival institutions, or between men whose positions in life are considered fixed. For the young scholar who is looking for employment, or even after he has received an appointment, the criticism of the older professors in his own institution or in others is regarded as the effusion of a restive, revolutionary spirit, which must be squelched forthwith. It would be dangerous to allow the "young bloods" to publicly question the haughty prerogatives of their superiors in position in any department. The latter feel that they might possibly lose some of their exclusive power over their pupils, and that their prestige with the public as "universal geniuses" and "wonderfully learned men" would soon begin to wane.

This one-man-power policy will have to be essentially modified in our American institutions before we can hope to reach any marked development of independent scholarship. The liberty of unrestrained criticism is the bulwark, the only safeguard, of the German university. Both old and young incumbents in academic office know well that their productions will be scrutinized unreservedly by those about them, and this not out of any feeling of personal jealousy or enmity, but from a conscientious interest in the dignity of science itself. It is true that this system is liable to suffer sometimes from an abundance of unripe discussion; but the authors of it soon find their level, and the reaction against them serves as a warning to others who might be tempted beyond the proper bounds. With us any young man would be thought a fit subject for an insane asylum who should display such bad taste or be so impolitic as to handle without gloves the pet theories and often absurd extravagance of the president of his institution, and yet before science, as before the law, they ought to stand upon precisely the same footing, with equal rights and equal privileges.

I would not be understood, in the remarks made above, to depreciate in the slightest the paramount importance of liberal salaries; on the contrary, for our country, where great libraries, representing complete sets of scientific works for special departments, do not exist, a liberal compensation is an absolute condition to keeping abreast with the progress of any individual science, or even to insure a commonplace success in it. In Europe such book-collections are abundant and of easy access, and where the scholar is temporarily cut off from them by his professional duties, the generous policy of the library authorities generally enables him to have them for a short time in his own home, though many miles away from the seat of the library. Extensive departmental libraries, then, a closer spirit of fellowship among the members of spe-

cial branches of learning, with no danger of being thrown out of employment for sensible, well-directed criticism, irrespective of whom it touches, would do more to revolutionize our present state of "masterly inactivity," to raise the dignity of the profession, to infuse a love of earnest, zealous scholarship in our youth, and stir up an ambitious rivalry for the promotion of science, than all the "brick-and-mortar" millions, all the legislation of States, and all the wise decrees of college trustees put together.

N. N.

BALTIMORE, May 22, 1883.

THE SUCCESSOR OF PRESIDENT McCOSH.

TO THE EDITOR OF THE NATION:

SIR: An important change is about to take place in the affairs of Princeton College; and as the Board of Trustees is to a certain extent an unapproachable body, I know of no way of reaching them or the alumni of the College except by means of the press. The *Nation* will certainly reach many of the alumni, and may reach some of the trustees.

Dr. McCosh has declared his intention to resign his office as President of the College in June next. He has given the trustees ample notice of his intention, and their proposed action must, therefore, be presumed to be, in their opinion, the wisest and best for the interest of the College. It is that Dr. McCosh should remain at the head of the College, but that he should be relieved of a portion of his burden by a new officer—a Dean of the Faculty—to be created for that purpose by the trustees. There are no objections to Dr. McCosh remaining at the head of the College except his desire to be relieved, and it will be painful to the younger alumni to think of Princeton under the direction of Dr. McCosh's successor, no matter how worthy he may be. But the time must soon come, and in his own opinion the time is come, when Dr. McCosh should be entirely freed from the duties of the presidency; hence the appointment of a dean of the faculty can only be an experiment. And since the dean of the faculty will naturally be the president's successor, the same amount of care should be exercised in the appointment to the deanship as directly to the presidency. To appoint a dean of the faculty is clearly a waste of energy on the part of the trustees, if an easy solution is what they are seeking. They will find it much easier in the end to accept Dr. McCosh's resignation and nominate his successor. The College will suffer and come to confusion under two executive officers, under any division of labor however minutely drawn. There is, too, obviously less danger that diplomatic mediocrity should be accepted in the choice for the presidency than in the choice for the dean of the faculty. Men are naturally more tolerant of mediocrity when it is elevated by easy stages than when at once raised into power.

There is another view of the matter which deserves attention from the trustees. The appointment of a dean of the faculty would seem to be a matter of some concern to every member of the faculty, and the uninitiated would naturally expect that the faculty would be consulted and invited to express their opinion fully and freely upon the subject. I venture to say that the sub-committee of three and the committee of nine having this matter in charge would find, upon inquiry, that the faculty are not uninterested in the subject.

It has been said, on the part of the trustees, that the alumni of the College do not show any decided interest in the matter. If that be so, it is because any tendency on the part of the alumni to suggest or advise has hitherto been systematically discouraged. Their petition for representation has been denied. In one instance even the right of petition was denied a large body of undergraduates. But in spite of this Oriental exclusion, the alumni still have a feeble interest in Princeton. Those in power frequently declare that the people are not interested in this or that subject, as an excuse for consulting their own self-interest so exclusively. If the trustees of Princeton will consent to even an advisory representation of the alumni in their body, they will find the feeble sentimental interest of the alumni transformed into a strong and active support of their college; and I believe the alumni would be found opposed to the arrangement for the relief of the president by the appointment of a dean of the faculty.

ALUMNUS.

PAUPERIZING DIVINITY STUDENTS.

TO THE EDITOR OF THE NATION:

SIR: As the present is a time of considerable discussion on beneficiary aid to students for the ministry, and as the profession of the ministry and ministerial education are matters of general interest, it may not be amiss to say a word on the subject through your columns.

The injurious effect of indiscriminate beneficiary aid to students in any profession would be great, but in that of the ministry it is very great, by reason of the importance of the ministry, and the very high abilities required for successful work in it. The system of aid to theological students is, as a general thing, practically indiscriminate, and this fact is generally acknowledged. A great many men of inferior abilities—some, indeed, who are dunces—finding little chance of doing anything in any other calling, find ready access to the ministry. In fact, there is no calling to which access is so easy as the ministry—a profession which, as the highest of all, should be most carefully guarded. Many inferior men, finding that they can get a good education almost gratis, and going naturally on the line of least resistance, finally reach the ministry. Many superior men of great independence have a contempt for theological students which is not altogether unfounded. I am glad to say, however, that there is an increasing body of students in theological seminaries who reject pure beneficiary aid.

Those who defend the present charity system of aid to students for the ministry have urged that it is a method common for students of all professions. One advocate points to the United States as practising the beneficiary system in its completeness at West Point. The illustration is unfortunate, for if there was the same discrimination by the Church as by the state, there would be left in our theological seminaries but the merest handful of students. The state accepts only the most carefully picked men, selected by physical, intellectual, and moral tests, and in the Military Academy great numbers drop out by reason of the very rigid examinations.

The editor of the New York *Independent* turns to President Eliot with, "Physician, heal thyself." He seeks to show that Harvard College is throughout, to its very President, a beneficiary institution. From some knowledge of Harvard Divinity School, I can say that President Eliot carries out there very fully his own principles. Scholarships are given only for work done, and only men of good abilities and great industry can obtain money. The divinity students are on the same level as other university students, being charged the same as they for board and room.

The giving without any *quid pro quo* is in every respect degrading and pauperizing. The principle of gratuitous distribution is quite generally denounced as positively injurious by benevolent associations which reach the masses, and much more must it be considered as injurious in the highest form of benevolence—the helping students who aim at the ministry. I know upon good authority that in two prominent seminaries men lay up money through beneficiary aid; and as to one I have been assured by one who should know, that students have sometimes gone out of the seminary with several hundred dollars in their pockets, obtained through every channel of beneficiary aid. A *quid pro quo* system of aid is to some extent practised at Union Seminary, New York city, and is to be more fully carried out at Andover, Mass.

H. M. STANLEY.

ANDOVER SEMINARY, MASS., May 25, 1883.

AN INTERNATIONAL SUPERSTITION.

TO THE EDITOR OF THE NATION:

SIR: In your issue of April 26, when speaking of Prof. A. De Gubernatis's 'La Mythologie des Plantes,' you say that "the author mentions a Russian superstition in accordance with which sick children were carried into the woods and thrice passed through the trunk of an oak split open," and you mention a similar superstition as having existed in France in the thirteenth century.

In collecting material for a work which we are writing on superstition, we have noticed several cases of similar action and belief in our great mother country, England. Rev. T. F. Thiselton Dyer, in his 'Domestic Folk-Lore,' tells us that,

"according to an old superstition, parents desirous of securing long life for their children should pass them through the branches of a maple. A few years ago one of these trees had long been resorted to for this purpose in West Grinstead Park, and as soon as a rumor spread through the parish that it was about to be demolished, quite a consternation prevailed in the neighborhood. Similar properties are supposed to belong to the ash, weakly infants that do not thrive being drawn through a cleft in its trunk. This charm, as performed in Cornwall, is thus: A large knife is inserted into the trunk of a young ash, about a foot from the ground, and a vertical opening made for about three feet. Two men then forcibly pull the parts asunder, and hold them so, whilst the mother passes the child through the cleft three times. The ceremony does not end here, as the child has to be washed for three successive mornings in the dew from the leaves of the 'charmed ash.'"

Mr. W. S. Coleman, in 'Our Woodlands, Heaths, and Hedges,' tells us of

"the reputed virtue of a split ash-tree in curing ruptured children. The programme of the ceremony by which this supposed power was called into play is as follows: The stem of a young ash being cleft down the middle, and kept open by wedges, the afflicted child, in a state of nudity, was forced through the opening; the mother standing on one side of the tree, and the father on the other. This uncomfortable transit having been twice performed by the astonished and shivering infant, both it and the disrupted tree were respectively swathed up at the same time; and if the wound in the latter healed and the parts coalesced, as was generally the case, a simultaneous cure was supposed to be effected in the child."

He mentions this performance as having been enacted in Warwickshire.—Respectfully,

F. A. HASSLER, M.D., Ph.D.

SANTA ANA, CAL.

A MAN OF STRAW.

TO THE EDITOR OF THE NATION:

SIR: I hardly think the explanation of the phrase "man of straw" given in your Notes of the 17th inst. can be quite correct. Witnesses who so openly advertised their willingness to swear

to what was wanted would be seen just as readily by counsel, judges, and jurors as by the parties who had need of them, and would soon find their market value gone. Besides, the phrase has always, to me at any rate, denoted rather slightness, weakness, especially in a pecuniary sense, than any moral depravity. I have seen somewhere (I cannot name my authority) an explanation much more plausible at least. During the process by which the English original writ of summons was gradually falling into disuse and the *capias* becoming in fact the first process, *bail* underwent a corresponding change. Originally, when the *capias* was a real arrest, the *bail* were two men of substance who bound themselves for the defendant's future appearance and obedience. By Blackstone's time common bail had degenerated to the two legal men-of-all-work—John Doe and Richard Roe. But there was an intermediate stage when the bail were required to be two men of flesh and blood—money no consequence. Hence it became a regular profession to stand about the courts with straw in your shoes, signifying your willingness to go any one's bail for a consideration. These were "men of straw," and the bail thus put in was "straw bail."

FRANCIS H. BELL.

HALIFAX, N. S., May 23, 1883.

PUBLISHERS' PROFITS.

TO THE EDITOR OF THE NATION:

SIR: Your answer to the letter of the Messrs. Putnam can hardly be regarded as satisfactory. In the article to which their letter refers, you had spoken of the arrangement by which the author receives fifteen cents and the publisher seventy-five cents as not a "fair division of profits." To this the Messrs. Putnam reply that the seventy-five cents received by the publisher is not profits; that only fifteen cents of it is profits. These figures may or may not be correct; but if they are, they entirely dispose of any conclusion drawn from a comparison of the figures as you stated them. But you say the author's receipts do not represent *his* profits, either. What, then, do you mean by an author's profits, or "net profits"? Do you mean the amount he receives over and above the value of the time and effort and ability he has expended upon his work? You can hardly mean that; and yet from your answer it would seem that before estimating the author's profits, one ought to deduct from his receipts the value of his labor, in the same way as the publisher deducts the value of the materials expended upon the manufacture of the book. But this is manifestly absurd. The only meaning that can be attached to the word "profit," as applied to the author, is the recompense he receives for his labor and ability, just as the publisher's profit is the recompense he receives for his labor, business ability, and reputation, and the investment of his capital, and not the amount he receives over and above some imagined *due* reward for these his investments in the enterprise.

It is quite possible that, from the point of view of theoretical justice, not only "five to one," but fifty to one, is an "understatement of the difference between profits"; but it is clear that no statement whatever of the case—neither an understatement nor an overstatement—can be obtained by the crude process of comparing the gross amounts received by the publisher and the author. From the fact that a builder receives a hundred thousand dollars for a house and pays over to the architect only one thousand, it would be rash to infer that the builder's "profits" are a hundred, or twenty, or ten times as great as the architect's.—Yours, very respectfully,

F. FRANKLIN.

BALTIMORE, May 27, 1883.

Notes.

MR. GABRIEL HARRISON'S life of John Howard Payne will appear, in a limited edition, in July. It will be embellished with several fine illustrations and autographic facsimiles. Meantime, Mr. Harrison, whose address is No. 44 Court Street, Brooklyn, N. Y., has issued a steel engraving of the "dramatist, poet, actor," which will be highly prized. It has been made by Mr. G. R. Hall from a daguerreotype by Brady taken just before Payne's final departure from this country for Tunis, and of course not long before his death—say about his sixtieth year. Not lacking the stamp of the highest authenticity, therefore, it possesses the additional interest which the nobility of the face and the history of the man inspire.

With 'Virginia: a History of the People,' by John Esten Cooke, Houghton, Mifflin & Co. begin a new series of popular works on "American Commonwealths," to be edited by Mr. Horace E. Scudder. It will not be so long a line as that of the States, for only such will be included "as have exerted some positive influence in the shaping of the national Government, or have illustrated in a noteworthy way any peculiar political principles." The volumes will be companionable in size and style with those of the "American Statesmen" and "American Men of Letters."

Macmillan & Co. publish immediately 'Dr. Claudius,' a new novel by F. Marion Crawford.

The first of the monthly 'Topics of the Time,' edited by Dr. T. M. Coan, and published by G. P. Putnam's Sons, makes a clearly-printed 16mo volume of 281 pages. The contents embrace eight topics: "World-Crowding"; "Europe in Straits"; "Secret Societies in France"; "Home Rule, Socialism, and Secession"; "A Democrat on the Coming Democracy"; "A Politician in Trouble about his Soul"; "The European Terror"; "The Nationalization of the Land" (the *Edinburgh Review* in reply to Henry George). Except where the author's name is not known, the name of the periodical from which the article is taken is omitted, even in the table of contents. This batch of "social problems" will be succeeded next month by "Studies in Biography."

Mr. Foster's *Monthly Reference Lists* for May is devoted to Oliver Wendell Holmes, Edwin Booth, and John Adams's administration.

In connection with his general index to the *Eclectic Magazine*, Mr. Griswold has already given us an index (under the same alphabet), to volumes 37-148 of the *Living Age*. There now lie before us Nos. 1 and 2 of 'A Complete Index to Littell's Living Age,' undertaken by Edward Roth (Philadelphia, 1135 Pine Street). The plan is peculiar and will hardly meet with the approval of the best index-makers, for it begins by setting apart the first hundred volumes, and then indexes these under no less than fifteen divisions, and of course under as many alphabets. Thus the parts just enumerated are confined solely to Biography (Abbott-James). The author frankly admits the imperfections of this initial publication, and shows that he started out with the notion that a *volume* reference without page (*i. e.*, a reference to the *Living Age's* own table of contents) would suffice. As he went on he changed all that, but he did not go back to repair the deficiencies. Mr. Roth disregards conventional signs, like Mr. Griswold's asterisk to denote a portrait, and further disregards space and expense by printing on one side of the leaf only, and by unabbreviated or ill-abbreviated subject-titles. The result is of course more satisfactory to eye and sense than the more condensed method; but how large a hole will it make in the subscriber's purse? We must, however, include Mr. Roth in our general thanksgiving to index-makers; and so far as he overlaps Mr. Griswold's work he will be useful by way of supplement and correction: indeed, they will be mutually helpful. Thus, under Henry Hallam, one refers to 65 : 85, the other to 65 : 83, for evidently the same thing.

D. Appleton & Co. are the American publishers of a "Parchment Paper [*i. e.*, paper-cover] Series," which, like its namesake, is both cheap and elegant. No. 1, 'English as She is Spoke, with an introduction by James Millington, proves to be a sample, or collection of samples, of our old friend, 'The New Guide of the Conversation, in Portuguese and English' (Paris, 1855). We must find fault with Mr. Millington for not intimating that this well-spring of mirth has been enjoyed for a generation by such as were fortunate enough to procure copies of an edition rapidly bought up *joci causa*. Moreover, he has not been scrupulously careful to preserve the errata which so much heighten the humorous effect of 'The New Guide.' Thus, in the preface, which he gives entire, we have noted four such errors smoothed away, including the crucial one of "*typ*graphical correction." In fact, the main service which the editor has rendered is in illustrating the obvious French basis on which the Portuguese ignoramus erected his stupendously funny structure. This he does in an introduction. Let us note that this series furnishes a happy example of compromise between the advocates of cut and uncut leaves. The leaves are cut, but the margins are left broad.

A plainer edition of the book just described comes to us from G. P. Putnam's Sons.

From the 'History of the Decline and Fall of the Roman Empire' the chapters relating to the establishment of Christianity have been separately printed in a volume bearing the title, 'History of Christianity,' and including also Gibbon's vindication of certain passages in the fifteenth and sixteenth chapters (New York: Peter Eckler, 35 Fulton Street). The publisher, who supplies his own preface, appears to have been moved to this enterprise by the fact of Dr. Smith's omissions in his 'Student's Gibbon.' He has sprinkled a large number of illustrations of pagan deities throughout the volume.

Mr. Francis S. Smith's 'Life and Adventures of Josh Billings' (Carleton) is not a remarkable performance in a literary point of view, but it has points of interest for all those who are concerned with the phenomenon known as American humor. Mr. Shaw's pedigree is almost distinguished—indeed, his father, who was a member of Congress from Massachusetts, and ruined himself by voting for the Missouri Compromise, is called "a distinguished citizen of the United States of America" by John Quincy Adams in a letter of introduction here quoted. The joker himself came near being a college graduate (he began freshman at Hamilton). He did not discover his vocation as a writer till he was past forty-five, and he made three dead failures as a lecturer before he achieved an extraordinary success; so his life throws light on our lyceum system as well as on some other things. Most noticeable is the fact that "Artemus Ward's" cacography gave "Josh Billings" a hint that humor is enhanced for the American public by illiteracy. The triumph, therefore, of the phonetic system would be fatal to this class.

We have received the thirteenth volume of the Business Directory of W. Phillips & Co., New York, on the utility of which it is needless to expatiate.

Vassar College has just published a general catalogue of its graduates from 1867 to 1883. It does not show an alarming mortality as a result

of the higher education: of the 566 graduates in sixteen years, only four and one-half per cent. have died. For the first ten years 44.5 per cent. have married, 45.2 per cent. have had some occupation, and those who have neither married nor died nor had an occupation are only 19 per cent.

The *Portfolio* for July (J. W. Bouton) opens with a first paper on "The Earlier Works of Rossetti," by Mr. F. G. Stephens, who writes from intimate personal acquaintance, yet with evident candor. Three striking and characteristic drawings by the artist are given in facsimile. Mr. Hamerton's chapter on Paris goes into the history of the Tuileries with sufficient minuteness, and has a few words to say about the palace of the Luxembourg. Among the illustrations is Méryon's famous etching of Notre Dame from the rear, reproduced by Amand Durand—we should say, with a qualified success, remembering the original plate impressions.

The thirty-second volume of *L'Art* (J. W. Bouton) seems to us to make more of a feature of its reviews than hitherto, and as these are of illustrated books from which pictures are freely taken, there is a great gain in the variety and interest of the designs which *L'Art* always lavishes upon its readers. Two large etchings of the basins and quays of Marseilles are among the most interesting of their class. But the chief series are admirable specimens of the chefs-d'œuvre of the Narishkine collection, including several named by us a fortnight ago in giving some of the prices at the sale, *e. g.*, Hooge's "Consultation" ($32,000), and the masterly study of four negro heads by Rubens ($11,000). There are, as usual, papers on artists ancient and modern, on the arts of the goldsmith and the ironsmith, on miniatures, on current exhibitions: Jordaens, Mantegna, Delacroix in Algeria, Benvenuto Cellini, the Devérias, etc., etc. Portraits of Doré, of Poynter, of Herkomer, and others occur; that on wood of H. Lehmann being, perhaps, the most noticeable.

The first thirty pages of *Le Livre* for May will inevitably fix the reader's attention without intermission. L. Derôme opens with a paper, in which the abuse of the pursuit of the *inédit* is properly characterized, on the lost works of Alfred de Musset, by way of introduction to criticism of Maurice Clouard's recent Musset Bibliography (Paris: Rouquette). The critic does not give any unpublished specimens of the poet, but he reproduces verses which for one cause or another have dropped out of sight, and he adds some very curious details of Musset's fantastic improvement (nominally a translation) of De Quincey's 'Opium-Eater.' Summing up, M. Derôme thinks searching for many additions to Musset's literary or poetic remains will not be fruitful. He "wrote no letters—only *billets incolores*." However, in the *Chronique* of this same number, there is an account of the sale of Musset autographs and drawings, which fetched high prices, and several extracts from his letters are given which show at least that the man was as much in them as in anything from his pen. An album of his sketches during his Italian journey with Mme. Sand, including portraits of "elle et lui," Stendhal, etc., went for $160. E. Forgues passes a very just verdict upon Doré in a chapter on the book illustrators of the nineteenth century, which is a condensed biography of this artist. Here the "inédit" asserts itself freely, one instance being the first sketch of a composition for Francesca di Rimini. Add to these a number of the familiar scenes from 'Don Quixote' and the 'Contes Drôlatiques,' lent by the Messrs. Hachette. This firm, by the way, has the monopoly of supplying the railway travelling public with reading matter, and in so doing exercises a censorship formerly reserved by the state to itself. *Le Livre* contains a petition, signed by a great number of literary men, on occasion of the exclusion of a novel by Guy de Maupassant. It prays the Chamber of Deputies to abolish the monopoly, and to relieve the railroad news service of all moral control whatsoever.

Nos. 2 and 3 of the "Théâtre Contemporain" (New York: W. R. Jenkins) consist of Eugène Labiche's "La Grammaire" and Ernest D'Hervilly's "Vent d'Ouest" and "La Soupière."

Parts 77-84 of 'Brehm's Thierleben' (Westermann) introduce the rhinoceros, the boar, the seal, the zebra, the giraffe, the humpbacked whale, etc., all shown in very striking colored plates, besides their congeners illustrated in excellent woodcuts in the text.

L. W. Schmidt, 7 Barclay Street, has received Parts 61-65 of the new Brockhaus (Deidesheim-Diebitsch). Germany falling under the letter D, we have a useful series of maps pertaining to that country—as, density of population, geology, political divisions, and historical division at stated epochs. Of course the Empire has a corresponding prominence in the text, filling all of Parts 63 and 64, and portions of others. German-Danish war 1848-50, German war of 1866, German arts, German literature, Germany military status, are some of the convenient heads.

Real progress seems making with Koolman's 'Dictionary of the East Frisian Language' (Norden: H. Braams), when we near the end of the letter S (*smarten*). The significance of the name of the river Rhine (*Rîn*) Koolman inclines to seek in *running*. Under *râdsel*, riddle, we have the Frisian version of "two legs sat upon three legs," etc., thus: "Twêbên satt up drêbên, do kwam fêrbên un wul' twêbên bîten, do nam twêbên drêbên un wul' fêrbên damit smîten."

Again an interval of two years brings us a fresh instalment of the survey of Attica undertaken by the Imperial German Archæological Institute. The new maps, of equal size and scale (1:25,000), are four in number, and show the four quarters of the environs of Athens, with that city in the centre. Thus, we have the Peiræus section on the southwest, the Hymettus section on the southeast, Kephisia on the northeast, and Pyrgos on the northwest. The rugged contour of Hymettus is particularly interesting as here delineated. Pentelicus appears on the third map mentioned. On the topographical beauty and accuracy of all these it would be superfluous to insist. The publisher remains the same (Dietrich Reimer, Berlin). Mr. Arthur Milchhoefer, who in 1881 had the Peiræus assigned to him in the explanatory text accompanying the portfolio, now furnishes the entire description, employing, as before, diagrams and other illustrations in special cases. The form of this text is quarto; of the maps, folio.

In the 'Éloge de Montesquieu,' by Marat, which has just been found by M. Céleste, assistant librarian of the Bordeaux Library, and published by M. Arthur de Brézetz, is a sentence which paints not inaptly the author himself eight years later (it was written in 1785). Marat compares Montesquieu with "those insensate writers whose audacious sacrilege overturns all barriers, breaks all ties, delivers men to the blind fury of passion, plunges them in the horrors of anarchy," and so forth. M. Céleste, by the way, has lately discovered and published a very empty letter of Rulhière, in mixed prose and verse, in the style of Chapelle and Bachaumont, describing the voyage of the Duke of Richelieu from Bordeaux to Bayonne in 1759.

The fifty-third annual meeting of the British Association for the Advancement of Science will commence the third week in September next at Southport. The President-elect is Arthur Cayley, LL.D., F.R.S., Sadlerian Professor of Mathematics in the University of Cambridge. The first general meeting will be held on Wednesday, September 19, at 8 P. M., when Sir C. W. Siemens will resign the chair, and Professor Cayley will assume the Presidency and deliver an address. On Friday evening there will be a discourse on "Recent Researches on the Distance of the Sun," by Prof. R. S. Ball, Astronomer Royal for Ireland; on Monday evening, September 24, a discourse on "Galvanic and Animal Electricity," by Prof. J. G. McKendrick, Professor of Physiology in the University of Glasgow; and on Wednesday, September 26, at 2:30 P. M., the concluding general meeting will be held.

—*Harper's* for June contains as usual several illustrated descriptive articles, and very little critical writing, for what Mr. Curtis says in the "Easy Chair" is less strictly critical than essay-like. *Harper's* keeps alive the early magazine traditions of the country in greater purity than any other. It has no controversies, and is not an organ of opinion, and does not meddle with the field occupied by the reviews. It is still a collection mainly of information, instructive or entertaining, as the case may be, and in many respects it suggests the distinctively rural magazine audience of thirty years ago, for which the department of anecdotes in the "Drawer" was evidently originally devised. The "Drawer" now, however, contains more than anecdotes, and this month has a literary "find" which will be interesting to lovers of Thackeray, in the shape of a Christmas carol, to the tune of "God save you, merry gentlemen," on "E. Aram" and "E. Bulwer," as good as anything that has been unearthed from *Frazer's* or *Punch* since Thackeray's death. It is a ballad rather than a carol, however, as the two opening verses will show:

"E. Aram was a pedagogue
So sullen and so sad;
E. Bulwer was a gentleman
What plied as Colburn's Cad:
And the deeds of both, I grieve to say,
Were werry, werry bad.

"E. Aram he whipped little boys
With malice and with ire;
E. Bulwer wrote whig articles
As Beelzebub did inspire:
And both of them they did these things
All for the sake of hire."

Mr. Higginson continues his historical studies, and writes this month about the "Hundred Years War" (1662-1763), which decided that the civilization of this continent was to be English and not French. Incidentally he discusses the old question of the wrongs done to the Indians by the English, and insists that the purchases of land from the Indians by Europeans, which usually strike us as most unconscionable bargains, were often fair enough, because the land was of no particular use to the savages, while what they got in exchange for it—cloth, tools, knives, beads, etc.—was of great value to them. It must be also borne in mind that the early investors in real estate on this continent, when they bought up the Indian titles, bought something of very doubtful legal character, which in early times did not insure them quiet possession against other European investors, better armed and equipped than themselves. When the Dutch governor Minuit bought the island on which New York now stands in 1626 for sixty gilders, the price, considering what he got for it, may, for all we know to the contrary, have been considered the very "top of the market."

— Dr. G. Stanley Hall has lately published two interesting and suggestive papers on questions of experimental psychology. The first, on "Reaction-Time and Attention in the Hypnotic State," which appeared in *Mind*, contains a record of experiments on a hypnotic subject with a view to determining the simple reaction-times in

the normal and in the abnormal state, respectively, as well as the "association-time," or the time required by the subject to utter some word suggested by another word, a list having been prepared beforehand. The results are chiefly of negative value, suggesting several problems on which the writer is now at work, and exposing the danger of accepting an abnormal state of attention as the one essential factor in hypnotism. The second paper, which appears in the current *Princeton Review*, is of more general interest, the subject being the "Contents of Children's Minds." The line of investigation here followed was suggested by an attempt made in Berlin a number of years ago to collect statistics in regard to the notions entertained by children in primary schools, regarding some of the commonest objects of life and their immediate surroundings. Owing to the non-observance of various precautions, these statistics did not prove as trustworthy as was desirable. More painstaking methods, the careful elimination of suspicious material, and the coöperation of several teachers in kindergarten and primary schools of Boston enabled Doctor Hall to secure some very curious approximate results and statistics. "As a reasoning electric light might honestly doubt the existence of such things as shadows, because, however near or numerous, they are always hidden from it, so the most intelligent adults quite commonly fail to recognize sides of their own children's souls which can be seen only by strategy." The error most commonly indulged in is to take for granted too much knowledge on the part of the children, and endeavor to educate them with words and books that convey no meaning to them, because the objects of which the words are abstractions are as yet unknown to them.

—Country experience, on the whole, offers more that is of pedagogic value than does the city. "A few days in the country at this age has raised the level of many a city child's intelligence more than a term or two of school training could do without it." Among city girls, 18 per cent. were found ignorant of what a cow is, 88 per cent. were unable to locate their ribs, while all but 4 per cent. knew where their knees were. The percentages varied with sex and nationality, the Irish children tested having been behind others in nearly all topics. Kindergarten children show a striking advantage over others. Children think more than adults in pictures, gestures, and inarticulate sounds, and they show a strong anthropomorphic and anthropopathic tendency in their notions of various natural objects. Of 48 that were questioned, 20 believed sun, moon, and stars to live, 15 thought a doll and 16 thought flowers would suffer pain if burned. Birds'-nests and stockings are supposed to grow on trees, butter to come from buttercups, meat to be dug from the ground. Puns are much indulged in, as when grasshoppers are supposed to give grass, and buttercups butter, or a holiday is supposed to be a day to "holler" on. Being asked to name right and wrong acts, 53 of the former were specified in about 450 answers, and 34 of the latter in over 350. The right things named were rather tame and unattractive. On the other side there was more variety. "Boys say it is wrong to steal, fight, kick, break windows, get drunk, stick pins into others, or to 'sass,' 'cuss,' shoot them; while girls are more apt to say it is wrong to not comb the hair, to get butter on the dress, climb trees, unfold the hands, cry, catch flies, etc." The whole essay is replete with interest to parents and those who have to do with educational problems. The most important deductions to which Dr. Hall calls attention are that we must start from the knowledge that children really have, and develop this as a germ; and that there is next to nothing of pedagogic value the knowledge of which it is safe to assume at the outset of school life—whence the need of natural objects, the sights and sounds of the country, and the necessity of avoiding books and mere word cram. "Many of the best primary teachers in Germany spend from two to four or even six months in talking of objects or drawing them, before any beginning of what we till lately have regarded as primary school work."

— The Plaza Cruz del Quemadero at Madrid, the scene of the most terrible part of Victor Hugo's 'Torquemada,' had remained covered since the time of the autodafés, says the *Gegenwart*, with a thick band of black earth, 150 feet long. On digging into it it was found to consist of calcined bones, coals surrounded by a greasy matter, and fragments of burnt clothing. Dark layers alternated with strata of clay or of sand, and were of varying thickness from three inches up to nine, so that one could infer a varying zeal in the Inquisition. The Spanish geologists, therefore, had a somewhat new problem submitted to them. The usual puzzle, not yet solved, is: Given the thickness of the strata, and guessing at the rate of deposition, to determine, so that a sceptic may be convinced, the age of the world. Their problem was: Given the thickness of the deposits, and the time over which they spread being known, to estimate how many human beings must have died in agony to slowly build up the horrible pile. The deposit was examined by learned Spaniards; the account of the investigations was published in the official journal. The Spanish clergy got nervous at this raking over of the embers—for a humanitarian public opinion is spreading even in bull-baiting Spain—and finally they have obtained from the Government that the whole thing shall be removed—a pleasing indication, not that the Church repents, but that she practically yields to the spirit of the age.

—Bull-fighting yet remains in Spain, and may for some time; but it may gradually fade out as prize-fighting has done in this country and in England. A kindred barbarity is not, perhaps, on the eve, but at least within measurable distance, of extinction in Germany. A society of students, *Reformburschenschaft*, has been founded at Berlin to encourage scientific studies and physical education, and to discourage the students' duel. Bismarck, characteristically, is opposed to it, as he is to a reformed German spelling and other good things. He thinks that these duels train men in coolness, and teach them to bear pain. His influence may be of some effect for a time, but not for long.

RECENT POETRY.

THE new impulse lately given to the fame of Robert Browning is a curious fact in literary history. Within the last year or two, Browning societies have sprung up, as it were spontaneously, in England and America; and there lie before us two independent selections from his poems, both edited with loving care, and both published almost simultaneously in New York. Yet it is almost half a century since Browning first came before the public, and in that interval his fame has seemed to hide itself behind that of a whole school of poets. Now that school seems to vanish with Rossetti. There has been no recent work which sustains the rapidly-acquired reputation, for good or for evil, of Morris and Swinburne; and it suddenly turns out that Browning's fame is stronger than ever, and may yet outlast two or three short-lived schools, whether fleshly or spiritual.

The writer of the preface to one of these new volumes seems to think twenty-five years a long time to have known Browning; but there are not a few in America who were among the subscribers to the original series of 'Bells and Pomegranates' as they appeared from 1841 to 1846—a series some of whose single numbers now sell in England (as is said to have been stated by the poet himself) for more than the author made by the whole issue. The reading of these led to the study of his earlier works, 'Paracelsus' (published in 1835) and 'Sordello' (published in 1840), both of which found ardent admirers among youths and maidens; and thus the first introduction of Browning to his American readers may fairly be dated back forty years. During that time he has had time to train his own especial public, and, like all great poets, to create the taste by which he is enjoyed. Indeed, he has, like Tennyson, dealt with two generations; and the 'Ring and the Book' forms as distinct an introduction to his later style as is afforded by 'Idyls of the King' in the case of his great rival. Few will now deny to these two the leading place among English poets, nor has America afforded one who can fairly claim equal rank with them, although Longfellow had certainly a wider range of popularity than either, and this even in England itself; while there are doubtless many who will hold, with some semblance of reason, that Emerson, with all his artistic waywardness, touches chords of human thought profounder than any living compeer has reached. As between Browning and Tennyson, it is easy to quarrel with Browning for almost wilful ruggedness and frequent obscurity, while, on the other hand, his extraordinary dramatic power makes all Tennyson's efforts in that direction seem tame.

In comparing these two Browning volumes, it is observable that they agree in less than half their selections. 'Lyrical and Dramatic Poems Selected from the Works of Robert Browning,' edited by Edward T. Mason (Henry Holt & Co.), has twenty-four poems, and 'Selections from the Poetry of Robert Browning' (Dodd, Mead & Co.) has forty-five; but thirteen of these last selections are in the former volume, constituting half its contents. In mechanical execution both volumes are pleasing and presentable, so that each forms a creditable tribute to the fame of Browning. Both leave out some poems which we had supposed to be generally recognized as among this poet's very best—for instance, "The Flight of the Duchess" and "Rabbi Ben Ezra." Both give us unflinchingly some of his most disagreeable effusions; thus Mr. Mason offers "Holy-Cross Day" and "Halbert and Hob," while the 'Selections' include the repulsive "Heretic's Tragedy" and the verses called "Youth and Art," which come as near as anything of Browning's can come to being trashy. We cannot justly complain that the editors in both cases follow the poet in those later emendations which, in the opinion of many of his admirers, were the result of too much deference for his duller students. There is a notable instance of this in one of his most graceful songs, which ran originally—the poet is speaking of the seeds of love—

> "I plant a heartful now; some seed
> At least is sure to strike
> And yield, what you'll not care indeed
> To love but, may be, like
> To look upon," etc., etc.

But as his readers in England obstinately refused to carry the meaning on into the second verse, he was fain to meet them at the termination, and the verse now ends tamely with a period—

> "To love but, may be, like."

There is not in all literature, perhaps, a flatter or more deplorable result of incompetent criticism, but similar ones might easily be cited from the 'Bells and Pomegranates.' However, we cannot expect editors to go behind the decisions of their authors. We suspect, nevertheless, that either the editor or proof-reader of 'Selections' has taken a liberty in the closing line of "Childe Roland," where there is ordinarily a period before the quotation.

The publishers of these little volumes have sought to strengthen them by giving in each case a preface, bearing the name of a critic of reputation, but we doubt if in either instance they have helped the book. Mr. R. G. White furnishes the preface of 'Selections,' and gives us as usual a pretty strong flavor of his own dominant personality, which, however racy it may be, can hardly be called pliant or receptive. He would hardly think it the best preparation for a critic of Shakspere never to have "read a line of criticism upon him" (p. xx.), and yet he announces this with an air of pride about Browning in his own case. Indeed, it would seem that he could hardly have read even the original poems with minute accuracy, or he would not speak (p. x.) of "Count Guismond's Apology," the name of the hero in question being Gismond. Moreover, it is a very shallow solution of Browning's want of wide popularity to say (p. x.) that he does not much interest "the average young woman," when the disinclination toward him among average young men is quite as manifest, and the recent readings from Browning by Mr. Thaxter were certainly attended by ten women for one man. Nor is Mr. Mason much more fortunate in prefacing his volume by an extract from Mr. Stedman's 'Victorian Poets.' To our thinking, there is no chapter in that elaborate and painstaking volume so utterly inadequate as that on Browning. Mr. Stedman's criticism in this case resembles, one might say, Mr. Edwin Booth's acting; in dealing with minor matters nothing can be better, but in handling the more difficult passages neither the actor nor the critic adds much to our knowledge. Hence Mr. Stedman's treatment of Landor was a masterpiece; but in criticising Browning he scarcely seems to recognize what a really dramatic poet is, and his unsuccessful attempt to class Browning with Swinburne, as an advocate of absolute license in love, is a piece of special pleading that seems utterly unworthy of one poet dealing with another. Be this as it may, the whole paper of Mr. Stedman is written from a point of view quite antagonistic to that of the lovers and admirers of Browning; and it would tend to kill the sale of this book of selections but for the fortunate habit of readers in regard to skipping the preface.

In close connection with these two books on Browning there comes a tolerably well selected volume of English poetry—'Living English Poets, 1883' (Boston: Roberts Bros.). The collection is anonymous. The worst thing about it is the wretchedly executed group of poets in the frontispiece; the best thing is the plan, which is excellent. The merit of this plan is that it is restrictive rather than miscellaneous; that it aims to represent only poets of established fame, and to give the very few masterpieces of each—just as, for instance, a corresponding American selection would allow Holmes to be represented by his "Chambered Nautilus," and Lowell by his "Day in June." The project at least sounds well; when it comes to the fulfilment, no two persons will agree even as to the list of authors. Looking at the collection from this side of the Atlantic (since it plainly originated in England), we can easily pardon the absence of Alfred Austin and Oscar Wilde and Mrs. Emily Pfeiffer; but it certainly seems a little absurd to insert Harriet E. Hamilton King and A. Mary F. Robinson, while altogether leaving out Edwin Arnold. When we examine the selections in detail, there is still more room for question. It is pleasant to find the friends of our youth, Sir Henry Taylor and Richard Henry Horne and Philip James Bailey, still holding their place as contemporary poets; but the first two, at least, do not appear at their best. Lord Houghton's "Brookside" is perhaps his most popular poem, and is here given; but Aubrey de Vere has written a dozen that are better than those which represent him in these pages, and if William Cory has not, he might as well not be included at all. But the selections from the greater poets are more felicitous than from the smaller. The chronological table is good; we are told the date of each poet's birth, and are spared all further information or criticism. As a whole, the book vindicates its plan, and is well worth having.

When we turn to the recent productions of our new American poets, we are reminded of what Heine says: that, as a glass of water contains a whole world of wonderful and minute animals, in whom the power of the Creator is as manifest as in the largest, so the pettiest poetic almanac contains a swarm of poetlings who to the studious searcher seem as interesting as any elephant. There lies before us a series of dainty volumes, each doubtless dear to the author and his wife, and each no doubt containing some genuine record of experience, yet each wholly destitute of the magic touch which could alone make them precious to the stranger. It is useless to name them, and better not to specify; there are, fortunately, a few which stand out from among them, either through intrinsic qualities or through the circumstances of their composition. Some of them, for instance, come from men who are already known in other fields, and with whom poetry is rather an avocation than a vocation. Sometimes these proceed from a clergyman, as with 'Poems by Minot J. Savage' (Boston: George H. Ellis); sometimes from an assiduous literary compiler and editor, as in 'Idler and Poet,' by Rossiter Johnson (Boston: Osgood); sometimes from one who has devoted his life to musical composition, as with Mr. Richard Storrs Willis, in his 'Pen and Lute' (Detroit: Nourse). In each of these cases the author would probably admit for himself that, as he had spent his life in training for some other pursuit, he could not justly claim excellence in this also. But the trouble is, that we often take most satisfaction in doing that which the world does not expect of us—as Byron was vainer of his swimming than of his poetry. There is nothing conspicuously bad in any of these volumes, except, perhaps, the very vapid college-songs of Mr. Willis; but all offer rhymed thoughts rather than poetry, and the mass of them have a greater defect—namely, that conventional and tame flavor which comes from taking both nature and life at second hand. Even Mr. Ernest W. Shurtleff—'Poems' (Boston: A. Williams & Co.)—who is expressly recommended by his sponsor, Mr. Hezekiah Butterworth, as having made his studio among the fields, birds, and flowers of Waltham, Mass., gives us a prolonged poem on the nightingale (p. 68), instead of celebrating any bird that could possibly be heard in Waltham. We are sorry to insist tediously on one point, but a national literature must be indigenous if it is to be anything at all; and we count it as a partial atonement for the ruggedness and the unkempt verse contained in Mr. W. J. Coughlin's 'Songs of an Idle Hour' (A. Williams & Co.), that the author at least writes about things he has seen and heard, such as Lowell cotton-mills and the children at work in them. Yet even he must become exotic when he wishes to be fine, and must sing of "Monkswood Grange" and "Lulu De Barre."

A few recent books stand out, however, from this general tendency to mediocrity. 'Monte Rosa, the Epic of an Alp,' by Starr H. Nichols (Boston: Houghton, Mifflin & Co.), has attracted much attention, and deservedly, through its extraordinary descriptive power. No one has ever put into more weird and picturesque language the whole range of Alpine nature from

> "The virgin snow
> That slenderly leaps into kindred cloud
> From the slim tip, the last of mortal earth"
> (p. 13),

through all the terrible experiences of climbing and crevasse. The phrase "epic" in the title seems at first a little whimsical, and then too true—an "epic" indeed it is, in length and sometimes in monotony; and there is often an incompleteness, and even slovenliness, of the lines, reminding us of the tantalizing utterances of Ellery Channing; but Mr. Nichols, yet more than Mr. Channing, is sure presently to startle us with something so thoroughly poetic as to atone for innumerable sins, and it is certain that so much fine Alpine description was never before compressed into a single volume.

Another little volume has a special interest as being a sort of "survival" of the ideal side of Transcendentalism. Mr. John Albee, author of 'Poems' (G. P. Putnam's Sons), wrote, many years ago, a paper in the *Atlantic Monthly*, in which he so caught the trick—or perhaps it would be kinder to say the movement—of Emerson's prose style that many people supposed the essay to be by Emerson himself. In like manner, there are many short verses in this volume which might have been printed in the *Dial* but that they seem more faint and misty than the improvisations, often striking, which used there to pass muster for poetry. We confess to liking Mr. Albee best when he is least Emersonian; when he writes under the inspiration of a personal grief, as in the series of poems, "In Memory of H. R. A.," or when he commemorates the local traditions of New Hampshire, and takes us back to the romantic old days of de Chauncy and Champernowne The latter is perhaps the most knightly figure in the early New England legend, and yet is strangely ignored by our cyclopædias. The sonnet written at his grave shows Mr. Albee at his best:

> "Here poise, like flowers on flowers, the butterflies;
> The grasshopper on crooked crutch leaps up,
> The wild bees hum above the clover cup,
> The fox-grape wreaths the fence in green disguise
> Of ruin; and antique plants set out in tears,
> Pink, guelder-rose, and myrtle's purple bells,
> Struggle 'mid grass and their own wasting years
> To show the grave that no inscription tells.
>
> "Here rest the bones of Francis Champernowne;
> The blazonry of Norman kings he bore;
> His fathers builded many a tower and town,
> And after Senlac England's lords. Now o'er
> His island cairn the lonesome forests frown
> And sailless seas beat the untrodden shore."

There is real power, too, in some of the 'Verses,' by Kate Vannah (Philadelphia: Lippincott), especially in those called "Her Last Wish" and the sonnet on "An Opera-Cloak." Mr. Mackenzie Bell, in his 'Verses of Varied Life' (London: Elliot Stock), certainly reaches pretty near low-water mark when he puts "Waiting for the Dentist" into rhyme; but he redeems part of his transgression by the very agreeable way in which he turns his peninsular travel into verse before the volume closes. The piquantly-illustrated volume called 'Birds and Babies,' by Ethel Coxhead (London: Kegan Paul, Trench & Co.), has a good deal of wit and grace in it; but the child who would not be haunted by those little black, long-eared goblins can have no hereditary predisposition to nightmare. Mr. Edward S. Gregory gives us an oft-told tale in his 'Lenore, and Other Poems'

(Lynchburg, Va.: J. P. Bell & Co.), yet an interest will always attach to Bürger and his poetry, to his three wives, and to the criticism by which Schiller is supposed to have killed him; so that Mr. Gregory's preliminary pages of biography and bibliography really enhance the value of his little volume. His translation of the well-known ballad is as good as any, and many of the other poems show real poetic feeling. The longest of these is one entitled "The Roman Lawyer," written by way of antidote to Mr. W. W. Story's defence of Judas Iscariot, under the same title. One alone of the minor poems has a marked political character, and that—being an appeal to Virginia, under the title "Desdichado"—is certainly one of the most spirited of the secession lays.

There is something quite novel in the whole effect of 'Birch-bark Poems,' by Mr. Charles F. Lummis (of the Scioto *Gazette*), as published by himself in very peculiar guise at Chillicothe, Ohio. The poems are printed upon miniature pages, two inches square, the material of these being an excessively thin birch-bark, as delicate as tissue-paper, and taking perfectly the impression of the types. The bark was in this instance, as the author privately informs us, gathered in the White Mountains of New Hampshire, where no suitable quality of the material can be found at a lower elevation than two thousand feet. The half-dozen little poems are smooth, fresh, and graceful, and the whole booklet is very pleasing to eye and touch. The author is to be congratulated on compelling his favorite tree to vindicate its claim to its prophetic title of *Betula papyracea*, or "paper-birch."

HALLOWELL'S QUAKER INVASION.

The Quaker Invasion of Massachusetts. By Richard P. Hallowell. Boston: Houghton, Mifflin & Co. 1883.

THE subject of this little book is the persecution of the Quakers by the New England Puritans. The object of it is "to correct popular fallacies, and to assign to the Quakers their true place in the early history of Massachusetts." The title, 'Quaker Invasion of Massachusetts,' is suggestive of a satirical treatment of the subject, but this appears only in the title and some of the chapter headings, the author's seriousness manifesting itself through every page of his work.

Quaker historians have preserved to the smallest particular the records of the afflictions of the "peculiar people." The executions, mutilations, stripes, imprisonments, and fines—all these have been described with wonderful minuteness by able, if not impartial, writers. The other side of the painful story has been left unwritten, and so it happens that the Puritans, without a defender, and scarcely an apologist, by their very silence plead guilty to the whole indictment. Two centuries of hearty repentance have not removed the stain. Our *ex-post-facto* judgment declares their offence to be thoroughly inexpiable, and demands from time to time a fresh exposure and punishment. An important circumstance of the persecutions—a circumstance usually disregarded in the discussions—is that, in strict justice, whatever opprobrium is to be meted out to the persecutors should be placed upon the magistrates and ministers of the colony, and not upon the whole body of the people. Mr. Hallowell candidly admits that "the passage of the laws and their merciless enforcement were not sustained by public opinion"; and Mr. Bowden, the author of an excellent 'History of the Friends in America,' says that "throughout the sufferings of Friends in New England, there is scarcely a single instance on record in which the public evinced a spirit of persecution." On one occasion, certainly, the inhabitants of Boston opened a public subscription in aid of the release of five imprisoned Quakers, and speedily raised the desired amount. Whatever the rulers might have been, the people of the colony were humane and generous. Without question the Quakers were a "disturbing element," for in several respects their avowed principles came in conflict with the requirements of Puritan law. The Puritans required that every able-bodied man should perform military duty; the Quakers were non-resistants, refusing to fight, and "testifying" against war in unsparing terms. The Puritans administered oaths of allegiance and fidelity to the inhabitants, with fine and imprisonment for those who refused to take the oaths; it was a cardinal precept of the Quakers to "swear not at all." The Puritans levied taxes for the support of ministers and churches; the Quakers were conscientiously opposed to contributing toward the support of the legally established ministers and churches. In an age of religious toleration these would be trifling differences, hardly worth talking about. The persecutions, however, were the events of an age in which toleration was preached against as a sin, "the first-born of all abominations."

Mr. Hallowell is a stalwart supporter of the Quakers. He writes feelingly and with all the force of a Bishop or a Whiting. Aiming to be accurate, he fortifies his position with quotations from the colonial laws and verbatim copies of the records, some of which have not hitherto appeared in print. His introductory chapter deals with the "Rise of Quakerism in England," and presents a eulogistic survey of the religious tenets of George Fox and his followers. His narrative proper commences with the chapter entitled "The Invasion—Measures of Resistance and Defence." The vanguard of the "invading army" arrived at the port of Boston, from Barbadoes, about the 1st of July, 1656. It consisted of two "harmless women," one, Anne Austin, "stricken in years," the mother of five children, and the other, Mary Fisher, a "maiden Friend" of the age of thirty-two. These women were ministers of the Society of Friends, and they brought with them "sundry books," described by the Puritan authorities as containing "most corrupt, heretical, and blasphemous doctrines, contrary to the truth of the gospel here professed." The strangers arrived at an unhappy moment. A few days before, Mrs. Anne Hibbins, the widow of an eminent magistrate, suffered death on the gallows for the crime of witchcraft, and the town was considerably excited over that extraordinary event. The Quakers were made prisoners before they had stepped on shore, and, after being examined for witch-marks "in a manner too indecent to be named," were carried to the jail and there kept in close confinement for the space of five weeks. Their proselyting books were ordered by the Council to be "forthwith burnt and destroyed by the common executioner," and after five weeks' imprisonment the offending women were put on shipboard and sent back to Barbadoes, the expense of their transportation, as also the charges of their imprisonment, being laid upon the captain who had so imprudently brought them to New England. Such was the beginning of the persecution of the Quakers. In commenting upon the treatment of Mary Fisher and Anne Austin, Mr. Hallowell says: "There is nothing in the whole history of their case to relieve the blackness of the diabolical crime of which they were the victims." But surely the fact that Nicholas Upsall, "a church-member and freeman since 1631, bribed the jailer with five shillings a week for the privilege of sending them provisions," lest they should be starved, must relieve the history of their case of some of its blackness, for Mr. Upsall by his charitable course was preparing the way for his own banishment.

On the 7th of August, two days only after the forced departure of Anne Austin and Mary Fisher, eight other Friends' ministers arrived at Boston by ship direct from London. These were Christopher Holder, John Copeland, Thomas Thurston, William Brend, Mary Prince, Sarah Gibbons, Mary Weatherhead, and Dorothy Waugh. Their reception differed but little from that given to Anne Austin and Mary Fisher. They were straightway made prisoners and placed in jail, the keeper being ordered to "search their boxes, chests, and things," and to "keep them close prisoners, not suffering them to confer with any person, nor permitting them to have paper or ink." After an imprisonment of eleven weeks' duration, sentence of banishment was passed upon them, and they were sent back to England by the same ship in which they came. Brave hearts! Within two years all except Mary Prince were back again in America, John Copeland and Christopher Holder to lose their right ears in Boston Jail. By ways mysterious the doctrines of the Quakers were spread through New England, and the "warfare," once fairly commenced, waxed hotter and hotter. Rigid laws were enacted punishing by fine, imprisonment, and banishment "on pain of death" the "cursed sect of heretics." In 1661, the "King's Missive" stopped for a while the hands of the persecutors. The truce lasted for little more than a year, and then the persecutions broke out afresh, and were continued until 1677, when "the Friends rallied in increasing numbers, and once more the authorities were forced to respect their rights."

An examination of the war record shows that four Quakers were put to death. The martyrs were Mary Dyer, described by a Dutch writer as a "person of no mean extract and parentage, of an estate pretty plentiful, of a comely stature and countenance, of a piercing knowledge in many things, and of a wonderful sweet and pleasant discourse"; William Robinson, a merchant of the city of London; Marmaduke Stevenson, a Yorkshire farmer; and William Leddra, a "clothier," from Barbadoes. Three young men, well educated and of good estate, were sentenced to have "each of you his right ear cut off by the common hangman." These victims were John Rouse, Christopher Holder, and John Copeland. Humphrey Norton was branded in the hand with the letter H. This was done in the New Haven colony, and must not be charged against Massachusetts. Norton revenged himself on his tormentors, and in a book called 'New England's Ensign' he blistered them all over. "The number of homes broken up by banishment and the extent of the impoverishment of families by confiscation of property have yet to be computed. Nor is it known how many scourgings were inflicted." From Mr. Hallowell's closing chapter—"The Cause of the War and its Results"—we quote the following:

"If we fully realize the differences that separated them [the Puritans] from the Quakers, we shall see that a conflict between the two was inevitable. Resistance to religious tyranny was an imperative and sacred duty with the Quaker. Extermination of heresy and persecution of Nonconformists were essential articles in the creed of the Puritans. . . . All Puritans were not Quakers, but all Quakers were Puritans. Strong sympathies and similarities intensified the heat of the conflict. Family feuds are proverbially bitter, and theirs was a family quarrel. When Greek met Greek then came the tug of war. . . . The Quakers were abreast, if not in advance, of the foremost advocates of religious and civil freedom. They were more than advocates: they were the pioneers who by their

heroic fortitude, patient suffering, and persistent devotion rescued the old Bay colony from the jaws of the certain death to which the narrow and mistaken policy of the bigoted and sometimes insincere founders had doomed it. They forced them to abandon pretentious claims, to admit strangers without insulting them, to tolerate religious differences, and to incorporate into their legislation the spirit of liberty which is now the life-blood of our institutions. The religion of the Society of Friends is still an active force, having its full share of influence upon our civilization."

Mr. Hallowell has closely studied the whole subject of the persecutions, and, after a somewhat careful reading of his book, we feel constrained to say that it makes a fair exhibition of one of the most distressing episodes of colonial history. A material addition to the value of the work is its faultless index.

WILLIAM ROWAN HAMILTON.

Life of Sir William Rowan Hamilton, Knt., LL.D., D.C.L., M.R.I.A., Andrews Professor of Astronomy in the University of Dublin, and Royal Astronomer of Ireland, etc., etc., including selections from his poems, correspondence, and miscellaneous writings. By Robert Perceval Graves, M.A. Vol. I. Dublin: Hodges, Figgis & Co.; London: Longmans, Green & Co. 1882.

William Rowan Hamilton was born in Dublin, August 4, 1805, and lived to the age of sixty years. Professor Tait, of Edinburgh, who has perhaps a greater familiarity with his scientific works than any other person, has called him "a man of genius . . . in the most strict and exclusive sense—one of those extraordinary instances which are above every-day comparisons, and in fact furnish themselves the only standard by which they can be measured." The boy Hamilton being, from the early age of three, under the tutelage of his uncle, the Rev. James Hamilton, had acquired at thirteen a thorough knowledge of Persian, Arabic, Sanskrit, etc.; at seventeen began the systematic study of Laplace; at eighteen was rated by Doctor Brinkley as the greatest mathematician of the age; received during his collegiate course at the University of Dublin the unique distinction of double *optime* ("the more remarkable by the fact that one was in classics, the other in science"); was appointed Andrews Professor of Astronomy in the University at the age of twenty-two, and before the actual termination of his undergraduate studies; at twenty-seven had made such generalizations in the science of optics as led him to the theoretical discovery of conical refraction (which Doctor Lloyd immediately verified by laboratory experiments); at twenty-nine, in adapting his method of "varying action" from optics to dynamics, contributed the greatest additions which this latter science had received "since the grand strides made by Newton and Lagrange"; was elected to the Presidency of the Royal Irish Academy at thirty-two; at thirty-seven published his important researches on the "fluctuating functions"; at thirty-eight was so fortunate as to make perhaps the greatest contribution to the mathematical science of the present century—the invention of the calculus of quaternions; and continued the high exercise of his extraordinary mathematical genius in grappling with the most abstruse subjects of analysis until within a few hours of his death (September 2, 1865), having been engaged at that time for many years on his great work, the 'Elements of Quaternions.'

To his uncle, curate of Trim, was Hamilton indebted, more than to any other, for that cautious circumspection of early training which insured a thorough foundation for the massive superstructure of his own erection; and in later life Hamilton was fond of acknowledging this incomparable service. The boy of four first draws the attention irresistibly by the striking combination of his childish frolicsomeness with the learning of the wisest heads. Of his marvellous attainments at a very tender age, Mr. Graves very concisely remarks:

"Continuing a vigorous child in spirits and playfulness, he was at three years of age a superior reader of English, and considerably advanced in arithmetic; at four a good geographer; at five able to read and translate Latin, Greek, and Hebrew, and loving to recite Dryden, Collins, Milton, and Homer; at eight he has added Italian and French, and gives vent to his feelings in extemporized Latin, and before he is ten he is a student of Arabic and Sanskrit. And all this knowledge seems to have been acquired, not, indeed, without diligence, but with perfect ease, and applied, as occasion arose, with practical judgment and tact."

Almost the first occasion of this sort gave birth to his 'Syriac Grammar, compiled from that of Buxtorf, translated into the English language and Syriac characters'—at the conclusion of which he says: "Soon may be expected an account of the irregular and indeclinable words, etc., with a syntax." This document, a manuscript book of thirty pages, was finished a month before he was twelve years of age. At fourteen, on occasion of the visit of the Persian Ambassador, Mirza Abul Hassan Khan, to Dublin, Hamilton wrote him a letter in Persian, of which the minister is reported to have said that he had not believed there was a man in Britain who could have written such a document.

It is always a matter of astonishment to one first acquainting himself with the life of Hamilton, and learning of his extraordinary acquisitions in language when still so young, that his celebrity in mature life came to him chiefly through his power of mathematical research. This meets with a full explanation in a letter by Hamilton himself, wherein he expresses his belief that his experience with Zerah Colburn, the famous American calculating boy—whom Hamilton met and engaged in Dublin at about this age—first gave the decisive turn of his attention toward the science of numbers. A mind of his calibre could scarce fail to leave the world the better for having lived in it, whatever might have been the direction of its activity; but there will be few to doubt that Hamilton's true sphere was mathematical analysis. And, notwithstanding the revulsions of his susceptible nature at the "utter unimaginativeness" of some mathematicians whom he met later in life, Hamilton himself would seem to have entertained no doubt that the field of scientific investigation he had chosen was genuinely his. He saw clearly, at the age of eighteen, that he had derived from the classics all the benefit they were likely to give him; writing at this time to his sister Eliza, that science in its most exalted heights had so captivated him—"so seized on, I may say, my affections—that my attention to classical studies is an effort, and an irksome one." In conjunction with a school-fellow, we find Hamilton, at fifteen, inventing and practically employing a signal-code, the words being spelled out in conversation by properly varied and combined motions of the arms, and viewed from as great a distance as his fellow could be readily seen. Of his lordly ambition, he writes to his aunt, Mary Hutton (p. 111): "Mighty minds in all ages have combined to rear upon a lofty eminence the vast and beautiful temple of science, and inscribed their names upon it in imperishable characters; but the edifice is not completed: it is not yet too late to add another pillar or another ornament. I have yet scarcely arrived at its foot, but I may aspire one day to reach its summit." About this time, at the age of seventeen, he conceived the germ of his illustrious researches in optics. The depth of his love for science, and particularly for mathematics, gave no sign of waning with advancing years—we must, in fact, regard it as the more forceful when, recalling his own propensity for poetic expression, we read what he writes to Francis Edgeworth at twenty-four (page 348): "I must say that I believe myself to find in mathematics what you declare you do not—a formable matter out of which to create Beauty also; and that, to my particular constitution of mind, a mathematic theory presents even more of 'the intense unity of the energy of a living spirit' than the work of a poet or of an artist."

We have serious doubt whether Mr. Graves has increased the attractiveness of his book, as a biography of Hamilton, by the occasional digressions on people—otherwise little known—who have had the slight connection only of a letter to Hamilton, or a talk with him. It is not, perhaps, too much to say that the book goes a good way toward the biography of many other persons of marked distinction. And while, in general, this enhances its literary merit, it is at least a hindrance to one seeking an adequate knowledge of Hamilton as a scientist purely.

When first, a youth of nineteen, Hamilton met Miss Edgeworth, in a letter to his sister he says: "She far surpasses all that I had heard or expected of her, though I confess that, at first sight, I was disappointed by her personal appearance; and though she said at once, 'Mr. Hamilton, I am sure,' I was not at all prepared to say, 'Miss Edgeworth, I am sure.'" In one of the 'Stanley Papers'—a series of essays by the members of a small society of which Hamilton was, at the age of twenty, the chief spirit—we read (pp. 216–17):

"We find that among women many have been eminent as poets, but few as mathematicians. But to be eminent is not, perhaps, the great business of any one; certainly it is not the great business of a woman. Those absurd prejudices have indeed died away by which 'learned ladies' were once looked upon as a sort of wild beasts, to be treated with a mixture of fear and aversion. The times are gone when working in tapestry was one of the highest accomplishments of princesses, and when women of inferior rank were not allowed to aspire much further than the making of a shirt or of a gooseberry pie. . . . I am so far from being an enemy to the cultivation of the female mind, that I am always glad when I see a lady possessed of that energy by which some have surmounted all the obstacles thrown in their way by the restraints of custom and the deficiencies of education. . . . They should be persuaded to add to their native delicacy of taste and feeling something of those habits of accuracy of thought and reasoning which the study of science appears so peculiarly fitted to bestow. . . . I am not quite sure that in anything valuable the minds of men are really superior to those of the other sex."

It was Hamilton's good fortune to meet Wordsworth very soon after his appointment to the chair of astronomy in the University; and their mutual friendship, through an occasional subsequent meeting and the correspondence of years, grew to a healthful maturity. Mr. Graves has given the letters of the poet the very conspicuous position they deserve. Nothing will better illustrate the delicate conscientiousness of Hamilton than a single passage from a letter to Wordsworth (p. 395):

"And if any one, endeavoring to be impartial, conscientiously believes that he has power of original thought, that he can discover new fountains, however small, at which the minds of men may drink and be refreshed—does not that person, in devoting himself to such a search, in following with entire submission the guidance of his inward light, and seeking to accomplish the task assigned to him from within, fulfil his highest duty, not to himself only, but to other men? To me—who do believe myself to possess original power of mathematical thought, however small may be its degree, and who have long been impressed with a deep and enthusiastic conviction that with this power are

connected a duty and a destiny, a task while I live, an influence after I am dead—the questions here proposed are of great and anxious interest. And though, as respects myself, my conscience has long since answered them, and the answer is graved in distinct and luminous characters, it were a lot too happy if the writing were never hid—if the inward voice sounded never faint and dubious—

'But though yet feeble, I will follow still.'"

To Herschel he writes of his possessing "the desire which all ardent persons have for sympathy, and the very little chance which there is of soon or often obtaining this sympathy, when the object of ardent love belongs to abstract Science." It is most gratifying to find Mr. Graves able to add, at the conclusion of this volume, "By nothing was Hamilton more distinguished, from the beginning to the end of his scientific career, than by his scrupulous anxiety to award to all laborers in the same fields with himself the shares to which they had a just title in the priority and independence of discovery."

Of Hamilton and his poetry his previous biographers have written not a little, but presumably without having seen more than a very small part of the immense number of verses he wrote. Except, perhaps, as showing the amiability and healthfulness of his nature, Mr. Graves would have done better to dismiss the poetry with a mere allusion to the fact that Hamilton frequently courted the muse. His poetry is respectable only in expression. That Hamilton himself, in later life, was inclined to regard with disfavor much of his early versification is evident from a letter in which he alludes to "those fourteen-lined productions to which I attach but little value on the artistic side, although some of them are associated with happy or mournful moments; and which at all events may, to a man's self, serve as instruments of culture, and may have some social or other interest to those who know him chiefly as a writer or thinker on subjects of a very different kind." Had Hamilton written his autobiography it seems doubtful whether it would have contained more than a very few of his verses. For a time, everything of this nature which he wrote was submitted to Wordsworth for his criticisms. The poet's replies are uniformly in discouragement of Hamilton's verse-writing, and he finally says (page 492): "But again I do venture to submit to your consideration, whether the poetical parts of your nature would not find a field more favorable to their exercise in the regions of prose: not because those regions are humbler, but because they may be gracefully and profitably trod with footsteps less careful and in measures less elaborate." Wordsworth offered plentiful emendations, but they were rarely adopted.

Hamilton's misfortunes in the early objects of his tender passion entered too largely into his life and work to be passed without mention here. His precocity was hardly less in love than in mathematics. At fourteen we find him establishing relations of permanent friendship at Willow Park, where "his impressible heart received from a daughter of the house the first stirring of a feeling which in after times caused him his keenest joys and his sharpest sufferings"; at nineteen, a member of the Disney family, and at twenty-six, no less a person than Miss Ellen De Vere, sister of the poet, became the object of his affections; while at the age of twenty-seven his mind was "kept on the stretch by the preparation of his University Lectures on Astronomy, by mathematical research, and by the composition of verses filled with all the past experiences of his heart as he gave utterance to the fluctuations of a new passion, which was to conduct him to his marriage."

We must pass with a simple allusion Hamilton's unique discovery of conical refraction, of which (while the praises of the scientific world were pouring upon him in profusion) he wrote to Coleridge, in 1833, that he looked upon it, and all similar predictions, as "a subordinate and secondary result" when compared with the object he had in view—"to introduce harmony and unity into the contemplations and reasonings of optics, regarded as a branch of pure science." Nor can we do more than call attention to Mr. Graves's admirable delineation of Hamilton as a lecturer (pp. 497-8). This volume takes us only slightly beyond the inception, so to say, of Hamilton's scientific career; at the beginning of the second he will be still a very young man—his chief laurels yet to be won. So that, highly interesting—not to say, in some parts, fascinating—as this volume is, it is not too much to expect that the subsequent volumes will surpass it. But, notwithstanding its bulk, it can hardly supersede, on completion, a thorough scientific biography of Hamilton; and it does not, of course, in any respect attempt to deal with his abounding mathematical remains. Mr. Graves has not forgotten the convenience of his readers, having provided, through the kindness of a friend, an index with very copious entries. Two busts of Hamilton were executed during his early years—the one by Kirk, the Dublin sculptor, and the other by Terence Farrell. An autotype copy from a cast from the model of the latter forms the frontispiece of this initial volume of the biography of Hamilton.

Life of Haydn. By Ludwig Nohl. Translated from the German by George P. Upton. Chicago: Jansen, McClurg & Co. 1883.

Professor Nohl, of Heidelberg, is one of the most prolific of living writers on music, his specialty being biography and the collection of biographic material, such as letters and contemporary critical estimates and notices. Various periodicals are regularly supplied with articles from his pen, and his books on Mozart, Beethoven, Liszt, and Wagner would fill a shelf capable of holding about a dozen volumes. Both in style and tone, his writings are of a popular character, which probably accounts for his alliance with the Reclam publishing house in Leipzig. This firm has issued a large proportion of the most popular German literature, in almost seventeen hundred neat little volumes, varying in price from five to twenty-five cents. Of these Professor Nohl has contributed five, besides a short history of music. They are biographies of Mozart, Beethoven, Haydn, Liszt, and Wagner, each of about one hundred pages, which makes five hundred pages of entertaining biography for twenty-five cents—for those who can read German. For English readers, the first three named have been translated, the latest addition being the 'Haydn.' The translation is clear, and, on the whole, less awkward than might have been expected on account of Professor Nohl's occasionally involved periods. Nohl has a good eye for the significant and suggestive facts in the life of his subjects, and his thorough sympathy with the modern movement in music does not prevent him from appreciating the historical and enduring value of the classical masters. References to the works and doctrines of Wagner and Liszt occur on almost every page, and the only objectionable feature is the occasional intrusion of the stupid Will-theory, with which Schopenhauer endeavored to explain music, like everything else. Wagner himself adopted and developed this theory; but the result only showed that he was as naïve and inexperienced in metaphysics as Schopenhauer was in music.

Haydn's longevity (he died at seventy-seven) brought him into contact with many of his distinguished successors, among them Mozart, Beethoven, Weber, Cherubini. His relations with Mozart appear to have been, on the whole, of a mutually affectionate nature, although there are indications of an occasional feeling of jealousy on the part of the older and of superiority on the part of the younger composer. With Beethoven he was on good terms personally, but in matters of art there was considerable tension between them. For some time, Beethoven was Haydn's pupil in counterpoint; but when he dedicated his sonatas (Op. 2) to Haydn, he refused to place "scholar of Haydn" on them, on the ground that he had not learned anything from him. It seems that when Beethoven presented his first trios to Haydn he was advised to suppress the best one of them—the third—which in "storm and stress," in freedom of harmony and structure, went considerably beyond Haydn. Beethoven naturally attributed this advice to jealousy, and from that moment suspected his teacher, who in turn habitually spoke of him as the "Great Mogul." Greater artistic sympathy existed between Haydn and Cherubini, who had said of Beethoven's great "Leonora" overture, when it first appeared, that he could not discover its key-note, on account of the confused modulation. Cherubini visited Haydn repeatedly, and on one occasion the latter said to him: "Permit me to call myself your musical father, and you my son." There was a certain æsthetic relationship between them, for, although Cherubini lacked Haydn's gayety, he shared his serene grace, and, like him, always made the form prevail over the matter or ideas; whereas with Beethoven, and still more with Schumann, Liszt, and Wagner, the ideas arbitrarily assumed whatever form was most becoming to them, without reference to traditional rules. The perfection of classical form is very apt to degenerate into mere formalism, and this is the reason why so much of the work of Haydn and Mozart is distasteful to the present generation. "Hastiness of conception, and execution according to an acquired routine, furnish the chief explanation of the character of their works," says Wagner. "His truly noble works Haydn wrote only in his old age, in the enjoyment of a comfort insured by his reputation abroad no less than at home." Both Haydn and Mozart were compelled to work at railway speed—Mozart in order to supply the public demand, and keep a few cents in his pocket, Haydn to fulfil the terms of his engagement with Prince Esterhazy, which lasted thirty years.

His life at the castle of this Prince is one of the most memorable episodes in the history of music, for it was here that modern instrumental music was nursed and brought up. Haydn had an orchestra of sixteen, subsequently enlarged to thirty, as well as a number of singers and occasional itinerant soloists. With these he was enabled to experiment *ad libitum*, and thus to develop his own originality and the resources of the orchestra, the different factors of which he was the first to individualize and teach a language of their own. The disadvantages of his position were that, with the exception of an occasional visit to Vienna, he did not come into sufficient contact with musical life in general, and that he had to write to order a vast amount of transient, ephemeral matter. How greatly he was capable of being stimulated even in old age by such an event as his London journeys, is evinced by the great superiority of his London symphonies over those that had preceded them. And how much of his time and genius were wasted in the service of his Prince is most strikingly shown by the statement that he wrote

more than 170 pieces for the baritone or viola di bordone—an obsolete seven-stringed instrument of the size of a 'cello, or smaller, which was the Prince's favorite instrument. Most of these pieces are lost, and none of them printed. His successful journeys to London, which for the first time enabled him to lead a life of ease, had the further effect of awakening his ambition to compose vocal works on a large scale after the example of Handel. But notwithstanding the excessive amount of laudation which several generations have bestowed on the "Creation" and the "Seasons," it has always been our humble opinion that these works were overrated, and that they show but little of the genius which has given a perennial charm to many of Haydn's symphonies and string quartets. But Haydn wrote one song of which Nohl justly says that, had he written "nothing but this song, centuries of the German people's life would know and mention his name." It is the Austrian national hymn, "Gott erhalte Franz den Kaiser," which towers like a pyramid over all other national hymns, and is one of the most sublime inspirations of the human mind. The melody is so rich that it seems to need no accompaniment; but when the grand harmonies, so capable of striking modulation, are added, the meaning of the word patriotism is, for the first time, fully revealed in a thrill of emotion. Not the least remarkable thing about this hymn is that it was written to order. The *Musical Review* gives expression to a general opinion in these words: "From Beethoven downwards, works written to order have died at their birth. The solitary real failure that Wagner can be said to have made was his Philadelphia 'Festmarsch.' Berlioz's prize cantata, 'Sardanapale,' was no student-work; yet it has perished untimely. Schumann holds up Lachner's prize symphony to contempt. Gounod, Massenet, and many others have won the *Prix de Rome;* their compositions had the life of the May-fly." The *Review* forgets Haydn's hymn, which was written at the special request of the Imperial High Chancellor in 1796, and proved so great a success as to atone for all the failures enumerated.

Statistical Record of the Armies of the United States. By Frederick Phisterer, late Captain U. S. Army. Charles Scribner's Sons. 1883.

THIS volume is a supplement to the collection of monographs on the "Campaigns of the Civil War," brought out by the same publishing house, in twelve volumes, and completes the work. As an addition, it is valuable; as the completing supplement, it is very inadequate. As the title shows, it is only a record of the Union armies, the statistics of the Confederate armies being almost totally ignored. It is all but wholly compiled with regard to military organizations, as if intended only to satisfy the special historical interest of members of such organizations, and not to offer to the general reader an easy view of the efforts made and the strength displayed in the successive stages or in the particular combats of the great contest. Its Part 1, embracing eighty pages, specifies President Lincoln's "Calls for Troops," the "Organizations Mustered into the Service of the United States," the "Military Divisions, Departments, and Districts of the United States," the "Military Division of the United States Forces," the "Principal Armies," the "Army Corps," the "Strength of the Army at Various Dates," the "Honors" conferred by Congress for special merits, the "Losses" sustained by the army collectively, and the "National Cemeteries." Part 3—upward of ninety pages—contains only lists of "General Officers of the United States" (according to rank, and with dates of appointment, promotion, death, or mustering out), of "General Officers of States entering service in April, 1861," and of "General Officers Deceased while in the Service." Part 2 is the main portion of the volume, presenting, in 160 pages, a full "Chronological Record of Engagements, Battles, etc."—no fewer than 2,261—with a partial list of losses, and an alphabetical index; but this division, too, gives only scanty information, and mostly information of no general interest.

Take, for instance, No. "36," which records the first great event of the war, the battle of "Bull Run (also Manassas), Va." We read, "July 21—Infantry, Volunteers, or Militia: 2d Maine, 2d New Hampshire, 2d Vermont, 1st, 4th, and 5th Massachusetts, 1st, 2d, and 3d Connecticut, 8th, 11th, 12th, 13th, 16th, 18th, 27th, 29th, 31st, 32d, 35th, 38th, and 39th New York volunteers," etc., etc., and much more information of the same kind, without the slightest indication as to which Federal army fought here, who commanded it, what its numerical strength was, what army or which general opposed it, which was the assailing party, which side was victorious, or where fuller information on the battle could be found. Only in a few exceptional instances are we told which Federal army was engaged, and who was its general, but no such exceptions occur as to the opposing forces. The curious student of the history of the Civil War will, of course, easily discover the description of the battle of Bull Run in one of the twelve campaign books to which this is a supplement, but where shall he look for information about the two thousand engagements entered under names totally unknown to him, without an allusion as to command or campaign? In fact, we consider the bulk of this chronological record as entirely useless. The list of "Losses" in one hundred and forty-nine engagements, in which there were more than five hundred killed, wounded, and missing on the Union side, is interesting in itself, and, being brief, also offers a connected view of simultaneous operations on the various theatres of the war. But "although the losses here given are generally based on official medical returns, the figures must not be taken as perfectly reliable, for in many instances the returns were based on estimates, and the totals of losses were, by *later* and more reliable returns, sometimes considerably reduced." These more reliable returns are not given.

Some of the statistical statements contained in Part 1 are worth reproducing here in brief. Under Mr. Lincoln's first call, of April 15, 1861, for 75,000 militia men for three months, there were furnished 91,000 men; under the call of May 3, 1861, 715,000, most of them for three years; under the call of July 2, 1862, 421,000, for three years; under the call of August 4, 1862, 87,000, for nine months; under the call of June 15, 1863, 16,000, for six months; under the calls of October 17, 1863, and February 1, 1864, 369,000, for three years; under the call of March 4, 1864, 292,000, for three years (with slight exceptions); between April 23 and July 18, 1864, 83,000 militia, for one hundred days' service; under the call of July 18, 1864, 386,000 men, for three years; under the call of December 19, 1864, 212,000 for various terms. Besides these, there were furnished, during the war, by the Territories and some of the seceded States, 182,000, mostly for three years. Total of men furnished (including the smaller figures, here omitted), 2,859,000; reduced to a three-years' standard, 2,320,000. Total of colored troops enlisted, 186,000; of men enlisted in the regular army, 67,000. (In this list men furnished for less than ninety days are not included, nor are the men credited for service in the navy; men who reënlisted are counted twice or more often.) Total of men in service on January 1, 1861, 16,000; July 1, 1861, 186,000; January 1, 1862, 575,000; January 1, 1863, 918,000; January 1, 1864, 860,000; January 1, 1865, 959,000; May 1, 1865, 1,000,000. According to the report of the Adjutant General of February 7, 1869, there were killed in battle 44,000 men; died of wounds, 34,000; died of disease, 149,000; of other known causes, 12,000; of unknown causes, 55,000—total of deaths, 294,000.

Velazquez and Murillo: A Descriptive and Historical Catalogue of the Works of Don Diego de Silva Velazquez and Bartolomé Estéban Murillo. With Original Etchings. By Charles B. Curtis, M.A. J. W. Bouton. 1883.

THIS very handsome *catalogue raisonné* of the works of Velasquez and Murillo is constructed on a plan which appears to us excellent. Seemingly an exhaustive historical and descriptive account of the works of these two famous artists, it puts the student in possession of all the known facts relating to them, while, by avoiding any critical remarks, it leaves him free to form his own judgments. Mr. Curtis has carefully classified the pictures in a manner which "has a certain reference to a chronological system, especially for the religious works." But an exact chronological arrangement is not attempted, because the data for such arrangement do not exist. Each picture is minutely, though concisely, described according to a uniform method. Its size is given, and its present whereabouts, together with its past changes of ownership and the prices paid for it, so far as these facts can be ascertained. To this is appended, in each case, a list of all the important engravings (with their dimensions) and in some cases of the photographs which have been made. Brief notices are also given of the lives and works of some of the followers of the two masters, and the book is completed by a convenient and copious index. Altogether it seems to be a very conscientious and thorough piece of work, such as we should be glad to see done for the greater masters of the Italian schools.

As regards Murillo, we think the labor here bestowed is out of all proportion to the importance of his works; and we regret to see the name of Velasquez coupled with his as if the two artists were of anything like equal merit. In the preface Mr. Curtis remarks that "it is much the fashion nowadays, with a certain class, to exalt Velazquez and decry Murillo. With such critics I have little sympathy. I find no difficulty in admiring both these artists. Each has his merits; perhaps I ought to be frank enough to admit that each has his defects." We had not supposed it to be much the fashion to decry Murillo. It has seemed to us more the fashion to admire him indiscriminately. We feel, however, that there is very good reason why Velasquez should be exalted over him, and the kind of catholicity to which Mr. Curtis gives expression appears to us to imply a want of real understanding of the powers of the two men respectively. Velasquez was a great imaginative realist. Murillo had little imagination, and he failed to appreciate the nobility of the real. Velasquez was also master of the technique of his art, while Murillo was lacking in subtle technical powers. Velasquez, though he possessed no great faculty of graceful design, was in other respects quite on a level with the great Italian masters. His penetration into character is equal to that of Titian or Tintoret, and his felicity, economy, delicacy, and expressiveness of touch are not inferior to theirs. Qualities like these are not to be found in Murillo; and when our author tells us that, "for the rigidity and severe asceticism of the previous age he substituted freedom in drawing, ease and grace in composi-

tion, unexampled richness and harmony of coloring, and a religious elevation that no artist has surpassed," we feel that he fails to comprehend the highest expression of the qualities he speaks of, as they are manifested in the works of the great Italian designers. The relative importance of schools of art must be estimated according to the sum of qualities which they respectively illustrate. Considered in this way, the Spanish school will, in the judgment of the most competent critics, fall into the second rank at best. The finest results in design—such as were attained in Florence and Venice—are the outcome of inherited gifts, of a vast series of favoring antecedent circumstances and contemporary conditions, such as the Spanish school never enjoyed. It was a school without noble traditions, and without such environment as might conduce to the finest artistic development; so that even Velasquez, its one great master, necessarily failed to attain the full standard of excellence which was elsewhere reached, while its lesser artists, including Murillo, are of distinctly inferior merit.

The etchings, of which the book contains four —two by Saint Raymond and two by Lalauze— are not of high quality; but the presswork and the general make up of the book are superb.

Washington-Irvine Correspondence. The Official Letters which passed between Washington and Brigadier-General William Irvine, and between Irvine and others, concerning Military Affairs in the West from 1781 to 1783. Arranged and Annotated, with an Introduction containing an Outline of Events occurring previously in the Trans-Alleghany Country. By C. W. Butterfield. Illustrated. Madison, Wis. : David Atwood. 1882. 8vo, pp. 430.

THE period covered by the Washington-Irvine correspondence is the two last years of the Revolutionary war, when hostilities had, to all intents and purposes, ceased in the East, although the state of war still nominally continued. General Irvine took command at Fort Pitt (Pittsburgh) in November, 1781, soon after the capture of Yorktown, and held command until October, 1783. The term of his command was distinguished by two events of unusual tragic interest—the massacre of ninety Moravian Delawares by a party of militia under Colonel Williamson, in March, 1782 (known as the Gnadenhütten affair), and the ill-fated expedition against the Sandusky settlements under Colonel Crawford, in June of the same year, which resulted in complete failure, Colonel Crawford being taken prisoner and burned alive after terrible tortures.

The Gnadenhütten affair is hard to understand at the present day, even with our experience of the uncompromising temper of the frontiersmen. But these were Christianized Indians, and they appear to have been neutral during the hostilities. It is, therefore, very significant of the state of feeling in the community when General Irvine writes to his wife in relation to it (p. 344): "I conjure you by all the ties of affection, and as you value my reputation, that you will keep your mind to yourself, and that you will not express any sentiment for or against these deeds, as it may be alleged the sentiments you express may come from me or be mine. No man knows whether I approve or disapprove of killing the Moravians." It is significantly remarked by a writer cited in a note to page 386 : "The Indians well knew the distinction between regulars and militia, and from these last they expect no quarter." We must remember that in all the Indian wars of the sixteenth and seventeenth centuries the cruelties of the natives were under the direction of civilized enemies. The British commander at Detroit, at the beginning of the war, "paid a bounty for scalps, but withheld it for prisoners" (p. 7). The book, therefore, affords a very instructive picture of the relation of the whites and the Indians at the close of the Revolutionary war on our (then) Western border, and would be of great value if only for this. But, besides this, it fills a gap in our knowledge of an important and little-known chapter of our history. The Introduction, of seventy pages, contains in six chapters an excellent history of the Northwest during the Revolutionary war. Considering the importance of this territory to the Union, and the delicacy of the questions arising out of conflicting claims and jurisdictions in regard to it, the clear light thrown upon its history by this publication is exceedingly welcome. The notes are very full and instructive, and must embody an immense amount of labor. There is also a good index, two portraits (of Washington and Irvine), and a facsimile map of the country between Detroit and the mouth of the Scioto.

A Concise English History. By W. M. Lupton, Army and Civil Service Tutor. London: Longmans, Green & Co.; Boston: Roberts Bros. 1883. 12mo, pp. 385.

MR. LUPTON'S concise history contains a remarkable amount of information in a very brief compass. For fulness, accuracy, clearness of statement, and convenience of arrangement—to which may be added the merit of a very full index—it deserves the highest praise. Nothing better, in the same space, could be desired for purposes of reference. Of course a book so crowded with names and dates as to be a good book of reference cannot be suited to general readers, nor, in our opinion, to be used as a text-book. It may serve as a basis of class work and a guide to reading, but interest cannot be secured and the attention fastened by such a mass of dry detail, nor can the memory be expected to master it. From the indication on the title-page we infer that it is designed to be used in preparation for competitive examinations in the English civil service; and we cannot help expressing the hope that the commissioners of our civil service may have the practical wisdom to prevent the reform from degenerating into such "cram" as this implies. The book is brought down to the latest dates, and will be welcome to those who wish to refresh their memory as to those recent events which are so easy to forget in their relation to one another, and so hard to look up. We notice on page 136 "Digger" for "Digges," and on page 237 "Ticonderago." There is a short appendix, on page 320, containing an explanation of terms used in history. The explanations are generally very good, but there ought to be many more. The definition of Tanistry is incorrect, or rather really belongs to the associated institution of Irish Gavelkind: Tanistry "determined the succession to all high office" (Maine, 'Early History of Institutions,' p. 33), and consisted in the election, out of the kindred, of a successor to the deceased chief.

A Book about Roses. By S. Reynolds Hole. W. S. Gottsberger. 1883.

THE Rev. S. Reynolds Hole, an English clergyman of the Established Church, is an ardent lover of roses, and he knows them thoroughly. This volume is the republication, in a smaller and cheaper form, of a work which appeared ten or twelve years ago, and which is well known to rose-growers. If Mr. Hole could contain his vivacity within reasonable bounds, curtail his anecdotes, suppress his Greek, Latin, and French, and spare us the occasional butt-end of a sermon inserted as a counterpoise to his jokes, his book would be more useful to those who want it for information. As it is, about half the space is devoted to gambols which, after a while, become tedious, especially as they are not always quite natural. Yet the book has excellent points. The exhibitor of roses will find it unequalled for his purposes. The lists of select roses, which form a valuable feature in it, have been revised and brought up to the present time, and are as good as any in existence.

Pedigrees of Thomas, Chew, and Lawrance, a West River Regester, and Genealogical Notes. By Rev. Lawrence Buckley Thomas. Thos. Whittaker. 1883. Pp. 139.

THE first thirty-five pages of this tract are given to the Chew family, beginning with John Chew, of Virginia, a burgess of Jamestown in 1623, prominent in that colony and in Maryland. Pp. 37 to 71 contain an essay by Edward S. Lawrance on the family of one Thomas Lawrance, born in London in 1707, who died in New Jersey in 1775. This branch or tribe seems not to be allied to any of the other numerous Lawrence families here. Pp. 73 to 117 relate mainly to the Thomas family, and the next twenty pages are uselessly devoted to miscellaneous notes concerning various Laurences, a name which seems invariably to lead the genealogist into a repetition of idle fables. The book is adorned with several portraits and other illustrations, and exhibits especially that exuberant fancy in the selection of unusual fonts of type which marks the productions of the amateur. Other indications of its origin abound; but, after all, genealogies are vanities, and why quarrel with any gentleman's special exhibition?

Electricity. By Robert M. Ferguson, Ph.D., F.R.S.E. New Edition. Revised and Extended by James Blyth, M.A., F.R.S.E. London and Edinburgh: W. & R. Chambers.

THE student of electricity will welcome this new edition of Dr. Ferguson's Treatise. Its merits are in its clear presentation of the phenomena, and in its avoidance of theories which have not been subjected to careful scrutiny. Many modern writers upon electricity incorporate in their treatises theories which occur to them apparently in the writing. New theories may be as good as old ones; but the age of a theory, like that of a wine, is something in its favor. Dr. Ferguson's book is eminently conservative, and the general student cannot find a better treatise on the principal phenomena of electricity. Professor Blyth has incorporated much that is new, and has not given too much space to useless illustration.

BOOKS OF THE WEEK.

Barrett, F. Honest Davie: a Novel. Harper's Franklin Square Library. 20 cents.
Bartlett, W. C. A Breeze from the Woods. 2d ed. California Publishing Co.
Brehm's Thierleben. Chromo edition. Parts 81-84. New York: B. Westermann & Co.
Brockhaus' Conversations-Lexikon. 13th ed. Parts 61-65. Leipzig: F. A. Brockhaus; New York: L. W. Schmidt.
Buck, R. M. Walt Whitman. Philadelphia: David McKay.
Burnett, Mrs. F. H. Lindsay's Luck. Philadelphia: T. B. Peterson & Bros. 50 cents.
Burnham, B. F. Records of Jesus Reviewed. Boston: The Union Co.
Burnham, S. M. History and Uses of Limestones and Marbles. With 48 chromolithographs. Boston: S. E. Cassino & Co.
Carr, J. B. Manual for the Use of the Legislature of the State of New York. 1883. Albany: Weed, Parsons & Co.
Chattock, R. S. Practical Notes on Etching. Scribner & Welford.
Chronicle of James I., King of Aragon. Written by Himself. Translated from the Catalan by the late John Forster, Esq. In 2 vols. Scribner & Welford.
Coan, T. M. Topics of the Time. I. Social Problems. G. P. Putnam's Sons. 25 cents.
Cornell, J. H. The Theory and Practice of Musical Form: On the Basis of Ludwig Bussler's 'Musikalische Formenlehre.' C. Schirmer.
Cotterill, Rev. H. My Work for God. Cassell, Petter, Galpin & Co.

Crawford, F. Marion. Doctor Claudius: a True Story. Macmillan & Co. $1.
Dix, Morgan. Memoirs of John Adams Dix. 2 vols. Harper & Bros.
Dulles, Dr. C. W. What to Do First in Accidents and Emergencies. 2d ed. Philadelphia: P. Blakiston, Son & Co. 75 cents.
Earle and Congdon. Annals of the General Society of Mechanics and Tradesmen of the City of New York. From 1785 to 1880.
Eclectic Complete Geography. Cincinnati: Van Antwerp, Bragg & Co.
English as She is Spoke; or, A Jest in Sober Earnest. Introduction by James Millington. D. Appleton & Co. 30 cents. Also, G. P. Putnam's Sons. 25 cents.
Fairy Gold: a Novel. Philadelphia: J. B. Lippincott & Co. 40 cents.
Farrar, F. W. My Object in Life. Cassell, Petter, Galpin & Co.
Fowler, T. English Philosophers: Shaftesbury and Hutchison. G. P. Putnam's Sons. $1 25.
Fulton, Rev. J. D. Sam Hobart. Funk & Wagnalls. 25 cents.
Gibbon, E. History of Christianity: Comprising all that Relates to the Progress of the Christian Religion in 'The History of the Decline and Fall of the Roman Empire.' Peter Eckler.
Golden Sands: a Collection of Little Counsels for Daily Life. Translated from the French. G. P. Putnam's Sons. $1 50.
Handbook for Friendly Visitors among the Poor. G. P. Putnam's Sons. 50 cents.
Hawthorne, N. Passages from French and Italian Notebooks. Boston: Houghton, Mifflin & Co. $2.
Hoppin, A. A Fashionable Sufferer; or, Chapters from Life's Comedy. Boston: Houghton, Mifflin & Co. $1 50.

Authors

AND

Publishers.

A Manual of Suggestions for Beginners in Literature. Comprising a description of Publishing Methods and Arrangements, Directions for the Preparation of MSS. for the Press, Explanations of the Details of Book Manufacturing, with Instructions for Proof-Reading, and Specimens of Typography, the Text of the United States Copyright Law, and Information concerning International Copyrights; together with General Hints for Authors. 12mo, cloth extra, $1.

"The work itself, though a small one, is of great value. It modestly purports to be merely a manual of suggestions for beginners in literature; but there is much in it which the most experienced literary veteran can read with profit, not merely for the views it suggests, but for the information it contains. On the latter account, it is not going too far to say that the work ought to be in the hands of every one who purposes to make authorship a vocation or an avocation."—*The Nation.*

"The manual contains nothing about Aldines nor Elzevirs, but sticks severely to the business in hand; and, whatever the publishers may think of it, authors and readers and all who use books must recognize in the manual a firm, friendly hand extended where one is sorely needed."—*Independent.*

"Somehow this house seems to understand better than any other of our publishers the needs of literary workers in various departments, and how to supply them, and this latest volume is an instance of the compression into small compass of a mass of information which many are seeking, but which it is difficult to obtain elsewhere."—*Providence Press.*

"...information which every writer ought to know, ...ch has not before been easy to obtain."—*N. ...d.*

27 and 29 West Twenty-third St., New York.

Sinners and Saints.

A TOUR ACROSS THE STATES AND AROUND THEM: WITH

THREE MONTHS AMONG THE MORMONS.

By Phil Robinson, author of 'Under the Sun.' 16mo, cloth, price $1 50.

"Although he has won a reputation as a humorist, Mr. Robinson is one of the most faithful of descriptive writers, and his pictures of life in the United States, as seen through the eyes of the cosmopolitan Englishman, may be accepted as trustworthy and instructive. His humor is of the sort that never wearies, for it is never extravagant or forced."

An Inland Voyage.

By Robert Louis Stevenson, author of 'Travels with a Donkey in the Cevannes.' 16mo, cloth, price $1.

A delightful account of a canoe voyage through Belgium and France. Robert Louis Stevenson is, in his own way, one of the most perfect writers living, says Hamerton.

Sold by all booksellers. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS, Boston.

THE LITERARY SENSATION OF THE SEASON.

A Primer of Criticism.

By EUGENE L. DIDIER. 16mo, paper, 10 cts.; cl., 30 cts.

"It is slashing in style, mercilessly satirizing the writers of the day. Its sharp criticism is not unneeded."—*Pioneer Press, St. Paul, Minn.*

"Mr. Didier is careering over the field of American literature, smiting hip and thigh . . . Howells, Henry James, Stedman, Cable, Stoddard, etc. He regards Mr. James as the Benedict Arnold of American literature. Mr. Didier does not want to kill Mr. Howells; he wants to take him by the ear, lead him to the wood-shed, and, after dusting his jacket, teach him how a man of his talent should write. The indictment against Mr. Stedman has more vinegar in it. Mr. Stoddard is taken up with a pair of tongs and dropped into oblivion. Richard Grant White is dismissed with a kick."—*From a leading Editorial in the Inter-Ocean, Chicago.*

Will be sent, post-paid, for 12 cents in paper; 33 cents in cloth.

American Publishers and English Authors.

By STYLUS. 8vo, paper, 20 cents.

"Vigorous, just, and powerful."—*Prof. Moses Coit Tyler.*

"We do not remember its equal, as an image-breaker, since Byron's 'English Bards and Scotch Reviewers.'"—*Publishers' Circular, London.*

"Stylus has produced a pamphlet that is spicy and bright. . . . The arguments are forcibly put. . . . The author writes with an excellent object in view."—*Robinson's Epitome of Literature, Philadelphia.*

Will be sent, post-paid, upon receipt of the price.

BARGAINS IN BOOKS.

Pen-Pictures of Modern Authors. 16mo, cloth, $1.

Hovey's Celebrated American Caverns. Illustrated. 8vo, cloth, $1 25.

The Nation.

NEW YORK THURSDAY, JUNE 7, 1883.

The Week.

THE Free-Trade Conference at Detroit was timely and useful in drawing public attention to the undoubted fact that the tariff is now a real issue in American politics—much more so than it has ever been in the present generation. Indeed, we must go back to 1846 and the years immediately following to find any period when this question was the dominant one in the national councils. There have been attempts to lift it up by horse-power to some sort of popular recognition since the close of the war, but all efforts were in vain so long as the issues growing out of slavery retained their grasp upon men's thoughts and consciences. In 1872 it was deemed a great *faux pas* that the Cincinnati Convention, composed in part of free-traders, remitted the tariff question to the Congressional districts. We are now far enough removed in point of time from that event to see that the dominant issues of 1872 were the carpet-bag governments of the South and the abuses of civil administration generally, and that the question of duties on imports would not then have controlled an average of five hundred votes in each State. All economical questions are dry and uninteresting to the mass of mankind unless they appeal directly and powerfully to the stomach, as they did in England when the Corn Laws were under debate. Great Britain was literally starved into free trade, and no country ever adopted that policy more reluctantly.

If, as is often alleged, the iron trade is an index of the general state of manufacturing industry, the present outlook is not altogether satisfactory, though in some respects better than it appeared a short time ago. Within the past week the crisis in the iron trade has been tided over without a strike among the operatives, though it has left matters in a somewhat unsettled and demoralized condition, and some important failures have followed, notably that of the Grafton Iron Works, of Leetonia, Ohio, with liabilities of $600,000, while several other firms are mentioned as being embarrassed. The action of the Pittsburgh ironworkers in conceding the demands of the operatives, after giving all the other iron mills of the West to understand that they could not and would not do so, has excited much indignation among the latter, because on the strength of these representations of the Pittsburgh men many mills in the Youngstown and other districts had made preparations for a strike, and cannot now avoid shutting down. This leaves the Pittsburgh men almost a monopoly of the business. It is generally admitted, however, that the production of iron now outstrips the consumption. On April 21 there was a decline of $2 per ton; a further decline of $2 was announced this week, and still lower prices are predicted.

There are some improvements in other features of the industrial situation, The crop prospects are certainly better than a few weeks ago, and there is now not much reason to doubt that we shall have a good average crop of wheat, and also that the certainty of short crops in Western Europe will make a fair market for it. Speculation in the grain markets still maintains prices to some extent, though there has been a decline within the week. The speculation in petroleum, which developed so suddenly, and advanced prices from $1 per barrel to $1 25 in a week or ten days, has declined and the price has dropped to $1 10. In the stock market the tendency has been toward stagnation. Prices of railway stocks have recovered a little from the extreme depression of two weeks ago, but the general public in this country seem to take less interest than usual in the stock market, and the same may be said of the foreign public. There has not been a time for several years when so few American railroad stocks were bought or sold for foreign account. While there is this decline in the speculative temper of the public, and also to some extent in the manufacturing industry of the country, money is accumulating in the banks, and rates of interest are tending downward.

After the Guiteau case, the Star-route case constitutes one of the most remarkable state trials that have taken place in modern times. It is, looked at in any way, a most important case. It involves not only a charge of fraud against two very prominent politicians, one of them an ex-Senator and the other one of the heads of the Post-office Department, but a charge of a far-reaching conspiracy to rob the Government, extending over a number of years, which was engineered by these two men. It is carried on at the seat of the Government; no pains or expense have been spared to secure the best counsel; and it has attracted from the outset an enormous amount of public attention. The Judge is a good lawyer, and certainly not in sympathy with the defendants. Under these circumstances it might be expected that the trial would be at least a dignified proceeding, whatever else it might be. On the contrary, the defendants have as one of their regular weapons a local press, in which they denounce and abuse and revile the prosecution, from the President down, threaten the witnesses, and, though they have been warned to keep quiet, are now publishing a choice collection of closing arguments, to match the closing speech of the Government counsel in court. One of the defendants has published "statements" through the press, during the course of the trial, to break the force of the evidence against him; he has nearly murdered a man for daring to give or suggest evidence against him, and he has maintained the most impudent demeanor on all possible occasions in the court-room. How far all this could have been prevented no one seems to know; but no doubt a great deal is due to the fact that the case is being tried in a little local court. The prestige of the tribunal counts for something, and we hardly think that in a United States court, with say two good circuit judges on the bench, even men like Brady and Dorsey would go to such lengths.

The statements made some time ago in the *Herald*, and on which we commented ourselves, touching the payment of the Baptist foreign missionaries in silver, instead of in gold, came up in a curious way before the Convention of the Baptist Missionary Union at Saratoga on Friday week. The charges—to which we made no allusion—of general financial maladministration were easily disposed of, and indeed seem to have had no foundation whatever, but the origin of the article in the *Herald* was left in some obscurity. It appears that a minister named Douglas was charged with having written it. This he denied on the platform, but read a letter of apology for having "furnished to an individual public printed documents, with no thought of harm to anybody"; and declared that "he did not know the contents of the article founded thereon," and was "not in harmony with the malicious insinuations and aspersions embraced in it." From another source we learn that though there has been difference of opinion as to the method adopted in adjusting the salaries of the missionaries, the question has been long settled, and therefore there is no foundation for the charge that an improper use had been made of the difference between the silver and gold. The explanation would have been more complete, however, if Mr. Douglas had been allowed or required to be more explicit. Why he should ask "forgiveness of God and of you" (the Convention) for furnishing "public printed documents" to "an individual," did not clearly appear.

The Harvard Board of Overseers has refused by a small majority to give Butler his degree. He has received the news with equanimity, maintains that it will help him politically, and will bring up the question "whether there is any good reason why the property of the College should be exempt from taxation which is so burdensome upon us while they use the alms of the State, bestowed on them for educational purposes, in an endeavor to control the politics of the State." "Time at last," he adds, "sets all things even." This threat is thoroughly characteristic of the man, and confirms what we have been saying as to the precise nature of the penalty, and the only one, which the Butlerites had in store, and the College had to fear, for a refusal of the degree. It appears that it was his conduct of late, since he took the Governorship, which decided the case against him. Moreover, the College officers in the Board of Overseers seem to have voted in his favor. The affair will be probably useful in putting an end, as far as Harvard is concerned, to the use of honorary degrees as a means of testifying the respect or admiration of a university for all kinds of merit, or no merit at all. Honorary degrees ought really to be reserved for proficiency in some field of learning or literature which the college is en-

gaged in cultivating. University testimonials for other kinds of merit should consist in resolutions passed by the degree-giving body, whatever it is. A correspondent of the Boston *Advertiser* shows that the practice of giving degrees to Governors has not been uniformly followed from the beginning. Two never received it at all; three had received it before becoming Governor; one received it only in the tenth year of his service, three only in the second ; and of the five who received it in their first year previous to 1844, three were Harvard graduates, and these five did not hold the office consecutively.

When Colonel Burt declined the Chief Examinership under the National Civil-Service Commission offered him by President Arthur, some papers sneeringly remarked that civil-service reformers like him had much to say about their cause, but would not accept an offered opportunity to serve it practically at a pecuniary sacrifice. This was silly talk in every respect, but Colonel Burt has effectually silenced it by accepting the Chief Examinership under the Civil-Service Commission of this State. That he could not accept President Arthur's offer without giving his sanction to a peculiarly ignoble trick, resorted to for the purpose of driving a most faithful and efficient officer from the service, in flagrant disregard of sound civil-service principles, will be admitted by every fair-minded man. The Civil-Service Commission of this State is now in excellent working order. The sincerity and earnestness of the Commissioners cannot be doubted, and they have for their executive officer unquestionably the fittest man that can be found.

Mr. Kennard must be curiously ill-informed of the state of opinion here if he believes that the discussion about the *Alabama* claims, which he proposed in his resolution in the House of Commons, reported in recent despatches, would result in the promotion of good feeling between the two countries. In fact, we do not see how anybody who knows much of human nature in general can expect it to do any good. It would, under his resolution, have to be begun by Great Britain, and would necessarily open with an intimation that, in the opinion of Englishmen, Americans had for ten years or thereabouts been keeping money which did not belong to them, which they had originally obtained by false pretences, and which their best men thought they ought to restore to the rightful owners. In what part of the world would a conference begun in this way be likely to bring people closer together or remove bitterness? The expectation entertained by some people in England, that a portion of the *Alabama* money will be returned, is fast taking on the character of a superstition—that is, a belief which rests on supernatural grounds and cannot be overthrown by ordinary reasoning. It is only one degree more respectable than the expectation that the Confederate bonds will be paid, and not by any means so respectable as the campaign story that as soon as the Democrats get into power they will pay $3,000,000,000 of "rebel war claims." This last has done good service in its day, and may do some service still, which is more than can be said of Mr. Kennard's dream.

The ladies forming the Local Committee on Harvard Examinations for Women have, as perhaps many of our readers know, established classes, under competent instructors, to prepare young women, at a very moderate expense, for the Harvard entrance examinations, which are identical for both sexes, Harvard having taken the bold, if not awful step, from which Columbia shrinks, of asking young women the same questions as young men, in Greek, Latin, and mathematics. These classes have been in existence during the past winter and are to be continued in the fall, but admission to them must be applied for before September 1 to the Secretary, Heyhoe, Palisades, Rockland County, N. Y. Such modifications in the system will be introduced as the experience of last winter suggests or the needs of the students seem to require. The examinations are held here every year, both of young men and young women, but in different rooms, by the same professor, sent on from Harvard for the purpose. Some private schools have prepared candidates for the Harvard examinations on the old plan of a special course for women, but none have met the requirements of the present system. What the Committee now offers is experienced and responsible teachers at the lowest possible cost to the students, thus obviating the large expense of private instruction, which many young women would be unable to bear.

The failure of the attempt to blow up the Welland Canal with dynamite is most satisfactory news. The accounts of the affair telegraphed from Toronto all agree as to the main facts. It was announced beforehand, as is usual in all such cases, that the day fixed to blow up the canal was the 13th of May, the day set for the hanging of Joe Brady. The Canadians, therefore, most prudently stationed sentries, armed to the teeth, all along the canal, keeping, of course, the larger military bodies as well as a batch of detectives in reserve. As soon as the guards were posted, the dynamiters came boldly on, "fifteen rough-looking men, each carrying a satchel." Jumping nimbly from the train, they were immediately shadowed by detectives to the hotel, and, it is unnecessary to add, "overheard in conversation." They walked about for some time "making secret arrangements" to blow up the canal. They had not walked far, however, before they came to the sentry-boxes. Seeing that the game was up, they dispersed and returned to the United States, having, however, by way of precaution, previously held a "secret meeting." To make the story complete, it should be added that "a Government official" connected with the canal, has "admitted" that it was true.

The Civil-Service Commission is troubled by that clause in the law which provides that when two persons of one family are employed in the civil service, no other member of that family shall be eligible to appointment, and it has concluded to ask for the Attorney-General's opinion whether the words "one family" in the law mean only parents and their children, or also nephews and nieces, grandchildren, cousins, and relatives by marriage. There has been a good deal of demagogy in the talk about families being quartered upon the public purse. Of course, it is undesirable that many persons belonging to one family should be in the same office together, so that, if so inclined, they can work into one another's hands and form coteries or rings for mutual protection and advancement. Such family nests should be broken up where they exist, and not be permitted to form again. But there is really no valid reason why several persons belonging to the same family, if they are found competent and suitable, should not be employed in different branches of the service where they can make no objectionable combinations of influence. It is not unfrequently found that certain specialties are cultivated in particular families with exceptional success. We know, for instance, of a family which has turned out a remarkably large number of excellent bookkeepers—real experts, male and female, five or six of them ; and we cannot see why this comparatively rare and extremely useful faculty should not be employed by the Government to the best advantage. We could not imagine any harm to come from their relationship if one were employed in the Internal Revenue office, another by the Commissioner of Railroads, another in the Indian office, another in the postal service, and another in the customs department. The Government should not be hampered unnecessarily in the employment of the best ability it can find.

The more we look into the article on "Authorship in America" in the June *Atlantic*, the more full we find it of new and original instruction for authors. Here is a lesson that we carelessly overlooked at the first reading:

> "I have heard people make the preposterous remark that the publisher grows rich, while the authors for whom he publishes continue to be poor. Of course he does; if he is faithful to the interests of the authors, he must, or what would be the meaning of the rule of three? A publisher with his hundred books ought to be better off for money than each of a hundred authors with one book."

So he ought—just a hundred times better off, if the rule of three is entitled to any lasting confidence—and a thousand times better off than a thousand authors with one book apiece. This neat application of the rule of three to the removal of authors' complaints is founded, it will be seen, not so much on the well-known fact that authors all write one book apiece, as upon the great fundamental idea which underlies the whole article—that one book is just the same as another, provided the weight, dimensions, paper, type, and binding are the same. The profits of publishers, under the rule of three, depend entirely on the number of authors whose books they get hold of, and a publisher could not possibly fail in business, as it has hitherto been foolishly supposed he might, from publishing too many books by authors whom nobody cared to read—for a book is, as is elsewhere fully explained, "a bundle of sheets of paper, stamped with little characters, sewed together, put between

covers of pasteboard dressed in cloth." A book can be used, he adds, by the young "to build block houses with," or "as a missile," or "to raise the seat at the piano"; by adults, on the other hand, "to set off a cabinet of shelves"—though for all these purposes, he points out, "a block of wood or a bit of stamped leather would be as serviceable."

The Nickerson divorce proceedings in Pennsylvania have attracted more attention than usual in such cases, owing to the military rank of the husband, and the peculiar cruelty of the fraud alleged to have been practised on his wife. It has forced upon the judges the necessity of taking some precaution against such frauds, and they held a meeting on Monday to consider the necessity of drawing up new rules of practice in divorce cases. The facts as presented to the court by Mrs. Nickerson were in substance as follows. The laws of Pennsylvania, like the laws of other States, require a short period of residence to give the court jurisdiction. Major Nickerson, therefore, in the first place, acquired a residence. In addition to this he packed his wife off to Europe with her daughter. This was in 1880. In Europe the mother and daughter remained, the Major promising to follow as soon as he could obtain leave of absence. She waited, but he did not come, though he continued to write regularly until about a year ago. About that time letters and remittances began to be sent to his daughter, and he ceased all communication with his wife. She asked him to explain, but he paid no attention to her letters. Finally she learned from her mother that her husband had obtained a divorce, and had married again. He had married, it seems, a few days after he had got his divorce, which showed, of course, that the object of his application was merely to marry again. More than all this, she learned that the ground on which the divorce was obtained was desertion. No notice of the application, of course, had ever been received by her, there having been nothing but a newspaper advertisement. The whole proceeding was conducted by the plaintiff in the absence and without the knowledge of the wife.

Various remedies are proposed to meet the difficulty in Pennsylvania. Several of the judges are in favor of making divorce more difficult by making it more expensive, as they say that people come to Pennsylvania for divorces rather than go to some Western State, because they know they can obtain them there at "bottom prices." Something like the "high-license" plan in liquor legislation is therefore proposed—a fee in divorce cases, sufficiently high ($500 is said to have been suggested by one judge) to make a divorce trip to Pennsylvania unattractive. Of course the effect of this would only be to make it difficult for poor people, and it would constitute a curious kind of reform. The suggestion of a high divorce fee recalls the story of the English judge's sentence of a poor prisoner for bigamy, who pleaded in excuse that his first wife had run off with another man: "What you should have done," he said to the prisoner, "was to obtain a divorce. This, you will probably say, would have cost you 1,000 pounds, while you have not 1,000 pennies in the world. I have to remind you, however, that that can make no difference, for England is not a country in which there is one law for the rich and another for the poor." The requirement of a long term of residence is what is really needed to prevent fraudulent divorces, and also the abandonment of the antiquated practice of publishing notice by advertisement, except in cases where the defendant really cannot be found. There could have been no difficulty, if Mrs. Nickerson's story is true, in getting a notice to her through the mails.

The hardened and apparently shameless Mr. Martin, the Superintendent of the Brooklyn Bridge, appeared before the Coroner's jury at the inquest on the victims of the late disaster, and denied that he was to blame for the accident, in the teeth of the fact that at least six newspapers have said that he was to blame. His conduct under these circumstances reminds us of Grummer's special constable in the 'Pickwick Papers,' who, on being charged by Mr. Nupkins, the magistrate, with drunkenness for laughing in court, denied it in the most brazen manner, and was asked by the magistrate "how he dared to say he wasn't drunk, when he (the magistrate) said he was," and was thereupon committed for contempt. Mr. Martin also had the supreme audacity to maintain that the steps on which the accident occurred were not to blame either, and were better than an inclined plane, although several editors have pointed out to him that he and the steps were the sole cause of the disaster, and that an inclined plane was just the thing, because, as is well known, panics in crowds never occur on inclined planes. In fact, the minute a panicky crowd finds itself on an inclined plane, it grows calm and considerate—all of which the callous Martin has apparently overlooked. The fury with which the press has fallen on the steps, as jointly responsible with Martin, puzzles many people; but it is really a survival of the ancient tendency of the race to impute moral guilt to any object which is the immediate cause of loss of life, and which was expressed in the old rule of law which condemned all such objects to forfeiture as *deodands*, and which still lingers in the children's practice of slapping objects that hurt them, and in the disposition of many a grown man to kick a thing that he trips over, or knocks his head against. If the late accident had occurred over a hollow, some journals would have said it was caused by the hollow, or in fact by anything that was near by or that the people fell on.

The trouble respecting differential or discriminating rates for railway transportation has broken out in England, not for the first time, but with rather more than the usual vigor. The *Economist*, which never opens its columns to a trade controversy until it has assumed a certain degree of importance, commented in a recent number on the hardships to English producers involved in the discrimination practised by English railways which carry foreign merchandise from the seaboard to interior points at less rates than are charged on English goods of the same class. The railway managers reply that they are compelled to meet the competition of water carriage, and they ask whether any interest except that of ship-owners is to be benefited by giving to the latter an exclusive monopoly of such freights. French goods, for instance, destined to interior points near Newcastle may be carried from Havre to Newcastle by water and thence by railway for short distances at very low rates. The same goods may be carried to the same points by the way of Southampton by a long railway haul, but the total charge for carriage cannot be greater in the latter case than in the former, for otherwise all the trade would go by water. The railway officials ask whether they can be required to abandon all this traffic to the waterways. The *Economist* replies no, they cannot be expected to do this; but if they carry from Southampton to Newcastle for a certain rate, they must not charge a higher rate for carrying the same kind of goods a less distance—from Birmingham, for instance, to the same destination. If they do so they attack the principle of fair competition which is the essence and very life of free trade. Equal mileage rates are not asked for—the *Economist* acknowledges that such a rule would be absurd and destructive—but a practice which discriminates against British industry by furnishing transportation to foreigners at absolutely lower rates for long distances than are given to English producers on the same line of railway and the same class of goods for short distances, cannot be tolerated. The controversy is one of long standing, but it seems now to be approaching a crisis. Its settlement will be looked for with the deepest interest, not only in this country, but on the continent of Europe as well.

There is a loud demand in England for a second Suez Canal, as the present one is rapidly proving inadequate to the demands upon it, four-fifths of which are English. The delays caused by the crowd of vessels are now so great as seriously to diminish the value of the Canal, which, of course, consists almost wholly in the time it saves. The capital for a new one could, it is needless to say, be procured now in England without difficulty, if the concession were once obtained from the Egyptian Government. M. de Lesseps and the French stockholders, however, bitterly protest against anything of the kind, on the ground that their charter conveys a monopoly, and they maintain, therefore, that if a new canal is to be constructed, their consent or their stock must be purchased. The Egyptian Juridical Committee of the Khedive's Council has sustained this view in an elaborate opinion, in which they hold that although the concession to M. de Lesseps does not expressly guarantee him against competition, its conditions contain an implied guarantee of the strongest kind, which should protect him against any similar grant to a rival company. It is probable, therefore, that we shall now see either the purchase of the old canal by a new company, or a distribution of shares of the new canal, by way of bonus, among the stockholders of the old one.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, May 30, to TUESDAY, June 5, 1883, inclusive.]

DOMESTIC.

THE Board of Overseers of Harvard College on Thursday, by a vote of 15 to 11, refused to confer the degree of LL.D. on Governor Butler of Massachusetts, at the next Commencement. The debate was long and exciting. Several compromises were proposed and rejected. The chief argument urged against granting the degree was Governor Butler's career since he had filled the Executive chair. Governor Butler said in regard to the action: "I have to thank them for doing me a very great personal and political service. The affront intended by their action is not upon me, but upon the people who have elected me, and is the verdict and execution of the judgment of Harvard College upon the acts of the people of the Commonwealth for daring by a large majority to choose a Governor without asking the consent of that college."

Decoration Day was very generally observed on Wednesday throughout the country. In this city the parade of military and of the Grand Army of the Republic was unusually large. President Arthur reviewed it from a stand on Fifth Avenue, near Madison Square. In the evening there were exercises at the Academy of Music, consisting of music and a patriotic address by Gen. George A. Sheridan. In Brooklyn and Washington the exercises of the day were very elaborate. In other cities the customary parades and ceremonies took place without special incident.

The afternoon of Decoration Day was marked in this city by a frightful accident. The great East River Bridge was crowded with thousands of men, women, and children who were taking advantage of the holiday to view the magnificent structure. Some time after 4 o'clock in the afternoon a woman fell down the wooden steps at the end of the New York approach to the bridge proper. As she lost her footing another woman screamed, and the throng behind crowded forward so rapidly that those at the top of the steps were pushed over and fell in a heap. Those following were in turn pushed over, and in a moment the narrow stairway was choked with human beings. In a few minutes twelve persons were killed (six women and six men), seven seriously injured, and twenty-eight others more or less severely wounded. Many persons received slight injuries. The fearful panic was increased by the operations of young thieves. Policemen and bridge employees tried in vain to quell the disturbance. At length the work of rescue began. The first rescuers to reach the spot found the dead and dying wedged together in the narrow space as if they had been fastened in a vise. So tightly were they packed and squeezed that from dozens of persons blood was oozing from ears and noses. The bodies were piled four or five deep at the foot of the stairway, and most of those at the bottom were of women. The ambulances did good service, and the injured were soon removed to the various hospitals.

Many suggestions have been made since the accident as to how it might have been prevented and what means should be adopted to prevent similar occurrences in the future. On Friday work was begun on a gas-pipe railing to divide the staircases of the bridge into two parts. The rail is to extend about thirty feet beyond the stairs on each side, and will not be carried over the main span until the working of small sections has been observed. Telephone arrangements have also been made for the instant transmission of alarms from one end of the bridge to the other and to police stations. The trustees met on Friday and heard Engineer Martin's report on the causes of the accident, and adopted a resolution to refer the subject of the accident to the Committee on Organization, in conjunction with the Mayors of New York and Brooklyn, to make a report, with such recommendations as were deemed best, at the first meeting of the new Board of Trustees in June. It has already been decided to increase the force of men on the bridge. The Coroner's inquest was held on Monday and Tuesday. A verdict was returned, on the latter day, censuring the trustees for not having a sufficient police force on the bridge.

During the month of May the reduction of the public debt of the United States was $4,890,476 60.

The State Department at Washington has received telegraphic advices that ratifications of the treaty between the United States and Corea have been exchanged at the Corean capital. This is the first treaty between Corea and a Western Power.

The National Civil-Service Commissioners resumed their work in Washington on Monday. Commissioner Gregory says that the Commissioners have been very successful in organizing boards of examiners in all the cities. They have called upon postmasters and customs collectors to designate clerks of sufficient education and of known probity for the task, and they have secured persons who are not only qualified for these places, but enthusiastic in the work.

Major-Gen. W. B. Hazen, Chief of the United States Weather Bureau, and Commander B. B. McAlla, United States Navy, have obtained the steamer *Proteus* for the use of a rescuing expedition for the Greeley polar explorers, and started her from St. John's, Newfoundland, for Franklin Bay and Davis Straits, where the missing expedition was last heard from two years ago. The *Proteus* is a powerful wooden steamer of 467 tons register.

The investigation into the affairs of the office of Supervising Architect Hill, of the Treasury Department, was begun in Washington on Thursday. No witnesses were heard, and after a few formalities the Committee adjourned. A session was held on Saturday. Mr. Poulson, of Brooklyn, stated his case, alleging that his firm had been abused in the matter of the Government building at Austin, Texas. The investigation was continued on Tuesday.

Mr. Merrick made a very strong argument in his speech for the Government in the Star-route trial during the week.

Considerable comment has been occasioned by certain facts in the Ottman case which have been recently reported from Washington. Forty-seven thousand dollars were stolen from the Treasury in Washington eight years ago. Three men were discovered to be the criminals, among them Ottman, a liquor-seller. The latter was twice tried, but the juries disagreed. Through the mediation of Mr. Richard Crowley, a compromise was effected last summer for $12,500, and the proceedings against Ottman were dropped, although the latter had a considerable portion of the stolen money in his possession.

Governor Cleveland on Friday signed the New York City Aqueduct Bill, and filed with it a memorandum in which he explained that he had given careful thought to the objections urged against the measure, and was driven to the conclusion that to temporize with such a question as the present inadequate supply of water for this city forced upon him would savor of a recklessness almost criminal. He adds: "The principal objection urged against this bill is that the designation of Commissioners in the bill itself by the Legislature is unconstitutional, undemocratic, and a violation of the doctrine of home rule. I think the bill is constitutional; and while I am not willing to be committed to the assertion that the best manner of selecting Commissioners was determined upon by the Legislature, I am unwilling to be responsible for the delay of this work because another plan was not adopted." The Governor has vetoed items of the Supply Bill appropriating $250,704 36, out of a total of $637,000. On Saturday he completed the disposition of bills left in his hands at the time of the adjournment of the Legislature. The number of bills passed by the Legislature was 692; number approved, 522; number vetoed to the Legislature, 38, none of which were passed over the veto; number returned for amendment and correction, 40, of which 7 did not again reach the Governor. Governor Cleveland has declined to sign the General Street Railroad Act.

The New York State Civil-Service Commission organized at Albany on Thursday afternoon. Ex-Naval Officer Silas W. Burt, of New York, was appointed Chief Examiner. Mr. Burt explained his apparent inconsistency in accepting a State position after declining last March a similar national one, saying that President Arthur did not appear to make the nomination in good faith, and that he declined it because, "coupled with the promotion of General Graham, it involved an affront to him and to the cause of reform." He takes this place at a lower salary, because he has confidence in the Commission's honesty of purpose. John Jay was chosen President.

At the annual meeting of the Columbia College trustees on Monday afternoon the report of the Committee on Higher Education for Women was adopted after a short discussion. For the present a plan is submitted by which young women, having passed a series of examinations carried on by or under the charge of the professors in the College, shall receive a certificate to the effect that they have completed a course satisfactory to the trustees.

The one hundred and second annual communication of the Grand Lodge of the State of New York, Free and Accepted Masons, was opened in ample form on Tuesday afternoon at the Masonic Temple, in this city. About one thousand delegates were present.

Major W. G. Mitchell, of General Hancock's staff, died on Governor's Island on Wednesday morning. He was Assistant Adjutant-General. During the war he rose to the rank of Brevet Brigadier-General.

A Free-Trade Conference met at Detroit, Mich., on Thursday, and organized by electing David A. Wells, of Connecticut, President. He was made permanent President on Friday. Mr. Wells, upon taking the chair, said the meeting was one of the most remarkable, in any sense, held since the close of the war. Men had come together to affirm their right to sell and buy without restriction. On Friday an address to the American people was adopted, setting forth that "the true interests of America are bound together in free trade, equal taxation, farmers' rights, manufacturing prosperity, and higher wages."

An interview with Governor Hendricks, of Indiana, has been published which points to his willingness to accept a place again with Tilden on a Democratic Presidential ticket.

Advices from San Carlos, Arizona, assert that Loco's wife, son, son-in-law, daughter, and grandchildren, with fourteen women and six bucks, have surrendered to the military authorities near San Carlos. The Indians are direct from Mexico, and report that all the hostiles are anxious to surrender, so that a speedy ending of the Indian war in Mexico and the return of General Crook to Arizona are anticipated.

A conference of the Iron Manufacturers' and Amalgamated Association Committees, in Pittsburgh, on Thursday, resulted in the manufacturers signing last year's scale, which is $5 50 per ton for puddling. This action averts a strike, and, it is understood, insures the running of the Western mills for at least a year.

The New York, Buffalo and West Shore Railroad was thrown open to the public from Jersey City to Newburgh, N. Y., on Monday.

Bismarck was on Saturday selected as the capital of Dakota.

The will of the late Amasa Stone, of Cleve-

land, O., was made public on Saturday. The bulk of his property is left to his wife, and two daughters and their husbands. Adelbert College, Cleveland, gets $100,000, if the estate reaches $3,500,000.

Council Bluffs, Iowa, was visited with a severe rain-storm and flood on Friday evening, which swept away seven iron bridges, and damaged property to the amount of about $500,000.

Hanlan, the Canadian oarsman, defeated Kennedy in a single-scull race, near Boston, on Thursday, by twenty lengths. The distance was three miles with a turn, and Hanlan's time was 19 m. 4 sec., the fastest on record. It is said that the course was a minute short.

The wife of Congressman Phil B. Thompson, of Harrodsburg, Ky., has made a statement in which she exonerates Walter Davis, who was killed by her husband, from any wrong toward her. Her statement is emphatically contradicted by Jessie Buckner.

Cardinal McCloskey, of this city, has decided to postpone the Provincial Council, which was to have convened in a few days, until fall.

FOREIGN.

The coronation festivities continued at Moscow throughout the week. On Wednesday the Emperor and Empress of Russia received the congratulations of the grand duchesses and ladies of the court. In the evening they attended the opera, where the people received them with great enthusiasm. On Thursday evening a state dinner was given, at which 500 persons were present, including the whole imperial family. The imperial regalia were returned to the Kremlin with much ceremony on Friday. A state banquet was given in the evening to the mayors of cities and members of the nobility. The Emperor on Saturday granted certain privileges to dissenters from the Greek faith. A great fête took place in Petroffsky Park on that day. On Sunday there was a grand parade of Circassian troops and Cossacks. There was a military fête at Sokolniki on Monday, attended by the Emperor and Empress.

Stepniak, the Nihilist, in a recent letter said the Czar would not be molested during the coronation festivities, because the system of attacks to create terror had been replaced by plans for a *coup d'état* and attempts at revolt.

The Paris *Temps* says: "The object of the recent journey abroad of M. de Giers, the Russian Minister of Foreign Affairs, was to inform the Powers that Russia was compelled to seek in Armenia an equivalent for the British occupation of Egypt."

On Wednesday the Paris *Figaro* published a sensational article, in which it sounded the note of alarm against the triple alliance as a scheme of Birmarck's, the ultimate object of which is a division of parts of France among the Powers.

The Italian *Journal de Rome*, commenting on the more friendly attitude which France has shown recently toward the Vatican, says a rupture between France and the Vatican would deprive the former, in the face of the triple alliance, of a great source of strength. She must choose between open war with the Vatican and breaking with atheistical radicalism.

The French have bombarded two ports on the northwest coast of Madagascar, causing great destruction of British and other merchandise.

No serious fighting is expected to occur in Tonquin before the middle of July, when the French will be ready to take the offensive. It is said that Captain Kergaradec, the French Envoy to Anam, has been instructed to hold the King of Anam responsible for the recent hostilities near Hanoi and to demand satisfaction from him, including the payment of a heavy indemnity. The bombardment of the capital of Anam, as a retaliatory measure, is probable. The following details of the recent French defeat are published: Captain Rivière, on leaving the fort near Hanoi, advanced with 150 marines, leaving in reserve a force of 250 men. These, however, remained too far in the rear to be of service to Captain Rivière's advanced guard, which was surprised by a large force of Anamites and almost annihilated. On the rear guard arriving at the scene the Anamites fled, carrying off Captain Rivière and fifteen marines, all of whom were impaled the next day.

It is asserted that Li Hung Chang, the Chinese Prime Minister and commander of the troops in the provinces adjacent to Tonquin, declares that unless France recognizes the rights of China in regard to Anam, China is resolved to fight.

The race for the Grand Prix de Paris was won on Sunday by the Duc de Castries's Frontin.

Prince Bismarck presided on Thursday at a meeting of the Prussian Ministry. It was decided by the Ministry to take the regulation of church matters in their own hands, independent of Rome, and to submit a bill in the Diet providing for a modification of the May laws. The bill will consist of a single paragraph, allowing the saying of mass and the dispensing of the sacraments in consideration of recognition of the Government's modified rule in regard to the duty of informing the Government of Church appointments.

The Workman's Sick Fund Bill was carried in the German Reichstag on Thursday by a vote of 217 to 99.

The German Bundesrath has decided against the coinage of silver at a ratio of 15½ to 1.

The Berlin *North-German Gazette* (Bismarck's organ) denies that Prince Bismarck has consulted judicial authority in relation to the dissolution of the Federal treaty with a view to abolishing the Reichstag.

Baron von Schloezer, the representative of Prussia in the negotiations with the Vatican, will, it is reported by a Roman newspaper, soon leave that city, and will not return. Another report says he will return in three months. The negotiations have failed, and relations between Prussia and the Vatican are not of a friendly character.

The contributions of Peter's pence have continued to decrease so rapidly during the past few months that an appeal, addressed to all the bishops, is being prepared by the Pope, urging them to awaken the faithful to the necessity of providing funds for the needs of the Holy See.

A Roman correspondent telegraphed on Sunday: "I have reason to believe that letters were issued by the Propaganda some days ago, and are now on their way to New York, summoning all the American archbishops to Rome to receive the Papal instructions and make preparations for a Provincial Council of the whole American Church, which is to be held next year at some town in the United States not yet designated. The nominal, indeed the chief, object of the Council is to tighten the bonds connecting the Catholic Church of America with Rome, and to concert various disciplinary measures tending to render the mode of spiritual and social life of Catholic ecclesiastics more austere and severe than, under the influence of democratic republican institutions, it has become lately."

A meeting of the Irish National League was held in Dublin on Wednesday. Mr. Harrington announced that 389 branches of the League had been formed. Mr. Sexton, referring to the Pope's circular, declared that the interference of the Pope in the Parnell testimonial indicated perilous and intolerable intervention in the future political course of the Irish people, but that the priests maintained a dignified silence, with which Mr. Parnell's admirers were satisfied.

Mr. McCoan, member of Parliament for Wicklow, has withdrawn from the Parnell party, principally because of Mr. Parnell's attitude toward him in a personal quarrel with Mr. O'Kelly, which led to a challenge. He published a letter in the Dublin *Freeman's Journal* on Monday, in which he disavowed sympathy with Mr. Parnell's political views, which he asserts are "veiled communism and rebellion."

Thomas Caffrey, the fourth of the Phœnix Park murderers brought to the gallows, was hanged in Kilmainham Jail, Dublin, at 8 o'clock on Saturday morning.

James Carey and other informers have been ordered by the British Government to reside outside of Ireland.

Messrs. Davitt, Healy, M. P., and Quinn, who were sentenced in February to confinement in Kilmainham Jail, Dublin, for six months for making inflammatory speeches, were released from prison at 1:30 on Monday afternoon.

True bills were found by the Grand Jury in London on Thursday against the dynamite conspirators, Doctor Gallagher, Bernard Gallagher, Whitehead, Curtin, Ansburgh, and Willson, indicting them for treason-felony. When they were arraigned on Friday they pleaded not guilty, and their trial was fixed for June 11. A special court has been constituted to try them. It consists of Lord Chief-Justice Coleridge, Justice Brett, of the Court of Appeals, and Justice Grove, of the Court of Common Pleas.

The text of Mr. Kennard's resolution, in regard to the *Alabama* award surplus, which, it is said, he intends to move in the House of Commons, is as follows: "That, in view of the public utterances of eminent American statesmen with reference to the destination of the undistributed moneys resulting from the Geneva award, the House is of opinion that an exchange of views between the English and the United States Governments on the subject would be conducive to the development of the friendly relations between the two countries." On Monday it was announced in the House of Commons that the British Government would not in any way interfere in the matter.

It is reported that Lord Derby, English Colonial Secretary, will not give his sanction to the annexation of New Guinea by Queensland, but will agree to the establishment of English stations on the coast of that island.

The Duke of Albany, it is asserted in London, recently offered himself as Governor-General of Canada, to succeed Lord Lorne, but was rejected by Mr. Gladstone on account of his youth and inexperience.

Alexander Kennedy Isbister, M.A., LL.B., who was instrumental in freeing Northwest British America from the Hudson's Bay Company and annexing that section to Canada, died in England on Wednesday.

A Fenian plot to blow up the Welland Canal, Canada, was frustrated by the watchfulness of the authorities. The fact has just been made public.

It was announced on Tuesday that Lord Rosebery, Under-Secretary for the British Home Department, had resigned on account of a recent insinuation of Sir William Harcourt, Home Secretary. John Tomlinson Hibbert, member of Parliament for Oldham and Parliamentary Secretary to the Local Government Board, has been appointed Lord Rosebery's successor.

Señor Castelar, the Spanish statesman, in a recent speech advocated the union of Spain and Portugal.

The Ceramic Exhibition was opened in Madrid on Wednesday by King Alfonso.

Fighting between the forces of the Ameer of Afghanistan and the Shinwarris has been renewed. The losses have been heavy on both sides.

Fifty persons have been roasted alive for witchcraft in the Sherbro district, Sierra Leone, Africa.

THE COLUMBIA COLLEGE SCHEME OF FEMALE EDUCATION.

THE Trustees of Columbia College have adopted the report of the Committee on the Higher Education of Women, and have prescribed the curriculum for female students suggested by it. This curriculum does not differ greatly from that of the male students—which suggests the question, Why should it differ at all? On what principle has any difference been created? As far as we can see from an examination of the women's course, it contains no recognition whatever of such a thing as sex in mind. The studies are such as any young man would do well to pursue in an academic, as distinguished from a professional, education, and such as no woman can pursue successfully without showing that she has what is called a masculine mind. Why, then, not save labor, and forestall complaints, by simply saying that the course for students of both sexes shall be identical? We cannot think, in fact, of any good reason for the distinction, beyond a desire to save the self-love of those who at first scouted the idea that Columbia College could ever be induced to do anything for female education at all. And yet it can hardly be that a motive so petty as a wish to show the promoters of the higher-education movement that they cannot have everything they asked for, though they may have something, has animated the powerful male minds which have so strongly disapproved of this whole business, in doing anything so serious as laying out a college course. It must be some hidden point of college policy which compels them to refuse to women the solemn privilege of following the present undergraduate course.

The same puzzle meets us with regard to the certificate to be given to the female graduates. It is, we are told, to be "nearly the equivalent" of the diploma given to the bachelors of arts. But why not the exact equivalent? What would happen if it were the exact equivalent, and were given as at Cambridge, England, or at Cambridge, Mass., on the same examination papers, and on the same standards? Would there be any violent disturbance of the framework of human society if Columbia College took this last step, and the whole earth were made aware that Doctor Dix had swallowed the higher education entire? A witty French statesman once accounted for the fixity of Prussian policy by asking: "What would the Universe say if a Hohenzollern changed his mind?" We suppose we must in like manner ascribe this little distinction between the women's diploma and the men's to some vague apprehension, which still lingers among the trustees, as to the effect on the relations of the sexes in all lands of an admission by Columbia College that a woman really can learn anything a man learns.

But we do not mean, in saying all this, by any means to deride what the College offers to do. The courses prescribed are good; the examinations which the College proposes to conduct will, we have no doubt, be searching, and the certificate will be an honor to any young woman who gets it. So that we trust the schools of the city will respond to the offer by sending up plenty of well-prepared candidates, and that the friends of higher education, whose exertions have extorted this concession from the College authorities, will do what in them lies to make the experiment a success. We have little doubt that before the end of the first four years the trustees will have got over what remains of their terror about countenancing female education in the higher branches, and will abolish the somewhat absurd little distinction they are now making.

We cannot help thinking, too, that they will by that time see the impropriety—to use a mild term—of committing the preparation and supervision of a scheme so large and important to a gentleman like Dr. Dix, who has had no experience in education, and no collegiate fame, and who had really disqualified himself for the work in advance, by vigorously denouncing it a short time before from the pulpit. There is no great Protestant university in the world to-day in which such a performance as that would not have been considered a formal disqualification for the duty of reporting on or framing the scheme; and Dr. Dix's appearance on the scene as the specially selected father of it, puts the lay element in the College government in an odd position.

LIBELLING "RESORTS."

WE called attention several months ago to the fact that a suit was going to be brought by a town in England to recover damages for a libel upon its character. The town was one which had enjoyed a high reputation as a "resort"; the libel was a publication reflecting most unfavorably on what is called in such cases the "salubrity" of the place. The libeller—who was, if we remember right, a newspaper man, egged on by a physician—declared that its salubrity was impaired by bad drainage; a most cruel thing to say of any town, and especially heartless in the case of a resort, where so many hotel-keepers, grocers, butchers, druggists, and livery-stable keepers would be unable to amass any wealth, were it not for the popular belief in its healthy condition.

Of course, if one town could maintain such a suit, another could, and the damages recovered by a slandered town might be very heavy; a few such suits would cure even the most reckless editors and physicians of the bad habit of calling attention to the unhealthiness of resorts. More than this, all the really healthy resorts would get such thumping verdicts that they would prosper more than ever; their salubrity would become more and more famous; larger and larger crowds would flock to them—the sick to become well, and the healthy to become more healthy still. Besides this, the poor hotel-keepers, butchers, grocers, druggists, and livery-stable owners would be better able than ever to keep the wolf from the door, and a general spirit of contentment and happiness would be spread throughout the community. Better than all, there could be no economical objection, for the money taken away from the editors and physicians would not be lost, but be profitably employed in business and kept active. The prospect was really one to raise the spirits even of an economist.

The only difficulty that could be perceived in any quarter was of a legal nature. The lawyers, who are always raising objections to everything, would, we ventured to suggest, make trouble, not over the fact that the suit would have these consequences, but that it would have still more—that if a town could maintain an action for libel, so could a county, or a State, or a sovereign nation; and as the newspapers of every country are continually saying the most unpleasant things about such political bodies, both at home and abroad, the number of suits instituted would be so great, and the amount of damages involved so enormous, that no man could tell what the end would be. How shamefully New York, for instance, has been slandered by Boston newspapers, and how recklessly, on the other hand, has Boston been slandered even by our own careful press! Either city might free itself from a considerable portion of its debt by a suit, say, in a United States court against the press of the other; while, oddly enough, the latter could, as the lawyers say, "recoup" to a terrible extent by a suit against the press of the first. There would, no doubt, be legal inconveniences about a suit brought by the United States against the London *Times* for its attitude to us during the war; and yet if a libel suit could be maintained by a mere town, it was hard to see how jurisdiction could be denied in the case of a friendly nation.

The suit had of course a far greater interest for Americans than for the English, because America is the great country of "resorts." This is the only country in the world where every little town in the mountains or on the sea-coast changes itself, when summer comes on, into a "resort," and, what is more important, into a healthy resort; for no matter how unhealthy they are during the winter, no matter what the death-rate, nor how bad or few the drains, nor how much malaria or low fever there may be, when the summer comes, by some beautiful law of nature—perhaps what is sometimes called the "principle of compensation"—these evils all disappear. This, at least, always was the case until recently.

Within a few years, however, as every one has noticed with pain, the newspapers have taken up the habit of denouncing resorts in various parts of the country as unhealthy, on account of bad drainage, malaria, or some other defect of that sort. The last case of the kind has arisen in the State of New Jersey, the town of Red Bank having been libelled by a Mr. Cook. The facts in the case appear to be that Mr. Cook, who is the editor of a New Jersey newspaper (which certainly makes his act all the more base), had the cruelty to publish articles criticising the health of this resort. The consequences of course immediately followed which happened in the English case. Not only was the little town filled with aching hearts over the cruelty of the thing, but the hotel-keepers, grocers, butchers, bakers, and druggists felt their profits threatened. They accordingly determined to make a stand, and, to make sure work of it, the town got the State of New Jersey to indict Mr. Cook for an article published in the *Register*. Every jurist early learns that one of the great arts in bringing a lawsuit is the "selection of the remedy,"

and an indictment was probably chosen in this case instead of a civil suit, in order to get over the trouble about damages. Moreover, to send an editor to jail whenever he libelled a resort, would teach him a lesson which he would not soon forget, and would probably have a more wide-spread moral effect. We are very sorry, however, to say that the case has broken down, the Judge having directed the jury to bring in a verdict for the defendant, first, on the ground that "the health of a place is a legitimate subject of discussion"; second, that the State had failed to prove that the criticisms in the *Register* of the health of Red Bank were untrue. On this account it was unnecessary, he said, to consider whether such publications could under any circumstances be indictable.

We are still, therefore, as far off as ever from knowing how far and under what circumstances there is any legal redress for the barbarous practice of criticising summer "resorts" and maintaining that some of them are unhealthier than others. There was a time when patriotic feeling was enough to prevent any questions of this sort from arising; when their equality in salubrity was recognized by every editor and resort correspondent in the land as the basis of discussion about all resorts. There was, no doubt, a difference between mountain and sea air, and one hotel might be larger than another; but the man who would publish an article denouncing the drainage of a resort, or suggesting that it might be well for the summer residents to look into the death-rate among the permanent residents, would soon have been made to feel his moral isolation. But this has gone by. Resorts are no longer merely described in glowing or beautiful language, but they are openly criticised on the score of their management and health. Patriotism can no longer be relied on to protect them even in New Jersey, and whether the law can do it is still involved in doubt.

THE SITUATION IN IRELAND.

THE release of Healy, Davitt, and others from the confinement to which they were sentenced in default of bail for their good behavior, before half their term had expired, indicates either that the Government thinks it made a mistake in shutting them up on a judge's order for violent language, or that it thinks that all necessity for severely repressive measures is past. There is no doubt that it has got the better of the murder societies. It has hanged four, and will soon have hanged five, of the Phœnix Park murderers, and it has nearly all the others, except the informers, in penal servitude. We doubt if it will be possible, for some years at least, to get anybody in Ireland to enter into conspiracies for the "removal" of either agents, landlords, or Government officers. In other words, the party of violence among the Irish malcontents have signally failed, and must be, for the moment at all events, thoroughly discredited in the eyes of the people. They will not be able to raise their heads again for some time to come, if for no other reason, because they have accomplished nothing for the national cause, and have once more brought home to all believers in the policy of violence the fact that those who adopt that policy must always expect the appearance of the informer. He may be long in coming, but come he does at last, and when he comes he makes a clean breast of it. Carey is the most finished specimen of the class that Ireland or any other country has produced, and it is hardly conceivable that he should not have made a profound impression on the popular imagination, and that he should not, for the present at least, have made a secret society seem the very jaws of death.

If the Government has gained much, however, by recent events, we incline to the belief that the Parnellites have gained more. It was the confident expectation of all their enemies, when the informers began their revelations, that evidence would be forthcoming to show the connection either of the Land League or of some of its leaders with the assassination societies. Carey's statement, for instance, that some one said, or some one thought, that the money for the expenses of the Phœnix Park assassins came from the Land League, was received with a shout of joyful expectation in England. Lady Florence Dixie's calculations, too, suggesting that all acknowledged receipts, the outlay of which the Treasurer of the Land League did not account for in his published statements, must have been spent in murder and outrage, were received with a certain cheerful credulity. But nothing has been elicited on the trials or inquiries in the least degree supporting these suspicions. Not a scintilla of evidence has been produced connecting the Land League, or any of its chiefs, with crime of any description. Even the "blonde-bearded" member of Parliament, whom somebody thought he saw at some of the meetings of the assassins, has faded from sight, leaving no trace behind.

In the second place, those who successfully opposed the Repression Bill in its original shape, when it made all these crimes triable by judges only, have been fully justified by events. The Irish judges strongly objected to this feature, and sent a written protest against it, but Mr. Gladstone, deferring to the English and Scotch majority, said in substance that it made no difference what the Irish judges thought. Subsequently he yielded to the remonstrances of the bulk of the Irish members and of some of the English Radicals, and left trial by jury optional with the Crown. The result has shown that he was wrong in the beginning, and that the Irish judges and members of Parliament were right. There has been no more difficulty in getting juries to convict in Ireland than there would have been in England. The trials have been as swift, orderly, and conclusive as they could have been anywhere, and far more so than they would have been in the United States; and the presiding judge, whose name shows unmistakably his Celtic origin, has set an example of calm, and dignity, and efficiency, from which a good many of his brethren in London might learn something. Nevertheless, under the plan of pacifying Ireland which some Englishmen sketched out after the news of the Phœnix Park murders came—a general massacre of the population of the island—the Irish judges, jurymen, lawyers, policemen, jailers, who have been administering justice so admirably under such trying circumstances, would have been slaughtered along with Brady, and Curley, and the others. Of course, this talk was simply enraged balderdash, but it was also an exaggerated specimen of the sort of nonsense which is talked on Irish affairs by a great many sensible men. There appears to be a subtle influence in Irish politics which makes fools both of the Irish politicians and of their enemies.

THE MEDICAL LIBRARY AT WASHINGTON.

THE special collection attached to the Surgeon-General's Office at Washington has grown from an ante-bellum basis of a few hundred text-books into a library which, in the particular sphere of medical literature, is without a peer. It is the first medical library in the world probably by an actual census of books, certainly as a working mine for professional men. This estate has been reached by zeal and tact in management, not by wealth, for the moderate Congressional appropriations, bestowed after prayerful and persistent entreaty, are barely sufficient to purchase two-thirds of the medical publications that appear day by day. The remarkable energy, organizing capacity, and erudition of the officer in charge have procured for it its 60,000 volumes and nearly 70,000 pamphlets, have made it a treasure-house of learning, and, better than all, have laid its wealth open in accessible form to the public of that profession. Its shelves hold about 66 per cent. of the medical literature extant, and nearly the whole of what has current practical value and is not merely historical. Its librarian early recognized the fact that the springs of medical thought first drained into the periodical press, and then, after evaporation and filtration, flowed together and settled in the more imposing volumes. The miscalled journals—the weekly, monthly, and quarterly expression of the medical mind—are the channels through which the newest ideas, truths and heresies, reach their readers; and in that department, especially as to American speculation and reflection, this library is nearly perfect. Every periodical in the world relating to medicine is taken, with an infinitesimal exception every American journal is complete, and the foreign files of the past are growing as opportunity occurs. And this not merely as to orthodox medicine: all the isms and pathies that the weakness of man or the invention of the adversary have poured upon humanity find there their own organs and their own expositions, ungarnished and undefiled. The library receives without adorning and keeps without abatement. The antiquary digging for rubbish and the student delving for treasure—both rubbish and treasure have use in intelligent hands—will be rewarded. But the collection makes no specialty of trash. Its object is the preservation of all medical writings; and those who use them may designate them as they please.

This is not a part of the Congressional Library, as is sometimes imagined. If it were, it is fair to assume that it would have neither the scope nor the value it actually has acquired. It is fair so to assume, because, by careful comparison with the medical sections of other great national libraries—for example, the British Museum and the National Library in Paris—actual count of similar portions shows the Washington Library to have more works and better ones for practical purposes than either, and this notwithstanding the advantages in money, in age, in situation, and in general experience which the

former possess. The Library of Congress receives two copies of every copyrighted book (why, by the way, should not one of those that are medical be diverted to the Surgeon-General's?); it has standing, its librarians have experience and scholarship; but in this branch of learning it is outstripped, and fortunately, by the one under discussion. Fortunately, because foreign experience shows that abroad special professions look to special collections as better and more accessible, and so they would at home; but especially because the Surgeon-General's librarian, Dr. Billings, with skill and enthusiasm, with an administrative capacity of the first order, and an appreciation of books as working material that no mere bibliomaniac possesses, has succeeded in diverting into it copious voluntary contributions of medical works of all sorts from all sources. It has acquired the confidence of the profession. Physicians give their books freely, because they realize that in the best sense they are putting them where they will do the most good. Its liberal management, the loan of volumes under proper guarantee to local libraries for distant students, the courteous response to literary inquiry where current work permits, and, above all, the publication of the monumental Index Catalogue, have created a vital interest in the medical men of the country, and in other scientific men also, toward this magnificent collection. It has acquired by its generous management voluntary contributors abroad. At home it is regarded with pride and affection, for, with a lively sense of the fraternity and responsibility of science, it is conducted as a public institution for the public benefit. It is a singular credit to the country and to that scientific corps of the army whose creation it was and in whose custody it is.

But a shadow rests upon it. Congress will give it no proper shelter. Before this is in print it may be in ashes. Congress doles out parsimonious supplies. Congress is not unwilling to consign it to that limbo which is known as its own library, to that vasty deep from whose surges the spell of no ordinary applicant can raise the buried spirits, to that wilderness of sheep and calf and boards to enter whose tangled wilds in search of light on hidden points is to leave hope behind. Congress is willing to transfer, and the over-burdened Librarian of Congress is willing to accept, this huge accession, which is now a symmetrical and illuminated whole, but which will then become lost in a labyrinthian mass of unrelated matter. Is it not well that the medical men of the country, who would be a power if they would work in unison—and, if they need help, that scientific and educated men generally—should impress Congress with a sense of its duty to preserve the Medical Library (however it may be ultimately housed) intact, and at liberty to develop in the way which has proved so eminently successful?

THE DUCHESS OF TOURZEL.

PARIS, May 11, 1883.

THE Duc des Cars has published the 'Memoirs of the Duchess of Tourzel,' who was the governess of the children of the royal family from 1789 to 1795. The precious manuscript was in the hands of the Duchesse des Cars, the mother of the present Duke, who was the granddaughter of Mme. de Tourzel. This lady was born in Paris, June 11, 1749. She was the fifth child of the Duc de Croy-Havré, Prince of the Holy Empire, grandee of Spain, etc., who was killed, in 1761, in the battle of Fellingshausen, and of Marie Cunigunde de Montmorency-Luxembourg. She was married April 8, 1764, to the Marquis de Tourzel, grand-provost of France, and five children were born of this union. The first years of her married life were spent chiefly at the fine château of Sourches, near Le Mans, which was built by her father-in-law, who lived very little at Versailles. The Marquis de Tourzel became grand-provost on the death of his father; and when the Queen Marie Antoinette was forced to separate herself from the Duchesse de Polignac, who had become the object of most violent attacks on the part of the revolutionary party, she offered the place of governess of the royal children to Mme. de Tourzel, who was notorious for the purity of her life and the excellence of her character. The situation of the royal family was already such that Mme. de Tourzel accepted her mission in a spirit of devotion and of sacrifice. Marie Antoinette greeted her in her new functions with these words: "Madame, I had confided my children to friendship, I now confide them to virtue."

The memoirs begin at this moment. A beautiful engraving shows us the Queen Marie Antoinette at about this period. It is taken from a pastel by Kucharsky, which was made for Mme. de Tourzel, but was interrupted by the journey to Varennes and finished only in 1792. It is an excellent likeness of the unfortunate Queen. It escaped the fury of the mob on the 10th of August at the Tuileries, and was found again behind a door, three years afterward, by the Marquis de Tourzel. The thin, somewhat pointed features of the Queen, her *grand air*, her aristocratic countenance, the fine oval of the face, the clear eyes, the Austrian features, the curious costume of the first years of the Revolution, contribute to give great value and expression to this portrait. Louis XVI. had only two children left, the Dauphin and Mme. de France, when Mme. de Tourzel became governess. She established herself at Versailles, in the first days of August, 1789. In the month of September, the King, alarmed at the increasing disorganization of the Government, began to think of leaving Versailles, and confided this idea to Mme. de Tourzel. She was told to be in readiness, so as to be able to leave in a moment, if necessary. The King and Queen had not yet decided where to go. Soon afterward they changed their minds and resolved to remain. The King had still, besides his own guards, the regiment of Flanders, which was very loyal, and the chasseurs of Lorraine, who were at Meudon. With this force he could have left Versailles without any difficulty. The banquet which the Guards gave to the regiment of Flanders was a useless demonstration, which only afforded an opportunity to the revolutionists. The armed bands of Paris came to Versailles, took possession of the royal family, and brought it back to the capital. After the famous days of the 5th and 6th of October, Louis XVI. and Marie Antoinette became the prisoners of the National Guard of Paris, and of the clubs.

Mme. de Tourzel gives a curious detail on the behavior of the Parisian mob at Versailles. Everything was quiet in appearance on the evening of October 5. The National Guards were mounting guard at the château:

"The *brigands* did not sleep, and, assured of the National Guard of Versailles, they prepared the execution of their projects. Their barbarism had a mixture of superstition, and, what will seem almost incredible, they went at 6 o'clock in the morning to the curé of Saint-Louis [Saint-Louis is the principal church of Versailles] to ask him to say mass for them. The mass was hardly ended before some of them went to force the entrance of the barrack of the *gardes du corps*, and massacred all the guards they met."

Another troop forced the grilles of the Château and invaded the courts and terraces of the garden, so as to penetrate into the Château. These bandits massacred two sentries under the apartment of Mesdames the aunts of the King, and had the heads cut off by a monster who followed them and was called the *coupe-tête* (the head-cutter). They mounted the great staircase, and went straight to the apartment of the Queen. The guards, though they were in small number, defended the entry with much courage; they had fortunately time to scream, "Save the Queen!" The Queen was saved; she ran away in her nightgown, and the brigands could only tear her bed with their pikes. These scenes are well known; they fill us with shame even at the distance of a century. The detail of the mass of Saint-Louis was unknown to me, and is very characteristic.

When the King was obliged to return to Paris, it could be said that he had virtually abdicated, and that his reign had come to an end. Mme. de Tourzel thus describes the royal progress:

"The cortége of the unfortunate Prince was worthy of these terrible deeds. First came the Parisian troops, each soldier carrying a loaf of bread at the end of his bayonet. All round them was a populace bearing on pikes the heads of the unfortunate bodyguards. Then came cars full of sacks of flour, and market-women [called *poissardes*], decorated with foliage, and having loaves of bread in their hands. Everybody was screaming: 'Long live the nation!'"

The King was received by the Mayor of Paris, Bailly, who afterward died on the scaffold. The royal family found the Tuileries quite unprepared to receive anybody. The Dauphin spent the night, without guards, in an apartment opening on all sides. "I barricaded the doors," says Mme. de Tourzel, "with what little furniture I found, and spent the night sitting near his bed, lost in the most painful reflections, and considering what could be expected of a people capable of such terrible excesses." Life became intolerable for the royal family in the Tuileries. The palace was surrounded constantly by the populace; the King, the Queen were loudly called for, and were forced to show themselves on balconies with tricolor cockades. The bodyguards were sent away; the only sentries were national guards. The King was already a prisoner.

In 1790 the royal family left Paris for Saint-Cloud, during the summer; but the King came almost daily to Paris. The young Dauphin was a little happier, and played constantly in the park. Once, while Marie Antoinette was walking at Saint-Cloud with Mme. de Tourzel and the Princesse de Tarente (who was one of her ladies-in-waiting), she was surrounded by National Guards, among them many of the *gardes françaises* who had rebelled at the beginning of the Revolution, and who had been incorporated in the National Guard. "How astonished would not my mother be," said Marie Antoinette, "if she saw her daughter—a daughter, a wife, a mother of kings, or at any rate of a child who is destined to be a king—if she saw her surrounded by such a guard! It seems as if my father was a prophet." She then told them that when Francis I. left for Italy, he took leave of his children. "I was the youngest," said she. "My father took me on his knees, embraced me several times, and seemed to be hardly able to let me go. It seemed singular to all the bystanders."

At the moment of the Federation, when the new Constitution was proclaimed in the presence of the deputies of all the provinces of France, the *fédérés* showed great sentiments of loyalty toward the King and the Dauphin. They urged the King to visit the provinces; but the ministers did not favor such a project. The King was timid; "discontented with the education which he had received, he did not judge himself favorably, and did not do himself justice." Mme. de Tourzel says that on the journey from Varennes to Paris "Barnave spoke with Mme. Elizabeth on the events of the Revolu-

tion, and, speaking of the Federation, he said: 'Ah! madame, don't complain of the Federation; for, if the King had known how to profit by it, we had been all lost!'" In the beginning of 1791 Mesdames Adélaïde and Victoire, the aunts of the King, seeing no security for themselves any longer in France, determined to leave the country and to go to Rome. The King was beginning to meditate seriously on the possibility of leaving France himself. He signed all the decrees presented to him by the ministers, but he detested almost all the resolutions taken by the Assembly. He acted so as to give the impression at home and abroad that he was no longer free; he did not exercise any royal prerogative, and, if he had tried to do so, he would probably have endangered at once his own life and that of the Dauphin. The Tuileries were a prison; he was living among spies, and the most innocent actions were denounced by the revolutionary clubs.

One day the Queen entered the room of Mme. de Tourzel, who was ill, and urged her to go to Plombières. "It is probable," said she, "that we shall be obliged to leave Paris, and you are too weak to follow us." Mme. de Tourzel said no consideration could induce her to abandon the Dauphin and Madame. The journey to Varennes was already planned. Marie Antoinette woke her son herself, and told him that she was going to take him to a fortified place, where he would command his regiment. The child was delighted. Mme. de Tourzel and the children left the Tuileries by a door which was little used, in an old coach, which was driven by the Comte de Fersen. The King only arrived after midnight at the house which had been chosen for the rendezvous; he had received Lafayette and Bailly before leaving the Tuileries, and had left the Tuileries alone, on foot, the guards taking him for the Chevalier de Coigny. The Queen had only left the Tuileries after the King. The journey took place in a great *berline*. Mme. de Tourzel was supposed to be the principal person, under the name of Baroness de Korff; the King was her valet, the Queen her maid, and Mme. Elizabeth the child's nurse. Everybody knows how the King was recognized by Drouet, the postmaster of Sainte-Ménehould, and arrested at Varennes and brought back to Paris.

The rest of the tragedy is only too well known. Mme. de Tourzel was separated from the royal family. She escaped the scaffold almost by a miracle, and established herself at Abondant, near Dreux, where she was forgotten during the last years of the Revolution and during the Empire. She built in her park a little monument, which still exists, and on which may be read:

"Quid sunt cineres? heu! cinis ipsa deest!"

in allusion to the fate of the unfortunate Dauphin. The inhabitants of Abondant, a small village, did not disturb the profound sorrow of Mme. de Tourzel. When Louis XVIII. ascended the throne, he attached to the person of the Dauphin Mlle. de Tourzel, who had become Countess of Béarn, and he conferred on her the hereditary title of Duchess, which became extinct in the person of her grandson Olivier, Duc de Tourzel. Mme. de Tourzel died herself on the 15th of May, 1832, at the advanced age of 82. She lies buried at Abondant, in the church. The Duc des Cars, who now publishes her 'Memoirs,' is, as I have said, the husband of one of her granddaughters. She had five children, four of them daughters. The Countess of Béarn wrote a very interesting book, 'Souvenirs de quarante ans,' in which she gives a most interesting account of the massacres of September. The fifth child was a son, the last grand-provost of France. At his death, all the family papers passed into the hands of the Duchesse des Cars, one of his children.

Correspondence.

THE CATALOGUE OF THE ASTOR LIBRARY.

To the Editor of The Nation:

Sir: Referring to an article in this day's *Nation* on the Astor Library, I beg leave to say that the Board of Trustees, believing that they had in Dr. Cogswell's four volumes a reasonably good author-catalogue of half the collection, decided that the most obvious step in advance would be to make an author-catalogue of the other half on the same general plan.

It is evident that this will not preclude, but rather prepare the way for, a thorough subject-catalogue of the entire Library, should the making of one be ordered on the completion of the present undertaking.

With regard to the conditions under which the work of correcting the cards is now progressing, the revisers have ample facilities as to appliances, place for working, and assistance in handling books. The only "hurrying" arises from the business-like desire of the trustees to confine the work to the simplest practical limits, and to bring out the catalogues as speedily and economically as possible.

C. Alex. Nelson,
in charge of new catalogue.

Astor Library, New York, May 31, 1883.

THE SUCCESSION AT PRINCETON.

To the Editor of The Nation:

Sir: "Alumnus," in his letter printed May 31, is probably correct in saying that the trustees of Princeton will decline to accept the resignation of Doctor McCosh, and will seek to relieve him of much executive work by the appointment of a dean. He is certainly correct in thinking that at least some of the alumni would prefer another solution of the problem than the appointment of an heir presumptive. Many of them remember that the vice-presidency was suffered to lapse for sufficient reasons; and the reasons that sufficed for the extinction of that office are valid against its revival in another name. If President McCosh finds the legitimate duty of the presidency inconsistent with the special teaching that he is so qualified to give, and prefers to merge the administrator in the philosopher, why obstruct the way? To be sole or senior professor of the School of Philosophy gives full scope to laudable ambition, especially when his name is already indissolubly associated with the period of Princeton's greatest material and intellectual growth. Why, then, insist that he be held, even in name, to the office from which he asks relief? The trustees reply that the New York influence is unwilling to separate him from the titular position. New Yorkers have given munificently to Princeton, and have bought respectful attention; but the constituency of Princeton is national, not local. The metropolis has furnished money, but the country sends students. And notwithstanding the million and a half from Mr. Green, and the Stewart, the Marquand, the Libbey, and other gifts from that city, there are also liberal donors in other places. It is satisfactory to know that the management of the College commends itself to those representing the liberality of its greatest givers, but the stream began to flow toward Princeton before Doctor McCosh was elected, and it will probably be diverted or suppressed only by gross maladministration. It is hardly fair to insist, as the trustees are understood to be willing to do, that Doctor McCosh must be retained in an office that he wishes to resign merely because he is pleasing to New York.

It is a suggestive fact that Princeton's greatest benefactors are not her own children—partly, perhaps, because a liberal education does not as certainly as commerce lead to great wealth, but also partly because, as "Alumnus" has hinted, the foster-mother has never very warmly welcomed home her scattered sons. The annual alumni meeting at Princeton is dreary beyond description, and the occasional Yale or Harvard man drifting thither goes away wondering why neither numbers nor enthusiasm can be brought out. But, in spite of neglect and the "Oriental exclusion" from direct control, affection for Alma Mater remains with many who would help her with influence although dollars may be denied them. These, grateful for what Doctor McCosh has done, would have his services substantially honored, his graceful resignation accepted, as he evidently desires, and would place in the president's chair a man to be president only. They, believing Princeton to have a future as well as a past, remembering that in better days it has seen one-sixth of the Senate its own graduates, and that its public men were its ancient boast, would place at its head a man to inspire its students with both scholarship and patriotism. They would cultivate philosophy, and literature, and science, and public spirit. They would have the new president president in fact, not dean by title; and they would send thither every boy who had aspirations to be a good citizen first and a carer for money afterward.

But the Princeton alumni will not be consulted, nor can they intrude upon the patriarchs in their old home. D. Q.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: The trial, recently ended here, of two young men accused of complicity in shooting Axel Winberg, I witnessed. When the two Proudfits gave in their testimony, I saw the effect on the jury, and no after-argument of the counsel had any effect upon them. Winberg had slapped the face of the young man, and was the first aggressor. Not one of that jury, though composed of laboring and wealthy men, that did not feel it was *right* to wipe out the insult with blood.

I have no words to express the pain and indignation felt in reading the comments upon the Thompson-Davis tragedy by the generality of the Southern papers. This affair, like many others, is the result of two codes of morals held for men and women, and of "ownership" in women. Much as I honor Mr. Watterson as a man, his comments upon it, viewed from a woman's standpoint, seem to merit the scornful contempt of women. Let me cite the parallel case of Kate Southern, of Georgia, who killed the mistress of her husband while dancing in her own parlor. She had refused to invite the woman, who was living in open liaison with her husband, to a party she was about to give. The husband *did* invite her, the woman came, and during the evening taunted the wife by telling her she did love her husband, was getting a divorce, and would win him from her, daring her to do her worst. The worst was done when, a few hours afterwards, she stabbed her rival to the heart, while dancing with her husband, with a knife borrowed from her father. These facts came out on her trial, yet for doing *precisely* what men are honored in the South for doing, she was sentenced to serve a long term in the penitentiary—I think was condemned to death on the first trial, but had her sentence commuted.

Nothing will tend more to change these unhappy features of social life than open discus-

sion of them by women and men both. The education of women will tend to change it more than all else. Men constantly declare that women do not demand as high a standard for men as men demand for women. Woman has never been allowed the rôle of censor, and never will be, so long as she is mentally, financially, and politically in bondage.

ELIZABETH L. SAXON.

MEMPHIS, TENN., May 29, 1883.

A LAST WORD ON UNIVERSITY HONOR.

TO THE EDITOR OF THE NATION:

SIR: You said in your last number that your readers had perhaps had enough of this controversy over "University Honor—North and South." Allow me to say that a rather large number of them, to my certain knowledge, are not at all satisfied to have it end in its present condition. We think that the true line has not been drawn, nor the existence of that line properly accounted for. "E. G.," of Boston, as it seems to us, has alone written in the proper spirit on this subject.

Nothing can be better established by human testimony than the fact that there is a contempt and hostility for deception of any kind at some Southern schools, so deep and general that tricksters and liars cannot find existence at them supportable. From my knowledge of the students at the University of Virginia, I vouch for what I say, that there is not only no cheating spirit there, but there is no spirit of deception of any kind. The burden of proof is upon those who allege its existence. I need not, most likely I could not, establish by argument the truth of my assertion, but there is a cloud of witnesses living in the North and in the South who will, I am positive, sustain it with their testimony. But without attempting to prove that "cribbing" and "skinning" are not the failings of the students at the universities of Virginia and Georgia, at Hampden Sidney, Randolph Macon, and other colleges, I shall, assuming my facts admitted, endeavor to account for them. Whatever may be the present character of the Southern people, it cannot be denied that, at the time some or all of the above institutions were established, the classes of our people who patronized them were, while full of faults, scorners of a lie, as a species of cowardice and weakness.

No reader of history is amazed to hear that, amidst much national profligacy and immorality, some one virtue is conspicuous in a people. Whatever may be the character of Virginians now, it is certain that at the time many of their schools were founded they hated falsehood, not, probably, as such, but as an indication of a lack of bravery. Their schools have acquired a tone. They are impressed with an idea. They are great conservators. Though the State as such may have lost its respect for its word, yet in these schools there remains that which inspires all lovers of the South with hope: an aversion to falsehood and underhand methods.

Now, the students at the schools I have mentioned do not refrain from cheating because they are Southerners, but because they are impressed with the idea of the schools. The same men have cheated at other schools, and would have continued to cheat had they gone where the atmosphere was different. At some of our comparatively young Southern schools there is, to my certain knowledge, an enormous and ever-increasing amount of cheating. What I want to lay stress upon is that Southern schools like the University of Virginia owe their absence of cheating not to the class of students in attendance upon them, but to the idea impressed upon the particular institutions by their founders, first professors, and the general sentiment of society at the time. The methods used at them are more the result than the cause of the unquestioning belief in the veracity of the young men. This unquestioning belief I cannot exaggerate or too highly commend. There is no "play belief." There is no ostentatious "don't-deceive-for-behold-my-trust" air which those often assume who are otherwise helpless. There is at the University of Virginia a feeling that it cannot possibly occur to a professor to doubt, or to a student to deceive. This is a mere matter of fact, which every alumnus or student or observer will affirm.

Not only is this the case between teacher and pupil, but also between the pupils themselves. While at the University of Virginia, after having attended schools of a lower tone, I was filled with amazement at the reverence shown there for one's word, even by those I knew to be of the most dissolute class. A man who had been sowing wild oats profusely was in no danger whatever of being tempted by his gay comrades after he had once quietly announced that he had promised to drink no more during the session. However weak his will, it was immediately taken for granted that his pledge could not be broken. I never heard of one breaking a temperance pledge, even when it had been forced upon him as an alternative for expulsion, or of any one tempting another who had taken it.

Of course, the system at the University of Virginia, while, as I have said, a result of the trust, helps to keep alive the trust. As your readers have been told by others, there is no grading, no honors, no demerits, no medals. There are also no police duties enjoined upon the professors. On the contrary, they are in the full sense of the word the friends of the students. It is very significant, and it helps to show the truth of this assertion, that among the hot-blooded young men who have attended this school there has never been fought a duel. This is a strange fact, and inexplicable to all who know the character of Southern students, but who do not know the professors of whom I speak, and the relation between them and their students. To me there can be no doubt that the ingenuousness and straightforwardness of the students at the University of Virginia have been to no small degree preserved by the wise non-interference of the school with matters of creed. No one need make any pretensions of a religious kind in order to win more respect or affection from his professors. He may be sure, however widely he may differ from them in matters of belief, that by his deportment alone he will be rated. The scorn entertained there for a cheat is largely due to the fact that a degree granted by that school is justly valued highly, because conditioned not upon length of stay, but upon a very respectable proficiency of the student. It is the selfish interest of each one, therefore, to prevent any one from gaining by sly trickery what he is trying to gain by arduous toil. For this reason he would expose and help drive away one who cheated at examination, just as he would aid in bringing to shame and punishment a common thief. At Princeton and at other Northern colleges there is no cheating, I am informed, among those who are striving to secure high positions in the graduating class. But those who it is thought will barely succeed in getting the minimum mark will be expected to cheat, will cheat, and will be aided in cheating, because it is not the degree that is prized, but the rank in the class.

Were not the general cause which I have mentioned still exerting its influence at the University of Virginia, were the grand *idea* eradicated which has so long controlled the conduct of all connected with it, there would exist at that institution, under a similar system, the same amount of cheating.—Very respectfully,

E. I. R.

ATLANTA, GA., May 29, 1883.

THE SOUTH AND THE NATIONAL DEMOCRATIC PARTY.

TO THE EDITOR OF THE NATION:

SIR: The day has come when the national Democratic party can no longer count upon the solid support of the Southern branch of the party. In fact, it is not going too far to say that already they form two separate and distinct parties, who have heretofore, from motives of self-interest (or supposed interest), acted together more as allies than as a unit.

We of the South find that we have reaped no benefit from this alliance in the past, and that, whatever success may come to the party, we at least shall have no share in its blessings. We have learned that we are to be used to lift the party to ascendency, and when we ask for consideration at its hands are to be told by our Northern brethren—as has invariably been the case—that this, that, or the other measure is too Southern, and will injure the party, and therefore they must oppose it. We wish to know, under these circumstances, of what benefit to us is a national Democratic victory.

It has been suggested to the Southern Democracy to draw off from both parties and form a separate third party, thus holding the balance of power; not with the expectation of party ascendency, but to hold itself ready to coöperate with either party as policy may on the particular occasion direct. And whether or not this idea crystallizes into form by the next national election, it is very certain that the Southern vote will, in a very large measure, hold itself independent of the direction of the national party. There are many reasons why we cannot consent longer to follow blindly the dictates of the national party.

These reasons may be summarized somewhat in this way: (1) There are no issues of principles between the parties. (2) The South is unanimous for free trade, let it come from what direction it may. (3) We are setting out on a career of unprecedented prosperity; consequently we want quiet, stability, and a maintenance of the present financial policy of the Government—in fact, having no political ambition, we are fearful of any sudden change or shock that might injure our material prosperity. (4) But above all this, we feel that the tendency of the national Democratic party is not in the direction of our sympathy or judgment. We recognize the fact that there is yet another "irrepressible conflict" brooding in this country, which some have termed—although improperly—a contest between capital and labor, but more properly between intelligence and ignorance, and that in such a contest our interest must lead us to an alliance with that party which most vigorously repudiates the propagandism of the Communist, the Nihilist, and the modern demagogue.

The South realizes the necessity of maintaining her State governments in the hands of the intelligent whites, but in national matters there is little doubt but that she will in the near future inaugurate a policy totally unbiassed by past affiliations.

R. K. CHARLES.

DARLINGTON, S. C.

Notes.

E. CLAXTON & CO., Philadelphia, will follow up their octavo "Avon" Shakspere with a corresponding "Newstead" Byron, to embrace the complete dramatic and poetical works of the

author of 'Childe Harold.' It will be printed from new plates. An illustrated Life of Byron, by Prof. John Nichols, will first be published by the same house.

We have already announced the limited *édition de luxe* of Sheridan's plays to be published by Dodd, Mead & Co. Another edition of Sheridan will form one of Professor Morley's new series of shilling volumes. Mrs. Oliphant's volume on Sheridan is announced as the next issue in the "English Men of Letters" series, and Mr. J. Brander Matthews has in preparation an illustrated and annotated edition of the "Rivals" and the "School for Scandal," to be published by James R. Osgood & Co. It will be preceded by a brief biography of the dramatist. Among other new matter, Mr. Matthews believes that he can give the exact explanation of Sheridan's extraordinary purchase of Drury Lane Theatre, which has hitherto been one of the puzzles of literary history.

The next of "Appleton's Home Books" will be the 'Home Library,' by Arthur Penn. It will contain more than thirty illustrations, chiefly of the more recent library devices to save time, trouble, and money. It is a practical book rather than a treatise on reading or a list of books to read. Among the chapters is one on book-plates, with copies of French and English examples, the only American representative being one drawn by Mr. E. A. Abbey for a dramatic collector of this city.

Harper & Bros. have decided on destroying the plates of their *Magazine* and *Weekly* up to 1880, and all the stock of those periodicals on hand they have sold to Estes & Lauriat, Boston.

Charles Scribner's Sons have likewise disposed of their entire list of school text-books to Ivison, Blakeman, Taylor & Co.

In 'Recollections of My Youth,' translated by C. B. Pitman, G. P. Putnam's Sons make accessible to English readers Renan's complacent 'Souvenirs d'Enfance et de Jeunesse.' Our Paris correspondent has already qualified our own audience to judge of the intrinsic worth of this volume. The chief charm of the original, the author's style, could not indeed be easily reproduced; but more might have been done to imitate it in this version, intelligent as it is, if greater pains had been bestowed upon it. A crucial test is the opening paragraph of the preface; and if we compare "qui sonne encore des cloches obstinées à convoquer aux offices sacrés des fidèles qui n'entendent plus," with "its bells calling to prayer a recalcitrant congregation," we shall see how too great haste has led the translator to neglect the poetry and falsify the sense of a passage presenting no difficulties except those of style. This was not owing to lack of intelligence, any more than the occasional printing of Renan's name with an accented *e*, as upon the title-page and the cover.

Another welcome translation, and even more skilful, is 'The Growth of a People: a Short Study in French History' (Henry Holt & Co.). This is, with a changed title, Paul Lacombe's 'Petite Histoire du Peuple Français,' the English being Mr. Lewis A. Stimson's. It supersedes a wretched performance made some years ago, and now, we are glad to learn from the translator's preface, unprocurable. We have tested it in a number of places, and its accuracy may be relied on. Since the same publishers have the original French on their list, teachers have now a rare opportunity of combining a capital introductory course in French history with dictation exercises in turning English idiom into French, and vice versa.

It never rains but it pours. We noticed last week the simultaneous appearance of two editions of samples of 'The New Guide of the Conversation'; now we have the entire work in a "first American edition, reprinted verbatim et literatim" (Boston: J. R. Osgood & Co.). In this case, certainly, the whole is better than any number of its parts. Mark Twain furnishes a short introduction, full of appreciation of the irresistible drollery of the book, but he seems to miss the key to what he calls "its enchanting naïveté," namely, its being a translation from the French. The difficulty of reprinting *literatim* is well known; but it is singular that the Osgood, Putnam, and Appleton editions should all have "typographical [for *typ*graphical] correction" in the preface. Is it possible that they all followed a reprint instead of the rare original?

Very recently we had occasion to mention the latest German-French-English Technological Dictionary. There now lie before us the first two instalments of Part I. (English-Spanish) of the 'Diccionario Tecnológico Inglés-español y Español-inglés' (New York: Ponce de Leon). The publisher, who is also the editor, has had ample experience of the need of such a work, and the best opportunities for compiling it. It is based on Tollhausen's trilingual dictionary (German-French-English, 1864), with the aid of some thirty other dictionaries in all languages, whose titles are given in the preface. It is expressly a work not of definitions but of equivalents, in this respect differing from the work first named above, which united the two. Some idea of the laboriousness of the task may be had from the single fact of the great diversity of synonyms in the various provinces of Spain and in her former possessions in this country. Purists may object, if they please, says the author, to some of the new terms thus admitted; but he has chosen to be as liberal in naturalization as his adopted country. He modestly craves correction of errors which cannot fail to exist in a pioneer work, and promises to profit by it in his appendix. The two numbers already issued (A–Bombon—*sic* for Bonbon) justify the pretensions of this dictionary to surpass every other in point of fulness. The names of craftsmen which we missed in Eger's German work are here given. In short, the 'Diccionario Tecnológico' cannot fail to meet the need of the ever increasing commercial and industrial intercourse of the great Spanish and Anglo-Saxon races.

The English translation of 'Das Reich der Töne' (The Realm of Tones), published by E. Schuberth & Co., is a book which no one interested in music can examine without feeling a strong desire to possess it. It contains, on a dozen plates, more than 300 photographs of distinguished composers, singers, and instrumentalists of all countries and periods, besides short and pithy biographic notices of them. The subjects are arranged partly according to nationality, partly with reference to their specialties. The insertion of several virtuosos in whom the artistic faculty was more or less obscured by the desire to tickle the public with cheap tricks is perhaps pardonable in view of their general popularity; but the line might have been drawn at Kontsky: nor was there any reason for placing Eduard Strauss by the side of Johann and Joseph. Among the regrettable omissions are Frau Materna and Herr Vogel, the two greatest living dramatic vocalists. The most serious objection to this book is that there is no index, and as the names are somewhat indefinitely arranged, with the biographic notices generally on the opposite page and not in alphabetic order, it is often difficult to find the name that is wanted. Of the photographs it must be said that they are in most cases based on the best models, and differ advantageously from the idealized photographs usually sold in the music stores, which make every composer appear a sort of Apollo. A valuable feature of the present edition is the addition of two plates containing the pictures of noted American musicians, the biographic notices being supplied by Dr. F. L. Ritter, who is also, as stated in the preface, at work on a 'Musical Dictionary.'

The late Prof. James Orton's 'Comparative Zoölogy,' first published by the Messrs. Harper in 1876, has now been revised by Professor Birge, of the University of Wisconsin, whose liberties, while not great, have heightened the original excellence of this work. The success of it may one day justify a renovation of the cuts, many of which have by long service earned an honorable discharge.

A Preliminary Catalogue and Synopsis of the collections exhibited by the U. S. Fish Commission and by special exhibitors, at the International Exhibition now open in London, has issued from the Government Printing-office.

To the Essex Institute Historical Collections (Salem, Mass.) for January-March, 1883, Mr. Robert S. Rantoul furnishes a long and interesting "Note on the authenticity of the portraits of Governor Endecott." Eight exist, some copies of the others; but in the case of the originals, or supposed originals, there is much obscurity as to the date of their execution or their painters. However, these bear a resemblance one to the other, and have the still higher stamp of authenticity which the resemblance of Governor Endecott's posterity affords in certain family features.

With the approval of the Board of Trustees of Washington's headquarters at Newburgh, Major Edward C. Boynton has compiled the general orders issued thence by the commander-in-chief during 1782–83 (Newburgh: E. M. Ruttenber & Son). Some of these orders have never before been printed. The pamphlet is illustrated.

The attention of all who are interested in spelling reform should be called to Mr. Alexander Melville Bell's article in *Science* for June 1, which gives a glimpse of his "visible-speech" alphabet, and shows what portion of it could be advantageously introduced as a beginning. Notoriously, Mr. Bell's system is both scientific and universal, and just as far as it was adopted in one language it would be intelligible to all. "But," as he himself says, "why not have two alphabets?"

The current number of the *Student and Statesman* (New York: Louis Kempner, 5 Clinton Place) contains an appeal for a more effective support from the public.

We have received from the State Charities Aid Association (No. 6 East Fourteenth Street) their pamphlet, "Suggestions for the Use of Workers among the Poor," issued last month, and known as Document No. 33. Some of the topics are loans, employment, provident schemes, legal aid, etc., and every section will repay consideration.

The Twelfth Annual Report of the Secretary of the State Horticultural Society of Michigan (Lansing), with its reports of auxiliary societies and Secretary's "Portfolio" or scrap-book, is calculated to instruct horticulturists everywhere in much the same way that their special periodicals do; but the index is far too meagre.

Late American books reprinted in the "Tauchnitz Series" are Mr. Crawford's 'Mr. Isaacs,' Mr. Howells's 'Undiscovered Country' and 'Modern Instance'; Dr. Holmes's 'Autocrat of the Breakfast Table,' and Mr. John Habberton's 'The Bowsham Puzzle.' The German publisher still reflects English opinion of American writers; and if his list bears an increasing number of American names, it is only because American novelists are exciting far more attention of late in England itself.

Dr. Philipp J. J. Valentini's paper on the Olmecas and Tultecas, "a study in early Mexi-

can ethnology and history," has been printed separately from the Proceedings of the American Antiquarian Society, with a map drawn by the author himself to illustrate his text. These primitive peoples he considers to have been of one family, settling in different parts of Mexico, and reuniting after the lapse of some centuries, but before the traces of kinship had vanished. Tultecas was a name never assumed by the tribe in question. Their architecture cannot be thought a development from the pueblos of the North.

The number of members of the British Association for the Advancement of Science who have announced their intention of being present at the proposed meeting at Montreal in 1884 continues to increase, and is now between four and five hundred. It is stated that Lord Rayleigh has accepted the presidency for the Canadian meeting.

Astronomers have so far been baffled in their attempts to rediscover D'Arrest's comet at the now approaching perihelion-passage. This occurs January 14, of next year, and the comet should now be visible, though very faint. Even when most favorably situated for observation, toward the close of this year, the intensity of its light will be less than the lowest value at which the comet has ever been observed at previous returns to perihelion. There is a surprising number of faint nebulæ along its track, and this fact alone largely diminishes the chances of its being seen at all at the present return.

The astronomical prizes of the Academy of Sciences, Paris, have been awarded as follows: The La Lande prize falls to M. Souillart, Professor in the Faculty of Sciences of Lille, for his investigations of the theory of the satellites of Jupiter. The Damoiseau prize for the revision of the theory of these satellites was not granted, but an encouragement of 2,000 francs was given to Dr. W. Schur for his recent determination of the mass of Jupiter, and of the eccentricities of the orbits of the two inner satellites. Two Valz prizes were awarded—the one to Doctor Huggins for his spectroscopic work and his recent great advances in celestial photography, and the other to M. Cruls, Director of the Observatory at Rio de Janeiro.

—The *Academy* having remarked upon the small amount of fiction circulated in the Mitchell Library at Glasgow, the librarian, Mr. F. T. Barrett, wrote to say that this was because the library had less than 400 volumes of fiction. The "turnover" of these was last year 97.93, the turnover of the whole library being 8.59. And yet Stirling's Library, within a short distance, has a large supply of fiction, and there are plenty of private circulating libraries from which novels can be procured at a penny a week. There could not be a better proof of the strong craving of human nature for this refreshment, or stimulant—a proof which is paralleled in the statement lately made that of 363,000 volumes circulated by the *arrondissement* libraries in Paris 200,000 were novels; and repeated with more or less strength in every library report which is published except that of the Germantown Library, which has more than doubled its circulation in eight years without this aid. But the existence of a craving and the advisability of gratifying it are two very different things. There is a still greater demand for alcoholic stimulants; but both physiology and sociology urge us to throw every obstacle in the way of their supply, or rather every obstacle that will be effectual. There is, however, this difference between alcohol and fiction, that the first is manifestly and undeniably productive of great evils, and that the belief in the evil effect of the latter, though widely spread, would, if examined into, be found to rest upon a very slender basis of observed facts.

—In these days of bric-à-brac-hunting, picture-buying, and book-collecting we may welcome M. Henri Rochefort's 'Petits Mystères de l'Hôtel des Ventes' (Paris: Jules Rouff; New York: F. W. Christern), which is a lively criticism of man and manners at the Hôtel Drouot, the Parisian auction-mart where all kinds of things are daily knocked down under the hammer. Few people remember that M. Rochefort, now known to the world as a ferocious political partisan, was once known in Paris only as a writer for the comic papers. It was in the *Charivari*, a score or so of years ago, that he published a series of humorous sketches of the manners and customs of the buyers and sellers at auction, utilizing thus the notes taken while he himself was picking up curiosities and the various objects of "bigotry and virtue" of which he has always been fond. In 1862 he made a book out of these serial sketches, and it is this book which is now published in a new edition, with a few additions and a slight revision, although nothing in the present issue bears witness to the original publication twenty-one years ago. The book is interesting, and shows its age but little, although we confess that we do not exactly see what there was in it to serve as the basis of a three-act farce, which M. Rochefort and M. Albert Wolff jointly made out of it, and which was acted at the Variétés in 1863. It is a simple and straightforward account of Parisian sales by auction, accompanied by a running fire of small jokes more or less clever, and quite in the usual style of the *Charivari*. Some of the illustrative anecdotes are very amusing. One of them sets forth that an expert in pictures, having been told that the subject of a certain painting was taken from the Apocalypse, made due announcement to the assembled bidders, kindly explaining that Apocalypse was a German master, whose works, although not well known in Paris, were highly esteemed abroad. Another declares that this same expert, seeing a head of Christ with the legend "Salvator Mundi," asserted that it was one of the best works of the Venetian painter Salvator Mundi, well known as a rival of Salvator Rosa. Still another relates how a certain collector of literary rarities bought a lot of Arabic MSS. beautiful in character and on irreproachable vellum, and how he rashly bragged of his bargain before an Arabic scholar, who was led to examine the MSS., only to find that they were the account books of various modern dealers in camels, dates, and spices.

—A correspondent at Florence writes us that at the recent sale of the Toscanelli collection at Florence the Boston Museum purchased a large and important altar-piece of the Sienese school, of the date of about 1400. The artist is not with any certainty determinable, for, though the piece was in the catalogue attributed to Bartolo di Maestro Fredi, it is certainly not by him, but by a pupil (unknown by name) of Lorenzetti, and the picture appears to have been painted in the closest relation with that master, the types of the heads as well as method of painting closely corresponding to those in pictures known to be by him. It is a group of small pictures in an architectural arrangement, the panels being ten in number and the frame of elaborate Gothic, in excellent preservation, as well as the pictures (considering the date), the little circles of imitation gems which enter into the decoration being mostly still in their places between the panels. The gilded backgrounds are to a great extent still preserved in the original gold. The subject is the death of the Virgin, the treatment being that of Lorenzetti, the saints mingled with angels laying the body in the tomb, and the spirit going up surrounded by a halo of angels. It is arranged as a triptych, the wings having two saints in each, and in smaller panels above are four prophets. The painting is in the conventional style of that early period, and characteristic to the last degree of the school of Siena, and of that manner of regarding painting which made it a part of the *ensemble* of worship with the architecture, stained windows, and decorative features of ceremony and building. Without studying these as a whole, no idea of Christian art, whether of its painting or its architecture, can be arrived at. The Museum has also acquired an example of a little-known but very able painter of the Bolognese school, Massari—an Entombment, from the Rosini gallery at Pisa, a powerfully and largely painted group of figures in an important landscape motive. If the Sienese picture is in the extreme of the mystical art, the Bolognese is as remarkable for straightforward, unaffected naturalism and thoroughly good painting.

— The appearance in rapid succession of Balg's English translation of Braune's 'Gotische Grammatik' (New York: Westermann) and of Skeat's 'Gospel of St. Mark in Gothic, with Grammatical Introduction and Glossarial Index' (Oxford: Clarendon Press), gives one a good opportunity of contrasting German and English scholarship. Braune's grammar in the original is so well known to American philologists that it is almost superfluous to speak of its merits. It is, in truth, a model text-book, giving the facts of the language, and avoiding all speculative discussion, while arranging the matter in a way to facilitate such discussion. The present translation will commend itself to those who are not able to read German with perfect ease, although we must confess that the translator's English is at times queer enough. There is an unidiomatic turn on almost every page. Still, these mere blunders of style will not impair the usefulness of the book. On the other hand, we are forced to state that Professor Skeat's work, while good as to its English, is very poor as to its Gothic. We regret to have to speak so sharply of one who has done such valuable work in editing Anglo-Saxon texts. We rank Skeat with Morris and Sweet as the most conscientious and trustworthy English editors now living. But his knowledge of Germanic philology is twenty years behind the times. It is so imperfect that it has hindered him from even perceiving the novel features in Braune's grammar (upon which his own grammatical outline professes to be based). Thus he does not seem to have heard of the distinction between East and West Germanic, or of the two *gg* sounds, and he gravely puts down *a* as an original vowel. In general, wherever he has departed from Braune he has made a blunder, and hence his work is not a safe one to put into the hands of the beginner. The only valuable and original feature is the palæographic elucidation of the Gothic alphabet, §7 and §8.

—The preliminary report of the Swedish Arctic expedition, which, under the scientific command of Nathorst and De Geer, was detailed, in the summer of 1882, to effect a survey of the interior and coast-line of Spitzbergen, gives some interesting facts and speculations connected with the geography and geology of that land. According to the observations of the naturalists above mentioned, as reported in the *Revue Scientifique* (March 17), the fjords and narrow valleys owe their origin not to simple water excavation, but to erosion by ancient glaciers, or those belonging to the glacial period. Up to this epoch, it is contended, the island and the peninsula of Scandinavia were united to each other;

the dissolution (as effected through terrestrial subsidence), which has persisted ever since, having followed about at its close. A subsequent reëlevation, not sufficient, however, to bring the entire submerged portion up to the sea-level, is indicated by the banks of marine shells, of existing species, which are scattered throughout the land—a feature, well known to the older geologists, which repeats itself on the opposite Scandinavian coast. The existence in Spitzbergen of some of the more characteristic species of the Scandinavian fauna and flora is explained on the hypothesis of migration at a time, probably not much post-dating the close of the glacial period, when the plateau uniting the two countries was still elevated above the oceanic surface. Considerable strength is lent to this hypothesis by the occurrence in the interior of the island, and consequently at a nearest distance of about four hundred and fifty miles from the mainland, of certain continental land-birds, and of the remains of the common fresh-water edible mussel (*Mytilus edulis*) and other molluscan types, which no longer at the present day inhabit the same localities. The various facts connected with the distribution of organic life on the island would seem to indicate that even after the era of great northern glaciation the climate of the region was at one time considerably milder than it is at present, a circumstance probably attributable to the more northward deflection, by the connecting land barrier, of the heated waters of the Gulf Stream.

MORTON'S NEW ENGLAND CANAAN.

The New England Canaan of Thomas Morton. With introductory matter and notes by Charles Francis Adams, jr. Boston: The Prince Society. 1883.

EIGHT or nine years ago Mr. Adams gave an historical discourse on the two hundred and fiftieth anniversary of the settlement of the town of Weymouth. This was the beginning of a series of studies of which this volume is the natural outcome. It led him into an examination of the scattered evidences of the feeble and uncertain settlements which were made about Boston Harbor previous to the coming of Winthrop in 1630, and subsequent to the settlement at Plymouth. It was a time when the Gorges representatives were striving, by actual possession, to make good their claims to territory around Massachusetts Bay. The subject had long been obscure, and scarce more than conjecture had defined what little was supposed to be known. With study and acumen Mr. Adams grasped the subject in this address; and more minutely in some later contributions, like a paper on the "old planters," which he printed in the Proceedings of the Massachusetts Historical Society, and a chapter which he contributed to the 'Memorial History of Boston.' In these he set forth, in an orderly and interesting way, the story of this shadowy period, showing how a careful collation of widely scattered statements could, under a skilful disposition, be made to yield a coherent narrative.

Thomas Morton was of course a central figure in much of this recital; and it was natural, as it was clearly profitable, that such special study should be applied to the elucidation of one of the most striking of the books pertaining to the early settlement of Massachusetts. The book itself is a rare one, and has been in some respects a bibliographical puzzle. It was written to play upon the prejudices of Archbishop Laud, so as to instigate him to measures which should impede the temporal progress of the two colonies of Plymouth and Massachusetts Bay, and make the way easier for the establishment of episcopacy under Gorges and his minions in the country, which was then engrossed by the Puritans and the Separatists. Gorges was always crippled in his efforts by lack of money, and it was probably some similar poverty which led to the printing of this book in Amsterdam, most copies having an imprint of that town, though one at least has the name of a London bookseller instead. The book was plainly intended for effect in England, and there is no evidence that any copy found its way to New England, certainly for some years. When Morton in 1644 was on trial in Boston, though the fact of his publishing the book was known to the Court, not a copy of it could be found to establish the evidence. Bradford, indeed, speaks of it as scurrilous and infamous, but if his description was from inspection, there is no proof of it. When John Quincy Adams found and bought a copy of it in Europe some time before 1801, it was not known that any existed in America; at all events this Adams copy was long reckoned the only one in existence, and Mr. Savage, in editing Winthrop's 'Journal,' said he had never heard of any other. A few copies, perhaps twenty in all, have since been traced. Peter Force unearthed one, and reprinted it in his 'Tracts,' with reasonable care, but on collating his reprint with the Adams copy, in preparing the text of the present edition, about a hundred variations were found; not many of these were serious, and they were not all errors, perhaps, for Force's copy, now in the Library of Congress, may have differed in minor points, as books kept standing in the type, after the fashion of that day, not unfrequently do. It is doubtful if the book made any mark even among those whom it was intended to influence, but it did not escape Bishop Kennett when he was forming his American library; and when he printed his catalogue in 1713 he included it in the list, giving the date "1632" in the margin. This seems to have been the origin of the belief that it was printed in that year, a belief into which Force was led, as it now appears, because his copy lacked a title. The Bishop's copy, now preserved, chanced to be one of those with the London imprint without date, and he had pencilled a conjectural date in its title, which was copied into his catalogue.

Morton's habit of multifarious allusions, as well as the natural crop of errors from Dutch type-setters dealing with English copy, renders the book a peculiarly fit one for editorial elucidation. Mr. Adams confesses to a want of previous editorial experience, but he has called upon the best men to help him in the various branches of Morton's studies which cover the geography and natural history of the country, as well as the peculiar conditions of society and theological belief which he tried to make obnoxious. The fellow, indeed, was an ardent admirer of the country, if not of its people, and as a follower of Gorges it was not unwise for him to set off in high colors its advantages as a plantation. The modern student of the physical conditions of the soil and waters and what they support, finds considerable satisfaction in these early records of Morton, Wood, and particularly of Josselyn regarding the things which they saw, and not a little has been done by the modern scientists in elucidation of these early observers. Mr. Adams has summoned such students to his aid unreservedly, and we know we have the best knowledge when we find the names of Professors Gray, Shaler, Sargent, and Messrs. Lyman, Allen, Putnam, and Brewster put down as vouchers. Of course, in Indian linguistics Dr. Trumbull came to the rescue; and for broad acquaintance with early New England history, Mr. Adams makes an exception in not limiting his recourse to contemporary writers by counting among them, as "just as good," so accurate an authority as Dr. Charles Deane.

In his introduction Mr. Adams has gone over, with precision and skilful grouping, the whole story of the beginnings of Massachusetts history, so far as it was a struggle against the possible victory of the Gorges party in wresting from the colonists their charter; and it is an instructive story, meaning much for the future, and best read in the light of what the Bay Colony became. Morton in all this was a man obnoxious in every way, representing hostile views and agencies—not, as Mr. Adams properly says, a remarkable man in any sense, except that nuisances are always noticeable. Of late years a reaction against Puritanism has induced a writer, given by instinct and belief to impugning the motives of the Puritans, to go so far as to place Morton's obnoxiousness to the score of his love of the prayer-book, and of his efforts to Christianize the Indian women! Mr. Adams refers to this writer's zeal by allowing him an "apparent gravity" in the exposition. Nothing, however, in the New Canaan can be droller than representations like these. Morton was repulsive enough to the Puritan or Separatist sense in his politics, his morality, his very jocoseness; but to picture him as making converts of the dusky women about Merry Mount to any code but the libertine's is to add to his character a blackness that even the descendants of the Puritans would not venture to give. Apparently Blackstone and the other Episcopalians who joined with the colonists of Salem and Plymouth in putting an end to his mischievous practices had not in that day reached to such a refined perception of his holy character.

Mr. Adams, as an editor, has certainly not been sparing of pains. He found the book full of difficult passages. He is not wrong in saying that Morton is "always confused and inaccurate in his statements," and the "most careless and slipshod of authors." Add to this, that he was fond of curious and not always apposite allusions, and we have the editor's task before us. We have been struck with the success of Mr. Adams's application, and with the deftness of his research. On one point, however, we are not quite satisfied. We suspect that Morton did not base his wild geographical theories regarding the interior of the country upon the map which appeared in the 1632 edition of Champlain's 'Voyages,' as Mr. Adams is led to believe; and he is certainly in error in supposing that there was no other map in 1634 which Morton could have seen. Some of the Dutch maps much more likely came within his notice after his return to England in 1631, as they very sensibly affected the cartography of New England for some years after that, producing sometimes a very strange jumbling of the imaginary nomenclature of John Smith's map with that of Adrian Block and the other Dutch navigators. Mr. Adams, it is to be presumed, purposely ignored Champlain's earlier maps of 1612 and 1613; but he must have overlooked the series of Dutch plots which, beginning with the so-called "Figurative map" of 1614, were the main dependence of the cartographers of other nations for some years to come. This map, as a manuscript, might not indeed have been known to Morton or to the circle about Gorges in London among which Morton lived; but the printed map of Jacobsz of 1621, and more particularly the map of New England and New France which De Laet added to the second edition of his 'Novus Orbis' in 1630, as belonging to a well-known and even popular book, translated into Dutch and French, was much more likely to come within the knowledge of these English promoters of colonization. Champlain's earlier

maps (1612 and 1613) had indeed given the lake of the Iroquois which that explorer had discovered; but such travellers and geographers even as Master Briggs and Speed seem never to have heard of it in 1625 and 1626, when their respective maps were published. Moreover, it is very doubtful if Champlain's books were known at all in England at this time; and it is certain that he had nothing like so just a comprehension of the distance between Massachusetts Bay and Lake Champlain as was shared by De Laet and Morton. The latter gives this distance as about 300 miles, or something in excess of the truth, while Champlain brings the lake very nearly down to the region of Cape Ann. The later Dutch geographer, Blaeu, in 1635, seems to have followed Champlain rather than De Laet, so that the lake in his map lies close upon the Merrimac and Blackstone Rivers. It is significant that Morton nowhere mentions Champlain, while he printed his book, as we have seen, in Amsterdam, and had knowledge of the doings of the Dutch on the Hudson. We know, too, that he begrudged them the possession of "the pleasant and commodious country of Erocoise [his form of Iroquois], the principal part of all new Canaan for plantation, and not elsewhere to be paralleled in all the known world."

There is one little possible local trace that naturally escaped Mr. Adams. Morton was several times in Plymouth, abiding there for a space. He is known to have been a zealous sportsman, often tramping off with his gun and his fishing gear. We have a distinct statement that in 1643 he annoyed Captain Standish by fowling on his grounds in Duxbury, and it was not probably an unwonted field for his sporting propensities. Now, it happens that in the tide-water contiguous to Standish's farm there is a place known to this day as "Morton's Hole." It is mentioned in the records at an early date, but after Morton's early sojourn there, when he came back with Allerton. It is of course possible that it is associated with another of that name; but it is not very difficult to imagine the sportsman's punt, floating upon the shallow waters of this cove lying under the shadow of Captain's Hill and within eye-shot of the pilgrim hero, smoking upon his door-stone.

LIFE OF BISHOP WILBERFORCE.

Life of Bishop Wilberforce. By A. R. Ashwell and R. G. Wilberforce. E. P. Dutton & Co. 1 vol. 8vo, pp. 553. (Abridged from the English edition.)

THOSE who expect to find in this volume, because of the stir it has made in England, the caustic personalities of the recent biographies of Carlyle and Byron will be sadly disappointed. Indeed, to Americans who are not especially interested in the details of the late history of the British episcopacy, much of this book must be pretty dry reading, although it presents the career of a prominent and, to some extent, a typical man at a period of important change.

It is evident that Wilberforce started with powerful influence to push him, as well as the prestige of his famous father's name, for preferment opened to him in many directions as soon as he took orders. This book tells us little of his childhood, except the strong religious influence and oratorical training imparted by his father. On this, as on many other points, we can learn more from other sources. Mr. Mozley tells us how, when he was only twelve years old, the boy quarrelled with his tutor (he never went to a public school), and demanded to be sent home at once. When the tutor refused, he threw himself in the road, in the track of a score or two of coaches, and "announced his intention of staying there till he was sent back. After he had remained there several hours, the tutor struck his colors, and Samuel was sent home." And this energy lasted through life, but not the obstinacy. Indeed, more than once in later life his sudden change of front bewildered and disappointed his friends and brought upon him ill-deserved suspicion of double dealing. It is known that he lost much of the high favor which he at first enjoyed at court from some appearance of over-worldliness which Prince Albert thought he saw in the conduct of the ambitious young prelate; but this may probably have arisen more from some social over-dexterity like the following than from any more serious dereliction:

"Staying once, during the dog-days, at a friend's country-house, it was his hap to sit at dinner next to a prosy old gentleman, to the influence of whose conversation (the ladies being gone) Wilberforce at last succumbed, and fell fast asleep. He did more: he *dreamed*—dreamed that he was afloat on a tempestuous sea. 'And the storm was so violent,' he said slowly aloud, 'that the ship—could never live—through the surge.' 'Now, do you know, my lord,' said the old buffer solemnly, after a pause of bewilderment, 'I find myself utterly unable to see the bearing of that remark on our previous conversation?' The Bishop waked up instantly, and, perceiving the gravity of his situation, but knowing his man, rejoined with the utmost gravity: 'Then all I can say is, I'm *astonished* at you. Let us join the ladies.'"

Such an incident would be sure to arouse distrust in a non-humorous person like the Prince Consort; but it would not be just to accuse of time-serving the man who censured so freely both Palmerston and Disraeli at the height of their power, and never hesitated to tell Gladstone his own opinion when they differed. His frankness evidently hindered his advancement. But the popular sobriquet of "Soapy Sam" which his social cordiality earned him, is not sufficiently explained by his own witty remark that it was because he was so often in hot water and always came out with clean hands. Generally this ready tact stood him in good stead. For example, once at the opening of a church, where a procession of the clergy in surplices had been arranged, and at the last moment two of them appeared in black gowns, to vindicate their evangelical principles, the rector was in despair, but the wily Bishop assured him that all would be well; and as the procession formed he stepped up to the first black-gowned clergyman with a "Good morning, Mr. ——. Will you have the kindness to read the first lesson for us this morning?" and passed to the other with a like request for the second lesson. The two hurried on the proper surplices, and the procession entered all clad alike. It is only just to say that this dangerous cleverness seems never to have been employed where principle was concerned. His desire for what he thought soundness of belief at any cost was carried much too far for a national church which may properly disregard minor differences in order to gain universal harmony. Over and over again we find him rebuking or attacking the clergymen in his diocese, sometimes upon matters of importance, at others as to mere trifles like the hour for holding the communion service, and by no means always with success. The proceedings against Doctor Hampden, the author of the Bampton Lectures, were certainly hasty and ill-judged, as his own subsequent ill-explained change of opinion showed. In general, however, he was a very efficient Bishop, working with immense energy, dictating four or five letters at once, never allowing himself a moment's rest, and possessing the invaluable power of enlisting and directing others and communicating to them his own enthusiasm.

In broader matters, too, he played a really important part in the Church. At the time of the great Tractarian movement, which carried so many enthusiasts over to Rome, his brothers, his brothers-in-law, even his daughter, passed over, but he, notwithstanding his High-Church position, stood firm. He compared ritualism to "some brilliant fantastic coruscation which has cast itself forth from the surface of the weltering mass of molten metal, which, unaffected by such exhalations, flows on with its full stream into its appointed mould. These burning sparks witness of the heat of the mass from which they sprung; they are not in their peculiar action of its essence or its end." His influence was exerted to repress extremes. He opposed regular confession, sisterhood vows, and any unwelcome change of rites. It is reported that he said that he never heard a Gregorian chant "without feeling a wish to lie down on my stomach and howl," and yet his influence was strongly in favor of the High-Church movement in a moderate shape. When the leaders of the first sisterhood went over to Catholicism, he nursed it back to life. He loved the legal rites, and it was his influence that revived the Convocation after a lapse of a century and a half. He was a leader of great earnestness and commonsense at a time when people wanted an advance and were terribly afraid of going too far. He was not a student or a profound thinker; but with the exception of his weak letter against unsectarian education, he said very little that was unwise.

We must remember that his defects and powers were those of the orator, from youth up. He was always enthusiastic, sensitive, impulsive, daring, and fond of verbal effect. His preëminence in society and the pulpit went together. Some of his mots were excellent—for instance, the Latin one in which he translated "hearse" by "mors omnibus"; and the other, often quoted, in which he said of an orthodox but wordy brother who was called "sound": "Yes—*vox et præterea nihil.* I never hear the northwest wind blow on Sunday but what it troubles me to think that poor —— is preaching." Many of his pulpit figures were strikingly fine—for instance, that describing sin as forgotten, but not forgiven, like footprints in yesterday's snow, which are still there, though hidden by the fresh fall over night. As with other great orators, many of his best passages were impromptu; thus, when one of his friends wished to recur to a singularly eloquent and powerful description of the effect on the soul of the clearing away of doubt, he found in Wilberforce's notes only the one word, "fog." He was the first of a new order of bishops, and so full of Christian devotion that Carlyle well said of his sudden death: "It must have been a glad surprise."

VÁMBÉRY'S ORIGIN OF THE MAGYARS.

Der Ursprung der Magyaren. Eine ethnologische Studie. Von Hermann Vámbéry. Leipzig: F. A. Brockhaus. 1882.

IN a late review of 'Die Ungern oder Magyaren,' by Paul Hunfalvy (*Nation*, No. 889), we pointed out what decision as to the origins of the Magyar nation has been, after a vast and varied amount of speculation on the subject, "generally accepted as conclusive." The Magyars are deemed a branch of the Finno-Ugric family of the Uralo-Altaic, or Turanian, division of mankind; their nearest ethnic kindred are the Voguls, Ugrians, Ostyaks, etc., of the Ugric subdivision of the family, rude peoples dwelling on or near the Volga; and the original home of their nationality, formerly sought among the lofty ranges of the Caucasus, Altai, or Himalaya, is believed to have been discovered in the low wilds between the Ob and Irtish, in western Siberia. The general acceptance of this solution of an almost romantic mystery is due mainly

to the labors of Professor Hunfalvy and his coworker at the University of Pesth, Joseph Budenz, linguistic followers of the traveller Reguly. Among the few scholars who still demur to this decision is Professor Vámbéry, of the same university, who, after acquiring, some twenty years ago, a world-wide fame as the first European who travelled extensively in Turkestan, has worked hard to maintain himself as the foremost authority on Central-Asian matters by a series of linguistic, ethnographic, and political writings evincing equal diligence and ambition. His philological works embrace 'Studies on the Tchagatai Language,' 'Linguistic Monuments of the Uigurs,' 'Hungarian-Turkic Word Parallels,' 'Etymological Dictionary of the Turco-Tataric Languages,' and the book before us—all of which have been issued, in German, by the publishing house of Brockhaus in Leipzig. As author and journalist an adversary of Russian expansion in Central Asia, and a loud defender of British-Indian interests in the still neutral zones, he has been assailed and represented as a fraud by Russian travellers and scholars, and by his (if we are allowed so to say) philo-Turco-Tataric etymological studies on the Magyar language he has also incurred the wrath of the upholders of the Finno-Ugric theory, and chiefly of Budenz. Against his Russian assailants he is strongly sustained by English and German predilections, and for his philological notions he himself fights gallantly with an untiring pen.

Professor Vámbéry does not contend against the presumed relationship, grammatical and lexicographical, between the Magyar and the Finno-Ugric idioms. To do this would be shutting one's eyes to what is as clear as daylight. However strange it may appear to represent the nearest neighbors of the Lapps and Samoyeds as speaking languages of all in the world most closely akin in structure to the vernacular of Kossuth and Deák, the living evidences for the fact are there, and cannot be shaken. Numerals are universally—and very naturally so, for their meaning admits of no nuances—deemed excellent tests of linguistic kinship. Now, let our readers compare the following table of cardinal numbers in Aryan, Semitic, Turkic, and Finnic idioms, compared with Magyar, and judge for himself concerning the family to which the dominant language of Hungary must be assigned :

English.	*Hebrew.*	*Osmanli.*	*Vogul.*	*Magyar.*
One	e'hād	bir	āk	egy
Two	sh'nayim	iki	kit	két
Three	sh'lōshāh	utch	korm	három
Four	arbā'āh	dört	nelyä	négy
Five	'hamishshāh	besh	ät	öt
Six	shishshāh	alti	kat	hat
Seven	shib'āh	yedi	sat	hét
Eight	sh'mōnāh	sekiz	n'alalu	nyolcz
Nine	tish'āh	dokuz	antellu	kilencz
Ten	'āsārāh	on	lau	tíz
Twenty	'esrīm	igirmi	kus	húsz
Thirty	sh'lōshīm	otuz	vat	harmincz
Forty	arbā'īm	kirk	nelimen	negyven
Fifty	'hamishshīm	elli	ātpen	ötven
Hundred	mēāh	yüz	sat	száz

A comparison of the commonest words leads to the same conclusion :

English.	*Hebrew.*	*Osmanli.*	*Vogul.*	*Magyar.*
Head	rōsh	bash	pong	fej
Eye	'ayin	göz	sem	szem
Ear	ozen	kulak	päl	fül
Mouth	peh	agiz	sop	száj
Tooth	shēn	dish	ponk	fog
Tongue	lāshōn	dil	n'elm	nyelv
Throat	gārōn	bogaz	tur	torok
Hand	yād	el	kat	kéz
Blood	dām	kan	ver	vér
Heart	lēb	yürek	sim	szív
Water	mayim	su	vit	víz
Fire	ēsh	atesh	tut	tüz
Stone	eben	tash	kav	kö
Grass	'ēszeb	ot	pum	fü
Horse	sūs	at	lu	ló

English.	*Hebrew.*	*Osmanli.*	*Vogul.*	*Magyar.*
Dog	keleb	köpek	amp	eb
Fish	dāg	balyk	kul	hal
Father	āb	ata	azhe	atya
Mother	ēm	ana	angve	anya
Woman	ishshāh	kary	ne	nö
Child	yeled	tchodjuk	kär-kve	gyerek
Son	bēn	ogul	pi	fi
Daughter	bath	kyz	ay	leány

What Vámbéry objects to is the conclusion that, because the Hungarian language is structurally Finno-Ugric, the Hungarian people must be of Finno-Ugric descent. Such a conclusion in itself would indeed be fallacious. Some millions of Irish in America, all speaking English, and only English, would not prove the Anglo-Saxon descent of the Irish nation. The Celts of Gaul adopted the language of their Roman conquerors, and the Germanic Franks who wrested Gaul from the latter exchanged their own idiom for the Gallo-Romanic. The Normans did the same after them. Italy, Spain, Rumania present analogous phenomena. Besides, Vámbéry contends, the Magyar tongue is far from being purely or predominantly Finno-Ugric. Its Turco-Tataric elements—comprising words related to the Osmanli, Uigur, Tchagatai, Turkomannish, Tchuvash, etc.—he finds to be much weightier than those common to it and such idioms as the Vogul, Ostyak, or Finnish. Hunfalvy himself acknowledges that the Magyars adopted from their southern Turkic (or Turco-Tataric) neighbors a large number of words, including names of animals, articles of husbandry, implements, ornaments, and similar objects—such as the words for lion, camel, monkey, ox, calf, steer, buck, ram, swine, hen, apple, wheat, barley, pea, cradle, hemp, gate, hatchet, club, quiver, kettle, brush, ring, thimble, pearl. Most of these words came to them, he believes, together with the objects, which were unknown in the rude northern home in which they abode with their Finno-Ugric kindred. Vámbéry adds a vast multitude of other terms derived, as he asserts, from Turkic roots.

He also, in long dissertations, passes over the whole field of discussion concerning the nomadic or semi-nomadic nations, non-Slavic and non-Germanic, which, like the Magyars, and mostly before them, roamed over the vast plains between the Jaxartes and the Danube, carried terror and devastation among many peoples, and, unlike the Magyars, more or less completely disappeared. After examining their ethnic characters, as described by the ancients, the Byzantines, and the Arabs, and all the indications as to their languages, he finds it highly probable that all of them, with hardly an exception—Scyths, Huns, Avars, ancient Bulgarians, Khazars, Cumans—were, in the main at least, of Turco-Tataric race. This sweeping conclusion clashes with the opinion of the greatest authorities, and especially with Hunfalvy's, who, with more or less positiveness, upholds the Ugric descent of the Huns, Avars, and Bulgarians, and leans toward the opposite view only in regard to the Khazars and Cumans. In the Magyars Vámbéry sees a people of mixed race, in which the Turkic element decidedly predominates over the Ugric, and in their language an idiom equally leaning toward both linguistic groups. English might be compared as such a nondescript among languages ; but the comparison—if Vámbéry were right—would be lame, for, mixed as English is, it yet is and must be classed among the Germanic tongues, and it would be so classed even if the French element in it were much stronger than it is. But in fact the equal leaning of the Magyar vanishes on close examination, and that language appears as distinctly Ugric as English is Germanic, the Turkic element being an absorbed one, as the French is in English, and comparatively much less weighty. It is, perhaps, not weightier than the Celtic element is in English, while the equally absorbed Slavic element more properly holds the relation to the absorbing Magyar which the French holds to the Anglo-Saxon.

Professor Vámbéry considerably weakens his argument by extending it so widely. If the Magyars were an essentially Turkic people, and all the nations among and with whom they moved through many centuries on their wanderings from beyond the Ural to the Carpathians—including the powerful Huns, Avars, and Khazars—were also Turkic, where is there a reason discoverable for their adopting, in large part at least, a foreign Ugric tongue ? The Celt adopted the language of his oppressors ; the Frank the language of the people whom he conquered, and in whom he was merged ; the conquered Anglo-Saxon and the conquering Norman blended their native idioms ; the Magyars, according to Vámbéry, were never merged in a more numerous, though feebler, Ugric population, nor ever ruled by a stronger. And if, for any reason entirely hidden from us, they exchanged a portion of their vernacular for a stock of foreign words, how did it happen that they gave away the commonest and oldest expressions, numerals and the like, for terms which did not in the least expand or modify their conceptions ? The opposite theory is all clear : the Magyars were a people of the Ugric North, not of the Central-Asian and Southeast-European Turkic belt ; they moved southward, and dwelt or migrated between Ugric and Turkic nations, powerful and weak, by turns fighting and intermingling with them ; they preserved their original northern language, but adopted many terms, chiefly for things new to them, from their southern neighbors or fellow-nomads ; they assimilated the Turkic words to their own vernacular, as they subsequently assimilated the Slavic. That Byzantine writers of the tenth century called the Magyars Turks as well as Huns and Mazars, is certainly a disturbing point, but the ethnography of the Byzantines of that age was based on such slender knowledge that we can easily conceive of their confounding with each other two branches of the Uralo-Altaic division of nations.

Professor Vámbéry further spoils his argument, or at least arouses suspicion as to its general substantiality, by the levity with which he advances his views and proofs. There is no end of assertions unsupported by authority or reference, of begging of the question, of bombastic sententious talk ; and, while the author's vast acquaintance with Central-Asian things and conditions is unmistakable, there is no evidence whatever of profound and conscientious study and research, or of habits of accuracy and regard for critical opinion. The Turco-Tataric linguistic field is so extensive, and as yet so poorly cultivated in most of its parts, that doubt naturally attaches to every point not clearly established by competent students. Vámbéry presents himself as an authority in the least-known portions of the study, but rudely shakes our confidence in the correctness of his knowledge by constant exhibitions of inaccuracy. We are required to rely on his statements as to the sounds or meanings of verbal roots in Tchagatai, Uigur, or Tchuvash, and on his amended readings of names in Byzantine and Arabic writers, while he shows himself so little mindful of precision in his reading or writing that what he calls Bokolaor on page 30 becomes Bocolabra on page 42, and what is Mundzukh on page 34 is Mundjuk on page 35, Munjukh on page 36, and Mundzuk on page 46 ; that he almost throughout this book changes Tchagataic into Tchagatic, repeatedly misquoting the title of his own work on that language ; that he writes the name of a great Slavic scholar of our century in

three different forms: Schaffarik, Safařik, and Šafařik—the last of which alone is quite correct; that he speaks (p. 4) of "the father of history" as a writer whose work was not composed before the third century B. C.; that, in quoting from Jordanis, "eas partes Scythiæ . . . quas Dunapri fluenta prætermeant, quæ lingua sua Hunnivar appellant," he refers "quæ," in opposition to Hunfalvy, not to the corresponding neuter "fluenta," but to the feminine "partes," forgetting his Latin grammar and overlooking the "quas" before him.

All these may be slips which do not directly invalidate our author's historical or etymological speculations. But we can less easily pardon evidences of critical levity like the following: In his effort to identify Hun, Avar, Bulgarian, or Magyar proper names with Turco-Tataric words, he explains names of persons as signifying sand, frost, repast; renders names of towns by *fleshy, priesthood;* and names of families by *surprised, reply, advice.* On page 169 he sneeringly remarks: "Herrn K. Szabó dürfte es unbekannt sein, dass das ungarische karvaly, karvaj mit dem türkischen karga, kargaj = Rabe identisch ist," and on page 572 the same *karvaly* is quietly and correctly identified with *karkara*, and *Sperber* and *varju* with *karga* and *Rabe*—which stands for *Krähe;* while *Krähe*, immediately following as the German equivalent of Hun. *holló*, stands for *Rabe.* On the following page *Flachs* stands for *Hanf*, as the equivalent of *kender*, hemp. On page 167 the mediæval chronicler Kézai is quoted as rendering the German bird name "Jegerfalc" (*Jägerfalke*, gerfalcon) by the Hungarian word *kerechet.* Vámbéry adds: "In der Sprache der heutigen Magyaren ist ein Vogel mit solchem Namen unbekannt," and immediately proceeds to identify the proper name Kerechet with the Tataric *kartchia*, falcon; and yet, at the very place in the Hungarian dictionary where he ought to have looked for *kerechet*, in its modern spelling *kerecset*, he would have found *kerecsen, kerecseny*, with the very meaning of falcon, gerfalcon, as Kézai has it—a word far from unknown "in der Sprache der heutigen Magyaren."

Some Impressions of the United States. By Edward A. Freeman, D.C.L., LL.D. Henry Holt & Co. 1883.

We doubt if there is any more entertaining reading for an educated American of the present day than some of the early work of English travellers in the United States, which on its first publication so exasperated the whole country. It is quite impossible to be exasperated any longer by Mrs. Trollope or Captain Basil Hall ("Captain 'All" we find him contemporaneously designated by a discerning American critic), or even Dickens's "American Notes"; for the America of these observers has become to us nowadays a foreign country. That the United States has greatly changed is a commonplace; and perhaps a foreigner could get no better idea of the change than by comparing such impressions as those of Mr. Freeman with the pages of the early English travellers. Most of them, it must be confessed, now that the bitterness of the rage their criticism excited has died out, told the truth about the country as they saw it. They did, no doubt, enjoy finding that the civilization of America at that time was not such as to justify our boast that that of England was at all points inferior to it; but then we must remember that every English writer of that time wrote under the influence of a belief that the happiness, progress, and comfort of the subject were a sort of product of the form of government under which he lived; that it was British constitutional monarchy that produced all good British institutions and customs and mental and moral excellences—just as any American writer of the period insisted on attributing everything good in this country to democracy. There was really a great deal more to be said for the theory in England than in the United States, because up to that period the development of English civilization had been the concomitant if not the effect of a development of the government of the country by a small, but very conspicuous, fraction of its population, which seemed to supply all the social impetus. In this country, on the other hand, our form of government, so far as it was novel, had been consciously adopted, and was democratic simply because the whole framework of society was democratic. Nevertheless, we insisted on adopting the old English view of the subject expounded with such elaborate patriotism by Blackstone, and pointed with pride to the perfection of the civilization produced by democracy, just as he had expatiated on the magnificent work turned out by the British constitution. The truth was, that neither civilization was perfect, and an American of our day would not have liked the America of fifty years ago any better than Mrs. Trollope did.

Mr. Freeman represents a very different generation of English observers, and his book, which is an amplification of some magazine articles published shortly after his visit here, is a very fair specimen of its class. As the country has changed completely, so has the observer. No two critics could be more unlike than Mr. Freeman and Mrs. Trollope. Mrs. Trollope set out with a determination to be fair, but we know by the tone with which she does it that we shall shortly hear some unwelcome truths. Mr. Freeman throughout betrays a nervous dread that by some possibility he may wound our feelings, which is almost painful. He was not eager to write about America at all, he explains in his preface. On the contrary, he rather shrank from it, for he had only been in the country a few months; in fact, he would not have done it at all had it not been that it was "laid upon him" as a duty—how or through what stress of circumstances he does not clearly explain.

His account of the United States, when we come to examine it, is not such as any American could find much fault with. But his desire to be fair has led him to be so cautious that it is really often very difficult to get from his book a distinct idea of what his impressions are. He has a great deal to say about the linguistic differences between the two countries, most of which is rather trite, and something about corruption, and city life, and the newspapers, and interviewing, and most of the common topics which now attract every traveller's attention; but we constantly feel how much salt would be added to what he says by a little of the old Trollope spirit. For instance, he tells a really very curious anecdote, going to show something which neither Ruskin nor any other writer on architecture has ever pointed out—that the peculiarities of style and the magnitude of our public buildings are sometimes accounted for popularly, not by any architectural explanation, but by a suggestion of some species of fraud in the building contract. We can imagine what delight such an idea would have given Mrs. Trollope—how she would have dwelt on it, and drawn the proper lesson for her readers from it. But Mr. Freeman is evidently handicapped throughout his book by the feeling that he was not in the country long enough to deal properly with such delicate subjects, and yet he has, we know, a native vigor of expression and command of the "British" language, as he would prefer to have it called, that would have made a hostile book about America by him delightful reading.

He is also, to a certain extent, the victim of a theory which he was anxious to verify by observation—that of the essential unity of the English nation on both sides of the water. His book is in part a labored attempt to show that we are more English than we are anything else; in other words, he is really more interested in finding points of resemblance between life in the United States and life in England than points of dissimilarity. There is something novel about this; indeed, Mr. Freeman is a pioneer in the field, but it must be confessed that it is a very misleading kind of criticism. It is only by seeing how our life differs from English life that we get any clear idea about ourselves. The unity of race and language is what makes the divergence so interesting, and what gave the old English observer his great opportunity. Mr. Freeman has gone to the other extreme, and endeavored to point out how wonderfully alike the two branches of the race are. He is for ever telling us how remarkably little difference there is between American law, and religion, and language, and customs, and institutions, and the corresponding things in England. He finds likeness in unlikeness everywhere. If Mr. Freeman is to be taken as the type of the English observer of the future, it is obvious that almost all our ideas about this class of writers will have to be not modified, but reversed.

In the Shadow of the Pyrenees. From Basque-Land to Carcassonne. By Marvin R. Vincent, D.D. With etchings and maps. Charles Scribner's Sons. 1883.

At a time when bulky works of travel, full of pedantic descriptions of commonplace objects and trivial occurrences, or tiresome with exhaustive repetitions of things a hundred times told, glut the literary market, it is refreshing to stumble upon a little book like the one before us. Its subject—the Basque-Land and the approaches to it on the French side, including Bayonne, Biarritz, Lourdes, and Carcassonne—is far from hackneyed.

Dr. Vincent lingered in the shadow of the lofty international range not only as "one who loves to surrender himself leisurely, day after day, to the charm of nature," as "one who is in search of a quiet nook where the summer may melt away in a delicious climate, tempered by the salt breezes of Biscay and the bracing air of the Basses-Pyrénées," but as one who also has a keen eye for national peculiarities, and "loves to study the life and characteristics of a strongly-marked and noble race." He gives, perhaps, too many details of what fell under his notice—while walking, riding, or reading about his subject; but we readily pardon the minuteness of the reproduction on account of its vivid faithfulness. What he tells us, for instance, about the various Basque and Roman names of San Sebastian—Hizurum, Irurum, Donostiya, Easo—or about its jurisdiction in the twelfth century from Fuenterrabia to the river Oria, and from Pasages to Navarre, detracts somewhat from the symmetry of his narrative; but along with it are interesting remarks on the ferruginous rocks lining the road from Pasages to the capital of Guipúzcoa, the excellence of the native metal which rendered the Cantabrian arms so formidable to the Roman legions, and the iron industries of the Basque provinces, and the following descriptions of the appearance of San Sebastian and its beach:

"The road begins to descend. A fortress crowning a headland, and a high tower beyond, come into view. Then, in the valley beneath, a fine railway station and a *plaza de toros;* cultivated terraces sprinkled with houses and gar-

dens, rise from a beautiful semicircular bay; there is the silver line of a little river; a flash of white breakers flinging their spray at the castellated headland; a fine bridge spanning the river; and a compact, handsome town, crowded thickly under the landward side of the citadel and stretching round the semicircle of the bay. This is the capital of Guipuzcoa. . . ."

"Down on the beach . . . cluster the pavilions of *La Perla del Oceano*, the great sea-bathing establishment. The beautiful dun cattle slowly draw the gayly-painted bathing-machines into the surf; boats hover on the safety-line, which is marked by a row of flags, and mount guard over the host of bathers; while a remarkable barge, a combination of the Roman galley and the Chinese junk, gay with floating streamers, and furnished with trapezes and diving-platforms, presents attractions for more adventurous swimmers. The Madrilenes are here in troops. . . . Morning, noon, and evening, the white lines of foam are dotted thickly with black heads, reminding one of a preserve of seals or of sea-lions. . . ."

". . . Such deep sapphire along the horizon-line of the sea! Such translucent green of the billows, rallying from their first shock against Urgullo and Santa Clara, poised in curves of emerald for an instant ere they drop upon the sand, then climbing the sea-wall, and as they recede encountering the on-coming breaker in tossing whirls of foam and spray! Such undulations of purple, rolling silently landward when the wind goes down at sunset, and Chubillo stands out against the flames of the rosy west, and the light begins to twinkle on Santa Clara!"

Dr. Vincent describes the physical type of the Basque as fine, and often imposing, though his own observation does not confirm the current statements as to the beauty of the women. Everywhere, in the field as well as in the street, men are frequently encountered "whose truly grand faces would adorn an assembly of senators": the head large and round, the forehead full, the face oval, the complexion light but sunburned, the eyes black, the hair brown, the body muscular and well-proportioned, the bearing dignified. The author devotes many of his pages to the history, language, and peculiarities of this remarkable people, but has little sympathy for the stubbornness with which, after having kept itself out of the Roman world in antiquity, and out of feudal society in the Middle Ages, it now struggles to keep out of the modern world and hold itself aloof from the brotherhood of nations. He thinks its days as a distinct nationality are practically numbered. The common army, the common school, and the railroad do the work of assimilation on both sides of the Pyrenees. Emigration to South America, prompted by aversion to military service, diminishes the numbers of the Basques in France. Fifty or sixty thousand French Basques are settled on the borders of the Rio de la Plata.

On the subject of the Basque language Dr. Vincent, wisely enough, gives us no learned disquisitions. He only alludes to its apparent affinities to remote Oriental sources, and its having no likeness whatever to any of the dialects of southern Europe. It is deemed so difficult that, "according to the popular legend, the devil, who has a special interest in mastering as many tongues as possible, spent seven years in the study of Basque, and learned only three words," possibly including the two following, "which M. Garat cites as specimens of many others": *izarysaroyaenlurrearenbarena* and *azpilcuetagaraycosaroyarenberecollarea*. "As to pronunciation, it is sufficient to cite the Andalusian proverb, that the Basque writes 'Solomon' and pronounces it 'Nebuchadnezzar.'" Dr. Vincent expends much good-humor on the Basque flea, which, the first of fleas, "jumped upon the Cantabrian sands when the morning stars sang together," and has since, "like the Basque mountaineer, successfully resisted the enervating influences of modern civilization," and both humor and serious reflection on the mummeries of Lourdes, in their opposition to the same civilization; but he has only grim earnest for the bloody record of bigoted Toulouse. In speaking of the expulsion of the Jews from Spain (p. 4), he commits the error of assigning to it the date of 1495, instead of 1492. The compositor is obviously responsible for "1840," instead of 1849, as the date of the abdication of Charles Albert (p. 159), and possibly also for the constant use of "San Sébastian," which is neither Spanish, nor French, nor English. On the whole, however, the book is as remarkable for correctness as for neatness. Four interesting etchings—two by Smillie, and one each by Gifford and Yale—add to its attractiveness.

Games and Songs of American Children. Collected and Compared by William Wells Newell. Harper & Bros. 1883.

ALL remember the great surprise a few years ago at finding that there existed among us a rich mine of folk-lore, and one that had hitherto been almost entirely unworked. If "Uncle Remus" was a new revelation, there was some excuse for previous ignorance, for the freedmen were a peculiar and separate people. What shall be said, however, when it is shown that we have had in our very homes a more ample and, in many respects, a more interesting source of folk-lore? Had even those interested in such researches been asked in regard to the popular games and songs of American children, we fancy the answer would have been: Almost nothing popular has survived the incursions of the children's periodicals. That materials for a handsome volume of more than two hundred pages, containing one hundred and sixty separate numbers or articles, could still be collected, would have seemed incredible before the appearance of Mr. Newell's book. The editor says:

"The existence of any children's traditions in America, maintained independently of print, has hitherto been scarcely noticed. Yet it appears that, in this minor but curious branch of folk-lore, the vein in the United States is both richer and purer than that so far worked in Great Britain."

This assertion is borne out in the pages which follow. We remember, some years ago, that Professor Child, while making preparations for his masterly collection of ballads, thought that some which had disappeared in England might possibly have been brought to this country by emigrants, and he urged his friends and others interested to question their English and Irish domestics. We do not know that any valuable results were obtained, but Mr. Newell's experience shows that Professor Child's idea was not so fanciful as might have been supposed. Imagine, for example, a version of "Hugh of Lincoln and the Jew's Daughter," the subject of which is mentioned as far back as 1256, being gathered from the lips of the child of a squatter near the Central Park! The American child in the hands of the modern novelist is fast becoming a European bugbear; it is but fair to recognize that he has other and better uses.

It is difficult to find room for even a superficial idea of the contents of this novel and entertaining volume, the material of which, with the most praiseworthy industry, has been drawn from almost every one of the older States. The editor has limited the scope of his work to such games only as are "played with words or quaint formulas," with some exceptions "in favor of certain amusements which possess interest as folk-lore." These songs and games are divided into fifteen categories, with an admirable introductory chapter on the "Diffusion and Origin of American Game-Rhymes," etc., and an appendix containing a bibliography of collections of children's games and comparisons and references. In regard to this introduction and appendix, we may simply say that it is refreshing to find Mr. Newell accepting the latest results of investigations in this field, and accounting for the diffusion of popular songs and games on some other theory than that of "a primitive Aryan origin." The references to parallel customs in other countries are accurate and sufficient, and show—as does the whole work—the hand of a scholar who has an intelligent grasp of his subject. Professional folk-lorists may add to the list of resemblances or swell the catalogue of works cited; readers may supply from their own memories variants of many of the games; but Mr. Newell will always have the credit of first opening a path into a singularly attractive and neglected field of research.

It must not be supposed from what we have said that this work is interesting to the student alone, or primarily intended for him. Men, who are but children of a larger growth, will enjoy it for the memories it awakens and the scientific interest now attaching to popular literature, but the children will turn it to practical account in expanding their circle of amusements. Nowadays, when fairy-tales are made the medium of imparting scientific truth, and nursery rhymes are replaced by sentimental ditties, we welcome anything that represents and is calculated to nourish a simpler and more natural type of childhood. The contents of the volume are as varied as can be imagined, and will afford endless opportunity for comparison and completion. The music of the songs and the localities are given where possible. Several of the games, Nos. 75, 155, 160, are nothing but childish dramatizations of well-known fairy-tales. We have alluded before to the extraordinary survival in a most unlikely spot of a version of Hugh of Lincoln (No. 18, "Little Harry Hughes and the Duke's Daughter"). Another, No. 59, "Marching to Quebec," may, as the editor says, "be of Revolutionary origin, as it can be traced to near the beginning of the present century." The chapter devoted to formulas for counting out is one of the most curious in the book; every reader can perhaps supply some trifling variant. The names of the games, too, change with the locality—thus, No. 100, "Thimble in Sight," is known in some places as "Monkey in Sight." We have noticed but one misprint: Vernaleben, in the list of authorities, for Vernaleken, as it is afterward correctly given. The word *carol* is now admitted to be of Celtic, not of Latin, origin, as might be inferred from Mr. Newell's mention of the Middle Latin *choraula*, from *choreola*—neither of which, by the way, is to be found in Du Cange.

Glossary of Terms and Phrases. Edited by the Rev. H. Percy Smith, M.A., of Balliol College, Oxford. D. Appleton & Co. 8vo, pp. 521.

THIS work is intended to meet the wants of the ordinary reader, by including words which are "among the more uncommon in current literature," and whose explanation must perhaps be sought "among a large and varied number of books, many of them not easily accessible." A cursory glance through the volume, however, will show that the "ordinary reader" is supposed not to have within his reach a common dictionary. Let us take at random the first column on page 153, which defines the following terms and phrases: Custard-apple, Customary freehold, *Custos morum*, Custos rotulorum, Cutch, Cutchery, *Cut his painter*, Cuticle, Cutis, Cut of the jib, Cutter, *Cuttle* (*Capt.*), Cuttle-fish, Cutty, Cutty-stool, Cuvette, Cyan-, Cyanogen, Cyanometer, Cyanotype, Cyathiform, Cyathus, Cybele. Now, comparing this list with an English dictionary, the 'Imperial,' the

italics indicate the only excuse for the 'Glossary,' since information in regard to all the other words and expressions is to be found in the 'Imperial.' This seems like very little pork for the shilling, as the homely saying goes; yet, though an extended comparison would doubtless be more to the advantage of the 'Glossary,' the above is not an unfair sample by way of general criticism.

No principle of inclusion being laid down, it is not worth while to hunt for evidence of consistency, or to guess why Captain Cuttle was taken in and Pecksniff and Pickwick left out, both the latter having furnished adjectives which are apparently a permanent possession of the language (pickwickian is recognized as such in the 'Imperial'). Gresham and Bampton lectures, Gretna Green, Thorney Island, Rois d'Yvetôt (*sic*), Romagna, Young England, we do not expect to find in a common dictionary; neither do we Palatinate, Jingo, and Chiltern Hundreds, though these are actually given in the 'Imperial' as well as in the 'Glossary,' and, what is more, the definitions are generally better and fuller in the former than in the latter. Take, for instance, Philistinism. The 'Glossary' says of it rather than defines it:

"A word used to describe the supposed lack of sweetness and light in inferiors by those who think themselves superior."

Such lexicography is on a par with Johnson's celebrated definition of oatmeal. The "ordinary reader" will not only miss the little dig at Matthew Arnold, but will be left wholly unenlightened as to the meaning of the term in question. On the other hand, the 'Imperial' defines a Philistine as

"a matter-of-fact, commonplace person, especially of the middle class, deficient in liberal culture and large intelligence, and so wanting in sentiment and taste, entirely imbued with utilitarianism; a person of narrow views; a man of 'parochial' intellect; a prosaic, practical man";

and adds illustrations from Mr. Arnold which complete the notion.

The entries and cross-references of the 'Glossary' are very imperfect. "Mutineers of the *Bounty*" we find, but no *Bounty;* "Cut the painter," as above, but the idiom is not noticed under Painter. A really large part of the work is obtained by introducing Latin phrases which are usually, in our dictionaries, placed together in an appendix. Finally, there are no woodcuts.

Recollections of Arthur Penrhyn Stanley, late Dean of Westminster. Three Lectures delivered in Edinburgh, in November, 1882. By George Granville Bradley, D.D., Dean of Westminster. Charles Scribner's Sons. 1883.

THIS volume owes its interest almost entirely to the subject treated. The excellent Dean who has succeeded to Stanley's place has little of his predecessor's grace and charm of composition. He is evidently well acquainted with Stanley's life and writings, and he has for both his character and his career a hearty admiration; but in the art of putting things he is not skilled. His style is clumsy and diffuse, and withal exclamatory. He seems in constant fear lest he shall seem to do something less than justice to his friend. We could have spared his excessive anxiety—excessive it surely must have been—to convince his Scottish audience of Stanley's appreciation of all Scottish things. But worse than this—as bad as possible—is his self-congratulation on his succession to the Westminster Deanery, at the close of his first lecture.

The work, though having these defects, is nevertheless extremely interesting. The original lectures have been made over into three chapters, somewhat expanded, and made consecutive in their treatment, as the original lectures were not. The first lecture takes us from Stanley's birth to the conclusion of his undergraduate days at Oxford in 1840, when he was twenty-five years old. Nothing is better than the account of Stanley's father, Bishop of Norwich, who lived again in many of his son's most noble traits. The Rugby period is also interesting. The question is raised whether the Arnold of Stanley's Memoir was the real Arnold. Dean Bradley answers in the affirmative. The influence of Arnold upon Stanley is another matter of debate. The second chapter treats of Stanley's travels in Greece, then of his Oxford tutoring and lecturing, then of his Canterbury canonship, and finally of his return to Oxford to assume the lectureship from which came the now famous lectures on the Eastern and the Jewish Church. His first and second journeys in Palestine were in this period—1840 to 1863. As a traveller he seems to have cared little for scenery, however beautiful, which had no human interest. The third chapter covers his London life as Dean of Westminster. The section of this chapter which treats of his controversial experience is particularly good, and reaches its point of highest interest in his defence of Bishop Colenso, when, amid a storm of hisses and opposing clamor from "the venerable Society for the Propagation of the Gospel," he recounted the good deeds of Colenso, and concluded: "For these deeds he will be remembered when you who censure him are dead and buried and forgotten."

We are given to understand that a full biography of Dean Stanley is in course of preparation. With all respect for Dean Bradley, we hope it has fallen to another—to one as well fitted for the task as Stanley was for writing the biography of his friend and teacher, Thomas Arnold.

Henry Ward Beecher: A Sketch of his Career. Edited by Lyman Abbott, D.D. Funk & Wagnalls. 1883.

WE have here a remarkable piece of bookmaking. The most cheerful passage it contains is that in the preface, which assures us that "Mr. Beecher had no knowledge of this book until the arrangements for its publication were completed," and that "he has not seen a word of it." The saying of Dr. Johnson is naturally recalled, that if he knew that any one was going to write his life, he would prevent it by taking that of the would-be biographer. But in Mr. Beecher's case prevention is impossible. The thing is done, and done in such a way that the sympathies of all good men would be with him if he should now make sanguinary reprisals on Messrs. Abbott and Halliday, the perpetrators of this atrocious outrage on his natural modesty and sense of general unworthiness. Dr. Abbott is naturally anxious to credit Mr. Halliday with the major part of the performance. Mr. Halliday is the "Pastoral Helper of Plymouth Church." He it was who conceived the idea of writing to twenty-nine different persons (mostly clergymen), and getting them to write out for him their opinions of Mr. Beecher's character and genius. Some of these opinions are discriminating; the most of them are merely laudatory. They come from various sects—Dr. A. P. Putnam, of Brooklyn, by the way, figures as Dr. E. P. Putnam both in the table of contents and in the body of the book. Following these opinions are certain magazine and other articles. There are real laurels here, unfading, irreversible; for example, the *Atlantic* article of Dr. Holmes on Mr. Beecher's visit to England during the Civil War. The address of Dr. R. S. Storrs at Mr. Beecher's "Silver Wedding"—Plymouth Church the wife—is reserved for the climax. This has an air of wanton cruelty.

Dr. Abbott's chapters, hastily thrown together, treat of Mr. Beecher's childhood and youth, his preaching, his methods of study, his journalism, his lectures, and so on. They contain much that Mr. Beecher's numberless admirers will be glad to read. Mr. Halliday's "Reminiscences" are neither interesting nor impressive. That so little worth remembering has stuck to him is most astonishing. A true Boswell's little finger would have gathered more. A Third Part contains some of Mr. Beecher's most characteristic utterances, among them his famous London speech, and that on evolution, recently delivered. The book contains many illustrations, the majority of which are counterfeit presentments of Mr. Beecher. He has been much photographed. His pictures on one page at twenty-three, thirty, forty, fifty, and sixty-five are an interesting example of development. He will be seventy years old on the 24th of the present month, and this volume is a shadow which that coming event has cast before it.

Fables, by Mr. John Gay. With a Memoir by Austin Dobson. [Parchment Library.] D. Appleton & Co.

THE immediate and long vogue of Gay's Fables doubtless entitles them to a place in the indefinite body known as "English classics," and so to a reprint in the Parchment Library. It must, however, be a very gentle reader nowadays who (assuming him to be an adult) can feel toward them otherwise than did Thackeray when he wrote, in his 'English Humorists,' "I have not, I own, been able to peruse [them] since a period of very early youth." They are, in fact, at the present time fit reading for children if for anybody—a fate measurably shared in practice by those contemporaneous perennial works, 'Robinson Crusoe' and 'Gulliver's Travels.' Mr. Dobson, making the most of them as in duty bound, says "they have enriched the language with more than one indispensable quotation, . . . still part of the current coin of conversation." He might have gone further, and said that other lines could be named which deserved to circulate with the stamp of popular, or at least literary, approval. Nevertheless, in the total, these are too few to redeem the general flatness and commonplaceness of the versification, and remind us of the gems in equally unenjoyable and prosaic poems which Wordsworth could be guilty of in his lucid intervals.

This volume, therefore, differs from its predecessors in this pretty series in possessing an historic and bibliographic rather than an intrinsic interest. The editor tells the story of Gay's life in an agreeable way, with little or no pretence to originality, and gives a brief account of the principal editions. He singles out that of 1779 as the one "which contained some of the earliest woodcuts of Thomas Bewick"—indeed, which first brought him into notice. That of 1772 is also worth remarking. Whether or not it was the last before the 1779 edition, it was profusely adorned with copperplate engravings, which were then on the eve of extinction as a popular mode of illustrating books. Moreover, the plate representing the Hound and the Huntsman—the subject of Bewick's prize cut in 1779—is clearly the original of the cut No. 86 in Hugo's folio collection, though this was certainly never produced by Bewick's graver, being a mere copy upon wood in copperplate style.

Mr. Dobson has let some faulty punctuation pass which mars the typography of this volume. On the other hand, he has had etched for it a taking likeness of Gay from an oil sketch by Sir Godfrey Kneller, never before engraved. Print-

ed in a reddish brown ink, it makes a charming frontispiece.

Italian Rambles: Studies of Life and Manners in New and Old Italy. By James Jackson Jarves. G. P. Putnam's Sons. 1 vol. 8vo.

MOST of the papers contained in this volume have appeared in journals and periodicals, and attracted attention at the time by their charming description of localities outside of those usually visited by travellers, and by their portraiture of the manners and customs of the Tuscan peasants and mountaineers. The long residence of Mr. Jarves in Florence, his artistic taste, his summer wanderings on Apennine heights for health and pure air, afforded him many opportunities of observation; and in his first chapters on "Pescaglia," "Serra," "The Mountaineers of Tuscany," he gives us interesting and graphic sketches of this aspect of Italian life. It may astonish and puzzle the philologists to learn that those rude and unlettered mountaineers speak a purer language than all other Italians—Florentines and Tuscans of the plains included.

To the above are added chapters on the "Ancient and Modern Glass of Murano," "Ghiberti's Gates of Paradise," "The Pursuit of Bric-à-Brac," "Two Busts in Terra Cotta," supposed to be Michel Angelo and Vittoria Colonna, written with Mr. Jarves's well-known artistic insight. One of the most characteristic chapters is entitled "Venice in the Summer Time." We mention this in particular, because Venice has been so universally described that we are very much inclined to be prejudiced when the name appears in a sketch-book. Who has not written about Venice? And what more, or new, can be said about it? Yet Mr. Jarves has given us a picture of Venetian life seldom alluded to—that is to say, when the city is "completely amphibious," not only as to her streets and houses, but as to her entire population—men, women, and children; with the addition of a very appreciative account of the series of ancient mosaics in the *atrium* (or entrance hall) of St. Mark, frequently overlooked by art students. The book is well printed, and will make delightful and instructive summer reading.

Early English Literature (to Wiclif). By Bernhard Ten Brink. Translated by Horace M. Kennedy. Henry Holt & Co. 1883. Pp. xv.-394.

SEVERAL years ago, when Ten Brink's work appeared, we commented at length upon its rare merit, and recommended it unqualifiedly to our readers (see *Nation* No. 667, April 11, 1878). Since then the book has found its way among many teachers and professors, and has been of inestimable service to them. But the lack of a translation has hindered the author from gaining that hold upon the ordinary reading public to which his sound scholarship entitled him. This want is at last supplied by the work before us. The translator, Professor Kennedy, was a pupil of Ten Brink's at Strassburg, and has prepared his translation under the author's direct and constant supervision. This fact alone is a sufficient guarantee of accurate workmanship. In some respects, indeed, the translation is even superior to the original. The author has modified here and there his views, in accordance with the criticisms and suggestions of his German reviewers. Thus, by comparing p. 66 of the translation with p. 84 of the original, we see that Ten Brink has abandoned his interpretation of the passage from Cockayne's 'Leechdoms,' in consequence of Zupitza's corrections in the *Anglia*, i. 189. Again, at p. 253, the translation explains the word *Novelle*, which the original uses as a matter of course. We call attention to such minutiæ as evidences of the extreme care that has been taken with the translation. Besides, we get in the Appendix twenty-four pages of entirely new matter, in which the author epitomizes—with his wonted clearness and impartiality—the literature that has sprung up in the last five or six years around certain points of controversy, notably the Cædmon Genesis, and Cynewulf. In fine, with such a translation before him, the mere English reader will no longer have any excuse for ignorance or error concerning the nature and growth of English literature anterior to Wiclif. We can only express the hope that the book will now be introduced in our colleges and academies, superseding there all the so-called "Manuals" and "Introductions" under which so many generations of pupils have groaned in vain.

In the main the translator has produced a very readable version. But occasionally he shows that his English is not quite adequate to the German. Thus we cannot admit that *erschöpfende Sammlung* and *zusammenhängende Erklärung* are fully rendered by "thorough collection" and "consecutive explanation." Such a sentence as this (p. 125) is at least awkward: "Anglo-Norman England remained somewhat alien to this entire epic development, as it culminated in France after the close of the eleventh century—or rather it shared it but receptively." In general the translator would have done better, we judge, by giving less heed to German phrase-structure. The translations from Anglo-Saxon poetry are sometimes in verse, sometimes in prose, according as Ten Brink has given them. For the sake of uniformity, we could have wished them all in the same shape. And in one respect we regret extremely that the translator has not seen fit to supplement the author. The chief, in fact the only, serious defect in Ten Brink's work is the meagreness of its references, especially in the Anglo-Saxon part. Had the translator and the author, in coöperation, made the references as complete as those given by Schipper in his 'History of English Metres' (see *Nation* No. 902), they would have greatly enhanced the practical usefulness of the work without materially increasing its size. But for the book as it stands we cannot be too thankful. Both translator and publisher are to be congratulated upon their enterprise, for which we wish them a more substantial reward than mere thanks.

A Chronological History of the Origin and Development of Steam Navigation. By George Henry Preble, Rear-Admiral United States Navy. Philadelphia: L. R. Hamersly & Co. 1883. 8vo, pp. 483.

THIS volume is precisely what it purports to be—a chronological statement of the origin and development of the art of navigation by steam up to the date of its publication. Its author has been collecting his material during the past twenty-five years, and has printed many of his notes in the *United Service* during the years 1881 and 1882. These notes have been revised and carefully arranged in chronological order, for publication in this book, which sustains the claim of its author, that it contains more facts relating to the progress of steam navigation than have ever before been collected in any one volume. While no attempt is made to record all the improvements of detail in the construction of the steam engine, which would demand several volumes like that here presented, the author has gathered together an enormous mass of valuable and intensely interesting material, upon which the historian can draw in the construction of a more formal account of the growth of the steam engine. This service is especially to be commended, because it exhibits the extraordinarily large share taken by Americans in the creation of the modern steamboat.

A very full description of the inventions of the earliest known engineers, such as those of the Marquis of Worcester, of Papin, of Captain Savery, Hulls, Périer, and the Marquis de Jouffroy, is given in the earlier chapters; and, following these, the most extended account of the earliest American inventors—Bushnell, who introduced the screw, Fitch, Evans, Read, and especially of John Stevens and Robert Fulton—that we have met with. The accounts of the early steamboats are apparently complete and are, in many cases, exceedingly interesting. The growth of the great transatlantic lines of steam-transportation is exhibited in a very thorough manner, some fifty pages being given to the subject; and the application of the steam engine to purposes of war is here, for the first time, so far as we are aware, adequately treated. No pretence is made to offer to the reader a finished history of the application of the steam engine to marine purposes. This work is a scrap-book in the best sense of the term. It contains much that is not usually considered as permanently valuable, but also a vastly greater quantity of really important historical matter, some of which would certainly have been lost if it had not been thus put in permanent form. It is brought up to date by descriptions of the existing domestic and foreign lines of steam vessels, and includes the dimensions and performance of some of the very latest vessels, as the *Servia* and the *Alaska*.

The Nation.

NEW YORK THURSDAY, JUNE 14, 1883.

The Week.

In August of last year, Congress passed a law to reduce the navy, by the simple process of discharging a certain number of cadets on the termination of their six years' course at the Naval Academy, with one year's pay. A legal question has arisen as to whether the act applies to cadet engineers, or only to midshipmen. The cadet engineers threatened with discharge, for no fault of theirs, not unnaturally took the matter into the Court of Claims, and obtained a decision from the Court of Claims to the effect that the law did not apply to them at all. On the strength of this decision they appealed to Mr. William E. Chandler, as Secretary of the Navy, to recognize the decision as binding. This he declined to do, on a variety of grounds, the only important one being that the case was to be taken to the Supreme Court, and therefore could not be regarded as decided until that tribunal had passed upon it, declaring at the same time that he thought the decision of the court all wrong. He wound up his letter with a very remarkable moral lecture, advising the young men to pause in their mad attempt to enforce their rights, before it was too late. Apprehending, however, that the Supreme Court might affirm the decision of the Court of Claims, and determined to put the Department in an impregnable position, he laid down in the course of his letter the following proposition:

> "There is also high authority for the position that neither the executive nor legislative branch of the Government is required to accept as guides for its action the legal opinion of even the Supreme Court. They must submit to the enforcement of any final judgment of such court where the power of enforcement exists in the particular lawsuit decided. Beyond this, every officer and every citizen should continue to act upon any clear convictions of law which he may honestly entertain."

When we read this we supposed that the "high authority" referred to must be General Andrew Jackson, in the course of whose checkered career high authority may be found for almost any proposition on almost any subject; but it seems not, for Mr. Chandler explained last week to the correspondent of the *Herald* exactly what he meant. He referred, it seems, first to "the Dred Scott decision"; second, to a speech made in the Senate by Judge Drake; but third, and chiefly, "to the decision declaring the Legal-Tender Act unconstitutional, when people went so far as to say that to reverse that decision the number of justices had to be increased and the court packed to secure a reversal of that opinion." Explaining this, he added: "Everybody knows" that "neither Congress nor the Executive heeded for a moment" the original opinion of the Supreme Court in the legal-tender cases. In other words, when the Supreme Court goes wrong it should be disregarded; when it goes badly wrong it should be packed. This letter and interview show how little high official position changes a statesman's real nature. The Hon. W. E. Chandler who gravely writes down and utters these novel constitutional ideas, is clearly no other than our old friend "Bill Chandler," who always talked in this way, and is evidently too old to change merely because he has charge of the navy. We ought to add, perhaps, that Judge Drake, to whose constitutional views in the Senate, whatever they may have been, he attaches so much importance, is the Judge Drake whose opinion as Judge of the Court of Claims he considers as a matter of no consequence. Finally, he is a lawyer.

Advices from the West during the last week show considerable improvement in the general mercantile and industrial situation. In the jobbing and dry-goods trades there has been an increase of sales of summer goods. The crop prospects continue to improve, especially for corn and for the spring-wheat crop of the Northwest. The iron trade is still very much depressed, and the present low prices compel many furnaces to suspend operations. Still, it is believed that prices have certainly touched bottom, and any change from the present must necessarily be in the line of improvement. The net result of the dissatisfaction of the operatives, and the threat of striking, is that the production of iron has been reduced, and this may soon allow the consumption to overtake the production and cause an advance in prices. The rates for money in New York have been tending downward, owing to the usual concentration of money here at this season of the year. The last weekly statement of the New York banks, however, showed an expansion of $3,560,800 in their loans, which was undoubtedly taken for speculative purposes. This has been followed by a gradual upward movement in prices of railway stocks, the advance during the week being from 2 to 5 per cent., due mainly to the operations of local speculators, as is shown by the fact that the regular commission houses dealing in stocks report but little increase of buying as yet from speculators outside of the city, and less is being done in either buying or selling of American securities for foreign account than for a long time. The rates of foreign exchange have, therefore, remained almost unaffected by any movement of securities. The exports of breadstuffs and cottons keep up in excess of the same time last year, and some bills of exchange are already being drawn for July against grain shipments to be made from the new crop. By next month, also, there will be similar forward drawing against shipments of cotton to be made in September. In view of these facts, there is no prospect of the export of specie from this country, as was apprehended a few weeks ago.

Mr. T. G. Shearman writes to the *Tribune*, about Dr. Cyrus Hamlin's unfortunate excursus into the tariff controversy, a letter in which he shows that the doctor apparently knows no more about the tariff in Turkey, where he lived for thirty-five years, than he knows about the Cobden Club. For he said that when he went to Turkey in 1838 there was a protective tariff under which many industries flourished till England introduced free trade in 1855. Mr. Shearman calls attention to the fact that this story conflicts with Prof. Ellis Thompson's assertion, which is perfectly correct, that the Turks have levied 3 per cent. on English goods for four hundred years, and, indeed, have never had a protective tariff or anything approaching to it. In fact, the good doctor has been wandering in fields which he knows nothing of, and is consequently constantly tempted into Oriental inaccuracy and hyperbole, which must injure him as a college president.

The Philadelphia *North American* some few weeks since attempted to bolster up the silly, but none the less favorite, argument of the protectionists, that the cause of free trade in the United States was subsidized and maintained by "British gold," by printing an ancient story, that the London *Times* in 1844—nearly forty years ago—contained a statement that over $2,000,000 had been (recently) subscribed in England to circulate free-trade tracts in foreign countries, and "that some of these tracts are to be printed in New York." Rejoicing that something positive in relation to this mysterious subject had at length been uncovered, we promptly called on the *North American* to dismiss all generalities of statement, and tell on just what day and in what issue of the London *Times* it found this remarkable item. We were anxious to hunt it up, and publish it for the discomfiture of those pestilent fellows in this country who must have had the handling of at least part of this money. But we are sorry to say that thus far the *North American* is dumb; and it begins to look very much as if this venerable organ of the Pennsylvania protectionists, thinking possibly that files of the London *Times*, accessible for ready reference, were not in every library, had ventured upon a little game of bluff. But we hasten to assure the editor of the *North American* that we have at command a complete file of the *Times*, and are only too willing to commence a search and verification, in the great cause of historical truth, if he will but help the investigation by stating a few particulars which he undoubtedly has ready. Shall we be under the necessity of calling again, or shall we conclude, and say, with the impudent Chicago *Tribune*, in commenting on this subject: "We predict that the editor of the *North American* will go to the grave with that secret locked in his breast"?

General Butler is receiving some consolation for the rebuff administered to him by Harvard. The Presidents of Williams and some other smaller colleges have invited him to their Commencements, and he is also going to attend that of Phillips Academy, at Exeter, in which he received his own education. He would have appeared officially at Harvard, and therefore his presence would have meant nothing in particular except the continuance of a

custom; but at Williams he will appear as an example to the young men specially selected for that purpose by the President, which suggests many curious and interesting reflections touching the relations of our educational institutions to elementary morality. Butler's chief contribution to political morality is his maintenance, in 1868, when he was advocating a repudiation of the national debt, that "the State had no conscience." We wonder if any professors of ethics have begun to teach this yet.

The chance of a war between France and China seems to have raised the question in France whether in such a war American privateers could be fitted out to prey upon French commerce. The Declaration of Paris, in 1856, to which France and the other great Powers of Europe are parties, abolishing privateering, is not binding on the United States. But this country has a treaty with France which has a good deal of bearing on the subject. Article XXI. of the treaty of 1778 provides that no "citizen, subject, or inhabitant" of the United States shall take out any commission or letter of marque from any country with which France may be at war; and that any one who does so "shall be punished as a pirate," or, in other words, shall be hung if he can be caught, the same treatment being probably applicable to all the crew. Besides this, our neutrality laws (U. S. R. S., Sec. 5281 et seq.) provide that any citizen of the United States who, within our territory, accepts a commission to serve against any country with which we are at peace, shall be deemed guilty of a "high misdemeanor," and may be punished by fine and imprisonment, and contains similar provisions with regard to fitting out vessels or military expeditions of any kind.

Señor Rodriguez, the Secretary of the late General Jerez, Minister for Nicaragua at Washington during the Blaine period, has been giving a curious account of the disquisitions which he says his chief had to listen to from Mr. Blaine, on the propriety of "reorganizing Central America as a single nation." General Jerez, he says, was highly in favor of the plan, and used to go to see Mr. Blaine about it, on Mr. Blaine's invitation, but at these conferences, strangely enough, Señor Rodriguez declares, General Jerez was not allowed to do any of the talking, Mr. Blaine had so much to say. On one occasion he "made use of innumerable arguments, employing them with strong oratorical effect," while the Nicaraguan Minister remained silent. "Why the Washington Cabinet endeavored to make one nation of the five Central Republics," Señor Rodriguez declines to explain, simply because, we strongly suspect, he does not know. Mr. Blaine himself would probably have been unable to give any better reason than that it was "a big thing," and would make much talk. Of course the notion that any power on earth can make five nations into one except the nations themselves, and that any foreign government can profitably take part in such a process, was an absurd one, but it was a not unnatural product of a mind accustomed to live on sensations, and surprises, and fireworks.

The *Tribune*, speaking of the divorce question, admits that the "only remedy which promises any result" is "a national divorce law enacted under a constitutional amendment," but insists that the great difficulty in its way is, that the prevailing looseness on the subject of marriage would produce a loose national law. But it would produce, as we have frequently pointed out, a single uniform law, and put a complete stop to at least half the divorces which are obtained by fraudulent changes of residence and other little devices of that kind; and would bring to an end the farcical state of the law which makes what is a lawful marriage in one State bigamy in another, and often puts it out of the question for innocent women to know what their legal position or that of their children may become if the head of the family changes his place of abode. Whatever the causes for which divorce is allowed within the limits of the United States, the status of the family ought to be unchangeable. No such state of things as we have exists in any other civilized country, and of course agitation for reform, without a definite proposal as to what shall be done, is absurd. The agitation has been going on for nearly twenty years, and the statistics on the subject recently published show that the evil is worse than ever.

The trouble which the Barber Boys got into in Iowa was chiefly owing to their love of their mother and fondness for home. Originally they had to become bandits owing to a difficulty with a sheriff, who came to arrest them, and whom they consequently had to kill, but everything seems to have prospered with them after this, until, a fortnight ago last Monday, they grew homesick, and resolved on a visit to Mrs. Barber and the girls. Had they been able to reach the Barber mansion, no doubt they would have been quite safe, but as the boys were quietly going into the house of a married sister, they were seen by another boy who was loitering about—probably some rascally boy who envied them their fame and the pleasant meeting they were about to have—and who immediately "aroused the people." They were captured on Wednesday, while eating supper affectionately together, in a house about six miles south of Tripoli, Iowa, and have since been taken out of jail by a mob and hung. The singular thing about the banditti of the Western States is their always being found in families of brothers. This seems to show how little truth there is in the idea so many foreigners have that our institutions have a tendency to loosen the family tie. In all the accounts we have of great European robbers, their tastes lead very early in life to a severance of all connection with their home. Their parents and brothers and sisters, in fact, are so little moved by family affection when it comes in conflict with the claims of respectability and social position, that they usually turn the young thieves out of house and home as soon as they find out what they are. This accounts for the fact that in history we hear only of Jack Sheppard, Dick Turpin, and so on, not of the Sheppard Boys, or Turpin Boys. With us, however, when one Boy takes to crime, whatever his parents may do, his brothers at least stick by him to the last; rob with him; murder with him; "compromise" with him, or even go to the gallows with him, if necessary. A brotherless Boy bandit is unknown in the West. How can all this be reconciled with the idea that family affection is on the decline in the United States?

The "Kentucky" news of the Louisville *Courier-Journal* of June 9 is very entertaining and somewhat characteristic reading. First of all comes an account of a set-to between Professor Shannon and Professor Simmons, School Commissioners of Warren County, at Bowling Green. They first "came near colliding in Smith's book store," and on the following day Professor Shannon caught Professor Simmons on his way to supper and gave him a severe beating. The day after, however, Simmons lay in wait for Shannon at the same place with a pistol, and fired four shots at him without effect. Paris was "somewhat disturbed" on the 8th by the conduct of Professor G. T. Gould and two friends who got on the train with a number of young ladies of the Millersburg Female College, and seeing the Rev. Elisha Green, an old colored minister, in a seat, "roughly demanded it," but Mr. Green refused to surrender it, so two of the party held him in his seat, while another "beat him with a heavy, brass-bound valise." Mr. Green, who is a cripple, is "suffering from the injuries inflicted on his head and hands," which we can readily believe. But why didn't he give up his seat, the old villain? At Fulton, too, it appears, a number of men named Oagle have been "trying to run the town," and the Marshal and his posse tried to arrest them. So there was a regular fusillade between them, and after a few volleys it was found that Joe Oagle and a negro were dead, and John Oagle, Will Jones, and the Marshal were wounded. At Frankfort, also, in a lawyer's office, Mr. Ned Conners, being dissatisfied with the conduct of a Mr. Kiernan, who had gone surety for his (Conners's) stepson and had to pay the note, expressed himself unpleasantly about it, so Mr. Kiernan drew a pistol and took one shot at him, but only one, and the ball grazed Mr. Conners's scalp, and is now lodged in the wall of the office. Mr. Kiernan is "a prominent citizen."

It is difficult at this distance to make out why Massachusetts Republicans should have thought it worth while to make a stand on General Butler's veto of the Safe Deposit Bill. The sole question involved was a technical one as to whether the bill was sent back to the Legislature with due formalities; and the Supreme Court have replied to the questions addressed to them on the subject to the effect that there is not a shadow of doubt that it was. The effect produced among Butler's followers, therefore, is of a merely factious opposition to the gallant old champion of popular rights by the rich Bostonians. This was, of course, the object of the veto—the safe-deposit vaults being managed by a number of well-known and wealthy anti-Butlerites. The Boston *Advertiser*, commenting on the case, declares, in language which recalls the Declaration of Independence: "He has committed misdemeanors, he has violated the laws,

his attitude toward the Legislature has been scandalously insolent." This looks as if they were beginning to think of impeaching the old reformer. As the Republican majority in the Senate is only four, probably nothing would give him greater delight than a chance to figure as a defendant in a great state trial of this sort.

The Rev. J. Hyatt Smith has been warning the Brooklyn Sunday-school children against the "Sunday-school dude." This is very proper. If there is such a creature, the children ought to be warned against him, but the description given of the type by the Rev. Mr. Smith shows that the word dude is already beginning to be used, as such words always are in the end, as a mere term of reproach, which may be applied to any sort of person the speaker does not like. Mr. Smith declares that a Sunday-school dude would be capable of carrying on a flirtation with a Sunday-school girl "instead of giving the water of life to the thirsty scholars." This may be so, but he went on to declare that dudes were "impudent fellows"—so impudent that it is difficult to get rid of them at all unless they are "booted" out of the way. But what Mr. Matthew Arnold would call the "note" of the dude is certainly not impudence. Modesty, shyness of an almost feminine kind, characterizes him; a brazen dude would be a contradiction in terms.

In a learned article on dinners, the *Saturday Review* calls attention to a curious idea of dinner-givers, that the number of dishes provided should increase in proportion to the number of guests. There is no doubt of the prevalence of the notion in this country as well as in England. The number of entrées, for instance, that are regarded as sufficient for a family of six, are never regarded as sufficient for a dinner-party of twelve. In part, this is due to the desire of the host to offer his guests a choice of dishes; but we believe it is also owing in part to a mistaken attempt to apply, to the modern civilized dinner, traditions of hospitality handed down from the old Anglo-Saxon cuisine. In the time of Cedric the Saxon dinners were not served regularly in courses, but all the food was put on the table at once; and the essence of hospitality was to have more food in sight than usual. The most hospitable man was he who provided most food, just as the most respected guest was he who could eat most of it. This state of things produced the rough rule, the more guests the more dishes, which has been handed down to us, and erroneously applied to the modern dinner—a meal of a wholly different character. A great deal of the indigestion and dyspepsia of which guests so frequently complain is no doubt traceable to this curious survival.

An attempt to revive the practice of hissing at the Adelphi Theatre, in London, led a day or two since to some curious scenes. One of the actors came forward and inquired what the audience meant, and reminded them that the play they were hissing was the work of "a grand man and novelist," for whom he and his associates were endeavoring to do their best. For this he got a round of applause, and then tried to strengthen his position by declaring that one of the ladies of the company was "entirely prostrated." To this, however, the audience replied that they did not "want to be lectured," and much confusion prevailed to the end of the play. All this shows that, whatever may be thought of the practice of hissing, remonstrances against it will do the grand men and novelists who write our plays little good. When a modern English play is so bad that a modern audience hisses it off the stage, all further argument is probably useless.

The withdrawal of Herr von Bennigsen from the German Reichstag, as well as the Prussian Landtag, signifies that the cause he represented is felt to be utterly helpless and hopeless. Herr von Bennigsen is the leader of the Conservative wing of the "National Liberal" party. He is a man of large ability and of the highest character. He was a strong Nationalist in the darkest days of division. But his Liberalism never was of the self-asserting, fighting kind. He has been rather a Liberal in the way of sympathy and good wishes. He has always sincerely desired the establishment of genuine constitutional government; he has ardently hoped that things would develop themselves in that direction, and been very much gratified when they seemed to do so. Meanwhile he endeavored to avoid, as much as possible, all conflicts between the Liberal party and the Government. But he found it impossible to follow Prince Bismarck constantly in all his marches and counter-marches. He supported the Church policy of the Government which culminated in the Falk laws and the "Kulturkampf," with great fervor. But when Bismarck, finding the Catholic Church a tougher antagonist than he had anticipated, threw Falk overboard and began to negotiate with the Vatican, Bennigsen offered a vigorous opposition to the Chancellor's new policy and to the proposed coalition between the Clericals and Conservatives which was to be the political outcome of it. He actually succeeded, in the session of the Prussian Landtag of 1879–1880, in defeating the recall of the banished bishops and in embodying several important amendments in the Government Bill.

He has now abandoned that opposition too, and desires the adoption of the Church Bill, yielding the principal points of the Falk laws, which was a few days ago laid before the Landtag by the Government. But it seems that the National Liberals, and even most of his own followers, are determined to oppose that measure; and, finding himself isolated and powerless, he has resigned. His retirement will probably put an end to further efforts at compromise on the Liberal side, and thus have a tendency to solidify the Opposition. In the absence of Bennigsen, Prince Bismarck is likely to find it more difficult than ever to draw any portion of the Liberal party into a parliamentary combination in favor of the Government. He is by no means relieved of such contingencies. Although the coalition of the Clericals and Conservatives has enabled him to have the budget for 1884–1885 taken up ahead of the regular time and passed, there are already signs of a purpose on the part of the Clericals to put a higher price upon their favors than is offered by the Government Church Bill, and thus the Chancellor may soon be obliged once more to look for support in other quarters.

Nothing could be more characteristic of the way in which things are done in Russia than the so-called "amnesty proclamation" or "act of grace" promulgated by the Czar at the time of his coronation. The Minister of the Interior may, if he sees fit, report the applications for pardon of political offenders who have been in Siberia for a number of years and who are now thoroughly penitent, and then they may be permitted to return to their homes, provided their homes are not in large cities; and inquisitions into political offences committed at least fifteen years ago, provided the inquiries have disclosed nothing, may be dropped. This is all the grace political offenders can hope for. But those who have robbed the state by the embezzlement of public money, or by conspiracy with contractors, or in any other way—in one word, the public thieves—shall be pardoned outright and go scot free. Their accounts are to be closed without further demands from the Government. It seems that they will not even be obliged to promise not to steal again.

Cardinal Simeoni's assertion to the *Herald* correspondent, if correctly reported, that the circular to the Irish bishops was never intended for publication, and would have remained private but for Mr. Errington's indiscretion, deprives it of all importance as a political document. The faithful among the Irish laity will, in fact, now be justified in acting as if it did not exist. Moreover, the Cardinal showed plainly that the process "of expounding the circular in a way to adapt it to the temper in which the Irish laity would receive it," which we predicted a fortnight ago, has already begun. We then said that "if it seemed likely to produce widespread defiance, it would undoubtedly be explained in a way that would save the influence of the clergy, and that it was even possible that the Pope himself would assist in the process." Accordingly, Cardinal Simeoni now says that it was never intended for publication; that it had "no political aim or purpose"; that Mr. Parnell was not personally in the mind of the Holy Father or of the Propaganda when the circular was issued; that, being simply a lesson in morals, it was not intended for the Irish Catholics exclusively, but for all Catholics, including Americans and Australians; that no foreign Power had been instrumental in bringing about its issue; that it was not meant to prevent priests from attending political meetings, but to prevent them from exciting angry passions; and that the Holy Father felt the warmest sympathy with the Irish people, and especially with the Irish farmers. In fact, the Cardinal, if correctly reported, has left nothing whatever of the circular as a "great blow" to the Irish Nationalists, and has reduced it to the rank of one of those general exhortations to morality to which only unblushing scoundrels ever object, but which thus far have never either helped or hindered any political movement.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 6, to TUESDAY, June 12, 1883, inclusive.]

DOMESTIC.

ON Tuesday the first official information of the expedition of General Crook after the hostile Indians in the Sierra Madre mountains was published. He left American soil, crossing the Mexican border, on May 3. After fourteen days of hard marching night and day, the Indian camps of Chato and Bonito were discovered in an almost impregnable position. The Apaches did not dream of an attack, as entrance to their stronghold was next to impossible, and the warriors were principally out on a raid under Chief Juh, only thirty-seven bucks being in the camp, with the women and children. The camp was surrounded, and firing was begun by the scouts. A panic was created, and soon all surrendered. Altogether 383 prisoners were taken. The chiefs captured were Chato, Bonito, Geronimo, Nachez, Loco, and Nana. About $5,000 worth of plunder was recovered. After the fight General Crook and his command marched leisurely back to American soil, and on Monday they were encamped on Silver Creek, Arizona. Not one of the command was lost during the expedition. Seven Indians were killed in the skirmish. General Crook is waiting for instructions from the Secretary of War as to what disposition he shall make of the prisoners. If the rest of the hostiles do not surrender, he will again enter the Sierra Madre after them.

Representatives of the colored inhabitants of the Cherokee Nation of Indians have been in Washington during the week to protest against the proposed distribution of the $300,000 appropriated to the tribe by the last Congress.

Special agents report to the Treasury Department a most extensive system of smuggling along the Rio Grande border.

The Department of Agriculture reports the condition of winter wheat as lower than in May, the general average being 75 per cent. against 83 in May. The condition of spring wheat is everywhere high, averaging 98 per cent.

The Treasury Department at Washington has been informed of the arrival at San Francisco of a large cargo of tea consigned to merchants in Chicago, and has directed that samples of the tea be forwarded to New York for inspection before the tea is delivered.

The position of the Civil-Service Commissioners as to certifying women for the eligible lists, according to the explanation of Chief-Examiner Lyman, is that if the heads of the departments request that women shall be certified, they will be, but otherwise sex will be disregarded in the certifications.

The report of the Naval Board appointed to examine the *Pinta* has been submitted to Secretary Chandler. Mr. Dezendorf's charges are fully sustained. In respect to extravagance, the Board finds that the total expenditures for repairs and equipment by the Bureaus of Construction, Steam Engineering, and Equipment, amounting to $106,221 55, when compared with the prime cost of the vessel, at a time when labor and material were high, are excessive. As to the unseaworthiness of the *Pinta*, the Board finds that the repairs had "made her no more unseaworthy than she was before," when she was "as seaworthy as most vessels of similar construction."

The United States double-turreted monitor *Amphitrite* was launched at Wilmington, Del., on Thursday afternoon. Secretary Chandler was present.

Postmaster-General Gresham has selected metallic red as the color for the new two-cent postage stamps. The vignette will be of Washington.

The attention of the Postmaster-General has been directed by Senator Van Wyck to a new Star-route in Nebraska and Dakota, recently let, which the Senator characterizes as "a bigger steal than the Star-routes now on trial." A daily mail has been put on between Fort Niobrara, on the Sioux City and Pacific Railroad, to Rapid City and Deadwood, in Dakota, the contractor being John R. Miner, one of the Star-route conspirators now on trial. The contract price for the daily mail is $13,000, and Vaile, also a Star-route defendant in the conspiracy cases, is one of Miner's sureties. The Department reply to the charges that they are compelled by law to give the contracts to the lowest responsible bidder.

Mr. Richard T. Merrick continued his great speech in the Star-route trial, at Washington, on Wednesday and Thursday, devoting much of his time to a severe and effective arraignment of S. W. Dorsey and an analysis of his rascally schemes. John Dorsey's testimony was also severely condemned. Mr. Merrick closed his argument on Friday. On Monday the prayers of counsel were heard, and on Tuesday Judge Wylie delivered his charge to the jury, and at 3:45 o'clock they retired to consider the case.

President Arthur took up his summer residence at the Soldiers' Home near Washington on Friday. He occupies the cottage in which President Lincoln lived during the war.

The scientific expedition sent out by the United States Government in March last to observe the total eclipse of the sun at Caroline Island, in the South Pacific, has arrived at San Francisco. Prof Edward S. Holden, of the Washburn Observatory of Madison, Wis., who is in charge of the party, reports that the weather on the day of the eclipse was perfect, and the result is a great success. Several good photographs of the corona and spectrum were obtained. The supposed planet Vulcan could not be found.

A permanent organization of the Ohio Republican State Convention was effected on Wednesday morning by the election of Senator John Sherman as Chairman. His name excited great enthusiasm. He made a speech advocating protection and the Scott liquor law, and approving of the general course of the Republican party. When nominations for Governor were called for, Senator Sherman's name was presented amid wild excitement, and he would undoubtedly have been nominated with no opposition had he not positively declined, urging that he could not surrender his duties in the Senate in justice to the people of Ohio and the country. Judge J. B. Foraker, of Cincinnati, was then nominated by acclamation. He belongs to the younger generation of Ohio public men, is a graduate of Cornell University, and has held a Supreme Court judgeship in Ohio. The remainder of the State ticket was filled with men of local reputation. The platform adopted favors protection, approves of the submission to the people of the two Constitutional amendments on the liquor question, one providing for prohibition, and the other for giving the Legislature power to regulate and tax the liquor traffic, without expressing any preference for either, and advocates taxation for revenue and for providing against the evils of the liquor traffic. Another resolution favors "the repeal of the law limiting the time within which applications for pensions under the Arrears of Pension Act shall be made."

A convention of Iowa Democrats was held on Wednesday. It nominated L. G. Kinne, of Tama, for Governor, and other State officers. The platform approves a tariff for revenue only and a gradual reduction of protective duties, opposes constitutional prohibition, favors a well-regulated license law, and advocates the extension of civil-service reform to all departments of the Government.

The Pennsylvania Legislature adjourned *sine die* on Wednesday, but was immediately called together again by the Governor for the consideration of Congressional, Legislative, and Judicial Apportionment Bills.

The Court of Common Pleas of Philadelphia on Saturday annulled the decree of divorce obtained by Major A. H. Nickerson, of the United States Army, on the ground that it was obtained by fraud, and dismissed the libel and imposed the payment of all costs upon the libellant.

Samuel W. Hale was inaugurated Governor of New Hampshire on Thursday, at Concord, with considerable ceremony. In his inaugural address he advocated prohibition of the liquor traffic.

The Massachusetts House of Representatives on Friday passed a bill increasing the salaries of the members from $500 to $750. The Senate passed, by a vote of 16 to 12, a bill incorporating the Cape Cod Ship Canal Company, with a capital of $5,000,000.

The Harper High-License Bill was passed by the Illinois House of Representatives on Friday. It is now before the Senate.

The Niagara Falls Park Commission organized on Saturday by electing Mr. Dorsheimer President, Dr. Anderson declining the office. Commissioner Rogers offered a resolution, with the plan of Director Gardner's report as its body, providing for the taking of a strip of land, varying from 50 to 159 feet wide, from the head of the rapids above the village down to and including Prospect Park, which is to be taken entire, together with all the islands above the falls between the Canadian boundary and the American shore. The resolution was adopted.

A dinner was given at Delmonico's, in this city, on Thursday evening, to the Southern gentlemen who have come North to awaken an interest in the exhibition which will be opened in Louisville, Ky., on August 1. Speeches were made by General Grant, Senators Beck and Bayard, Carl Schurz, Henry Watterson, and others.

The graduating exercises of a class of cadets took place at Annapolis on Saturday. Examinations were in progress at West Point during the week, and the exercises of the graduating class were held on Tuesday.

President John J. Jarrett, of Pittsburgh, who has been at the head of the Association of Amalgamated Iron and Steel Workers since 1880, has sent in a letter to the Convention which will be held in Philadelphia on August 7, declining a reëlection. His determination was made known to the lodges some weeks ago, but since the recent termination of the conference which averted a strike the members of the Association have been loath even to consider a possibility of his retirement. His physician advises the step.

The American Fish Culture Association held its twelfth annual meeting in this city last week at Cooper Union. A number of interesting and instructive papers were read.

The Barber boys, two noted desperadoes of Iowa, were captured after a desperate fight in which they wounded four men, two mortally, on the evening of June 5, near Tripoli, Iowa. About 9 o'clock on Friday night a mob of 200 attacked the jail at Waverley, Iowa, where the men were confined, and after two hours' work reached their cell, whence they were taken and hanged to a tree. They were firm to the last. The county officers did all they could to protect the prisoners.

Mr. Charles C. Fulton, editor and proprietor of the Baltimore *American*, died on Thursday, at the age of sixty-seven. He purchased an interest in the *American* in 1853, becoming its sole proprietor nine years later. The prosperity of the paper grew under his management. Some of his letters addressed to it in his foreign travels have been republished in book form. He was one of the original Republicans of Maryland.

Prof. Charles E. Anthon, of the College of the City of New York, died on Thursday at Bremen, Germany, of heart disease. He was sixty years old. He was the son of John Anthon, a prominent lawyer, and was a

nephew of Professor Anthon, the distinguished classical scholar.

Chester W. Chapin, ex-President of the Boston and Albany Railroad, died at his home in Springfield, Mass., on Sunday. Mr. Chapin was born at Ludlow, Hampshire County, Mass., December 16, 1798. He was for many years prominent in railway and steamboat corporations. He was elected to Congress in 1874, and served one term.

FOREIGN.

The German Liberal papers consider that the bill with reference to the May laws recently introduced in the Prussian Diet is a fresh retreat on the part of the Government. The Clericals consider the concessions larger and better than those heretofore offered. The Centre party will probably accept the bill, and the Conservatives will support it, thus securing a majority. The Vatican, it is asserted in Rome, is satisfied with the bill. The bill was considered in the Landtag on Monday and Tuesday, and was referred by the Lower House to a committee of twenty-one. The House then adjourned until June 21.

The consideration of the German budget was begun in the German Reichstag on Friday, at the request of Prince Bismarck. The Progressists tried to have the proposed military and naval votes deferred until autumn, but a motion to that effect was defeated by a coalition of Tory and Catholic members. This is a victory for Bismarck, and is another step toward divorcing the Executive from the power of the Reichstag, by means of a biennial budget. The bill passed its third reading without amendment on Tuesday, and the session was closed.

Herr von Bennigsen on Monday resigned his seat in the Lower House of the Prussian Landtag without assigning any reason for doing so. Before announcing his intention to resign he held a conference with the members of his party (the National Liberals) in regard to the divergence of views among them on the Government's new Church bill. His action has caused a great sensation in Berlin. He has also resigned his seat in the German Reichstag. His resignation, it is reported, was due not only to his position in regard to the Church bill, but also to certain troubles with Bismarck on the Budget question.

It was officially announced on Wednesday that there is no foundation for the alarming rumors recently put in circulation in regard to the health of Queen Victoria. She took up her residence at Balmoral on May 25, and has been decidedly better since that time.

In the House of Commons, on Thursday afternoon, Sir William Harcourt, Home Secretary, read a letter from Lord Rosebery in which the latter said that he had not resigned the office of Under Secretary for the Home Department because of the Home Secretary's statement touching his duties. Sir William Harcourt explained that Lord Rosebery's acceptance of the office was only temporary.

A stormy debate arose in the House of Commons on Friday on a motion to recommit the Lord Wolseley and Baron Alcester annuity bills for the purpose of commuting the proposed pensions for lump sums of money. Sir Wilfrid Lawson (Radical) and Lord Randolph Churchill (Conservative) opposed the motion. The latter alleged that an inquiry into the Egyptian war was first necessary. He asserted that the Khedive was the real author of the massacres at Alexandria. Mr. Gladstone declared that this assertion was at variance with all evidence. Sir Stafford Northcote (Conservative) supported the Government, and declined to be led by Lord Randolph Churchill, whose opposition he characterized as shabby.

In the House of Commons recently Lord Randolph Churchill called attention to the mission of Mr. Errington to Rome, and argued that there could be no doubt that the Government had recommended him to the Vatican, the recent Papal manifesto in regard to Irish affairs being the result. Mr. Gladstone replied that Mr. Errington had gone to Rome at his own suggestion. Mr. Errington received no pay, and no instructions were given him by the Government, but, said Mr. Gladstone, as Mr. Errington's visits to Rome would tend to alter his position in future, a record would be made of his proceedings and left for transmission to the successor of Earl Granville as Foreign Secretary. On Saturday it was reported that the Pope had refused Mr. Errington an audience, and that he was in disgrace for making public the letter from the Vatican to the Irish bishops. He left Rome without a farewell audience with the Pope.

In the British House of Lords on Monday the bill legalizing marriage with a deceased wife's sister passed its second reading by a vote of 165 to 158.

The celebration to commemorate the services of John Bright as representative in Parliament for Birmingham, England, for over a quarter of a century, was begun on Monday in that city with great enthusiasm.

A memorial was presented to Lord Spencer in Dublin on Wednesday, asking him to reprieve Timothy Kelly, one of the Phœnix Park murderers, on account of his youth and the fact that he was suffering from epilepsy. On Thursday he refused to grant a respite. Mr. Varian, a member of the Prisoners' Aid Society, called upon Earl Spencer, the Lord Lieutenant, late Friday evening, and gave him his personal assurance that at 8 o'clock on the night the Phœnix Park murders were committed Kelly was present at a meeting of the Society. Nevertheless, on Saturday morning at 8 o'clock Kelly was executed in Kilmainham Jail. He was the fifth and last convicted of the Phœnix Park murderers. He made no confession. There was a great but orderly crowd outside the jail at the time.

It was rumored in Dublin during the week that the Irish Invincibles have been extensively using poison in removing obnoxious persons. The police are investigating a number of cases of suspicious death which have occurred in the past few years, especially the case of a hotel keeper named Jury, of Dublin, who died a fortnight after the Phœnix Park murders. In the House of Commons on Tuesday it was announced that Jury's body had been exhumed, and no traces of poison were found.

James Carey, the informer, protests against being kept in confinement in Dublin, but refuses to leave Ireland.

It was announced on Monday that Michael Davitt and Parnell had had a conference in London, and had come to a complete agreement as to an Irish programme.

Further important evidence has been obtained in the case of the London dynamite conspirators, showing that several of the prisoners were in England at the time of the explosion at the Local Government Board offices at Westminster. The trial of Dr. Gallagher, Bernard Gallagher, Ansburgh, Curtin, Whitehead, and Willson, who are charged with treason-felony, was begun on Monday morning in London, and Sir Henry James, the Attorney-General, opened for the prosecution. Lynch alias Norman, the informer, repeated substantially the same testimony which he gave at the preliminary hearing. The trial was continued on Tuesday without special incident.

In the races at Ascot Heath, England, during the week, Mr. J. R. Keene's American colt Blue Grass won the Biennial Stakes.

Zukertort has won the first prize, $1,500, in the London chess tournament.

Sir George Bowyer, the English legal writer, is dead.

The committee appointed at a meeting of influential ship-owners of London on the project for the construction of another canal across the Isthmus of Suez, have resolved to proceed vigorously with the work.

General Hicks has gained a great victory over 5,000 Arabs in the Sudan, killing 500 of them.

Suleiman Daud and Mahmud Sami, who were accused of setting fire to Alexandria at the time of the British bombardment, were found guilty and sentenced to death on Thursday. Eighteen officers were found guilty of complicity in the same crime, and were sentenced to various terms of penal servitude. Suleiman was executed on Saturday morning in the midst of the ruins of the great square. He had to be almost carried to the scaffold, and murmured that he had been victimized by Arabi Pasha. On the evening before the execution a heated debate took place in the House of Commons, in which the Government was urged to stay the proceedings. Mr. Gladstone asserted that the British Consul-General in Egypt saw no reason for interference.

War preparations are making in China on a great scale. Three corps of troops are in readiness and a Chinese fleet is under orders to sail for Tonquin. At a French Cabinet Council on Thursday it was announced that the situation in Hanoi continued to improve. It is asserted that China will only begin aggressive operations in the event of France attempting to establish water communication between Tonquin and Yun-Nan. On Tuesday it was reported that negotiations between France and China were progressing favorably.

The Malagasy Envoys have asserted that while they are willing to make a treaty with France similar to the treaties they have signed with other countries, they will not entertain any question involving a French protectorate over Madagascar.

A force of Albanians has captured near Scutari a Turkish convoy. Nine battalions of Turkish troops have been sent to chastise them. Several fights have occurred in the mountains, resulting in heavy losses.

The Porte recently informed General Wallace, the United States Minister to Turkey, that the commercial treaty between Turkey and America would terminate on March 13, 1884. The Turkish tariff expired on the same date of the present year. After the termination of the treaty the importation of all American meats, lard, and similar produce will be prohibited. The Porte has virtually increased the duties on spirits by compelling their storage at Smyrna. It also maintains its demand relative to the storage of petroleum. General Wallace has protested that the above measures are arbitrary, and claims that American goods under the treaty of 1830 are entitled to the most-favored-nation treatment. The relations between the Sultan and General Wallace continue friendly.

The consecration of the Church of the Saviour, one of the most brilliant features of the coronation festivities, took place at Moscow on Thursday. The Czar and Czarina arrived at St. Petersburg from Moscow on Sunday, and drove in an open carriage to the Peterhof Palace. There was an illumination in the evening.

There is no truth in the story that the Mayor of Moscow has been removed from office for a recent speech.

Count Tolstoi, Russian Minister of the Interior, has been instructed to draft a law giving greater liberty in regard to change of domicile. The collection of the poll-tax from the poorest portion of the peasantry will entirely cease from January 1 next, and the tax to be collected from the remainder of the people will be reduced by one-half.

The Governor-General of Cuba having reported favorably concerning the state of that island, more than 100 exiles will be allowed soon to return there. Two hundred thousand slaves in Cuba will become free in 1888. The labor question is then expected to become a serious one. Spanish statesmen and Cuban planters are already examining plans for the introduction into Cuba of free African negroes or Chinese or Indian coolies.

MAJOR NICKERSON'S DESIRE FOR A CHANGE.

THERE could hardly be a more striking illustration of the force of the passion which the institution of marriage is intended to regulate, and at the same time of the feebleness of the protection which the institution gets from our laws, than Major Nickerson's divorce case. But his case, let us say, is peculiar only in that it has happened to be conspicuous, owing to his position. We have no doubt that hundreds of such cases occur every year in which the parties are too obscure to attract notice, or the wife too poor or too ignorant or meek to defend her rights. The state of the marriage laws is acting as a constant temptation on the imagination of the vicious and dissolute and fickle all over the country to try a change. In fact, it invites them to change in that relation in life in which change is most mischievous, and in which it is the object of the institution of marriage to prevent or hinder change. It may be said, without great exaggeration, that there is now no Northern State in which the family bond gets much strength from the law, or in which a man is prevented from deserting his wife and children by anything but natural affection or public sentiment. If, however, his vicious propensities get the better of his natural affection, as they so often do, or if there be no public sentiment which he cares about, as is too often the case, he is really almost as much master of his domestic relations as if he was a member of a herd of cattle.

Major Nickerson is an officer of high rank in the army, and apparently of some scientific attainments. He married suitably, in 1870, and lived happily with his wife for ten years. It then appears to have occurred to him that he would like a change. When this thought—which probably comes into the head now and then of great numbers of married men, after their wives' youth has passed—came into his head, the law of the land ought to have appeared before his mind's eye as an obstacle so insurmountable as to make his desire seem as idle as a desire for one million dollars in cash. Nearly every man probably feels this last desire occasionally, and many know, or think they know, of ways of gratifying it, but they are deterred by the law, and they banish it as a foolish fancy. Major Nickerson did not banish his, because he probably knew or had heard of scores of cases in which men had got rid of their wives by the plan which he proposed to try, without paying any penalty, social or legal. So he probably said to himself, Since change is so easy, why not have a change? Since fraud is so common in getting divorces, and entails no disagreeable consequences, why not get a divorce by fraud if necessary? In fact, the whole process seemed so simple to him, and surrounded by so few difficulties, that it concealed from him the conspicuousness of his position, and also the very important fact that, as an officer of the army, he was exposed to a double danger in case he strayed from the paths of honor.

So he went to work in the old-fashioned way—shipped his wife and children to Europe, took leave of them with the usual marks of affection, and then began a suit for divorce on the ground of desertion, giving the wife notice through the newspapers only, got his decree, and married another woman. The proceedings were all regular on their face, and yet they were marked by perjury and fraud at every step. There is nothing remarkable about this. Such divorces are obtained every month in nearly every State in the Union, and the remedy which Legislatures seem, on the whole, most inclined to try, is making divorce easier rather than increasing the penalties for fraud. What is remarkable about Nickerson's course is, that the state of the law had such an effect on his imagination that he forgot that the consequences of his crime were to be permanent and conspicuous. He actually expected his wife to submit quietly, and expected to be able to retain his social position and his position in the army without question or cavil. Everything was to go as well with him after his second marriage as after the first, just as if there were no law in the matter but his own wayward inclinations. Now that his evil deeds have been exposed, and the courts have convicted him of fraud, and the military authorities are trying to catch him for trial by court-martial, and he is a fugitive from justice, he is probably perfectly bewildered, and is asking, What does it all mean? It doubtless seems strange to him still that in the United States a man cannot leave his wife when he has ceased to love her, or that proceedings in divorce should be anything but a formality, in which fraud or perjury is not taken seriously. It is not, however, for the conscientious, steady, sober-minded, and faithful that marriage laws are needed, but for the wayward, fickle, and unscrupulous like Major Nickerson; and the worst of it is, that our marriage laws are now so drawn and administered that, instead of bracing up this latter class to face the stern facts of life, they suggest to them the possibility of successfully evading their most solemn responsibilities.

ENGLAND AND THE POPE.

THE explanations offered by Mr. Gladstone in the House of Commons on Thursday, if correctly reported by the telegraph, go far to confirm the construction which has been put on Mr. Errington's mission to Rome, and on the Papal circular to the Irish bishops. Mr. Errington is an English Catholic whose fancy has long been tickled with the idea of restoring harmonious and even close relations between England and the Vatican, and he appears to have gone out to Rome with this bee in his bonnet, and before going to have not only induced the Ministry to listen to what he was going to tell the Pope, but induced them to tell him a good many things which they thought it would be well for the Pope to hear, and especially things about Ireland. Moreover, they seem to have arranged with him to make memoranda of his interviews with the Pope, and transmit them to the Foreign Office to be put on file, just as if he were a regularly accredited envoy.

It is not surprising that under these circumstances the Papal circular should be looked on both by the Irish and English as the product of British diplomacy, and that though it is treated with outward respect by the Catholic clergy, it should be producing very perceptible alienation from the Pope on the part of the Irish people. In fact, there is no way of looking at it in which it does not seem the result of a great mistake on the part of the Ministry. The Parnell testimonial, against which the circular, with unusual, if not unprecedented, want of dignity, was specially directed, is apparently in no way injured, but indeed rather strengthened, by the Pope's disapproval. The only visible effect of this disapproval thus far is the stoppage of appeals in its behalf on the part of the priests in the churches. Outside the churches the clergy are apparently giving it as much encouragement as ever.

It was very unfortunate for the effect of the circular, too, that it should have been received with so much exultation in England. The proclamation of the *Times* and other journals that it was a "heavy blow" to the Nationalist cause, was one of the many signs of the past three years of the ignorance of English journalists about the state of Irish popular feeling, and in particular about the influence of the United States on the Irish mind. Down to 1847, not only were Irish politics in the hands of the priests, but the religious influence of the priests was as strong as ever. Since 1847, not only has a new and somewhat agnostic Ireland arisen on this side of the Atlantic, but a great change has come over the popular mind in all countries touching the authority of the clergy. Tyndall, and Huxley, and Spencer, and Mill do not reach the Irish peasantry or any peasantry directly, but they permeate the atmosphere with a spirit of doubt and revolt which the peasant cannot help breathing in, though in a highly diluted form.

Moreover, the disestablishment of the Protestant Church, in 1870, deprived the priests of the last remaining shred of the martyrdom which did so much for them in the eyes of their flock in Ireland, and the secret ballot enabled the peasant to vote against his landlord whenever he pleased, without the priests' instigation or support. So that although it is undoubtedly true that Ireland is, except Spain, the most Catholic country in Europe to-day, its Catholicism is a more delicate and fragile fabric than that of any other country. The priests are still very powerful in Ireland, if they still play the rôle of the poor man's friend and protector. They are not powerful if they appear in the smallest degree as official pacificators or police agents of the English Government, and in this position the circular in some degree seeks to place them. In one way or another hatred of England has now come to be the master passion of the Irish breast, and to suppose that it can be quenched by Church censures is to mistake both its force and the position of the Church in our time.

The facility with which the Phœnix Park murderers have remained in their own eyes "good Catholics," while planning and committing the most atrocious crimes, is a striking illustration of the curiously exceptional position, both in religion and morals, which the Irish Catholics have created for their patriotism. Curley urged his wife and children to attend to their "religious duties," in his dying letter to them, but every word indicated that he thought that he had been setting them a good example in the commission of his

villanies. In fact, the Irish conspirators seem to be standing over the same frightful and unfathomable abyss, not exactly of immorality but of *un*morality, as the Russian Nihilists, but with just a thin crust of Catholicism under their feet, which it is folly to put any more weight on.

A DISMAL VIEW OF FRENCH FINANCE.

M. Leroy-Beaulieu, who has been for some time back the Cassandra of French finance, though he has hardly surpassed M. Léon Say as a prophet of evil, has a very dismal article on the present outlook in the last number of the *Revue des Deux Mondes*. The appropriations of 1883, which the Chambers have just voted, amount to the enormous sum of $608,000,000. This, however, is less than the actual amount will be, because, according to the French custom, "supplementary credits" for things overlooked, or for the deficit of the previous year, will have to be added to it. So that he thinks it will reach altogether $625,000,000. The receipts, all things considered, will leave in the accounts of the current year a deficit of $29,000,000. The outlook for 1884 he does not think any more hopeful. The appropriations will have to amount to $620,000,000, and the receipts, judging from the returns of 1882, the last year for which, according to another vicious French custom, the accounts have yet been made up, will leave a deficit of $40,000,000. He acknowledges, however, that this is probably too dark a view, as since 1882 there have been certain elements of improvement in the revenue; so he puts the deficit of 1884 at $30,000,000. Accepting this as correct, it appears that there will then be a total deficit in the three years ending with 1884 of $90,000,000. The only mitigating feature in the situation which he thinks can be counted on with certainty is the conversion of the fives into four-and-a-halfs, which will reduce this amount by about $8,000,000. For the elasticity has apparently gone out of the taxes since 1881. Every year since 1875 the yield has shown an increase, and generally a considerable one, over that of the previous year. In 1881 this increase amounted to $24,000,000. But the year 1882 showed an increase of only $200,000 over 1881, and 1883 only $5,000,000 over 1882.

It is unfortunate, but true, that this condition of the public treasury only began after the Republicans came into full possession of the Government in 1877. From the close of the war down to that period French financial management, under the master hand of M. Thiers, had been one of the marvels of the age. No sooner was he dead, however, and the Republicans in control, than the Government entered on a course of extravagance which curiously resembles what we witnessed here for some years after the close of our war. To use M. Leroy-Beaulieu's words:

"No matter who the Ministers were who too rapidly succeeded each other in office, the real influence, the pledging of the public credit and the laying of the taxes, was in the hands of the ardent and inexperienced majority of the Chambers. These had neither rule, nor measure, nor knowledge, nor conception of the real needs and duties of the state. They dreamed of a policy of ostentation which should pour out blessings of every description on the country. They had a truly naïve generosity and a systematic prodigality. They were animated by all sorts of ambitions and caprices. They wanted an army and fortresses better than those of Germany, a navy and colonies better than those of England, schoolhouses better than those of Switzerland, and as big railroads as those of the United States."

To crown all, the civil service was disorganized by the furious greed for office of the newcomers, which compelled the Government to put large numbers of old functionaries on the retired list before their time in order to make vacancies, thus greatly increasing the charges on the pension list, for a man cannot be dismissed from the public service in France without cause. To these weaknesses, which we can readily understand here, were added others which were curiously French. One was the refusal of the Government to convert the fives, for fear of offending the bondholders by paying them off or reducing their interest. The other was the persistence of the Treasury, which takes charge of the savings-bank funds, in paying the depositors a higher rate of interest on their deposits than it paid to its other creditors, or than it could borrow at in the market. Both these oddities are the product of the notion, which three hundred years of centralization and despotism have firmly implanted in the French mind, that the Government is a power apart from the people, with resources of its own to which the taxpayers do not contribute.

How long these crazes will last, or whether the Republicans will work out of them without some sort of financial cataclysm, it is hard to say. It is quite certain, however, that things cannot go on much longer as they are. They must either mend or grow much worse. The fever of "public improvements" has spread all through the communes, just as it did here before 1873. Splendid schoolhouses and town halls are going up in every direction. The workmen are crowding into the towns to get employment on these buildings in a way which is leaving the farmers short of laborers and introducing into France large hordes of Belgians and Italians. The wages paid in the towns, too, are very high, and it is the great consumption which these wages stimulate which does much to keep up the direct taxes on tobacco, wine, and other working-class luxuries. Consequently, when the check comes it will be necessarily severe and widely felt.

"RIDING TO HOUNDS."

An article in the last number of the *Nineteenth Century* on fox-hunting in England, besides being an admirable piece of literary work, will furnish very useful reading to the considerable and growing numbers of young people of both sexes in this country, who make a practice not exactly of fox-hunting, but of "following the hounds" across country in the fall. In Pennsylvania and Maryland and Virginia, where real fox-hunting is indigenous, the article will not be found to have much that is new, but for the amateurs of New York and Rhode Island and Massachusetts it is full of instruction, because those who have observed the "riding to hounds" in these latter States are aware that desperate jumping forms one of its leading features, and that there is a tendency among the riders to believe that cross-country riding is not the real thing unless they take everything that comes, in an audacious manner, at any risk to themselves and their beasts.

In reality, however, riding to hounds in the country of its origin is nothing so senseless as this. Englishmen have managed to find a place, and a very large place, too, in the chief national sport for judgment, and have refused to make it simply a display of reckless courage. Fox-hunting has an object, and the object is not the jumping of high rails or wide brooks on horseback, but keeping up with the hounds; and the man who does this, no matter how he does it, is the successful hunter; and the better the condition in which he brings his horse in to the death or other finale, the better rider he is. Consequently to the good rider a low fence is better than a high one, a gap or an open gate better than either, and the zest which comes from taking a high or long leap is to be found in the fact that it is necessary, or that there is nothing else for it. Needless strain on horses is odious to all good riders, because, if for no other reason, it is fussy and childish, which to the true hunting mind ought to be detestable.

That it is not easy to keep up with the hounds after they settle down to their work is a well-known experience of all hunting. No matter how large "the field" which assembles at any hunt, in five minutes half of them have been left behind and out of sight. Every stiff fence or brook keeps back a great many. Very often in fifteen minutes not six out of a hundred are to be found in sight of the hounds. At the death of the fox probably not over two or three are present. The rest are spread all over the country for miles in the rear.

It must not be supposed, however, that they are all, or nearly all, left behind because of their pusillanimity. On the contrary, as the writer of the article points out, there is no such furious riding and reckless jumping anywhere as among the laggards. The contrast between the scenes in the rear and those at the front of a fox-hunt is, in fact, very like that which General Sherman has drawn between the scenes at the rear and those at the front of an army during a general action. In the rear all is confusion and uproar, and hurrying to and fro, and fierce preparation or deep depression. As you go forward things get quieter and quieter, until when you arrive at the fighting line, where the real business is being done, you find the calm and resolution and serenity of men intent on their work and knowing how to do it. So also in the hunting-field, on going back two or three miles from the hounds, on whose flanks probably three or four master hands are riding—it may be at a terrible pace, and with unflinching courage, with the highest judgment, taking every advantage which the ground offers, bringing every faculty to bear on the work of getting over the ground with the minimum of fatigue to their horses—you come upon really frantic riding. For when the blood has got into the heads of the common herd they rush at everything that offers, and, having lost sight of the hounds and not knowing which way to turn, they often take big jumps in an exactly opposite direction to that in which the fox has gone. The arti-

cle in the *Nineteenth Century* tells an amusing story of the late Lord Alvanley having shouted after one of these fierce riders till he got him to stop, for the purpose of pointing out a place to him where the fence was higher than where he was going. In fact, the consciousness that they are hunting, or "riding to hounds," seems to set many of them crazy, especially after the hounds have left them behind, and they wander about the country in a promiscuous and aimless manner, with imminent risk to their necks.

There is not much to be said for the practice of jumping high fences or broad brooks, *per se*. It is simply steeplechasing, and steeplechasing is something in which professional jockeys will always excel amateurs. But the art of getting across country on horseback with a minimum of danger and strain to the horse, is a noble and very human art, which probably brings the man and the animal into closer communion than anything else they do in common. It is the promotion of this art which hunting even of the anise-seed bag ought to favor, but, we fear, does not. It is too often followed in the spirit of the circus, as an occasion for the display of tricks and feats. In a word, riding across country ought to be throughout an exercise of judgment and skill rather than a display of courage.

COLONIAL ANNEXATIONS: THE SOUTH AFRICAN QUESTION.

LONDON, May 24, 1883.

IT is strange, when one thinks how large the colonial possessions of England are, and how complicated their relations with one another and with the peoples or states which border on them, that their fortunes should engage so small a part of the attention and anxiety of the English public. This nettles the colonists themselves, who are usually in a querulous sort of mood toward the mother country, complaining that whereas they are always thinking of her and burning with love for her, she does not seem to care what happens to them. If the accusation be true, the reasons are not altogether discreditable. Englishmen have come to the conclusion that the colonies thrive best when left most to themselves. In the case of the great European-peopled colonies, such as those of Australia and North America, self-government has been granted; and self-government, in order to work properly, must not be meddled with by those at home. As respects the Crown colonies, such as the West India Islands and Ceylon, the English politician, though he has no great faith in the wisdom of the Colonial Office, has a wholesome sense of his own ignorance, and doesn't feel as if the interference of Parliament, except to expose some gross abuse or correct some obvious mistake, would be of great service in colonial difficulties. Thus there is singularly little discussion of colonial questions either in the English press or in Parliament, and one meets hardly anybody who has followed the course of events in any of our dependencies, or can give an opinion, based upon any facts, with regard to the disputes which agitate them. Even as regards India, to which so many Englishmen go to make their living in the service of the state, and from which so many return to take a considerable place in society at home, there is much less curiosity, less knowledge, less comprehension of current events, than one might have looked for.

There is, however, one question of colonial policy on which most people have, if not fixed opinions, at least pronounced tendencies: I mean the question of annexation. It is less important than formerly, for the simple reason that we have annexed already nearly all the most desirable places that lay near our colonies or in the way of our ships. There still remain (besides the lands that border India) only two regions in which much new territory of any value can be acquired. One of these is South Africa, and the other the East Indian Archipelago.

South Africa is the standing difficulty of our colonial empire. For the last fifty years it has always been vexing us, entangling us in native wars, which have ended in annexations that in their turn brought fresh wars upon us. We have tried every policy in turn, and no policy has prospered. Sometimes we have carried on interference actively; sometimes we have tried to let the native tribes fight out their own quarrels; sometimes we have controlled the colonists, who are of course far less indulgent to the natives than is the home Government; sometimes we have left the colonists to their own devices. But sooner or later we have become involved in the old troubles. At this moment disorder is in an acute stage. After the Zulu war of 1879, Zululand was parcelled out among several chiefs, who do not agree with one another, and last autumn we restored King Cetewayo to a part, but only a part, of his old dominions. Now we hear that furious strife has broken out between Cetewayo and several of the other chiefs, a strife which may disturb our neighboring colony of Natal. Further to the west the Basuto tribes are in a state of commotion, and the war between them and Cape Colony, which was with difficulty stopped more than a twelvemonth ago, seems recrudescent. The most serious difficulties are, however, those that gather round the Transvaal and the native Bechuana tribes which dwell on the borders of that state. When the Transvaal country was first annexed, the preservation of peace between the natives and the Boers, was one of the grounds assigned for that hasty act. When, after the revolt of the Boers, a convention was made in 1881 with them, recognizing their practical independence, subject to British suzerainty, it was hoped that this suzerainty would enable our Government to secure adequate protection to the natives from the Boers; and engagements, the exact legal effect of which is disputed, were understood to have been made with some of the native chiefs to secure their safety. Now disorders have again become serious. European marauders, whom the Transvaal republic is either unwilling or unable to restrain, are attacking the Bechuanas and seizing their cattle. The British Government is appealed to to compel the Transvaal authorities to restore order, but it seems very doubtful whether this can be done without another war. We are thus placed in a disagreeable dilemma. If we take the matter into our own hands, we may have not merely to reconquer the Transvaal, but to govern it after the reconquest, and thus push our frontier a long way further toward the equator, with the prospect of increased military expenditure and new wars to follow. If we wash our hands of the matter, leaving the Boers and the natives to fight it out, we appear to recede from the convention of 1881, to abandon the Bechuanas, to declare British suzerainty an empty name. The honor of England seems to point to a course which is beset with the gravest practical mischiefs—mischiefs no one would have encountered could they have been foreseen. Public opinion at home is therefore a good deal divided on the question; nor is it only the imperialist party which calls upon the Government to act vigorously on behalf of the natives and against the Boers: a considerable force of philanthropic sentiment presses them toward the same course. Mr. W. E. Forster is the most conspicuous mouthpiece of this sentiment, and the speech in which he recently attacked the conduct of his former colleagues in hesitating to interfere on behalf of the Bechuanas produced some sensation, not only because it widened the breach between him and the Cabinet, but also because it placed in a strong light the weak points of our present attitude.

If it be asked why South Africa should have proved so much the most troublesome of all our colonial possessions, two main reasons may be assigned. In the first place, its European population is not purely, in parts not even chiefly, English. The districts round the Cape of Good Hope were originally settled by the Dutch, and ceded as spoils of war to England. From these districts Dutchmen have continued to flow out into the surrounding regions to the north and northeast, carrying with them their language and their habits, while in the older parts of Cape Colony a great many of the farmers are still thorough Dutchmen, not fusing with the more recent immigrants of English or Scotch blood, and looking rather to Holland than to England as their true mother country. Thus the whole of our South African territories have wanted that homogeneity and attachment to English sovereignty which exist in most of the colonies, not, indeed, perfectly in Canada, owing to the presence there of a French element, but notably in Australia and New Zealand. There has never, it is true, been any active disaffection, threatening rebellion against the British crown. But when difficulties arose between the British Government and the Dutch Boers of the Transvaal the sympathy of the Dutch in Cape Colony for their blood-kinsfolk was so marked as to import a new difficulty into the situation, and make strong measures against the Boers additionally undesirable. The other source of difficulty—a graver and more permanent one—is found in the numbers and persistency of the native races. In the Australian colonies and in North America the aborigines were few in number, and soon began to disappear before the whites. In most parts of Australia they have already vanished. In New Zealand we are using all possible efforts to protect them and keep them alive, but disease and the change in their manner of life are steadily reducing them. But in South Africa not only are they more vigorous and prolific as races, but they are recruited from a vast and populous inner country, stretching far away north through a huge tropical continent. This aboriginal population, more or less negro in blood—for there is much difference between the various peoples—is not generally wanting in intelligence or in other good qualities; but a long time will of course be needed to civilize it and accustom it to a peaceful life, and meantime it so greatly outnumbers the whites, at least in the newer colonies, as to make the process of civilization go on slowly. Here, therefore, the problem of annexation presents itself in the most troublesome form. If we go on advancing and annexing, there is really no reason why we should ever stop, for the same causes which led to the annexation of one piece of territory will lead to the annexation of another. We shall not find anywhere south of the equator, nor even north of it till we reach the Sahara Desert or the frontiers of Egyptian rule, a good solid boundary, either natural or constituted by the existence of a strong state with which treaties can be made. Wherever we try to stop we shall experience the same difficulties, and we may therefore (so it is argued) just as well stop where we are now as go some hundreds of miles further to the northward.

If it were possible to allow the colonists themselves to confront the difficulties to which annexations give rise, England might, at least in the case of self-governing colonies, such as the Cape, shift the responsibility for the future on to their shoulders. But two reasons forbid this. In the first place, the colonists might not be able to defend themselves against a general rising of the black races; and the very knowledge of their comparative weakness which the natives would soon gain, would tend to encourage them to resist or attack the whites. In the next place, the colonists would doubtless carry on war more cruelly and treat the conquered more harshly than the sentiment of Englishmen at home could tolerate. Our interference has at least the effect of giving some sort of protection to the aborigines, for it need hardly be said that we have none of that hatred of them and desire to seize their lands which are powerful forces in every colony. It is like the difference between the sentiment of New England and that of Arizona towards the Apaches.

All these considerations puzzle politicians at home so much that many of them try to ignore the problem, and seek by a hand-to-mouth policy to stave off for the moment our perpetually recurring difficulties. This is perhaps all that even the Government can do; it seems to be all they are trying to do in the present instance. Meantime a fresh question has arisen for solution which raises somewhat similar issues, the annexation of Eastern New Guinea under the orders of the British colony of Queensland. Voices are already heard, some applauding, some condemning this extension of our territory. When opinion pronounces itself more widely I shall hope to give you some account of the circumstances, as well as of the views which prevail here. Y.

ITALY'S ESTRANGEMENT FROM FRANCE.

PARIS, May 25, 1883.

THE attention of France is completely engrossed at present by interior affairs, by the financial situation, the conversion of the rentes, the proposed convention between the state and the great railroad companies, the struggle between the Government and the Catholic clergy. We are hiding our heads under our wings, and we should like to think there was nothing outside our frontiers. At the same time the party in power has been seized with a sudden ardor for distant colonization. The ease with which the conquest of Tunis was effected, and the happy results, so far, of this conquest, have revived the ancient feelings which once sent France to Canada, to India, to so many places. The programme of the day is: Peace in Europe, distant and easy expeditions to various parts of the world—Senegambia, Congo, Tonquin. Our statesmen think that the establishment of distant colonies will give an outlet to many restless spirits, whom they find inconvenient at home, and satisfaction to our navy and, to some extent, to our army. It will even, in their eyes, be an assurance of peace in Europe, as it will show our neighbors that our activity is looking for new fields.

As yet only two Powers have shown any jealousy of this new policy—England and Italy. With England this jealousy is almost instinctive; she is so accustomed to help herself in all parts of the world, to take whatever comes in her way, sometimes with her own hands, sometimes by the hands of her colonists, that she has finally looked upon this power of annexation as a sort of natural privilege. She has claims on every land, on every region; still, she has grasped so much lately, she has had such an active policy, that the jealousy with which she has seen France first go to Tunis and afterward prepare to go to Tonquin, has not been followed by any serious opposition. With Cyprus and Egypt in her clutch, she felt that she could not remonstrate with a good grace. It is not so with Italy. Italy was profoundly wounded by the French expedition to Tunis. She is the mistress of Sicily and the heir of ancient Rome; she thought that she had a natural right to the country where once was Carthage. Tunis was considered by the Italians as an apple which sooner or later must fall into the lap of Italy. This ambition was not much concealed, and the attitude of the Italian consuls in Tunis, their increasing influence at the Bardo, their constant opposition to the French consuls, were among the reasons which precipitated the French expedition. In high military quarters it was thought that if, in a great European war, we were unfortunate enough to have the Italians among our enemies, nothing would be easier for them than to land an army in Tunis and invade our province of Constantine. There is no defensible barrier between Tunis and this province, and an Italian army might have seized all our African possessions. With Tunis in the hands of France these provinces can no longer be invaded, as Tripoli is too far away, and an expedition with Tripoli as its basis would be exceedingly difficult.

From a strategical point of view the occupation of Tunis was almost a necessity for France. Politically it has borne results which are developing rapidly. It has estranged Italy from the Government of the French Republic, and this estrangement has had two consequences: first, an alliance of Italy with the two great German empires; secondly, a reconstitution of Italian parties on a more distinctly monarchical and conservative basis. Depretis has formed a new majority, which includes all the Right, and he is just now excluding the most advanced Liberals from his cabinet. These political moves were an obvious necessity at a moment when Italy was begging for admission to the great German alliance; it was clearly obligatory to say good-by to all the Irredentists—to the bitter enemies of the house of Hapsburg. For a long time we shall hear nothing of the Trentino, nor of Trieste, nor of the Dalmatian coast. Italy will not feel *irredenta* in these lands; she will perhaps feel suddenly *irredenta* elsewhere—in Nice, perhaps in Savoy, perhaps in Corsica.

The journey which Marshal von Moltke has just made to the tunnel of Mount St. Gothard, to the passes of the Alps between Piedmont and the French coast, has not been much commented on by the press; we speak not lightly of the great warrior who conducted the German army before Sedan and Paris. Marshal von Moltke knows history as well as geography. At the time when the House of Austria possessed not only the Austrian provinces, but Spain and the Netherlands, and the north of Italy, communications between the Duchy of Milan and Germany took place through the Grisons and the Valtellina. During the Thirty Years' War France kept her eye constantly on these passes of the Alps; Richelieu sent the famous Duc de Rohan, the great Protestant chieftain, to the Grisons, in order to hold the passes against the imperial armies. The Dukes of Savoy, who had the keys of the Alps on another side, played a most important part in all the wars; their policy was constantly oscillating between France and the House of Austria—so much so that it was proverbially said that if at the end of a war the Duke of Savoy was found on the same side as at the beginning, it was because he had had time to change sides twice. So long as Austria was mistress of Venetia and of Lombardy, France had always to fear an invasion of her southern provinces, though she was reassured by the natural antagonism between the Austrians and the Italians. When the French armies crossed the Alps with Napoleon III., and made Italy free from the Alps to the Adriatic, it seemed as if France had secured the friendship of Italy forever, and as if the Alps stood higher than ever between Germany and Italy. But there is no gratitude between nations, and the Italians thought, perhaps, that Victor Emmanuel paid his debt largely when he abandoned Savoy and Nice to his allies.

When we think of the state of Italy after Novara; when we remember Italy divided between many principalities more or less subject to Austria, and when we see what she is now, we must confess that such an extraordinary fortune, helped by reverses as much as by victories, may well inspire the Italian people with an inordinate ambition. The unification of Italy has been accomplished without any difficulty; the soldiers of all the provinces are mixed in every regiment—the shepherds of the Abruzzi and of Sicily are drilled with the fishermen of Como. The House of Savoy has no more opponents. Rome has become the capital, and her splendor speaks more to the soul than the splendor of any other capital in the world.

Italy has been the spoiled child of destiny in this second half of the nineteenth century, even more than Prussia; and however different these two countries may be in their tastes, in their views of life, in their instincts, it seems almost as if a hidden force united them and brought them together. Italy dreams of becoming the most important naval Power in the Mediterranean Sea. Her ironclads, few in number, are the largest in the world. The development of trade in the Suez Canal will give to the inland basin of the Mediterranean as much importance as it had in the times of antiquity. The ambition of Italy is probably natural, but her impatience is too great. It seems as if she could not wait. She is restless and uneasy, and she is always offering her alliance for a definite and immediate object. She was ill at ease when the alliance between Northern Germany and Austria-Hungary was concluded, at the time of Prince Bismarck's journey to Vienna; she felt the importance of this great event. It seemed as if every Power in Europe sunk into insignificance when the vanquished and the conquerors of Sadowa reconciled themselves.

The circumstances of Bismarck's journey were very peculiar, and great irritation was felt at the time in Russia against Germany, and especially against Austria. War was almost imminent between the Russians and the Austrians. Prince Bismarck extended his protection over Austria; he forced a reconciliation between the sovereigns; he defeated the party of the Austrian Archdukes; he showed Austria the way open on her eastern frontier; he consoled her for her losses with the hope of new acquisitions in the Balkan peninsula. Germany and Austria together have now resumed the old mission of the House of Austria; they are forming an immense barrier against Russia; and Austria is preparing to extend her influence in the provinces of the Turkish Empire, which, sooner or later, will be detached from this empire.

The advances made by Italy to the allied empires were not heeded at first. Italy was made to wait some time at the door—there was some irritation felt against her at Vienna; but last summer the negotiations were brought to a close. The indiscretions of the German official press helped soon to spread the news of the alliance, discussions took place in the parliaments of Rome, of Vienna, of Pesth, and finally of Paris, and now the truth is known. The last interpellation was made in the French Senate by the Duc de Broglie, and the Minister of Foreign Affairs of France admitted that there

was a *rapprochement* between Italy and the two German empires. He confessed modestly that his Ambassadors knew no more about it than the public; that they had no special information about matters which had been kept secret. The sum of his speech was this: "We only know what everybody knows." We are therefore ignorant of the exact tenor of the arrangements which have taken place, of the conditions of the new alliance, of the eventualities which it foresees. The fact remains, and it is important enough, that Italy has issued from her state of isolation; that she has joined the two most powerful empires on the Continent; that her relations with France have become cold, and that in Tunis she alone opposes all our projects, as far as she can.

Correspondence.

THE SCARCITY OF MINISTERS.

To the Editor of The Nation:

Sir: Some of us who are accustomed to look, and seldom in vain, to the columns of the *Nation* for careful accuracy of statement, were taken somewhat aback by the account, in the number for the 31st of May, of some matters connected with the Presbyterian General Assembly at Saratoga. It is there stated that it is the function of the Board of Ministerial Relief "to supplement the salaries of the ministers of poor congregations." In fact, the fund for ministerial relief goes to the aid of ministers who have broken down or who have been worn out in the service, and to their needy families, and not at all to the supplementing of salaries. Further on it is said that, notwithstanding the pressing need for an increase of salaries, the Board of Relief raised last year only $18,000. The Board of Relief raised upward of $87,000. There is no "board" in our Church charged with the duty of supplementing salaries, though there is a side-fund for this purpose administered by the Board of Home Missions.

The statement to the effect that "the Protestant minister . . . has to be a man of some scholarship," comes, in so far as the Presbyterian ministry is concerned, quite within bounds. In fact, with rare exceptions, the student for the ministry in the Presbyterian Church must pass years in preparation for college, and then four years in college, and then three years (and not unfrequently he passes four years) in the Theological Seminary; and there is little risked in saying that among the professions of this country the Presbyterian ministry is by far the best educated. And the pittance our students receive from the Board of Education takes them quite out of the range of President Eliot's animadversions.

The impression made by the last paragraph of the article in the *Nation* can hardly be accepted as fair and just, even were the statement strictly accurate in form. That statement seems to intimate an inordinate, if not an extravagant, interest in foreign missions, to the neglect of needed work at home. Now, our Church expends annually not far from nine and a half million dollars upon its pulpit, its mission work, and its other work, somewhat over a half-million of which is devoted to the carrying of the elevating, purifying truths of the Gospel to the blinded, degraded tribes of heathendom. And, however it may appear to others, a considerable proportion of our Presbyterian people, as they look at this disparity, will rather blush at the meagreness than complain of the magnitude of the minor sum.—Yours respectfully,

W. P. Breed.

Philadelphia, June 6, 1883.

A "SECESSION LAY."

To the Editor of The Nation:

Sir: Thanking you for the kindly color of your notice, in the *Nation* of May 31, ult., of a little volume of verses lately published by me ('Lenore, and Other Poems'), I ask leave to correct a natural but no less hurtful misconception therein fallen into by the reviewer respecting the composition on page 184 entitled "Desdichado."

This poem, however "spirited," as alleged—for which I thank you—and though even more "markedly political" than was suggested, yet has no more reference to the late civil war or to the issues of secession than to the Edict of Nantes or the Cracovian Catechism. It was meant to express the lamentation of certain of the people of Virginia over the defeat of their candidate pledged to maintain, in the office of Governor, the financial honor of the commonwealth—the Hon. John W. Daniel. If you will take the trouble of reading the verses anew, especially in connection with the scrap of Horace prefixed to them, you will perceive that they will not bear the construction you put upon them, and that they refer to a candidate, and not primarily to any cause.

The misconstruction has meaning and moment for the public, and especially for the Northern public, only so far forth as the correction of it serves to illustrate how strangely liable are the people of this section of the country to have their utterances read to mean something never intended nor even dreamed of by themselves. I am a priest and no politician, and certainly no *temporum actorum laudator;* and I grieve that what is best on both sides of the ancient, now dismantled, lines cannot come together more quickly by grace of some saving solvent.—I am, very heartily, Edward S. Gregory.

PUBLISHERS' PROFITS.

To the Editor of The Nation:

Sir: Your correspondent, Mr. Franklin, in the *Nation* of May 31, clearly points out the folly of attempting to determine the profits of author and publisher from a comparison of the gross receipts in each case. His statement, however, that "it is quite possible that, from the point of view of theoretical justice, not only five to one, but fifty to one, is an understatement of the difference between profits" in favor of the publisher, merely echoes the popular opinion that authors as a class have a genuine grievance against publishers on the score of an unfair division of the net avails arising from the publication of books. I believe this opinion is erroneous, and therefore does publishers an injustice. No doubt it owes its existence in large measure to the ignorance of those who hold it as to the cost attending the publication of books. Many individual cases of gross injustice upon the part of publisher toward author have occurred, and many others are likely to occur in the future, but with these I am not at present concerned. Are publishers as a class unjust to authors? It is so alleged.

It is clear that the author whose reputation is established can have no ground for complaint, as he holds "the balance of power," and is in a position to dictate fair and honorable terms. Publishing houses are eager for books by the writer the merit and popularity of whose published works are a sufficient guarantee to insure the success of any new production from his pen. Neither can the author grieve over an unjust division who sells his manuscripts outright for an agreed sum; nor he who chooses to become his own publisher, and thus obtains whatever profit his venture realizes. The grounds for a real grievance can therefore exist, if at all, only with those writers who publish on the royalty plan, agreeing with their publishers to receive as their share of the profits a percentage of the retail price of their books. It is safe to say that the average sale of all books brought before the public on this plan will not exceed five thousand copies for any one publication; or, in other words, of books so published, those whose sale is less than five thousand exceed the number whose sale is greater. Now, any reliable publisher, I think, will verify the statement that unless the sale exceed five thousand copies, the author, nine times in ten, receives a larger profit than his publisher. For example, from a book whose retail price is fixed at $1 50, and which reaches an ultimate sale of five thousand copies, the author, at a royalty of fifteen cents for each copy sold, will invariably derive a profit of $750, while the publisher's profit will oftener be less than more than that sum. Were seventy-five cents, as erroneously stated in the *Nation* of May 17, his true profit, he would realize a gain of $3,750. But before he can ascertain his profit he must subtract from this amount the cost of the electrotype plates, the cost of the manufacture of the five thousand copies, the expense of advertising, shipping, collecting, his losses from bad accounts, the cost of unsold copies and of those given for review, and any other outlay not here specified.

However much "theoretical justice" might be made to yield the author, practical justice cannot well do more for him than publishers as a class are now doing. W. W. Williams.

Cleveland, O., June 4, 1883.

AN INTERNATIONAL SUPERSTITION.

To the Editor of The Nation:

Sir: After reading, in your issue of April 26, of Prof. A. De Gubernatis's mention of a Russian superstition, that sick children might be cured by passing them through the trunk of an oak split open; and again, in your issue of May 31, the letter of your correspondent, F. A. Hassler, showing that a like superstition existed in England, I am prompted to say, that the same superstition has existed, if it does not now exist, in this country. About ten years ago I heard a trustworthy gentleman say that a father and mother, who are known to me, once passed an infant son through a split oak sapling, in order to cure him of a rupture. The father and mother stood on opposite sides of the tree and passed the child through from one to the other three times; after which the sapling was bound together again. My knowledge of the family concerned leads to the inference that this occurred less than forty years ago, and either in Alleghany County, N. Y., or in Cumberland County, N. J.—Respectfully,

Lucius Heritage.

University of Wisconsin, Madison,

THE ORIGINAL "MASHER."

To the Editor of The Nation:

Sir: From the remarks of your English correspondent on the "Masher," I infer that he is totally unaware that the term is of American origin, and has been in current use here a good many years—that is, among certain classes of people. The masher, however, in crossing the Atlantic, has changed his character completely—has become a wonderfully more respectable person than he is here at home. The original (I may say Simon pure) masher is an individual who successfully employs his blandishments upon persons of the opposite sex. In short, the term has no significance here except a sexual one. The American masher is a dandy and a "swell"

only so far as his fine clothes may aid him in getting into the good graces of the other sex, and no further. He does not affect any particular style of dress with us; therefore he is a very different sort of person from the dude. Another fact: the masher here may belong to either sex, though the male masher, of course, predominates. For instance, some months ago at a variety performance, I heard "Brudder Bones" propound to his opposite "end man" of the tamborine the conundrum, "Why are the gentlemen in this audience like boiled potatoes?" and the answer finally given was, "Because they're so easily mashed"—*i. e.*, persons especially susceptible to female blandishments. Hence the masher in this country is most generally a libertine, and the word is considered low, and has never had any currency in respectable society. S.

DORCHESTER, MASS., June 2, 1883.

["S." is, we believe, perfectly right in thinking the word "masher" of American origin. It is the modern analogue of "lady-killer," and reflects the progress that we are all the time making in force if not delicacy of expression. The verb "to mash," applied to operations conducted against the heart of the opposite sex, was in common use at Harvard some years back, and the noun "masher" and the type have been evolved from it. We are perfectly willing to believe our correspondent that there are now to be found lady mashers in Massachusetts — these corresponding to the old-fashioned flirt. It would obviously be silly for a dude to try to mash any one; but he clearly might be mashed.—ED. NATION.]

MORTON'S NEW ENGLISH CANAAN.

TO THE EDITOR OF THE NATION:

SIR: In your notice of the reprint of Morton's 'New English Canaan,' edited by Charles Francis Adams, jr., the date of original publication is conjectured to be 1632. It may interest your readers to see the original title-page (lacking in the specimen preserved in the Library of Congress). It is taken from a copy in the possession of a gentleman of this city, and is as follows:

NEW ENGLISH CANAAN
OR
NEW CANAAN

Containing an Abstract of New England;
Composed in three Bookes.

The first Booke setting forth the originall of ye natives, their Manners & Customes, together with their tractable Nature and love toward the English.

The second Booke setting forth naturall Indowments of the Country and what Staple Commodities it Yealdeth.

The third Booke setting forth, what people are planted there, their prosperity, what remarkable accidents have happened since the first planting of it—together with their Tenents and practice of their Church.

Written by Thomas Morton of Cliffords Inne gent. upon tenne yeares knowledge and experiment of the Country.

Printed at Amsterdam
By JACOB FREDERICKSTAM
in the Yeare 1637.

NEW YORK, June 10.

THE TARIFF AND LOW WAGES IN ITALY.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent "W.," from San Remo, in No. 930 of the *Nation*, is not very well advised when he says, "The tariff in Italy is the highest in Europe, *if not in the world.*" If he had said the *taxes* were the highest and most oppressive to the poorer classes, he would have been nearer correct. But the tariff is in general not near as high as our own, and not much, if any, higher than those of other leading nations of Europe. It only needs a little comparison with the tariffs of other countries to show this.

The ordinary income of the Italian Government for 1882 was, in round numbers, 1,360,000,000 francs. The income from the tariff was 143,000,000 francs, being only about 10½ per cent. of the entire income. I have not before me the value of imports for 1882, but for 1881 it was 1,332,000,000 francs, and the change for 1882 will not have been great. So we see that the tariff in Italy averages about 10 per cent. ad valorem on imports. With us, under the tariff still in force, I believe the general average is 43–45 per cent. ad valorem, or more than four times what it is in Italy; and more than two-thirds the entire expenses of our Government are derived from our tariff, instead of less than one-tenth, as in Italy. You see, then, how erroneous your correspondent is when he conveys the idea that the Italian tariff is higher than ours.

But when compared with the tariffs of other leading countries of Europe, he is nearer correct, for our tariff is several times higher than that of any other civilized country. In France, for instance, the average duty on imports is only about 7 per cent., and the Government derives about 14 per cent. of its ordinary revenue from that source, or, for 1882, 404,000,000 francs out of 3,044,000,000. In England the average import duty is only about 5 per cent., and levied on but a few leading articles, while the Government derives over 22 per cent. of its revenue therefrom, £19,000,000 sterling out of £86,000,000. For the German Empire the average import duty is about 7 per cent. ad valorem on all imports, while the proportion of the revenue of the Empire derived from this source amounts to nearly 33 per cent.—197,000,000 marks out of 610,000,000 for the year 1881–82. My figures do not pretend to be exact, but approximate only. I should also remark that Italy has commercial treaties with nearly all the countries of Europe, by which her general tariff is considerably modified.

If we go into particulars, we find the import duty on some articles in Italy very high, while on others that would bear a high duty it is very low—very badly adjusted, like our own tariff in this respect. Petroleum, for instance, has to pay considerably over 100 per cent. on the value; but a gold watch, whatever may be its value, pays only 3 francs (60 cents) duty, and a silver one 1 franc (20 cents), while by our tariff they would pay 25 per cent. ad valorem. The duty on wheat or flour imported, which your correspondent complains of as so high that the laboring classes cannot use it, is only about two-fifths what it is according to our tariff. The duty on cotton cloth which your correspondent says would cost 5 cents a yard in Massachusetts would be 30–40 per cent., according to grade, thus adding 1½ to 2 cents a yard to the cost, whereas according to our tariff the duty would be 5 *cents* a yard and upward, or 100 per cent. and upward.

It is very true, as your correspondent says, that labor is very poorly remunerated in Italy—perhaps worse than in any other civilized country. The price of 90 cents a day paid a mason at San Remo would be high wages in South Italy, where 50–60 cents would be the common price. An able-bodied peasant-man gets at most 20–30 cents for field work, and a woman not over 15–20 cents, and nothing found them.

But what has the Italian tariff to do with these wages? If it be the high tariff that produces the high wages with us, as our protectionists would have us believe, why are the wages in Italy not higher than in England and France, where the tariffs are lower? The fact is, the cause of the low wages and unproductiveness of labor in Italy is to be sought elsewhere than in the Italian tariff, just as the high wages and productiveness of labor with us are owing, in a great measure at least, to other causes than our high protective duties. Italy is spending for her army and navy and for her heavy debt more than the country can bear, and her taxes are not only enormously high, but levied in a way to be extremely oppressive to labor and to nearly all kinds of enterprise. This is the real cause of low wages and the extreme poverty of the laboring classes in Italy—at least, such is the opinion of an OBSERVER.

NAPLES, May 26, 1883.

THE DUBLIN MURDERS AND THE NATIONAL LEAGUE.

TO THE EDITOR OF THE NATION:

SIR: You have upon several occasions very properly animadverted upon the attitude assumed by many of my countrymen regarding the Park murder trials. These animadversions come with double force from you, who have been so consistently appreciative of all that is good and true in the Irish cause. I owe it to myself, and to such of my countrymen in the United States as these lines will reach, to say that the events of the last few months in Dublin, and the way in which they have been received in some quarters, have had a very terrible and discouraging effect upon many Irish Nationalists and members of the Irish National League like myself. They have compelled many of us very searchingly to consider our position and duties. We have deep convictions; we are willing to spend and be spent in the cause of Ireland; we have endeavored to see good, and appreciate motives and necessities, in the terrible position in which our country has been placed whenever since the Union it has been necessary for her to obtain reforms; but circumstances connected with the exploitation of the Carey ring have been of too ominous a character for us not to take deeply to heart. For myself, I desire to say that, although the juries in the late trials undoubtedly were packed, I consider the verdicts to have been eminently just, and such as juries having regard to their oaths could only have found. From my heart I pity the unfortunate men whom misgovernment impelled to conceive and carry out the Park murders and other outrages; but none the less they were guilty, and, unless morality and duty are to be theorized into soup, they richly deserve the fate that has overtaken them. As to the means by which their crimes were brought home to them—as to the instruments employed—they were such as, under the circumstances, no civilized community could have hesitated to employ.

This Irish problem, is, in truth, a terrible and a grim problem, in the settlement of which the whole English-speaking world is directly interested; for, until it is settled in some way, evils are being generated fatal to the peace and happiness and prosperity of this country, and which, carried to other lands, cannot but bring with them the elements of difficulties and disorders. What more terrible comment can there be upon the plight to which the political conscience can be reduced than the attitude of mind which we deplore? What more terrible comment upon the necessities to which a government may be forced that has once entered on a wrong road, than, what I believe to be the truth, that in the previous series of trials here it is more than probable that two innocent men at least were sent to the scaffold? The unsatiated longings

of our hearts for a country to love and serve and be proud of must in some way be met. The responsibilities and educating influences of self-government must in some way be thrown on us. (Separation, which I should deplore, would be better than the present relations between the islands.) To these ends I am willing to strive in a National League; but if we cannot have a league of conscientious and honest men and gentlemen, it were better to leave the future to Providence, to bear the present as best we might, and to strive to keep our hearts pure.

Respectfully yours,

ALFRED WEBB.

DUBLIN, IRELAND, May 24, 1883.

Notes.

W. S. GOTTSBERGER publishes this week an historical romance, entitled, 'A Tragedy in the Imperial Harem at Constantinople,' by Leïla-Hanoum, translated from the French by Gen. R. E. Colston.

J. B. Lippincott & Co. have in press a 'Dictionary of Miracles,' by E. Cobham Brewer, author of the 'Reader's Hand-book'; and 'Young Folks' Whys and Wherefores,' a story, illustrated.

A. H. Smythe, Columbus, O., will publish immediately 'Church Law: Suggestions as to the Sources and Scope of the Law of the P. E. Church in the United States,' by J. W. Andrews.

R. Worthington has nearly ready 'A Century of Roundels,' by A. C. Swinburne.

It appears from a special introduction that we owe a cheap edition of Herbert Spencer's 'Data of Ethics' (D. Appleton & Co.) to Prof. Goldwin Smith's onslaught upon it in the *Contemporary Review* of February, 1882. Three replies to Prof. Smith are appended to this introduction.

The same firm have added two more Tennyson volumes to their "Parchment Library." The first two were 'In Memoriam' and 'The Princess.' These last are designated 'Poems' simply, but they contain the old favorites which antedate the time of the Crimean War; for example, the youthful productions ("Juvenilia"), the "Lady of Shalott," the "Dream of Fair Women," the "Day-Dream," etc., etc., but not "Maud," nor the "Charge of the Light Brigade," nor what has come after. No choicer form for these lyrics could be wished.

The General Society of Mechanics and Tradesmen of the City of New York, which was founded in 1785 and incorporated in 1792, has commemorated the first ninety-five years of its useful existence in a handsome volume of 'Annals.' These records have been edited by Messrs. Thomas Earle and Charles T. Congdon. They are for the most part a simple account of official changes, of annual reports, and of the most important steps taken by the Society in the management of its property or the execution of its benevolent objects. They reflect but little the current of public affairs. The Society early drew off from politics, and did not maintain its active interest in protection manifested in 1787. It made one venture in a State lottery and lost nine pounds by the operation. An unguarded real-estate purchase brought it into litigation with Aaron Burr. For thirty-seven years (1821–58) it supported a free school for children of deceased members, upon the close of which it established a still flourishing free school for mechanical drawing. Its most successful foundation was the well-known Mechanics' Library, which now contains 60,000 volumes. Pensions, lecture-courses, and scholarships have been other forms of its beneficence, and its funds have been so well invested that its net assets exceed $600,000. The colors it gave to the First N. Y. Vol. Engineers were the first to wave over the recaptured Forts Pulaski and Wagner. One custom has been observed since 1786, when it was resolved that smoking be not allowed at the annual meeting. The volume contains many interesting illustrations, a list of members from the beginning, and a good index.

The American Antiquarian Society, Worcester, Mass., has published a 'Partial Index to the Proceedings' from 1812 to 1880, compiled by Mr. Stephen Salisbury, jr., and supplemented by a table of contents of all the Society's publications and reprints to April, 1883, by Mr. Nathaniel Paine. Among the publications are Thomas's 'History of Printing' and other works procurable at the prices affixed. The whole makes a thin volume of 86 pp., 8vo. Since 1880 the Proceedings have been regularly indexed.

Our German correspondent called attention last year to the valuable Hessian archives at Marburg. The current issue, No. 25, of the *Pennsylvania Magazine of History and American Biography*, contains one of the papers drawn from this source, communicated by Dr. Friedrich Kapp. This is a translation of the report of the court-martial for the trial of the Hessian officers captured at Trenton, December 26, 1776, which was held six years after the event, and conveniently laid the blame on two officers who were killed in Washington's attack.

The latest souvenir of John Howard Payne is published by E. Bierstadt, 58 Reade Street, New York. It consists of a folding card-board on which are artotype portraits, facing each other, of the poet and of Mr. W. W. Corcoran, at whose expense Payne's remains have been brought from Tunis and interred in Washington. Both these portraits are from life—Payne's from a daguerreotype taken in 1850, possibly the same which served as the basis of the engraving by G. R. Hall which we noticed last week. If so, it is only fair to say that the latter is greatly idealized.

We have been glad to speak well of the Boston *Wheelman*, which has most of the marks of a tasteful and well-edited magazine. Its 'Art Supplement,' however, does it great injustice, for this reproduces some "decorative" monstrosities—verses in a bedlamitish chirography interspersed with symbols—which standing alone are seen in their true ugliness and vulgarity. Nor do we much fancy the fashion followed in the scenic illustrations, of framing and dissecting the design. Better things have appeared and may appear again in the *Wheelman*.

It seems fitting that the works of Charles Dickens should, in token of his beginning life as a reporter, be translated into shorthand. There lies before us Part 4 of the 'Pickwick Papers' in Pitman's Shorthand Library (20 Paternoster Row, London).

The origin of engraving is commonly assigned to proof-taking by workers in *niello*. This idea has been used by B. A. Wikström in his 'True Story about Gutenberg's Invention of Printing' (J. H. Hamburger). Seven stanzas on seven illustrated plates tell the love of Frederic for Bertha, his carving her initials and his own on a bench, his filling the channels with cherry juice, his sitting down on them to conceal them from his master Gutenberg, his subsequently sitting on his master's paper roll, and the discovery. There is a rude humor in these designs, though the scale is rather large for the amount of it.

The publishers of 'The Realm of Tones,' Messrs. Schuberth & Co., call our attention to an index to the musical celebrities pictured and commemorated in that work, which we had overlooked when writing our notice of it last week.

Mr. Leslie Stephen, whose retirement from journalism to undertake a great British Biography we have already noticed, has been called to the newly-founded Professorship of English at Cambridge—an appointment notoriously of the fittest, and having this attraction for the incumbent (who, by the way, is a Cambridge man) that, as the *Daily News* points out, he will be untrammelled by the example of a predecessor in forming his scheme of instruction. Mr. Stephen was for many years the London correspondent of the *Nation*.

Mr. Henry Harrisse has recently read a memoir and exhibited before the Institute of France an original Portuguese chart and documents *of the year* 1502, showing that the entire coast line of the United States from the Gulf of Mexico to the Hudson was discovered, explored, and named in twenty-two places by Spanish or Portuguese navigators as yet unknown, between the years 1500 and 1502—eleven years previous to any known expedition to the mainland—and that the regions visited by Gaspar Corte-Real are the east coast of Newfoundland and Greenland.

The fourth issue of 'Dramatic Notes, an illustrated Year-Book of the Stage' has recently been published (London: David Bogue; New York: Scribner & Welford). It covers the year 1882, and is edited by Mr. Austin Brereton, who prepared the preceding number, the first having been done by Mr. C. E. Pascoe, the projector of the work, and the second by Mr. Wm. H. Rideing. A title and a table of contents for the four years are given with the present issue, and the four numbers are worth preserving as the best available record of the English stage. The editing is neither as careful nor as ample as in either of the French dramatic annuals, and the illustrations are hardly models of portraiture; but the little book is acceptable in default of a better.

The visit of Mr. Henry Irving, the foremost of English actors, to this country next fall gives interest to a recent English announcement. Mr. Brereton is about to publish 'Henry Irving, a Biographical Sketch,' illustrated with sixteen portraits of the actor in character by Messrs. Edwin Long, R. A. Whistler, Bromley, and Fred. Barnard, and Mrs. Allingham and others. Mr. Irving, who has before now contributed 'An Actor's Notes on Shakspere' to the *Nineteenth Century*, has recently written a brief preface to an English translation of Talma's essay on histrionic art, and he also introduces Mr. W. H. Pollock's forthcoming translation of Diderot's 'Paradoxe sur le Comédien.'

Any educational institution or museum desiring a small collection of antique pottery has an excellent opportunity to acquire one in a series of thirty vases and kylices of Etruscan and early Italian ware, beginning with the archaic work found under the lava on Monte Albano, and coming down to the best period of Etruscan art, belonging to a gentleman living near Chiusi. The price is 1,500 francs, plus the cost of transportation. Mr. Stillman, 8 Via Leopardi, Florence, will undertake the packing and shipping, if desired, without charge.

One of the proofs of natural theology has always been the universal belief in a God, on the principle "quod semper, quod ubique, quod ab omnibus." It has been strenuously or doubtfully affirmed by theists, and denied by atheists, sceptics, and by those who would make all religious truth depend on revelation. M. Lesserteur, a professor in the French Seminary of Foreign Missions, is perhaps of the latter class. At any rate he denies the universality of the belief. It is very easy, he says, to excite the belief in a deity in men who have it not; it is only necessary to call their attention to the structure and mechanism of the world, and they will easily avow that this palace must have had an archi-

tect, that this movement must have had a mover. But not all men have this belief before it is brought to them. From one who was a missionary, and is now a teacher of missionaries, this testimony is not without weight.

The Société d'Histoire de France has just completed the publication, in three volumes, 8vo, of the Memoirs of Nicolas Goulas, who was for thirty years attached to the person of Gaston d'Orléans. The first thirteen chapters were purposely omitted, being exceedingly frank confessions of the writer's early life. Some idea of them was given by M. A. Cellery in a lecture before the Cercle St.-Simon in February, when it was announced that he intended to publish these 'Confessions de Goulas,' with original researches for the last twenty-three years of the autobiographer's career.

Part 6 of Vogt and Specht's illustrated work on the 'Mammalia,' the appearance of the first number of which, treating of the Old World monkeys, we had recently occasion to notice in our columns, carries the subject completely through the Quadrumana and Cheiroptera (bats) to the Insectivores. Although, strictly speaking, the work may be said to be of a popular character, it does not partake of that ordinary stamp of popularity which distinguishes the vast majority of entertaining treatises on natural history. Adequate space is allotted to the description and habits of the individual species, and, in addition, no inconsiderable attention is paid to anatomical details, geographical and geological distribution, and the broader questions connected with the origin and evolution of forms. It is hardly necessary to state that the name of Professor Vogt is a sufficient guarantee of the general accuracy and proper selection of the materials of the text—conditions unfortunately too frequently overlooked in works of a similar nature. Too high praise cannot be bestowed upon the illustrations by Specht, which in artistic finish, in truthfulness of detail, and in faithful representation of that inexpressible something inseparably associated with the *tout ensemble* of animal belongings, probably equal, if, indeed, they do not surpass everything of a similar kind hitherto attempted, not even excepting the masterpieces of Wolf. The plate in Part 5 representing the jaguar and capybara is in the very best style of the wood engraver.

—Some two years ago, a young man from Wisconsin, walking in High Holborn, was driven into a second-hand book-booth by a sudden shower. He noticed a bundle of books marked "American," and took one out. Happening to open it at the fly-leaf, he read there, in a very plain hand, the name "John Howard Payne." Thereupon he readily paid the shilling which was all that was asked for the book, and made many inquiries to discover how it came into the hands of the dealer, but without success. The book, a small one (5⅛ x 3 inches), was entitled 'The New Pocket Biographical Dictionary,' by John Kingston, 2d ed., pp. 308. It was published at Baltimore in 1811, when Payne was nineteen, and an actor on the stage in that city. It is a not improbable conjecture that he bought the book then and there and carried it to England, to which he voyaged within a year or two. When his fortunes declined and he was even thrown into prison, he naturally lost his books. The little Baltimore manual, redolent of "Sweet Home," associated with early successes, and so convenient for the pocket, may well have been one of the last possessions he gave up. Either Payne, or some subsequent English owner, had the book very tastefully bound in calf. One page of the fly-leaf bears the following words to guide the binder, which are scrupulously copied on the back of the book: "American Literature, Biography, Biographical Dictionary, Kingston." Whether these directing words are in Payne's handwriting is a question as to which chirographic experts disagree, and which outsiders must feel incompetent to decide. The words, "John Howard Payne," betoken a youthful writer. The hand is handsome, and every letter is distinctly and gracefully formed. The six words on the opposite page, while having many points of resemblance to the signature, are more carelessly and hastily written, and argue an older writer. It is worth inquiry whether autographs of Payne are common, and especially whether any of them are earlier than that in the Kingston volume.

—The April number of the *Antiquary* contains a paper by Mr. Gomme—one of the best-known and most successful investigators in the early history of institutions—upon "Nottingham Borough Records." The key to the article is found in the following passage: "English municipal history has never completely claimed for itself a Roman origin, because there are such extensive breaks in the chain of evidence as to forbid such a proposition ever reaching beyond the domain of theory—theory, too, of special schools of thought. But, on the other hand, English municipal history has not fully claimed for itself its origin in the village system of agricultural communities, which belongs to the Teutonic and to the Celtic origins." For the matter of that, any continuity in municipal life from Roman to mediæval times is now given up, we believe, even for Italy and southern France. The line of inquiry here indicated is the same as that of Mr. Round in his articles upon the "Domesday of Colchester" (see the *Nation* for March 8); it has also been followed out upon the Continent, especially in Germany (very elaborately) by Von Maurer, and in Belgium by Van der Kindere. Mr. Gomme gives, from the Nottingham records, several cases of the right of preëmption, which is so integral a part of the village-community theory. In the same number is an article on "The Church Ceremony of Marriage," showing how "the Church prayer-book has preserved for us a genuine piece of folk-lore," the very words even of the old formula being incorporated in the ritual. Another article is by Mr. C. F. Keary, upon "The Coinage of Christian Europe"—a continuation of articles upon classical numismatics. This paper traces very clearly and completely the history of coinage from the later Roman Empire to the Middle Ages. For the Middle Ages proper one would desire a little more fulness, particularly in regard to the successive debasements of the coins and the history of the *mark*.

—While of no startling vigor in its political department, the new organ of English Conservatism, the *National Review*, promises rather better than fairly well in literature, poetry excepted. For instance, Mr. Edward Ford discourses instructively, in its third number, on the "Names and Characters in the 'Vicar of Wakefield,'" and contends, more than plausibly, that the places and persons of the tale were far from being pure inventions. Wakefield being no other than Wakefield, it is maintained that the "small cure, . . . worth only £15 a year," "a journey of seventy miles" from that town, which the Vicar left for it, is to be identified with Kirkby Moorside, rated in "the King's books," at the time when Villiers died there, at £14 0*s.* 10*d.* The surroundings of the Vicar's new home correspond in all respects with ascertained facts. The "prattling river" in front of the Vicar's house was the Dove. Welbridge, where Moses sold the horse, we have in the petty market-town of Welburn, about a mile distant from Kirkby Moorside. With less certainty, Mr. Ford traces "Thornhill Castle" to Helmsley, finds "the Wells" at Harrogate, and locates "the races" at Doncaster. "Eleven miles" from the parsonage of Dr. Primrose was the prison to which he was taken, and this, most probably, was at Pickering. With equal likelihood, as it is shown, it was at Boroughbridge, near the confluence of the Ure, the Swale, and the Ouse, that Olivia narrowly escaped being drowned "in the midst of a rapid stream." George Romney, it is suggested, after adduction of strong circumstantial evidence, was the artist who executed the memorable picture, of undisposable frame. The benevolent Sir Wm. Thornhill, it is pretty conclusively made out, was intended for Sir George Savile, the friend of both Burke and Pitt, or "Savile of Thornhill," as he was commonly designated, with reference to a parish included in his ancestral domains. But these details must suffice. As Washington Irving says of Goldsmith, in a strain of mainly divinatory criticism the truthfulness of which Mr. Ford has interestingly ratified by his researches, "scarcely any adventure or character is given in his works that may not be traced to his own many-colored story."

—The preface to the second edition of Mr. Halliwell-Phillipps's 'Outlines of the Life of Shakespeare' (Longmans, Green & Co.) bears date of April, 1882. Our tardy notice of this monumental work was published in the following December, when the indefatigable author was closing his preface to a third edition, which reached us about a month ago. The 703 pages have become 736, though, by an unusual and inconvenient compensation, the index has shrunk even within its former too scanty dimensions; and one who wishes to compare the differences in the two editions has, from lack of any table of contents, a genuine taste of the difficulties of Shakespearian research. It will be found that the Outlines proper have been enlarged just one-half, with no corresponding increase in the Illustrative Notes, which are, however, so greatly modified by omissions that the owner of the third edition can by no means rest contented that he has not the second, as in the case of most books. This remark equally applies to other portions, such as the body of essays following the Notes, from which we now miss those on the spurious plays, on North's Plutarch, on an early notice of Hamlet, on Lord Pembroke's actors, on the Coventry Mysteries, on the First Folio. In general, we remark an improvement in the arrangement and classification, the transpositions being so numerous that one may easily err in estimating the extent of the changes.

—No great discovery leading directly up to the poet has been made in the past year, but it is getting nearer to his person to be shown a facsimile of Richard Quiney's letter, the only one addressed to Shakespeare known to exist. This whole episode has, with good judgment, been much dwelt upon in the new edition, and we realize the perpetual gleaning in the author's chosen field when reading the fresh particulars about the husbands of Shakespeare's married daughters—namely, Dr. John Hall and Thomas Quiney—and the daughter of the former pair, Mrs. Thomas Nash. For one slight particular, we remark that this lady, Elizabeth Hall, is now said to have been born in February, 1608, whereas the second edition gave her baptismal date precisely as February 21. More is made of the subject of Shakespeare's birthplace, and two views are given of the cellar, the only unchanged portion; of his butcher's apprenticeship; of his marriage, and the inferences to be drawn from the circumstances attending it; of Ben Jonson's first contact with him; of Davenant's attach-

ment for his godfather, etc. There is also some valuable discourse about the horrible and the brutal in the plays of Elizabeth's time, and a timely reminder that London in Shakespeare's day offered plenty of opportunities for the lover of horticulture and of wild flowers to gratify his eye and enlarge his knowledge. Besides the pictorial illustrations already mentioned, is one of Stratford-on-Avon in 1749, from an old print, and a facsimile of a list of holders of corn in the ward in which New Place was situated, from the original MS. return dated February, 1598, containing Shakespeare's name for ten quarters, the third (quantitatively) on the list. It would be superfluous to speak of the wealth of information concerning the manners and customs of the period covered by this work, for which we are under lasting obligations to Mr. Halliwell-Phillipps.

—"A non-graduate officer" writes:

"E. I. R.'s" explanation of truthfulness in schools is confirmed by the experience of West Point, where every pupil represents a distinct Congressional district, and the standard is as high as at the University of Virginia. As is well known, personal discipline at the Military Academy, down to very small details, is exceedingly strict. But for every breach reported the inculpated cadet is required to offer an explanation. If he denies the offence, the matter is dropped, on the supposition that the reporting officer was in error. The rare deviation from exact and honorable truthfulness, by an occasional moral idiot, proves the rule by the social pressure and ostracism that at once follow. This is not born of geography, but depends upon the happy traditions of the past carefully preserved by *esprit de corps*."

GALTON'S DEVELOPMENT OF THE HUMAN FACULTY.

Inquiries into Human Faculty, and its Development. By Francis Galton, F.R.S. Macmillan & Co. 1883. Pp. 380.

PRETTY much all that Mr. Galton has written since the publication of his work on 'Hereditary Genius,' in 1869, is here brought together in something like logical sequence, to some extent rewritten, and with much that is new interpolated. Traces of the fragmentary origin of the work still remain, and make it, as the author intended, more suggestive than encyclopædic.

If photographs of several members of the same family, between whom a strong family likeness exists, be reduced to the same size, degree of lightness or darkness, and the same point of view, superposed with much exactness so that the eyes coincide, and then exposed successively to the sensitized plate of a photographic camera—each an equal fraction of the whole time required to take a perfect picture—it is evident that those points and features in which the several component faces coincide will stand out clearly, while those in which they differ will be blurred. This process Galton described five years ago and named composite portraiture; but his methods and results are here greatly improved, and a number of typical portraits are given. In one case, six members of the same family, male and female, parents and children, are combined into a portrait which friends of the family recognized as typical of it, while differing as to which member was represented. A remarkably clear portrait of Alexander the Great is produced from six different medals. Portraits of criminals, consumptives, royal engineers, etc., are obtained in some cases from fifty or even one hundred components. These pictorial averages, Galton thinks, may be serviceable in retouching negatives, in obtaining the physiognomy of crime and diseases, and in defining the most vigorous type toward which a race is developing along the line of its best tendencies. They also suggest how "general impressions are founded upon blended memories," and perhaps how sense-perceptions are combined into ideas. So, too, statistical tables and moral averages reveal general traits by emphasizing the common and eliminating the individual elements. If brain-cells respond to the action of summated impressions in a way at all analogous to the response of the photographic plate to the successive portraits, then the old strife between nominalism and realism has received something not altogether unlike an experimental solution. At any rate, psychology receives a most suggestive illustration; and this, for a science which deals so largely with things invisible, impalpable, and imponderable, is of the greatest value.

Men of the best stock, or "eugenic" men, differ from those of a lower order in two fundamental ways. First, they have more energy or capacity for work, a high degree of which, our author thinks, distinguishes all his scientific countrymen. Idiots are feeble and listless, domestic pets grow dull if stimuli to activity are removed. Even fleas keep dogs active and well-conditioned, which if kept too clean cease to thrive. True, if all men were energetic, there would be little scope for pity or charitable institutions; but it would be wrong to preserve a sickly breed for the sole purpose of tending it. In the second place, eugenic men distinguish more grades of sensitiveness between a just observable impression and an intensity of it which passes over into pain. The feeble-minded often burn themselves intentionally because the impression is not so strong as to be more than a pleasant tonic. Words, Galton tells us, distinguish but five degrees of weight; blind men's touch is not finer than others, and savages and sailors do not have finer senses for forest or sea than cultivated men, but they merely know better what to look for and where to seek it. His tests revealed the fact that old people cannot hear high notes, but that some animals—*e. g.*, the cat—have an exquisite ear for tones higher than man can ordinarily recognize. In another section, anthropometric laboratories are suggested where methodic photographing of school-children shall be undertaken, and where members of each family shall go at stated intervals to be not only photographed, but weighed, measured, etc. This kind of lore must, of course, be of slow growth, but we owe this to our children, who are but the prolongation of our own lives, and need all the experience and self-knowledge of mind, body, and character we can give them. Gregarious habits all the way down their long pedigree have made it very hard for individual men to stand, think, and act freely and independently for themselves. Quakerism is recruited from among the color-blind, and favors color-blindness. The comparative effects of nature and nurture are best studied in the life-history of twins, thirty-five pairs of which are collected, to show how predominant heredity is over education and environment. Almost every kind of animal has, at some time and place, been trained and more or less domesticated. Those now most subject to man are chosen by slow selection as the most docile, strong, useful, etc. The objective efficacy of prayer is made extremely improbable, we are told in another section, by statistics. The longevity of royal personages, which is prayed for so universally, is not increased. Insurance offices do not discriminate risks on life or property prayed for; commercial enterprises are not more secure if devout men are shareholders, or when religious bodies deposit their funds or charities in them. Missionary vessels are no better risks than trading ships, and slavers have an exceptional immunity from accident. The writer pleads for a greater sense of freedom, opportunity, and responsibility; for public funds for portioning poor marriageable girls. Even charities might be directed in this and other ways toward the other great duty of furthering evolution by stocking the world with more "healthy, intelligent, moral, and fair-natured citizens."

The most fascinating, as well as the most original, part of the book is the sections on visualizing, of which the author's previous studies have been greatly extended, and the different forms of which are illustrated by scores of diagrams. Mental imagery is often so vivid that artists can draw from it, as Blake did. Seeing faces in the fire or forms in the clouds, blindfold chess-playing, playing or speaking from notes or manuscript seen only with the mind's eye, are forms of it. It is hereditary, dulled by language and book-making, strongest in children, not connected with sharpness of vision, and far more comprehensive than any field of vision. Bushmen show it in their drawing, and Eskimos in their remarkable geographical instincts. It is cultivated unconsciously by dressmakers, tacticians, engineers, architects, by most systems of mnemonics, and the means of developing it should be taken into most serious consideration by educators. The study of "number-forms" is only one aspect of it. About one person in twenty sees numerals in some form of visual imagery. Figures are seen or thought along lines: with sharp curves and angles at ten or twelve, and at twenty, thirty, forty, etc. These lines or forms bend now up, now down, are now lost, run behind the back or into the pocket, follow the outline of hills on the horizon near the home of childhood, and are constant for years in the same individual. Often colors are associated with numbers, vowels, or even consonants. These were named by Beuhler and Lehmann, who first observed them, photisms; and Galton gives colored diagrams of several interesting cases of this color-association, and connects the whole topic with the experience of visionaries and dreamers, and suggests that partial irrigation of the brain by the blood, causing suppression of action in some parts of it, may have something to do with it. The forms which animals seem to carry in their psychic organization of the habitations they build with such regularity; the order in which storks and other birds migrate in flocks; fashion in artistic forms and curves, as in the patterns of prints, wall-paper, missals, etc.; and even the form of handwriting, so expressive of character as Galton thinks it to be, are illustrations of the all-pervasive nature of the visualizing faculty, which seems to be checked only by the rise of abstract ideas and the habit of thinking in words instead of in pictures.

One result of these studies is to emphasize the distinction now so often referred to by psychologists, but never as yet well wrought out, between the relative preponderance of aural and of visual impressions in determining the type of mental development. This would no doubt have been more apparent to the author if he had extended his observations to younger children, in whom there seem to be two leading genera or types of intelligence—the one in which mental operations are mainly in terms of sight, especially form, supplemented by motor impulses, and even by tactile impressions, and to which all memorized or other forms of words are difficult, unnatural, and misleading, because all their natural thinking is visualization; and another, very different, type, in which verbal forms appealing to the ear and following audible signs are dominant. The latter order of minds have little imagination, little constructive or inventive power, are not natural geometers or seers in any Swedenborgian sense, but are often endowed with high poetic and rhythmic faculties. The author has almost no light to shed on the origin of the

visualizing faculty ; in fact, its cause and development do not seem especially to have interested him. In a word, Mr. Galton has given us his view of a great number of topics of contemporary psychologic and anthropologic interest with freshness and originality, but with little evidence of a knowledge of the rich and varied literature already existing on some of his topics, which are touched upon only in the most superficial, conjectural way. His remarks about, *e. g.*, visionaries, enthusiasm, and test-weights, have little value, and are naïve and unsuggestive. This, however, for all who labor in a field so vast as psycho-anthropology has now become, is at some points probably almost a form of fate.

BAZAINE'S APOLOGY.

Épisodes de la Guerre de 1870 *et le Blocus de Metz.* Par l'ex-Maréchal Bazaine. Veritas vincit. Madrid : Gaspar; New York: Westermann & Co. 1883.

This book is in the main the same as that published in Paris, in 1872, before Bazaine was court-martialled, under the title 'L'Armée du Rhin depuis le 12 août jusqu'au 29 octobre, 1870.' To this have been added some extracts from the evidence before the court, and a long preface on the true lines for the defence of France, and on the proper organization of the army. The additions are, however, by no means very valuable, and the book is a decidedly unsatisfactory one.

The difficulty with it is two-fold. First, Marshal Bazaine, though a soldier of great experience, is not an educated man. He does not know how to write a clear and connected narrative; still less is he equal to the task of arraying in their proper order the reasons which induced him to take the course which ended in the surrender of his army. In the second place, his case is a bad one: it would be difficult for the most ingenious counsel to make out a good show for him. Singularly enough, however, Bazaine does not seem to realize the fact that all the presumptions are against him. He does not seem to see that a Marshal of France, commanding four corps and the Imperial Guard, who unlimbers his guns, dismounts his cavalry, eats up his horses, and finishes his campaign by the surrender of his army and one of the strongest fortresses in France, must give an account of himself that shall be clear and unambiguous, or be lost in the opinion of the world. Never in modern times did such a gigantic surrender take place as this of Bazaine's—150,000 regular troops in good order and condition, besides nearly 25,000 more sick and wounded, with all the artillery and supplies of all kinds that belong to such a force, and all the arsenal of Metz into the bargain. An officer who would defend such a termination as this to his campaign must address himself seriously to his task, or he will not be listened to, and ought not to be listened to.

Yet Marshal Bazaine writes in a tone of calm superiority to his critics, as if the animadversions on his conduct were the result of personal dislike or jealousy, and as if his fate in being cashiered was an inscrutable dispensation of Providence. The reader will find little in his narratives to supply the need of such a treatment of the case as is evidently required. Instead of attempting a systematic defence of his course, Bazaine gives us plenty of criticism on his brother officers—much of it, no doubt, deserved—plenty of criticism on the Government, no doubt, also, in great part deserved; and in our opinion the valuable part of his book consists of these passages, and in the light they throw on the state of the French army in this most unfortunate campaign. That an army organized, as was the French army, on the old-fashioned system should be in a state of greater or less need of various important articles of food and equipment when it had effected its concentration, is not to be wondered at. The territorial system, of which the Prussians were the inventors, avoids most of the causes which bring about these evils. In that system an entire army corps, with all its administration, is concentrated, in time of peace, in a certain district. When war is declared, therefore, no time is lost; there is no need of hurry; there is no fetching of one regiment from this distant garrison in the interior to this village, or of another regiment from a seaboard fortification to that village. Nothing of the sort takes place; all is easy, because there is concentration in time of peace. Every one knows what struggles an army like that of France at the time of which we speak, or that of England to-day, has to make in order to concentrate a respectable force in a short time, and it was remarkable, at least to any one who knew anything of the former efforts of European armies with like organization to effect a rapid concentration on the frontier, that in 1870 the French succeeded as well as they did. They had on or near the Rhine in the first week in August—that is, between two and three weeks after the declaration of war—the First, Second, Third, Fourth, Fifth, Sixth, and Seventh Corps d'Armée, and the Imperial Guard; and though all the ranks were not full, there could not possibly have been fewer than 260,000 to 280,000 men in line. Bazaine, according to the Prussian Official Narrative, surrendered 173,000 men; he could not have lost from casualties in action and sickness fewer than 20,000 or 25,000 men. His command must, therefore, originally have numbered nearly 200,000 men. MacMahon had upward of 50,000 men at Wörth, and two divisions of the Fifth Corps were not engaged there. There were, therefore, troops enough to have made a vigorous and more or less successful campaign.

But the faults of the Emperor and his corps commanders began with the beginning of the campaign. Of course, we cannot enumerate them here; it is sufficient to say that when Bazaine assumed command of the forces near Metz on the 13th of August, the army under MacMahon had been driven into the interior, and there was nothing for the Army of the Rhine to do but to retreat. Whether Bazaine purposely delayed this retreat or not, is not made any clearer to us by this book of his. That he was under orders to retreat is admitted; that he gave corresponding orders to his lieutenants is admitted; he alleges that they lost time, and very likely they did. But it is pretty clear from more than one passage, that Bazaine himself did not believe in the advisability of allowing his army to continue its retreat; that he dreaded its effect on the morale of the troops, which the early disasters had sensibly affected; and that he thought he could recover this morale by winning a victory in which he should stand on the defensive. In other words, he thought the army fit only for a defensive battle, and that Metz was the proper place to fight such a battle, or series of battles. Yet he does not squarely tell us that this was his idea, and maintain that it was a sound one. Here as elsewhere there is a great lack of frankness.

Then, when he is surrounded at Metz by the army under Prince Frederick Charles, he leaves us equally in the dark as to his real intentions of staying or breaking through. Did he on August 31 and September 1, in what is called the battle of Noisseville, really attempt to cut through the enemy's lines? We have no question that he did not so intend, the dilatoriness of the preparation, the ostentatiousness of his proceedings—"considerable uproar and the incessant clanging of military bands" attracting "the attention of the Prussian watch-posts," according to their Official Narrative—the lame, inefficient way in which the successes of the 31st were obtained (for they were not followed up), are sufficient reasons in our mind for this conclusion. It was not that there was any difficulty about breaking through the lines; the accounts leave us in no doubt whatever as to this. But Bazaine was afraid of what would happen to his army after he had got it into the open field. Yet, while he gives us in more than one place materials for this conclusion, he does not formulate it himself, and then defend it like a man.

Lastly, the same double pleading is to be seen in his treatment of the charge that his conduct in staying in Metz and surrendering there was influenced by political motives. Of course he does not admit this; yet he certainly did try to obtain his instructions from the Empress after the revolution of the 4th of September; he sent General Boyer to Chiselhurst for this purpose. The note which he gave this officer begins by saying that "the Marshal commanding the Army of the Rhine, inspired with the desire which he has of serving his country and of preserving it from its own excesses, interrogates his conscience and asks himself, if the army placed under his orders is not destined to become the *palladium* of society: that *the military question is settled:* the German armies are *victorious,*" etc. This note is dated October 10, 1870. One may hold what opinion one may choose about the relative merits for France of the two forms of government, the Empire and the Republic; one may even condemn (as does the writer) the action which, at the dictation of a city mob, changes the form of government of a great country in the midst of a foreign war; but no opinions of this kind or of any kind can shield Bazaine. An officer in the command of troops, who, when his country is in the midst of a foreign war, admits the success of the enemy, and prates about his army having for its function the "salvation of society" instead of the duty of persistent resistance to the common enemy, is a traitor, and deserves to be shot.

RECENT LAW BOOKS.

A Treatise on the Law of Executors and Administrators. By James Schouler. Boston: Soule & Bugbee. 1883.

A Treatise on the Constitutional Limitations which Rest upon the Legislative Power of the States of the American Union. By Thomas M. Cooley, LL.D. Fifth edition, with considerable Additions, giving the Results of the Recent Cases. Boston: Little, Brown & Co. 1883.

Remedies and Remedial Rights by the Civil Action, according to the Reformed American Procedure. A Treatise adapted to use in all the States and Territories where that system prevails. By John Norton Pomeroy, LL.D. Second edition. Boston : Little, Brown & Co. 1883.

The American Decisions. Containing the Cases of General Value and Authority decided in the Courts of the Several States, from the earliest issue of the State Reports to the year 1869. Compiled and annotated by A. C. Freeman. Vols. xlii., xliii. San Francisco: A. L. Bancroft & Co. 1883.

Essentials of the Law. Vol. ii. Comprising the Essential Parts of Stephen on Pleading; Smith on Contracts; Adams's Equity (including Pleading and Procedure). For the use of Students at Law. By Marshall D. Ewell, LL.D. Boston : Soule & Bugbee. 1883.

A Digest of the Statutes, Equity Rules, and Decisions upon the Jurisdiction, Pleadings, and Practice of the Circuit Courts of the United States; including Decisions relating to Pleadings and Practice at Common Law, in Equity, Appeals in Admiralty, and in Criminal Cases. By Erastus Thatcher. Boston: Little, Brown & Co. 1883.

An Epitome of Leading Common Law Cases, with some Short Notes Thereon. Chiefly intended as a Guide to 'Smith's Leading Cases.' Fifth edition. By John Indermaur, Solicitor. American edition, by Charles A. Bucknam and Bordman Hall, of the Boston Bar. Boston: Soule & Bugbee. 1883.

A Selection of Leading Cases in the Common Law. With Notes. Second edition. By W. Shirley Shirley, B.C.L., M.A. Boston: Soule & Bugbee. 1883.

Commentaries on the Law of Statutory Crimes; including the Written Laws and their Interpretation in General; what is Special to the Criminal Law, and the Specific Statutory Offences as to both Law and Procedure. By Joel Prentiss Bishop. Second edition, rewritten and enlarged. Boston: Little, Brown & Co. 1883.

Law and Lawyers in Literature. By Irving Browne. Boston: Soule & Bugbee. 1883.

Mr. Schouler's 'Treatise on Executors and Administrators,' according to his preface, "completes an investigation of the law of personal property, whose results the writer commenced publishing ten years ago." The "results" have been published in four volumes, which cover, besides the matters treated in the present work, such important titles of the law as gifts, sales, bailments, including carriers and innkeepers, etc. The author declares rather cautiously that he has been "not without direct encouragement from his professional brethren." This statement will not be questioned by any one who knows how eager lawyers are for new collections of cases; but Mr. Schouler's books have never shown any tendency to become works of authority, and it is difficult to imagine that they will ever supplant such treatises as, let us say, 'Benjamin on Sales' or 'Williams on Executors.'

Notwithstanding the length of the period which has elapsed since Mr. Schouler began his researches, his work itself produces the impression of a rather reckless rate of speed. When he undertakes, for instance, to discuss the important subject of fixtures (§ 227), which he disposes of in three pages, his statements of the law are so vague, if not inaccurate, that it is wholly impossible to say what he believes the rules on the subject to be. The "cardinal rule," he says, is, that when the controversy arises with an heir or devisee, the right to fixtures "is most strongly taken in favor of the heir or devisee," whereas, if it arises between a life-tenant and a remainder-man, the law "appears to favor the soil rather less"—which reads very much as if the whole thing went by favor, and the common law was guided by an affectionate interest in heirs and devisees, on the one hand, and an aversion for remainder-men, on the other. It is not impossible to discover and state what the rules regarding fixtures between the various classes of claimants are, for it has been done by other writers; and it would be utterly out of the question to decide a given case by means of what Mr. Schouler says on the subject. In short, what he has to say is so ill-considered as to be nearly useless. To turn to another topic, which the author rather funnily calls the "suitable testamentary condition" of the testator, the time and attention of courts have, every lawyer knows, been greatly occupied with the burden of proof in insanity cases. Some courts have held that the burden was upon the proponent throughout; others that it shifted, under certain circumstances, to the other side. Here is what Mr. Schouler says: "And the burden being accordingly upon the proponent of a will to establish full testamentary condition and capacity in the testator, no mere presumption of sanity and free will can avail, as an independent fact, to outweigh proof to the contrary." This is about the most summary and obscurely expressed disposition of the matter that we have ever met with. These are fair examples taken quite at random from Mr. Schouler's pages. His style is very peculiar, and he frequently seems to be guided by a determination under no circumstances to be led into definite or precise statements of the law, as if he really felt that this was the pitfall the conscientious text-writer in these times ought most carefully to avoid.

The second edition of Judge Cooley's 'Treatise on Constitutional Limitations' appeared in 1871, and since that time three more editions have been called for. The demand for the book is in part occasioned by the fact that it is the only treatise in existence which is exclusively devoted to the subject of which it treats; constitutional limitations being taken up only incidentally by Story and other text-writers. It should be added, however, that Judge Cooley's reputation as a judge is very great, and on this account whatever he has to say on any branch of law carries with it an authority sufficient to place the book in a different category from ordinary text-books. His style has the merit of clearness, and his collection of authorities is full.

The new matter in the second edition of Mr. Pomeroy's work on 'Remedies' is chiefly confined to the notes. A new and fuller index has been added. The codes of procedure which have within the last thirty years supplanted the old common-law system throughout the United States are substantially alike, and the courts have applied to them a pretty uniform system of construction, and reached everywhere the same general conclusions. Mr. Pomeroy's treatise is not as well known as it should be to practising lawyers, correct pleading being something the importance of which is apt to be overlooked in the hurry and looseness of modern practice. It is an excellent work, and we can cordially recommend it to the profession.

The forty-second volume of 'The American Decisions' contains cases originally reported in various authorized series in the years 1843–1846. The leading case of Masterton *v.* The Mayor, etc., of Brooklyn gives Mr. Freeman an opportunity for a note on damages for breach of an executory contract; Wilson *v.* Mackensie, for a discussion of the liability of naval and military officers for acts done under color of military authority; and there are a quantity of short notes on a variety of subjects which add to the value of the volume. The forty-third volume comprises cases taken from the regular reports of the years 1845–46. There are long and important notes by Mr. Freeman on the separation of the jury in civil and criminal cases, sheriffs' sales, the protest of commercial paper, riparian rights, the negligence of common carriers, warranty of title to land, and the liability of stockholders.

As a handbook for students, Mr. Ewell's 'Essentials of the Law' is in many respects convenient. It can hardly take the place of the works on which it is founded, and in the case of 'Stephen on Pleading,' which is in itself a model of condensation, it is not desirable that it should. Stephen is in his own way a classic, notwithstanding the fact that the system which he explains so beautifully is obsolete, or nearly so, all over the civilized world.

The practice of the United States courts is a tangled maze of antique and modern systems, full of puzzling and unexpected problems, which are often solved differently in different circuits. We have known a circuit judge to be so bothered by the question of jurisdiction over a corporation alleged to be "found" within the district—a matter as to which the law ought to be perfectly plain—that he was obliged to refer it, in order that evidence might be taken, and the case dragged on for months before it could be ascertained whether the defendant was or not before the court. Only lawyers constantly practising before United States courts know how full of stumbling-blocks is the path of the most wary practitioner through them. A digest of the whole subject, like that of Mr. Thatcher, covers a wide field, and, if well arranged, must prove of great utility to the profession. We cannot say that we think the system adopted by Mr. Thatcher a judicious one. Decisions upon jurisdiction and other subjects he puts under the sections and subdivisions of the Revised Statutes which confer jurisdiction. This, we think, is a mistake—first, because, since the Revised Statutes are changed from year to year, no one is in the habit of going to a digest to see what they are; second, the only convenient arrangement of decisions is by subjects, the titles being of course as full as possible. Mr. Thatcher uses this method more or less throughout his book, but in such a way that he is obliged to have recourse to an index to enable any one to look up the subjects in the digest. Cross-references carried as far as possible on the plan adopted in recent volumes of the United States digest seem to us the true way.

Mr. Indermaur's 'Epitome' was intended for the use of English students, and specially for "articled clerks not having sufficient time to fully peruse" Smith's Leading Cases. It is also of value to students who have plenty of time, as it condenses the cases, and the law bearing upon the points decided in them, in a very convenient and compendious form. The American notes consist mainly, if not altogether, of cases. To make the American work as good as the English, the editors ought to have gone more deeply into the subject. The rules laid down in Hadley *v.* Baxendale, for instance, would bear much further examination than they have thought it worth while to give.

The first edition of Mr. Shirley's 'Leading Cases' appeared in 1880, and the appearance of a second in three years seems to prove that his somewhat original method of treating the authorities has its uses. The cases he gives are not transferred from the reports as they stand, but are reported by the annotator in the free, humorous manner of a newspaper. This method Mr. Shirley thinks likely to fix the cases in the mind of the student—for it is students rather than practising lawyers for whom the book is intended. The notes do not go deeply into the subject, but, taken with the case, present the more important points of the law developed from it by the judges in a brief compass. As an assistance in preparing for legal examinations, we should think the book would be of considerable service.

Mr. Bishop's work on 'Statutory Crimes' completes a series of useful text-books covering the whole field of American criminal law, criminal evidence, criminal pleading, and criminal practice. It treats of the principles of statutory interpretation, with special reference to the criminal law; of the statute of limitations in criminal causes; pleadings in cases arising out of private statutes and municipal by-laws; and discussions of the offences "purely or in substance statutory," as distinguished from "mere statutory extensions of common-law crimes."

The book has been long out of print, and the present edition is almost a new work, so greatly has it been increased in size and value. Mr. Bishop's accuracy and fulness of citation make all his books of use; their permanent value is impaired by a peculiar carelessness of language, which in a book on interpretation is sometimes grotesquely unfortunate. For instance, he quotes from Lieber the rule that but one meaning can be attached to the same sentence, and then gives as an illustration the following: "If the Legislature should direct the officers of a court in a particular emergency to *sit or stand*, the meaning could not be that a part might sit while the rest stood." But why not? Such a legislative direction might be compared to that in ordinary life, to "play or pay." This injunction, if addressed to a number of persons, would certainly give each one of them liberty of choice in the matter.

Mr. Browne, in 'Law and Lawyers in Literature,' has made an entertaining collection of extracts, with a running comment of his own, which exhibit the lawyer as he appears to the novelist, the dramatist, and moralist, and the man of letters in general, from the earliest times down to the present day. Speaking broadly, his book shows that in popular literature the lawyer has always cut a rather sorry figure. He is usually represented as tricky, disingenuous, and crafty, if not positively dishonest. His main object is to extract a living from his clients' misfortunes, by hook or by crook; and in the accomplishment of this object he spares neither age, sex, nor condition. He is a social harpy, dreaded by all, and most by those who are unlucky enough to have to come into relations of confidence and trust with him. There are, of course, good lawyers in literature—men who are the soul of honor, who protect purity and innocence, run down the wicked and bring them to justice; who are good angels to their clients. It is through such as they that the vile plots of Quirk, Gammon & Snap are unravelled and exposed. They have, however, made comparatively little impression upon literature; the fame of Oily Gammon and his wicked partners survives ('Ten Thousand a Year,' by the way, having been written by a lawyer, is a rather strong illustration, for Mr. Warren certainly did not intend to blacken the profession), while the name of their worthy rival perishes and is forgotten. Dodson & Fogg are names handed down to posterity, but who treasures up the memory of the virtuous antitypes of Dodson & Fogg?

But we see the same thing in other professions and walks of life. If lawyers are usually represented as sharp, mean, or dishonest, doctors are popularly very doubtful characters. We have no doubt that the physician in literature might be made the subject of a book not very unlike Mr. Brown's. Again, what a picture of the publisher and his treatment of the author might not be drawn from the literature of the modern world. Poets and novelists have not been prolific in the type of the good publisher. Neither can it be said that the literary man has spared himself. Poets have, to be sure, usually held up poetry as the most ennobling occupation in the world; and the "bard," whatever he may be at home, is in verse a semi-sacred character still, as he was actually in classical times. But prose-writers have made a vast amount of fun of the literary career; have held the literary man up to ridicule and contempt; have laughed at his Bohemianism, his everlasting insolvency, and his often disgraceful relations with his creditors. A book about literary men as they appear in literature might be made, we fear, an amusing exposure of the craft; the type of the good, wise literary man—the literary man as he ought to be—is rather unfamiliar.

Various explanations of these curious facts may be suggested, but, taken altogether, they show that the use of the lawyer in literature is not exceptional, and does not necessarily prove that the popular notions about him are fair. He has so many doubtful companions that we are forced to believe that the true explanation is that literature finds it easier to make profitable use of bad types than of good ones; in other words, that people like to read about bad people of all kinds, and derive more excitement from such reading than from descriptions of good ones. A literature in which the lawyer should always appear as he is described by theoretical writers, as unselfishly taking his part in the work of administering justice, telling the truth at all hazards, never seeking to gain an unfair advantage, overreach his client, or even his antagonist; in which a doctor should always be the minister of health and physical salvation, and never humbug his patient with unintelligible words or mysterious suggestions of unsuspected ailments; in which a publisher should never take advantage of an author's poverty, and so on, might be a literature more improving than that which we have, but it could hardly be so entertaining.

BOOKS ABOUT THE STAGE.

Nights at the Play. By Dutton Cook. London: Chatto & Windus; New York: Scribner & Welford. 1883. 2 vols. 8vo, pp. 324 and 350.

Four Original Plays. By A. W. Dubourg. London: Bentley; New York: Scribner & Welford. 1883. 8vo, pp. 239.

A Mingled Yarn: Sketches on Various Subjects. By Henry Edwards, Comedian. New York: G. P. Putnam's Sons. 1883. 8vo, pp. 157.

Gaulois et Parisiens. Par Léopold Lacour. Paris: Calmann Lévy; New York: F. W. Christern. 1883. 8vo, pp. 325.

THERE may well be two opinions as to the advisability in general of gathering together into a book scattered and often incongruous articles, written at random and on the spur of the moment for immediate publication in a newspaper or magazine. A volume so compounded must always of necessity be lacking in finish and in unity of design. Yet the plan has its advantages no less than its disadvantages, and in no department of literature is the advantage greater in proportion than in dramatic criticism. Almost the only knowledge we can have of the theatre of the past is that afforded us by the contemporary dramatic critic. The play may remain, but reading is not seeing, and, to judge it exactly, we need to know how it affected the audience when it was acted. The actor's life may be written by himself or another, but the best part of many recent histrionic biographies is the judicious selection and comparison of the opinions of competent critics at first hand. For these reasons, we are very glad indeed that a dramatic critic as learned, as honest, and as able as Mr. Dutton Cook has been moved to gather together the chief of the criticisms which he has contributed, first to the *Pall Mall Gazette*, and afterward to the London *World*, during the past fifteen years. He has thus given us an outline-history of the course of the drama in England—a history not elsewhere accessible in a form at once convenient and compact. Mr. Cook's first criticism is dated September, 1867; and, as the final entry in Prof. Henry Morley's 'Journal of a London Playgoer' is dated February, 1866, the gap between the two books is not wide, and we may fairly accept Mr. Cook's book as a continuation of Professor Morley's. The 'Journal of a London Playgoer' reaches from 1851 to 1866, and Mr. Cook's volumes now cover the years 1867–1882. As Genest broke off in 1830, and Doran closed his 'Annals of the English Stage' with the death of Edmund Kean, there is a gap of only some twenty years in this full record of acting and play-writing in England. Mr. Cook's criticism, as we see it in the hundred and fifty newspaper essays here reproduced, is straightforward and even-tempered. It is the result of a large experience of the theatre, of wide reading about it in all its forms, both in England and France, and of a deep love of the stage. It has no superabundant charity for American actors or American dramatists. It has occasion to consider the acting of the late Charles Fechter, of Mr. Henry Irving, of Mr. Joseph Jefferson, and of Mr. Edwin Booth, as well as (with the aid of a minute acquaintance with theatrical *ana*) many important revivals of old plays; and it sets forth simply the impression produced on a competent observer by many of the best and the worst new plays acted in England of late. The book is disfigured by a few misprints; but, as some amends, it has an index, not perfect, but better than those usual in English books.

It happens that Mr. Cook has not reprinted his criticism of "New Men and Old Acres," a modern comedy written by the late Tom Taylor and Mr. A. W. Dubourg, which achieved a fair success several years ago. Mr. Dubourg has been trying to get another play acted ever since this collaboration with Tom Taylor, but with scanty success; so now he makes bold to publish four of them in a volume, to which he prefixes a few pages of personal explanation. He declares that the plays are published partly because he is "tired of hearing that original English plays are never written nowadays, and partly because the popular taste for farcical comedy and burlesque tends to crowd out work of serious purpose, be it intensity of drama or the satire of comedy." The four plays are "Greencloth: a Story of Monte Carlo," "Vittoria Contarini: a Story of Venice," "Land and Love: a Story of English Life," and "Art and Love: a Sketch of Artist Life." Of these, the last is perhaps the best: it is in one act only, and it deals with that fascinating creature, the actress in private life. The rest are longer and more ambitious. Their chief defect is that they are all hard, strained, unsympathetic. At times they are clever, but at all times they are too forced: a French critic would say that all Mr. Dubourg's work was *trop voulu*. Even the language is hurried and hasty. Yet there is very undeniable cleverness in these plays; and if Tom Taylor were alive to iron them into smoothness, to lend them the aid of his neat literary touch and of his exceptional experience of the stage, they might be acted with applause and admiration.

'A Mingled Yarn' is a book about the stage only by courtesy, and inasmuch as it is the work of Mr. Henry Edwards, comedian. It is an altogether unpretending and pleasant collection of sketches and addresses, many of them prepared for the Bohemian Club of San Francisco, of which Mr. Edwards was president, if we are not misinformed, and before which they were delivered. The most important paper is the first—a record of a three weeks' stay in Mazatlan—which gains value from Mr. Edwards's scientific experience. Perhaps more interesting to the student of the stage are the addresses on Shakspere and on the late Edwin Adams, the actor.

It is now nearly two years since we reviewed M. Léopold Lacour's 'Trois Théâtres,' a volume of careful and acute criticism of the plays of MM. Émile Augier, Alexander Dumas, *fils*, and Victorien Sardou. His present work is a continuation of the former. As that was devoted to the more eminent and serious of living French

dramatists, this deals with the lighter and more amusing. After an essay on "Le Théâtre et la Vérité," M. Lacour applies himself to the analysis of the comic drama of France, and more particularly to the farces and comedies of M. Eugène Labiche, of MM. Meilhac and Halévy, and of M. Edmond Gondinet. No two critics would agree on all points, and there is more than one criticism on which we could join issue with M. Lacour; but taking his book as a whole, it is admirable, and worthy of very high praise, the first essay especially, in which he considers the conventions of the drama, and, following M. Sarcey, divides them into two classes—those which inhere in any dramatic representation, and are therefore eternal and unchangeable, and those which are temporary, and depend only on current notions. His essays deserve to be read and pondered by all who are interested in the drama.

The Golden Chersonese, and the Way Thither. By Isabella L. Bird (Mrs. Bishop). G. P. Putnam's Sons.

Miss Bird sees so much more, and knows so much better how to tell her story, than the ordinary tourist, that we gladly forget her few faults. She is apt to wave the British flag in your face when you least expect it, and her Jingoism (p. 325) is pronounced and undiluted. While dull and over-conscientious travellers resemble the coachman who got the engagement by professing a habit of keeping his wheels as far away from the precipice as possible, our writer marks the dizzy verge with her tire half over. We do not say that because she leaves the beaten tracks for unrutted spaces, she utterly leaves the road of truth, nor would we ever charge upon one of her statements a catastrophe over the precipice of falsehood. In all her four books of travel, however, old residents, whether of Hawaii, the Rockies, or Japan, find an exhilarating view of things which is certainly original. Whether of eye or of pen, the outcome as seen in her letters makes charming reading. Let the people in Japanese ports dub her previous work "bird-tracks" if they will, we hail with delight her new footprints in the Malay Peninsula.

The present work, which owes its ambitious title to her sister, now deceased, to whom her letters were addressed, describes the latter part of her journeyings in the Far East in 1879. Looking at an old map of Ptolemy's (which the president of our Geographical Society once had reprinted in *Harper's Weekly*, to show that the discovery of the Nile sources and tributaries was but a rediscovery), we find the name *Aurea Chersonesus* applied to the extreme southerly part of Asia, which we know as the Malay Peninsula, and the natives as Tanah Malayu (Malay Land). To this region Miss Bird came after leaving Japan and China. After an introductory chapter packed with fresh information about the Malays, she quotes the closing paragraph of her 'Unbeaten Tracks in Japan' which mortices into her narrative proper. Seven chapters are devoted to China, or rather to Canton and Hong Kong. In spite of the fact that our author here traverses familiar ground, paved with many layers of guide and travel books, we esteem this the most attractive portion of her work. We have read scores of descriptions of Canton, yet we know of nothing in the language which so vividly reproduces to the fireside traveller the lights and shadows of this most typical Chinese city. Even the execution-grounds and prisons become new places. To the Chinese she is not attracted. "After the courteous, kindly Japanese, the Chinese seem indifferent, rough, and disagreeable, except the well-to-do merchants in the shops, who are bland, complacent, and courteous." She thus sums up her impressions of Canton:

"Canton is intoxicating from its picturesqueness, color, novelty, and movement. . . . As we sat at midday at the five-storied pagoda, which from a corner wall overlooks the Tartar city, and ever since, through this crowded week, I have wished that the sun might stand still in the cloudless sky and let me dream of gorgeous sunlight, light without heat; of narrow lines rich in color; of the glints of sunlight on embroideries and cloth of gold, resplendent even in the darkness; of hurrying and colored crowds in the shadow, with the blue sky in narrow strips high above; of gorgeous marriage processions, and 'the voice of the bridegroom and the voice of the bride'; of glittering trains of Mandarins; of funeral processions, with the wail of hired mourners clad in sackcloth and ashes; of the Tartar city, with its pagodas; of the hills of graves, great cities of the dead outside the walls, fiery red under the tropic blue; of the 'potter's field,' with its pools of blood and crosses of crucifixion—now, as on Calvary, symbolical of shame alone; of the wonderful river-life, and all the busy, crowded, costumed hurry of the streets, where blue banners hanging here and there show that in those houses death has stilled some busy brains forevermore."

Of Hong Kong, which reminds her of Genoa, she says: "Moored to England by the electric cable, and replete with all the magnificent enterprises and luxuries of English civilization, . . . the colony is only forty years old." Its perfect winter climate, its costume and color, its hospitalities and many charming residents, and even its indispensable and enjoyable feuds in state, church, and society, which constitute "civilization," do not long detain her, for she is, by her own confession, "a savage at heart, and weary for the wilds first, and then for the beloved little home on the wooded edge of the moorland above the Northern Sea." So, setting out on a French steamer for Saigon, she glances at the military cafés, and spends twenty-four hours in peering into the native huts with gridiron floors, well smoked with an ever-burning Gehenna beneath, from which all good mosquitoes perforce keep away. After a glance at Singapore, its fluctuating society and its tigers, she arrives at Malacca, and is installed in one of the rooms of the old Stadthuis, the architectural witness of former Dutch occupation, when "Malacca" meant to us the whole peninsula. As the Dutch ousted the Portuguese, so the British turned out the Hollanders. The first European, in the triple capacity of explorer, merchant, and robber—or, in one word, buccaneer—was Albuquerque, the same whose name is given to two of our towns in New Mexico and Texas. The Portuguese rediscovered "the Golden Chersonese" (as Milton calls it) in 1513. After attacking the "Moors" of Malacca and putting them to the sword, he built a fortress fifteen feet thick out of the ruins of their mosques, and received the friendly overtures of the alarmed King of Siam. The Pope was duly informed of this "victory of the cross," and by the year 1600 the commerce of the Straits was in the hands of the Portuguese. Their crusade, however, made them many enemies, and among them the Sultan of Atcheen. In 1641 the Dutch, having made advantageous treaties with several of the Malay sovereigns, drove away the Portuguese, and held Malacca and the chief commercial ports. The history of the part played by the Dutch in the civilization of the Far East has never been written, and an English book is not much better than a French or Spanish one to search for truth and knowledge concerning it. Miss Bird, of course, wastes no praise on the Hollanders, whether the topic be religion, architecture, or government. In 1775 the British acquired Penang, in 1798 Wellesley, in 1823 Singapore, and the following year Malacca. This "Regio Latronum," as the Romans even in their time dubbed it, now felt the vigor of British rule. Piracies and monopolies were alike suppressed; free trade, a wise administration, and treaties "have gradually laid a solid foundation for the future prosperity of this distracted land." These small but important "Straits Settlements," with their few hundreds of British residents, are really among the most valuable of the British possessions in the Far East; though but small islands or narrow strips of coastland, their exports and imports in 1880 amounted to $161,765,000, or more than three times those of Japan.

Into the crowded details of description, of adventure, of word-pictures, of facts on which brilliant generalizations and vivid epigrams are built by our author, we have not space to enter. The same wealth of style, of fascinating narrative and dramatic grouping of effects, and, above all, the imperial quality of knowing what to leave out, make her last book peer to any of its predecessors, and, for popular use, the best work in English on the Malay Peninsula. Two maps and a dozen illustrations add to the value of the work, which, despite the formidable accounts of centipedes, tiger-mosquitoes, leeches, betel-juice, krisses, rogue-elephants, and Malays "running amuck," will divert many a globe-trotter into the Straits of Malacca, and carry envy into the breasts of ten thousand would-be travellers.

Three Lectures on Subjects Connected with the Practice of Education, delivered in the University of Cambridge in the Easter Term, 1882. By H. W. Eve, Arthur Sidgwick, and E. A. Abbott. Cambridge: University Press; New York: Macmillan & Co. 1883.

The English, who, by constitution and tradition, are determined followers of "the rule of thumb," have of late years taken the whole subject of education very much to heart; and no wonder, for the most apathetic teacher could hardly fail to be stirred by the incessant activity of Germany in this direction, and Mr. Matthew Arnold has interpreted Germany to England. About four years ago the University of Cambridge "determined to institute lectures on and hold examinations in the history, theory, and practice of education. For the first two years complete courses of lectures on the practice of education were delivered. . . . After this it seemed to the syndicate better to revert to a plan originally proposed, and to ask distinguished teachers to deliver single lectures on subjects with which they were specially familiar."

The three lectures presented to the public in this little volume will interest in different degrees the teachers and the friends of education in America, as they did the English hearers. They are all full of practical sense, and even if thoughtful teachers have anticipated many of the lessons, it is always a comfort to find one's experience confirmed. Two of these lectures, the first and the last, treat of "Marking" and "Latin Verse Composition"; and, as marking is falling into discredit among us, owing to German influence, and Latin verse composition is a peculiarly English institution, it may be thought that lectures on these subjects could not command more than a languid interest here. But while "marking" may be abolished and is abolished for daily recitation in some of our higher colleges, and is evidently abused in English schools, it is none the less important that teachers should have clearer ideas of their duty as markers than many of them seem to have. The grossest injustice is often done from sheer ignorance of the principles of marking, and few who read Mr. Eve's lecture will leave it without a more exact notion as to the right method of gauging examination papers—a task from which no ad-

vance of education will set us free. On the contrary, if civil-service reform is ever to amount to anything, the examiner's work is destined to become something as formidable as it is in England, and the experience of English examiners will be of the greatest value.

But if "marking" of some kind is inevitable under almost any conceivable system, Latin verse composition seems to be doomed, and Dr. Abbott himself thinks that it will hardly survive the century even in England. In Germany, Greek and Latin verses are relegated to those who think that they have a genius for them, and the fabrication of them is not considered a regular part of classical training. In France, to judge by what M. Bréal has told us, Latin verse composition holds its own better than it does in Germany; but England is still the home of the manufacture as well as of the art. True, it no longer occupies in all the great schools the time once assigned to it. The university rewards of success in this line are no longer so brilliant, and, as a natural consequence, the schools will give less and less time and force to the exercise. In reply to personal inquiry at two of the great public schools of England, the writer of this notice was assured that foreigners had exaggerated notions of the amount of time required, and Doctor Abbott's figures show that the masters were right; but it is a pity to throw away two or three hours a week from the age of ten or eleven to the age of sixteen or seventeen; and in the large majority of cases the time is thrown away. With a rational system of Latin pronunciation, and the use of text-books with the long vowels marked, the knowledge of Latin quantity is to be attained by a much shorter method than by the tacking together of nonsense verses; and while it is not very Christian-like in Doctor Abbott, who is head master of the City of London School, to triumph over his competitors, he is only acknowledging a pardonable weakness when he says:

"Whenever I hear, at the performance of a Latin play at a celebrated public school, 'ego' pronounced 'eego,' I often feel disposed to feel thankful that in the present keen competition for university distinctions our formidable rivals are handicapped by the burden of an ancient tradition, which only an ancient school can afford to bear."

After setting forth the absurdities of the present plan, its frightful waste of time, and its utter uselessness, and worse than uselessness, for a large proportion of the boys, Doctor Abbott gives his own plan, which begins later, drops those pupils that show no aptitude for the work, and secures for all during the year of trial a certain amount of useful discipline in the study of both English and Latin. His method is to teach Latin verse by means of English verse, and is, in fact, a comparative study of Latin and English poetry—stimulating and fruitful in the hands of a competent teacher. The details of the plan are presented in a most attractive way, and in the few schools where Latin verse-making is taught in this country Doctor Abbott's lessons should be heeded; and where it is not taught, his hints as to the comparative study of Latin and English poetry will be a great help.

Mr. Sidgwick's lecture, the second of the three, is on Stimulus, a series of practical directions to teachers, based on what is known to have been a rich and successful experience. Of course, the subject of the lecturer must have been embarrassing, as one should say, "the secret of Stimulus by a Stimulant," but Mr. Sidgwick has met the natural objection very well:

"To dwell on the need of stimulus to one who would be a teacher is like Ruskin's first rule given to the art student: 'Be born with genius.' . . . But this genius [of the teacher] may be observed in the working; and something may be got by so observing the details of its work. . . . Even those teachers who can lay no claim to the possession of genius may make an enormous difference in their power of stimulating by seeing what to aim at. And, further, there are not a few points of detail and method quite capable of being acquired by care and effort, which again may increase immensely the teacher's power of stimulus. I believe, in spite of the difficulty, the subject has its practical side."

If space permitted, it might be interesting to compare the results of Mr. Sidgwick's experience with the maxims laid down in that old hand-book of education, Quintilian's 'Institutions,' and to show that, so far as precept goes, the advance has not been immeasurable. But young teachers are not going to read Quintilian, and Mr. Sidgwick's sensible and straightforward counsels are put in a clear, cogent way, with the needful homeliness and familiarity of illustration. As might have been expected, the editor of 'Scenes from Euripides' and 'Scenes from Aristophanes' is in favor of "cooking" the classics—an art that he learned from Doctor Temple; and the author of Sidgwick's 'Greek Prose Composition' believes in making stories the basis of writing Greek and Latin. But every teacher's deliverances are in a sense an *apologia pro vita sua*, and few teachers have had so useful a career to defend as Mr. Sidgwick.

English Painters. By H. J. Wilmot-Buxton, M. A. With a chapter on American Painters by S. R. Koehler. Scribner & Welford. 1883.

A FULL and accurate history of English painters is a desideratum in the literature of art. We are not aware that any book of the kind we need, except Cunningham's 'Lives,' yet exists on the subject, and that treats only of the earlier English painters. The interest attaching to the English schools is very great indeed. For, notwithstanding the fact that the English, as compared with the people of the Continent, are not an artistic race, it is yet true that very great artistic ability has existed, and still exists, among them; and that, owing to certain peculiar conditions and circumstances, they have achieved some of the highest successes of modern art. More important names than those of Hogarth, Gainsborough, Reynolds, Constable, Turner, and Rossetti can hardly be found in Europe in modern times. The annals of schools which include such names are, therefore, highly important to the student. Such a work as we require should include an examination of the conditions which have made art of such importance possible to such a people. Two fundamental traits of character seem to have conspired largely to produce the result: the healthy and hearty love of nature, fostered by the habit of living in the country, and that moral integrity which distinguishes the Anglo-Saxon race. Add to these an aptness to apprehend and assimilate the qualities of other, and very diverse, schools of art, and important forms of artistic production could hardly fail to result. It is true that opposite traits have operated. The native want of good taste and the tenacious adherence to conventional and ungraceful fashions have set their mark upon English art. But, on the whole, the better tendencies have ruled, and have rendered this art healthy and exemplary in a peculiar way, and in a very marked degree. Not the least interesting characteristic of English art is its great diversity. It may, we think, safely be said that it embraces a wider range than that of any other country. It has often been observed that there has as yet existed no one dominating school in England; but it is by no means safe to conclude that this indicates any defect in the artistic constitution of English artists. It would seem rather the contrary, for by this diversity the field has been greatly widened, and while the higher forms of historical and imaginative figure painting, portrait painting, and genre and still-life painting have been successfully cultivated, the art of landscape painting, in the modern sense, may almost be said to have been created in England.

The book before us cannot be considered of much value, because of its too great brevity. When a man like William Henry Hunt is disposed of in twelve lines, and men like John Lewis and Dante Rossetti in seventeen and eighteen respectively — as they are in this volume — one had better turn to any respectable encyclopædia for information. Mr. Koehler's chapter on American art is well written, and is, perhaps, as good as it can be within such limited compass. The book is partially illustrated by indifferent woodcuts.

Les Nouvelles Routes du Globe. Par Maxime Hélène. Avec une Lettre de M. Ferdinand de Lesseps. With 92 illustrations. Paris: G. Masson; New York: B. Westermann & Co.

THIS book belongs to the class of popular scientific productions, and describes in a manner which would be better appreciated by the intelligent layman than by the professional engineer the great public works whose accomplishment revolutionizes the commerce of the globe. It takes up two general subjects, "Isthmic Canals" and "Subterranean Routes." The book is dedicated, "To Ferdinand de Lesseps, Creator of the New Routes of the Globe by Suez and Panama, Follower in their Immortal Work of the Navigators of the Fifteenth and Sixteenth Centuries —Columbus, Gama, Magellan—who Discovered the Natural Routes of the World by the Capes and Straits." The letter of M. de Lesseps is little more than an acceptance of this dedication, and the dedication indicates in no small degree the spirit in which the book is written. The writer is an admirer of the distinguished diplomat to whom he has dedicated his work.

Under the head of "Isthmic Canals," successive accounts are given of the Maritime Canal of Suez, the Interoceanic Canal of Panama, the canal through the Isthmus of Corinth, the canal through the Isthmus of Malacca, the Amsterdam Ship Canal, and the canal which is to ameliorate the climate of Algeria and Tunis by allowing the waters of the Mediterranean to overflow about three thousand square miles of salt desert, which is now below the level of the sea. Of these six works, only two are completed, and some of them have hardly advanced beyond the merest preliminary stages of projection; but the author seems to regard a project in much the same light as an accomplished act, and places side by side the Suez and the Panama Canals as if they already stood on the same footing. The closing words of the chapter on the Panama Canal are a good illustration of the spirit of the book:

"L'œuvre est aujourd'hui décidée; il ne s'agit heureusement plus de convaincre, mais de vaincre, et c'est chose facile à M. de Lesseps. Le créateur de Suez nous a annoncé que dans six années il irait lui-même inaugurer le canal de Panama. Cela suffit pour que nous soyons certain de l'y rencontrer à date précise."

M. de Lesseps is certainly entitled to great credit for the manner in which the Suez Canal was carried through, and for the energy which he has already shown in the work at Panama. Whatever merits the lines at Nicaraugua and Tehuantepec may have, neither of these localities could be adapted to the construction of a tide-water canal, whose capacity should not be limited by the dimensions of its locks; and the Frenchman, from the start, determined that the canal must be of this kind. Let us give him his due for selecting the location, for enlisting

capital, and for beginning the great work; but the difficulties of construction are enormous, and to place a work of this kind, which is just emerging from the period of surveys, on equal terms beside the Suez Canal does not do justice to the energy, the ingenuity, the industry, and the sacrifice which contributed to the completion of the Suez Canal, and which will be called forth in a more marked degree yet at Panama.

Under the head of "Subterranean Routes" are described the great tunnels of St. Gothard, the Arlberg, and Mont Cenis, while reference is made to projected tunnels in other Alpine passes. A chapter is also devoted to the tunnel under the straits from Calais to Dover. The subject of tunnels is apparently one with which the author is more familiar than that of canals, and a greater portion of the space here is devoted to works which have actually been completed.

A chapter entitled "Les Routes de la Pensée" gives a very brief account of the principal submarine telegraph lines, and an appendix of but a few pages is devoted to the use of dynamite and air-drills in public works. The book is handsomely printed and illustrated, and, while not rising to the rank of a valuable scientific or technical work, will be found interesting reading by any one who desires to get a general idea of the subjects which it describes.

Adelaide Phillipps. A Record. By Mrs. R. C. Waterston. Boston: A. Williams & Co.

ADELAIDE PHILLIPPS was a fine singer, who justly enjoyed great popularity, but she was not one of those rare vocalists who are named in histories as representatives of an epoch. The writer of the present memoir does not claim her as such, but she missed the only opportunity of justifying the existence of her book (so far as she was not writing for Bostonians about a favorite local "talent") by making it illustrative of the condition of operatic affairs in this country during the period of Miss Phillipps's activity. As it is, it has little value, except for those who were personally acquainted with the singer, and who, therefore, take an interest in a number of petty details about her Boston and other friends, which are eminently uninteresting to the general public. Young ladies who intend to study for the stage in Italy may learn a lesson by reading the first chapters, where they will find the old story, so often told, of impressionable audiences, liberal in applause, but fickle; of the difficulty of securing a reliable engagement, and the still greater difficulty of securing payment from an impresario. They will do well, also, to be on their guard against serenades. After a successful début in Brescia, in 1853, Miss Phillipps was awakened next morning by a band of music, coming, as they professed, to congratulate her on her success, and continuing to disturb her rest until they were *paid*, whereupon they went away.

BOOKS OF THE WEEK.

Metternich, Prince Richard de. Mémoires, etc., laissés par le Prince de Metternich. Vols. vi., vii. Paris: E. Plon; New York: F. W. Christern.

Orton, J. Comparative Zoölogy, Structural and Systematic. For Schools and Colleges. Revised edition. Harper & Bros.

Books to take to the Country.

PLANT LIFE.

By Edward Step. With 148 illustrations. 12mo, $1 25.

Gives an interesting account of the life and growth of plants in plain language for non-scientific readers.

"More delightful reading for the country at this season of the year authors and publishers have not provided for us."—*Pall Mall Gazette.*

"The author writes with a mastery of the subject and a perspicuity of style which makes his chapters delightful reading."—*London Literary World.*

The Leisure-Moment Series.

Novels in a form suited to readers of taste. The books are sewed with *thread*—not wired—so they lie open easily; the paper, type, and printing are good.

Prices from 20 to 35 cents each.

☞ All the LEISURE-MOMENT SERIES may be had in the LEISURE-HOUR SERIES, printed on heavier paper, bound in English cloth, etc. Price $1 each.

HENRY HOLT & CO., New York.

THE COMPLETE

Index to Littell's Living Age.

Of this formidable but necessary work, begun six years ago and announced last February, Numbers One and Two, stitched together, 16 pages each, forming part of Division BIOGRAPHY, and containing about 3,000 separate notices (ABBOTT-JAMES), are now ready, price (till June 15) $3, on receipt of which they will be sent, postpaid, to any post-office in America, Europe, or Australia. After June 15, the price will be $4.

EDWARD ROTH, 1135 Pine St., Philadelphia.

On receipt of ten cents, specimens and prospectus mailed to any address.

COMTE DE PARIS, 'Histoire de la Guerre des Etats-Unis,' Vols. V. and VI., and maps accompanying the same, can be supplied at a very moderate price to my own subscribers, as well as to those parties who purchased the preceding volumes in Europe.

New supply of Maupessant's 'Une Vie.'

Catalogues on application.

CARL SCHOENHOF,

Foreign Bookseller, Boston.

WHAT AND HOW TO READ.—Consult the chapter on "Books and Articles on Reading," from Foster's "Libraries and Readers," pointing out the various treatises, manuals, articles, and essays which bear upon the subject of reading, the use of books and of libraries. Price 5 cents. Sample copy free to clergymen.

NEW YORK THURSDAY, JUNE 21, 1883.

The Week.

THE shooting of Dukes by his victim's son probably gratifies a great many people, and will be fully forgiven by his neighbors, as making amends for the disgraceful verdict of the jury last spring. But those who are disposed to condone this sort of offence, and to see young Nutt get off without punishment, as we fear he will, ought to remember that the practice of carrying concealed weapons, and taking the law into one's own hands, seems to be growing among the people of this country to an alarming extent, that it already constitutes a serious blot on our civilization, and that every homicide which, for whatever reason, goes unpunished promotes and encourages it. People who are ready to forgive, or even glorify, murders committed by way of avenging a private wrong, whether it be a wife's or sister's "dishonor," or a father's death, are apparently possessed by the gross delusion that respect for human life and for law can be kept up while allowing private manslayers to share with the Government the work of preserving order. But nothing of the kind is possible here or anywhere. In civilized countries the Government cannot divide the power of inflicting capital punishment with anybody. Anything of the kind is a reversion to mediæval barbarism. Nor can we with impunity teach boys and young men that there are some kinds of murder which they may lawfully and honorably commit, and that they are at liberty to decide for themselves when the occasion for such a murder has arisen, and whom it is desirable to kill. Out of this shocking relic of savagery arises the practice of carrying deadly weapons, and that state of mental readiness to slay on slight provocation which seems to be almost always produced by having a pistol in one's pocket.

The awful crack of the murderer's pistol is still heard in every direction, and especially southward, while the brutal practice of lynching prisoners before trial, by mobs, who are themselves criminals of the worst type, seems to be spreading at the West. In fact, the illustrations of a growing popular contempt for or disregard of the regular administration of justice over a large area of the country, are multiplying and seem to call for some great awakening of the public conscience. A few days ago, in Louisiana, a young clergyman, on the ground, as appears, that a girl of seventeen made a charge against the principal of the female college she had just left, also a clergyman, and a man of mature age and presumably high character, got a pistol and murdered the older clergyman without the slightest warning. At a school exhibition in Metcalfe County, Kentucky, two young men were asked not to make a noise, so they forthwith "opened fire" on the man who addressed them. He had his pistol ready, too, and returned the fire. Before it was over, one of the combatants was mortally wounded, another badly wounded, a bystander was shot dead, a Miss Philpot was struck in the cheek, and a negro is supposed to be "dead in the bushes," to which he fled in a panic when wounded in the fray. Yet these things are all supposed to occur, according to popular geographies, in a civilized and even Christian country. Moreover, in Pennsylvania, Nutt, who has committed a deliberate murder in broad daylight, is in receipt of showers of congratulatory telegrams, presumably from Christian people, eminent counsel are offering him their services, and subscriptions for his defence are coming in, and everything being done to prepare for another farcical trial, in which a perjured jury will disregard both the law and the evidence.

Rerdell is left by the Star-route verdict in a position which he must find rather puzzling. He originally pleaded not guilty to a charge of conspiracy, like the other defendants. Then, having made up his mind to confess, he was permitted by the Court to withdraw his plea, and plead guilty. Then he went on to the stand and testified to facts tending to show his own and his accomplices' guilt. But the jury have acquitted all the defendants, and as it requires at least two to make a conspiracy, Rerdell's idea that he conspired is completely exploded. But if he did not conspire, he must have been committing perjury of a deliberate, heinous, and also unnecessary kind. His acquittal shows not only the uncertainty of the law, but the peculiar blackness of Rerdell's nature. Fortunately, Brady and Dorsey are determined to let no guilty man escape, and as they have the sympathy of the District and its press, they will no doubt take the proper steps to bring Rerdell to justice. They have announced their intention of punishing the *Times* at once; but is not Rerdell wickeder, and therefore more deserving of immediate attention, than even the *Times?*

It must be said for Dorsey that although an impudent he is a most amusing rascal. There is nothing in comic literature much better than his address to the colored club which has just serenaded him in Washington. He compared his trial to one of those great struggles of innocence with power to which people will refer in the future, "as Macaulay pointed to the trial of Warren Hastings," and he says that "the trial told a story before which humanity will bow down." "The trembling wires of intelligence," said the wretched wag, "that bore the news of the acquittal to Berlin, to Moscow, to Dublin, told the poor, the lowly, and the hopeless that there were yet twelve men to be found who would deal justly with them." The joke of this lies in the fact that had he been tried in any of these three capitals, which he appears to have selected with care, he would in about two weeks after the case was opened have been carted off to jail to undergo a good term of penal servitude. In some other European capitals he might have escaped, but in these his fate would have been a sure thing. The whole case is a most shameful one, in which the bouffe element has been very prominent from the beginning, and Dorsey is winding it up suitably. That the two principal thieves should have been, one a high officer of the Government, and one the Secretary of the Republican National Committee, and that they should have kept a newspaper during the trial to attack the prosecution, and have entertained handsomely now and then while in legal jeopardy, make, altogether, a spectacle not often equalled off the comic stage.

The business atmosphere has been considerably clarified during the past week by several important failures in the provision and grain trades, which it has been known for several weeks must come sooner or later. In the lard and provision trade it was notorious that prices were being held up by a clique at the West to figures far above what the consuming markets would pay, or could afford to pay; and though the corner in lard was run by the strongest parties, financially, ever engaged in any such operation in the United States, it has notably failed, and the prices of provisions are steadily declining to figures at which foreign consumers will buy more freely. The beneficial effect upon our foreign trade in that particular will undoubtedly be made apparent within a few weeks. In wheat also there has been a similar mistaken policy on the part of speculators in this country. As soon as it was certain past a doubt that the next crops of all western Europe would be short of an average yield from 15 to 25 per cent., the speculators here invested to an enormous extent in wheat. But they overlooked the fact that in consequence of the heavy exports from this country in the four or five months preceding April 1, Great Britain and, to some extent, other countries had been accumulating an unusual stock of foreign wheat; consequently, when they undertook to advance the price of wheat here they found they could not make the foreign markets advance. Their next move, then, was to talk "short crop here" in order to advance prices, and probably never in the history of the grain trade has there been such an amount of deliberate falsification in regard to the condition of the crops in this country. It is even believed that some of the various kinds of official reports have been strongly influenced in their favor. But the whole policy has failed, and with it a good many of the speculators.

These incidents in the most important trade interests of this country have not affected the financial situation in any way unfavorably, but the contrary. In expectation of an increased export movement of products as a result of the lower prices, foreign exchange has this week shown a downward tendency, and the apprehensions of the export of specie which were entertained a few weeks ago have disappeared. Money has been extremely easy in American markets, and rates of interest have been down to the

lowest prices usually touched at this season of the year. In London the Bank of England has gained £1,538,000 in bullion in the last four weeks, and the prospect is for lower rates for money there. Capital, however, since the speculations in grain and provisions have failed, shows no special desire to invest in anything for speculative purposes. The railway share market has been dull, and the general range of prices as compared with a week ago has scarcely changed at all. Within two weeks the character of the crops in this country will be practically settled, as the spring wheat crop will be out of danger after the 4th of July, and if it then becomes apparent that the crops are good, there will be a firmer market for stocks and more confidence in business generally.

The end of the produce speculation in Chicago is a striking illustration of the folly, or rather the uselessness, of such legislation as some of our moralists were trying to get from the State Legislature last winter, and as formed the subject of the sage report on "futures" on which we commented in these columns at the time. The speculative bubble has burst at last, and in bursting has punished the speculators in a way in which the law could never have punished them. McGeoch, for instance, the "Lard King," has been committing all forms of speculative wickedness about lard. He has forced the price up beyond precedent, and beyond human endurance, causing a fever of speculative activity in produce through the West, and drawing off money from the more legitimate business of bulling railroad stocks in Wall Street. In fact, a better example of the absolutely wicked speculator we probably shall not see for a long time. And yet it would have been almost if not absolutely impossible for the law to get at him. Supposing he had been indicted for making a corner against the statute, it would have taken several months to procure the necessary evidence. The other makers of corners would not have testified against him, if they could have helped it, because those who dealt with him expected, if let alone, to make money out of him, and it would probably have been next to impossible to prove his transactions out of his books. The trial, if it ever came on, would have lasted from three to six months, and would probably have taken place before a jury composed in part of persons unable to write, or unacquainted with any arithmetic beyond addition, in part of drunkards, and in part of keepers of "bucket shops," and, after six weeks' speaking from the lawyers on both sides, would have ended in a disagreement and the triumph of the Lard King, which would have been celebrated in oceans of sweet champagne by the speculators.

Now, see what has happened to the bad men by the simple process of letting them run their rig. See how corner-men and all other wicked speculators are caught in their own snare or hoist with their own petard. Peter McGeoch, the chief speculator, has been fined $1,050,000, and the fine has been paid, and it has ruined him for the moment, for this is what is meant by the news that this amount of his money has been "sunk in the deal." Daniel Wells, jr., the Lard Viceroy or Vizier, has been in like manner fined $750,000. Besides this, these two leading offenders have "failed for" $1,600,000 between them, or, in other words, have been the means, without any expense to the State, of inflicting fines to that amount on their confederates. J. M. Ball has also been fined $100,000; Ellis & Lightner, $60,000; Holley & Allen, $50,000; Tabor & Wilson, $40,000; M. B. Crafts & Co., $30,000, and smaller men about $50,000 more. All the lawyers and courts in the United States could not in ten years have recovered half this amount from the offenders, or, if they had recovered it, would have absorbed it in fees and costs. Now the penalty has been inflicted without lawyers, without a trial, without discredit to public justice, by the offenders themselves. Peter McGeoch, too, probably feels differently about the Lard Crown from what he ever did before, and is perhaps a little sick of "futures" and "puts and calls." Moreover, the dangers of the speculator's career have been brought before the youth of the country with a clearness and completeness which no trial could have accomplished. The lesson may be put into one column of a newspaper, without any opening address, or testimony, or summing up, or charge, or "prayers" to the judge.

The revolt among the Republican members of the New Hampshire Legislature against Senator Rollins, who has been nominated for reëlection by a majority of the Republican caucus, is a new local symptom of a general complaint. Senator Rollins is not a man of high statesmanlike qualities, but he has devoted himself with great zeal and energy to the task of managing the patronage and "organizing forces." A great many of the Republican county and town committees are manned with Federal office-holders who were appointed on his recommendation, and during the last State canvass Mr. Rollins used his whole influence to secure the nomination of candidates for the Legislature favorable to his reëlection. It appears that his machine worked very effectively in a considerable number of districts, and that the number of his friends sent to the Legislature was large enough to give him a majority in the Republican caucus. But his skill and energy as a political engineer had also the effect, which in our days it usually has, of exasperating his opponents in the party, and the result is an open declaration on the part of a considerable number of Republican members that they do not consider themselves bound by the action of the caucus, and will oppose the reëlection of Mr. Rollins to the bitter end. Whether they will prove strong enough to defeat him does not yet appear quite certain. But in any event they have furnished another proof of the fact that in these days of loose party cohesion the caucus has lost its power, and that too skilful and energetic Machine management is at present apt to be rather dangerous to the man whose interests it was to serve.

Women seem to be making a decided advance toward the acquisition of their "rights" in Massachusetts—at least, the right to recognition as practitioners of medicine. Of the 1,343 members of the State Medical Society, 709—more than half—say, in reply to formal questions, that they are in favor of the admission of women to the Society on equal terms; 23 say they do not care whether women are admitted or not; while the interest of 211 in the subject is so languid that they have not taken the trouble to answer at all. The remaining 400, even if they are very earnest in their avowed opposition, are less than one-third of the whole number. It appears further that 336 shamelessly confess that they have "consulted" with women doctors, while 931 boldly say that they would have no objection to "consult" if they were asked to do so.

The political situation in Pennsylvania is peculiar. The Republican Machine men are in possession of the regular party organization, and it is generally admitted that they will control a strong majority in the next State Convention. The Republican Independents, whose practical protest against Machine rule last year defeated the Republican State ticket, declare that they will stand by the party this year provided the Machine majority in the State Convention nominate men in every way acceptable. It is generally expected that this will be done, and that in this respect the Independents will have no cause of complaint. To strengthen their confidence Senator Cameron has gone to Europe, and permits it to be given out that he intends to be gone about two years—that he is tired of politics and will not return to public life. While all this looks fair and promising, and while the Machinists may be willing to nominate "good men," the Independents are reminded of the fact that the future character and management of the party will depend not only upon the candidates for State offices, but upon the State Committee to be appointed at the next State Convention. If the Machinists appear determined to keep the control of that Committee in their hands, it will be fair to assume that they want to keep possession of the party for their own purposes, and when that possession is firmly secured again, even Senator Cameron may be prevailed upon to overcome once more his disgust with public life.

There could hardly be a better illustration of the largeness of the class in England which is rather puzzled to find occupation, than the organization of a society, with all the machinery of agitation, such as rooms, lectures, and exhibitions, to bring about a change in the fashion of women's dress. The movement is headed by Lady Harberton, who is the apostle of a garment called "the divided skirt," which, if we understand it rightly, is simply a small set of petticoats for each leg, instead of one more expansive set for the two legs. She lectures on and exhibits this frequently, and seems to have made many converts, including Mr. Proctor the astronomer, who has written to the papers giving a somewhat diverting account of the conversion of the ladies of his own family, whom he represents as having enormously increased thereby both their happiness and their usefulness. The latest phase in the agitation

is the opening of an exhibition in London of healthy clothes of every description, underclothes which are hygienically cut and of the right material, corsets that fit like a sentry-box, and gowns which are neither too heavy nor too light, but just right, and shoes which keep the feet in the ancient Greek condition, as to shape, corns and bunions. All these contrivances appear, in fact, to be so admirable from the hygienic point of view that the giddy votaries of fashion have really no defence against them, except the prediction that as they are ugly the young women won't wear them. They maintain, with some levity, that it makes no difference what the ladies who wear them do wear, inasmuch as nature or time has made them all superior to dress. What foundation there may be for this flippancy we do not know, but it is quite certain that the movement is supplying a topic of discussion, which has the enormous merit of being one on which everybody, male and female, is fairly entitled to a say. There is no civilized man or woman who is not an authority on clothes, considered simply as covering.

The story that the Postmaster-General is considering the plan of compelling the Chicago letter-carriers to wear knee-breeches was, no doubt, started as a joke; but, as is so often the case with hoaxes, it seems to have been received by the carriers in dead earnest. They have held a meeting and made a formal protest against knee-breeches, resolved to resist the innovation to the bitter end, sent deputations to the four Chicago Congressmen, urging them to lobby the Department against it. The Congressmen, it is needless to say, expressed deep sympathy with their resistance. The interesting part of the case is, that though they have, or think they have, several practical objections to the change—such as the increased expense—they rest their case almost altogether on what they term the "ridiculous" character of the dress. "We don't want to be dudes," one of their leaders says—using the word dude, of course, in a broad Western way, as meaning any foolishly-dressed person—and adding that the suggestion came from Philadelphia, where the postmaster is "something of a dude." In the East, he admitted, "where half the people are dudes," such a thing might work, but not in Chicago. This Chicago remonstrance throws a new light on the anti-trouser movement in fashionable society. There is nothing really ridiculous in knee-breeches; it is the appearance of the average leg in them which is ridiculous. Trousers have superseded them in all modern countries because they establish equality in legs. Now, the letter-carrier, when we reflect upon the amount of pedestrian exercise he takes, ought to have the best developed leg in the world—it should be and probably is, if we could see it, a beautiful object—so that if any class could afford to adopt knee-breeches without any fear of ridicule, it would be far more likely letter-carriers than the effeminate classes like dudes, who usually have weak, thin, mean-looking legs. The letter-carriers, in resisting the movement, are therefore, without intending it, furnishing the strongest possible *a fortiori* argument against the knee-breeches movement in the fashionable world.

Dr. McCosh, in his farewell of Princeton College, for which he has done so much good work, has returned once more to the subject of athletic exercises; this time to declare that something must be done to prevent excess in them. He says that some eight or ten students out of every class of a hundred waste their college course by becoming not idle men, but professional athletes. It will at once occur to anybody who reads what he says that the whole matter is in the control of the Faculty; that they have only to prescribe a certain minimum standard of performance in studies, as shown at the examinations, and thus prevent any undue devotion to games. But the difficulty with any such rule is that it would impair the popularity of the College, partly, as Doctor McCosh points out, because it would act as a sort of handicap on Princeton in its athletic contests with colleges which allow entire liberty in these respects, as it is to be presumed that the colleges where students are not restricted in athletic sports at all will turn out better crews and better nines than institutions which are more rigid. The plan first tried at Princeton, of requiring the written permission of the parents or guardians, failed utterly, as might have been expected, for the athletic sport craze is not a craze of the young men alone; it fires the hearts of all classes, including fathers and mothers, sisters, cousins, and even aunts. The remedy that President McCosh suggests, of refusing to allow the students to play match games with colleges which make no restrictions in the time devoted to athletic sports, seems to be based on the idea that all these colleges will, by the fear of being cut off from playing with Princeton, introduce restrictions; but this, if what we have said is true, is hardly likely.

It will be very interesting now to watch the effect on English family life of the legalization of marriage with a deceased wife's sister. This measure has been opposed for fifty years with almost ferocious pertinacity, with predictions as to the effect it would have on the peace and purity of homes, although the bishops were very strong against it also with Scripture. Testimony, too, of the most ridiculous character was procured from this country as to the effect of the system here. We quoted some of it some months ago, obtained from an old clergyman who said that the possibility of their father marrying their aunt made American children look on her with horror. The *Saturday Review*, which also stood out against the change with uncompromising vigor, always maintained that there was something morally wrong with people who advocated it. The measure has been slowly gaining ground for some years, but would probably not have been carried now but for the assistance of the royal dukes, under the leadership of the Prince of Wales. It is not often they can find anything to vote on without seeming to take sides in politics, so that the deceased wife's sister bill has been a godsend to them, as giving them something they can vote about with impunity. The opposition to it will probably all be forgotten in six months, or only be recalled now and then on the platform as an amusing illustration of Conservative timidity.

From Berlin we have the significant news that the Committee of the Prussian Landtag which is to consider and report upon the Church Bill, has resolved to report against that clause of the bill which empowers the Government to reject nominees for Church benefices on civil, religious, or educational grounds, and that the Government will probably allow that clause to drop. This means that the Government is willing to go even further in its concessions to the Vatican than it went when the Church Bill was introduced. Giving up the power to reject nominees on civil, religious, or educational grounds seems to be equivalent to giving up that power altogether. It is difficult to see where the concessions will now stop. The Clericals have been made aware by Prince Bismarck that he needs their votes very much, and it is now but natural that they should put the highest price upon them. When Herr Windthorst, their leader, declared that he could not tell what the attitude of his party with regard to the Church Bill would be until the discussion on the other side was closed, he was evidently preparing to take the utmost advantage of the needs of the Government as to parliamentary support. It is reported from Rome that the Vatican is inclined to accept the concessions offered by the Prussian Government. This does not, of course, preclude asking for more, and trying to gain prestige by humiliating the adversary after having beaten him.

Mr. John Bright, addressing an immense gathering of his admirers at Birmingham on the occasion of the twenty-fifth anniversary of his service as a representative of that borough in Parliament, took occasion to disavow being an enemy of the United States, which would be ludicrous enough if it were not that so many people here hold that anybody who thinks the American tariff ought to be lowered, and especially any Englishman, is animated by simple hatred to the country, and especially to American workingmen. He said this as a preface to the prediction on which he ventured, that "the question between a protective and revenue tariff is nearing its solution" in the United States. We think he is right, but the solution is probably not as near as he supposes. He forgets the enormous amount of capital which has been invested in the United States during the last twenty-five years in reliance on the tariff, and the great difference which this creates between the situation here and that which existed in England before 1847. Moreover, no statesman controls legislation, or can carry his own party over to a new policy here, as Peel did in England. The change will probably come more slowly here than it did there, and it is desirable that it should do so, because no change would be permanent which did not rest on the actual conversion of the public, including the working classes. We shall probably have several revisions of the tariff in a free-trade sense before the question of a tariff for revenue only comes up fairly and squarely.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 13, to TUESDAY, June 19, 1883, inclusive.]

DOMESTIC.

AFTER being out all night, the jury in the Star-route trial at Washington were brought into court on Wednesday morning at 10 o'clock. The court-room was crowded, and the air was sultry. There was a profound silence as the jurors entered, which was broken by a cry from Juror Vernon, who fell to the floor in a fit. Immediately there was great confusion in the court, which was soon quelled, and the sick juror was taken to an ante-room under a physician's care. The rest of the jurors retired to their room. During the intermission which followed, Judge Wylie was heard to say: "The man has been drinking a good deal. In the course of the trial I have given him a sharp admonition. I suppose the effect of measurably cutting off his supplies is serious." About 11 o'clock the physician entered the court-room and announced that the juror had recovered. In a few minutes the whole jury reëntered and Judge Wylie explained a certain question of fact. The foreman wanted to know whether they could report a partial verdict, but Judge Wylie announced that their verdict must be complete. He also told them that he did not propose to discharge the jury soon. Court was then adjourned for the day. The Deputy Marshal was instructed to allow Juror Vernon two drinks per day.

Promptly on Thursday, at 10 o'clock, the jury were again brought into court, and in response to the usual formula of inquiry the foreman announced the verdict of "Not guilty." Immediately the decorum of a court of justice was forgotten, and cheers resounded from all quarters. Mrs. S. W. Dorsey sprang to her feet, clapping her hands, while the tears streamed down her cheeks. S. W. Dorsey and Brady were heartily congratulated. Judge Wylie, in dismissing the jury, said: "You have been more than six months engaged in this trial. Many of you have occupations of your own which you have been obliged to neglect during that period. Though your verdict, of course, will create dissatisfaction to many, yet having been selected according to the forms of law, and having sworn to perform your duties faithfully, the Court is bound to presume that you have faithfully performed your duty. If you have done so, each one according to the dictates of his conscience, that will be a satisfaction to you as long as you live." The foreman of the jury, Mr. Crane, said to a journalist that five ballots were taken. The first was upon the question of the existence of the conspiracy, and the ballot resulted in a vote of three for and nine against the conspiracy. On the second ballot the nine was increased to ten, although the vote was then upon the innocence or guilt of the defendants. This vote remained unchanged until about 8 o'clock on Thursday morning, when an acquittal was agreed upon. None of the Government counsel expressed any surprise at the verdict except Mr. Merrick, who said that he was unable to imagine how twelve honest men could have arrived at such a conclusion. The acquittal was celebrated by a gathering of the defendants and their friends at Colonel Ingersoll's house in the evening. Much complaint is made because of the low grade of intelligence of the jury. The law in the District of Columbia makes no provision for special or "struck" juries. No charges of dishonesty, however, have been brought against the jury; the only charge is incapacity.

On Monday Montford C. Rerdell appeared in the Criminal Court and withdrew his plea of guilty in the Star-route conspiracy, and the Government entered a nolle prosequi.

The Grand Jury at Washington, on Saturday morning, brought in another indictment against Thomas J. Brady. It is in regard to a contract with J. B. Price to carry the mail on a New Mexican route, for which General Brady received $1,250 as compensation for awarding the contract. The new indictment was called up in the Criminal Court on Monday, and General Brady was given notice to plead on Tuesday. The Judge announced that he should require more bail, which, on Tuesday, was fixed at $20,000.

Ex-Senator Kellogg also appeared in court on Monday to plead to the indictment against him. The plea was in abatement, and based on the ground that there were irregularities in the formation of the Grand Jury, that Mr. Ker, of the special counsel for the Government, appeared in the Grand Jury room, and that there were other irregularities.

S. W. Dorsey has written a long letter to John A. Martin, his successor as Secretary of the Republican National Committee, to say that no records giving the history of the Republican party came into his hands, and that he has none to transmit to Mr. Martin. He adds: "I do not owe the Republican National Committee a cent of money or a grain of thankfulness."

Secretary Teller, of the Interior Department, on Thursday paid to Chief Bushy-Head, of the Cherokee Indians, the $300,000 appropriated by Congress for lands ceded to the United States by that tribe.

Secretary Teller has written to the Secretary of War that he does not think the renegade Apaches should be allowed to return to the San Carlos Agency. He thinks the criminals captured by General Crook should be held as prisoners and punished, and the children should be sent to school.

Mr. Evans, Commissioner of Internal Revenue, has, it was announced on Tuesday, removed four of the most efficient officers in the service, and has appointed four personal friends to their places. This action has excited a great deal of adverse criticism.

The report made by the Board of Visitors to the Secretary of the Navy with regard to the condition of the Naval Academy at Annapolis, Md., says that the Board found everything had been done during the year which was possible to render the buildings healthy and comfortable. They approve of the reforms instituted by Superintendent Ramsey, and believe that they will work well after the friction of change has passed away. They make two recommendations as to a change of discipline.

In the United States District Court at Austin, Texas, on Thursday, an important opinion was delivered in a criminal suit brought under the Civil Rights Act, passed by Congress in March, 1875, to enforce the penalty of $500 for excluding Laura Evans, a colored woman, from a ladies' car on the Houston and Texas Central Railroad. The Court held that the act is unconstitutional, being an infringement on the rights of the several States, and that the State tribunals alone have jurisdiction in the premises. Nineteen suits of a similar nature were dependent on the decision in this case.

The Republican Legislative Caucus in New Hampshire on Thursday night nominated E. H. Rollins for United States Senator. J. W. Patterson got 18 votes. The entire Republican vote in the Legislature is 206—168 being necessary to elect a Senator—and Mr. Rollins must obtain 70 more votes than he received in the caucus, and 38 above the total number participating, to insure his return. Seventy-six members absented themselves from the caucus entirely. The caucus adopted a resolution that the Legislature should choose a Senator of the United States for the long term also. Senator Blair was renominated. On Tuesday the Legislature decided to elect but one Senator this session. The first ballot in the Senate resulted in 10 votes for Rollins out of 23. In the House he received 117 out of 305 votes.

The Ohio Greenback State Convention met in Columbus on Wednesday, and nominated Charles Jenkins for Governor, with a full ticket. The platform demands the abolition of the national banking system and the substitution of legal-tender paper money for the present currency. Forty delegates were present.

The Harper High-License Bill passed the Illinois Senate on Friday, and was signed by the Governor.

The Massachusetts Senate on Wednesday, by a vote of 35 to 1, killed the House bill to increase the salaries of legislators fifty per cent.

The Board of Aldermen of this city on Wednesday confirmed the nomination of Alexander Shaler as President of the Board of Health, to succeed Professor Chandler, for a term of six years. The vote was 15 to 9. General Shaler is a Republican, and he was confirmed by the Republican and Tammany Aldermen.

A panic was caused on the Chicago Produce Exchange on Saturday by the announcement that the firm of McGeoch, Everingham & Co. had failed for about $1,000,000. The firm was attempting to make a corner in lard. Armour and others refused to aid them, and the failure followed. Lard immediately dropped from $10 87 to $9 05 for July. The whole provision market was affected, and the grain market was to some extent agitated by the disaster. A number of smaller failures resulted. Peter McGeoch, the head of the firm, is a Milwaukee speculator, who has been very successful in wheat deals. It is understood that the firm held about 600,000 tierces of lard. The total losses by the failures amount to about $2,500,000. W. S. Nichols & Co., one of the largest grain and provision firms of Chicago, suspended on Tuesday. The firm say they will be all right in a few days.

All the small streams in the Missouri Valley have overflowed their banks within the past week, and portions of Missouri, Kansas, Nebraska, and Iowa have been flooded, causing great destruction of railroad property, and making necessary an almost total suspension of travel and traffic over the entire railway system of that region.

James Nutt, the eldest son of the late Capt. A. C. Nutt, on Wednesday evening, at Uniontown, Pa., shot and killed N. L. Dukes, who, on December 24 last, killed Captain Nutt, and was not many months ago acquitted of the crime, to the great indignation of the neighborhood. Five shots were fired, four wounding him. Dukes fell on the top step of the Post-office and almost immediately expired. Nutt was immediately arrested. He was very cool, and simply said that it had to be done. Public opinion in Uniontown is with young Nutt. Only a few days ago he went home, and when he met his mother he said to her: "Mother, I met Dukes on the street to-day, and he looked at me and laughed." His mother then tried hard to get him to promise that he would not do anything to Dukes, but he told her he would not talk to her on that subject. He is about twenty years of age. The Coroner's jury on Thursday found a verdict in accordance with the facts, and Nutt was held for trial.

Much excitement was caused in St. Louis on Friday, by the announcement in court that Judge Chester H. Krum, who recently disappeared, is a defaulter. He had been U. S. District Attorney and Judge of the Circuit Court. He returned on Saturday night, unexpectedly, and had a consultation with his father. It was announced on Monday that there was a report current that Judge Krum had not defaulted. On Tuesday he issued a statement asserting his innocence.

Commencement exercises were held at Columbia College in this city on Wednesday. Degrees were conferred upon graduates of the Schools of Arts, Political Science, Mines, and Law. At Vassar College, Poughkeepsie, on the same day a class of thirty-nine young ladies was graduated. The Commencement

exercises at Stevens Institute were held at Hoboken on Thursday evening. Class-day exercises were held at Cornell and Princeton on Tuesday.

The Rev. Charles Timothy Brooks died on Thursday morning at his residence at Newport, R. I., aged seventy years. He was graduated at Harvard, and went to Newport in 1836 as pastor of the Unitarian Church, which position he occupied for thirty-six years, and for nine years was pastor emeritus. He was an accomplished German scholar, and has been identified with various public institutions.

Eugene Casserly, a member of the United States Senate from California from March 4, 1869, to the fall of 1872, when he resigned his seat, died at San Francisco on Thursday at the age of sixty-one years. He was born in Ireland, and was brought to this country when two years of age. At one time he was editorially connected with the *Evening Post* of this city, and was also a journalist in San Francisco.

Edwin Booth, the tragedian, arrived in this city on Monday, after a long and successful professional tour in Europe.

A verdict of guilty was rendered in the Court of General Sessions in this city on Monday, in the libel suit of August Belmont, the banker, against John Devoy, editor of the *Irish Nation*. The jury recommended the extreme clemency of the Court, and the counsel for the prosecution joined in a similar plea. On Tuesday he was sentenced to sixty days in the Penitentiary.

FOREIGN.

Mr. John Bright delivered an address at Bingley Hall, Birmingham, England, on Wednesday, before an audience of over 20,000 persons, in connection with the great celebration in honor of his public services. Referring with great kindness to America, he said: "I believe the question in the United States between a protective and simply a revenue tariff is nearing its solution. The opinion is growing that irresistible economic facts are offering themselves for the consideration of statesmen and every intelligent man in the great republic. An extraordinary condition of things exists there. No country of any age ever experienced or dreamed of an actual surplus of revenue of £30,000,000." On Thursday evening Mr. Bright was given a complimentary dinner in the Birmingham Town Hall. In a speech he reprobated the course of the Tory obstructionists in the House of Commons, who, he said, allied with the Irish rebel party, were doing their utmost to make it impossible for the House to do any work. Sir Stafford Northcote informed Mr. Bright that he would call attention in the House of Commons to this part of his speech as a breach of privilege. On Monday he took that action, and Mr. Bright made an earnest reply, in which he reaffirmed that there was combined action between the Conservatives and the Irish members in both debate and division to worry and destroy the Ministry. If, he said, the Irish Members of Parliament would disavow connection with disloyal societies in America and declare their loyalty to the Crown, he would withdraw the word rebel and apologize for having used it. Mr. Gladstone took part in the debate, and said that he considered Mr. Bright's explanation satisfactory. Sir Stafford Northcote's motion, that Mr. Bright's remarks be considered a breach of privilege, was rejected, 151 to 117—a party vote.

The House of Commons on Thursday night passed the bill providing for grants of money to Lord Alcester (Admiral Seymour) and Lord Wolseley for the services they rendered during the late war in Egypt.

Lord Carlingford, British Minister of Agriculture, recently received a large and influential deputation representing towns in England containing 10,000,000 people, the object of which was "to protest against restrictions of the food supply." Lord Carlingford said that the decrease in the importation of American cattle was due to the fact that better prices could be obtained in America than in Great Britain, and not to the system of compulsory slaughter of the animals at British ports. He said the Government would not strain the present laws toward further prohibition.

The case for the prosecution in the London dynamite conspiracy trial was closed on Wednesday. The arguments for the defence were then begun, Dr. Gallagher's attorney urging that there was no occasion to defend the prisoner against the charge of levying war against the Government, as no evidence had been adduced to show that he was guilty of that offence. Lord Chief Justice Coleridge declared that if the prisoners had agreed to destroy property of the Crown, to endanger life, or to intimidate the councillors of the Queen or Parliament, they had virtually levied war against the country. Counsel for the defence submitted that there was no case against Bernard Gallagher, who, he said, had acted while under the influence of drink. Whitehead and Ansburgh spoke in their own behalf on Thursday, declaring their innocence. The counsel for Bernard Gallagher admitted that the latter had a general knowledge of the plans of the dynamite party, and added that it was a matter of common knowledge that plots existed in America for the manufacture of dynamite for use against England, almost with the connivance of the American Government. For this latter remark he was warmly rebuked by Lord Chief Justice Coleridge, who advised him to withdraw the statement, which he did. Lord Chief Justice Coleridge, in his charge, said the case against Dr. Thomas Gallagher, Whitehead, and Willson was much stronger than against the others. He declared that the assertion that the nitro-glycerine was intended for legitimate purposes was incredible. The case was given to the jury at 5:35 P. M., and they soon returned with a verdict of guilty against Doctor Gallagher, Willson, Whitehead, and Curtin, and a verdict of not guilty in the case of Ansburgh and Bernard Gallagher. The four men found guilty were then sentenced to lifelong penal servitude. The verdict met with warm approval in England, and also from the Dublin *Freeman's Journal*.

In the town of Sunderland, England, on Saturday evening, a terrible calamity occurred which resulted in the death of 202 children. A conjuror had given an entertainment which was attended by several thousand children. At the close of the performance the body of the hall had been entirely cleared of its occupants, when about 1,200 of the little ones came rushing down stairs from the gallery. At the top of the first flight of stairs there was a door which opened only twenty inches, and thus only one child was permitted to pass through at a time. At this point, while the mass of children were pushing forward, some of them fell and were unable to rise, owing to the others crowding on. The result was that a great number were pushed down, trampled on, and suffocated. The panic was caused by an announcement that prizes would be distributed to the children at the door. A man fastened the door half open so that the prizes might be given to the children, one at a time, as they were leaving. The dead were laid out in the hall, and the scenes when parents were admitted to identify them were heartrending. Queen Victoria telegraphed her deep sympathy. Many of the survivors are seriously injured.

London *Truth* asserted on Wednesday that Queen Victoria had quite recovered from the injury to her knee, but that the depression of her Majesty's spirits causes some anxiety, owing to its influence on her general health.

The rumor that Earl Spencer intends to retire from the Lord Lieutenancy of Ireland was on Thursday revived.

Two envoys from the Anamite King have arrived at Saigon, and have protested against the action of the French at Ha-Noi. They said that the King desired a peaceful solution of the present difficulty. M. Brun, French Minister of Marine, on Thursday informed the Cabinet that the reports of extensive war preparations in China were without foundation. Li Hung Chang, the Chinese Commander, has informed the French Minister of Shanghai that China has no intention of declaring war against France. The French Minister has replied that Chinese soldiers captured in Tonquin will be considered pillagers and summarily shot. Marquis Tseng, Chinese Minister to Paris, London, and St. Petersburg, in a recent interview, said that diplomatic relations between Pekin and Paris were practically broken off, though the French Government had recently sent a new Minister to Pekin, and to that extent they may be said to continue.

The Committee of the Lower House of the Prussian Landtag, who are sitting during the recess of that body, adopted on Thursday the first three clauses of the Church Bill. The third clause was amended so as to transfer the right of raising objections to Church appointments from the Central Government to the Governors of provinces. Clause four, giving power to the Government to reject nominees on civil, religious, or educational grounds, was rejected. The Committee were informed that Herr von Schloezer, Prussian representative at the Vatican, had established a position, which shows that the negotiations will be continued. On Friday the Committee approved clause five of the bill, with an amendment allowing bishops recognized by the state to exercise their functions outside of their dioceses. All the amendments to the sixth clause, which repeals the provisions of the May laws inconsistent with the bill, were rejected. The first reading of the bill was then concluded. On Saturday the Committee passed the second reading of the bill by a vote of 13 to 8. The majority was composed of members of the Centre and Conservative parties, and one member of the Fortschritts party.

The Portuguese Government bill abolishing the hereditary Chamber of Peers and creating a Senate has been submitted to the Bureaus of the Cortes. The Prime Minister has been instructed to reorganize the Cabinet.

Mr. John W. Foster, the new American Minister to Spain, presented his credentials on Saturday to the King, and was cordially received.

There is a report that the Queen of Spain has left her husband on account of a court scandal affecting his loyalty to her.

The Czar has during the week commuted the death sentences of a number of Nihilists to penal servitude for an indefinite period. Other sentences have been mitigated.

News from Panama under date of June 5 says: Iglesias signed the terms of peace which Noboa, the Chilian, had agreed to in Lima. A most powerful party is gathering about Iglesias, which proclaims the following to be a part of its programme: To bring about a reform in the constitution, the organic laws, and the codes, so that all guarantees shall be respected, and crimes and abuses punished; to procure for foreigners the right to participate as citizens in the political administration of the country after one year's residence; to render responsible all who are guilty of fraud or malversation of public funds; to obtain judicial reforms.

Advices from Sierra Leone, Africa, assert that Chief Gbpowe again made a raid upon the British settlement in Sherbro, and that a British expedition was sent out against him in consequence. The men succeeded in capturing and burning four more of his stockaded towns, including one which was garrisoned by 1,500 warriors. Gbpowe fled, and a reward has been offered for his capture.

THE STAR-ROUTE VERDICT.

THE Star-route case was tried under conditions not usual in this country. At the close of the first trial the Postmaster at the capital was removed, because, during its progress, he wrote a letter to a country newspaper predicting its result. The Marshal was also removed, because he had criticised the course of one of the Government's counsel and reflected on his methods. Several men were prosecuted for tampering with the jury, and, with the ground and atmosphere thus cleared, the recent trial took place. There was a verdict of acquittal. The world at large is surprised and disappointed ; the legal and judicial world is probably less so. Though perhaps not found in any book, the experience of the profession generally recognizes as a rule that in all cases dependent upon indirect evidence, there should be some one thing, conclusive in its nature of the guilt of the accused. It follows that care should be taken to strengthen this one dominant thing—certainly not to weaken it, or diminish its importance, by withdrawing attention from it to trivial or insignificant matter. Had the Government one or more of these conclusive things? What it did was to flood a whole continent with comparatively unimportant matter, over each item of which there was a controversy. It was too much to expect that one man in twelve could safely traverse the expanse spread before this jury, and justly estimate the value of each item of evidence and sum up the result. No American jury is equal to a case tried under such conditions : overloaded, overwhelmed, distracted and lost in the mere mass of so-called evidence, if they acquit, the Government has chiefly itself to blame.

The verdict, however, was a surprise to most people who had followed the case, because it was generally assumed that the trial must result either in a verdict of guilty or in a disagreement. For a variety of reasons it will carry no moral weight. The twelve men who composed the jury were unfit in almost every way to pass upon the questions submitted to them (one of them was a victim of *mania a potu*), and, as if to give a signal proof of their incapacity, they came into court after the charge and asked Judge Wylie to tell them whether they could "report to the Court" in case they agreed as to the guilt of any of the defendants, without having come to any agreement as to the existence of a conspiracy—the guilt of the defendants being of course wholly dependent upon the existence of a conspiracy. All that can be said for it is that it is really an improvement on the verdict rendered by the first jury, for that brought in two of the subordinates as guilty, while letting their principals go as innocent.

The escape of Brady and Dorsey is most unfortunate, but what is more unfortunate still is that the effect of the two Star-route trials has been, not to make an example of anybody, but rather to draw people to the conclusion that the attempt to secure a conviction for any of the offences with which they are charged is hopeless, and that Brady and Dorsey, in their brazen defiance of the Government, and in their prediction that no Washington jury would ever convict them, were perfectly right. The conclusion, too, has been gradually forcing itself upon the public mind that, although the Administration was honest in its determination to punish the Ring if possible, the trial itself has been made to subserve a great variety of other objects in which the public has no sort of concern. The case has lasted over six months, and is one of the longest jury trials on record. Yet in such a trial, with an ordinary jury, the only hope of securing a conviction lies in making it as short as possible. By extending the time of trial, by occupying not days but weeks with addresses to the jury, and arguments upon evidence, and discussions of points of law, the minds of the jurymen are distracted from the main point at issue ; and besides this they gradually come to regard the case not as that of their own Government trying to bring criminals to justice, but as a mere struggle of wits between a lot of sharp "counsel"—a sort of game in which they sit as final referees, and decide which side makes the best score. It is all the more important that such trials should be short because it is so often for the apparent interest of those concerned to lengthen them. Mr. George Bliss has received something like $50,000 since he has been in charge of the cases, and the other lawyers sums in proportion. Apparently the longer it lasts the more they are to receive. We do not mean to say that the trial has been protracted purposely, but we cannot shut our eyes to the fact that the case has gradually come to be looked upon as professional capital for those engaged in it, rather than a simple effort to bring offenders to justice ; and, this being so, it is certainly better to be done with it.

There is one difficulty in getting a common jury to convict a number of defendants of "conspiracy" to rob the Government, which probably affected the verdict in the Star-route case in a way that has not been noticed. The vulgar idea of a conspiracy is of a carefully-concealed plot, such as we have to go to the theatre or opera to see a specimen of, in which the conspirators assemble in a private room, disguised from head to foot, with their fingers on their lips, converse in whispers, and then disperse to carry out their nefarious design. A conspiracy such as that in which Brady and Dorsey are accused of having taken part is, of course, a very different affair. Everything is done openly and above-board except the division of the plunder; and, what is more, the conspirators are apparently helped on in their work by public opinion. Brady's account of his operations is that he was simply anxious to give the country ample mail facilities ; and that the country wanted these he proved with the usual evidence—piles of "petitions." On the petitions he increased the contractors' pay; the contractors, according to the theory of the Government, paid him what he demanded out of the increase. On the face of the matter, consequently, there was very little beyond excessive payments to the contractors. To the ordinary imagination a conspiracy is something far blacker and wickeder than this; yet there were no passwords, no dark rooms, no concealment—in fact, none of the paraphernalia of conspiracies such as the members of the Star-route jury were probably most familiar with from their reading and hearsay. The bluff, open, public-spirited way in which Brady expedited every route he was asked to, which is one of the damning circumstances in his case, no doubt made him seem to the jury more like a plain, straightforward business man than a conspirator.

The published interviews with the counsel for the Government make the prospect of getting a conviction in the cases against Brady, Price, Kellogg, and others, which remain to be tried, seem rather slender. They say that the practice of the District of Columbia does not admit of "struck" juries, and that this defect cannot be remedied except by an act of Congress. No attempt has been made to get such an act passed, and probably none will be, so that the next case will have to be tried before a common, or, in other words, a very ignorant, jury. It is said that the indictment against Brady and Price is to be tried in the fall, and we can but hope that the case will prove sufficiently simple to be tried in some short space of time.

The only explanation of the result of the trial that we did not expect to see in print was the suggestion that it was forced upon the jury by the evidence. Yet the *Herald* seems to think that this is the true view of the case ; and it draws the conclusion that the Administration is "equitably bound" to pay back to Brady, Dorsey, and the other defendants the money expended by them in their defence, we presume with interest at the current rate. The difficulty with this explanation is that the Star-route case has been tried once before, and on the former trial the Judge was so convinced of the guilt of the defendants that his charge amounted to a direction to bring in a verdict for the Government. The charge was no doubt objectionable in form and temper, but that does not affect the fact that the Judge regarded the evidence as overwhelming. Now, on this trial there is much more evidence for the Government than there was on the first, including a full and detailed confession by Rerdell, one of the defendants, so that the ordinary presumption that the verdict is right cannot be said to exist.

TWO ENGLISH WRITERS ON THE IRISH QUESTION.

Two articles on the Irish question from English writers of the first rank, Prof. Goldwin Smith, and Mr. James Bryce, M. P., have appeared within the last month, Mr. Goldwin Smith's in the *Nineteenth Century*, and that of Mr. Bryce in the *Century* of this city. They are well worth reading together by any one who has any interest in the subject. Mr. Goldwin Smith, whose political judgment used to be admirable, and whose essay on 'Irish History and Irish Character,' published some fifteen years ago, was an almost unequalled bit of political analysis, seems really to have allowed the Irish troubles to throw him completely off his balance, and to break his hold on the great principles of Liberalism, of which he was once so distinguished an apostle. He can hardly look at or think of the Irish without falling into a rage. The Celts are his special

abomination. For the Anglo-Irish he shows a certain tenderness, but only when he reflects that they might at one time have cut the throats of all the Celts, or have driven them into the sea, had they been so minded, and that they would probably do so still if properly provoked. But when he thinks of them as having once carried on an Irish Parliament, he has no patience with them. He gave the people of Brighton (England), a year ago, an awful account of the drunkenness, corruption, and poor oratory of the Irish Parliament (which was entirely composed of men of English origin), forgetting to tell them that the English politicians of the same period were no less drunken and corrupt and were worse speakers. Being reminded of this, he answered that the English politicians did not, as the Irish did, sell their country. But they did sell everything there was a market for. They sold everything the King and the Minister wished to buy, and quartered as many of their families on the treasury as it would bear. If a purchaser for the entire Government had offered, under the same conditions as presented themselves to the Irish, there is every reason for believing that they would have closed the bargain in much the same spirit as the Irish member displayed who, being reproached with having sold his country, "thanked God he had a country to sell."

What troubles Mr. Goldwin Smith now is the Irish emigration. He cannot bear to have the Irish in Ireland, and says emigration is the proper remedy for their troubles; but when he hears of them emigrating in such large numbers to this country he is alarmed by thinking of the influence they are likely to have on the politics of Canada and the United States. So he has written to the *Nineteenth Century* to point out that, bad as they are at home, they are likely to become worse if sent here. The American influence on them he thinks will be very injurious. Even the naturalization laws, which now keep them from voting for five years after their arrival here, will not be properly administered as to them. The more he looks at the Irishman in America, the more uneasy he becomes, and he finally announces that "his fatal influence threatens with ruin every Anglo-Saxon polity and Anglo-Saxon civilization throughout the world." This awful prognostication suggests naturally the reflection that Anglo-Saxon civilization is hardly worth troubling one's self about if the Irishman can put it in such peril with his priest and his shillelah. If Mr. Smith's account of it be true, it is clear its hour is at hand, and that, like the Roman civilization, it must go, and the Celtic barbarian be allowed to make the ground ready for something better. But he evidently thinks it may yet be saved, by the very simple expedient of sending the Irish emigrants to the South to live with the negroes, and fight and get drunk in the large unoccupied spaces still to be found in most of the Southern States. But how the British Government is to convert the Southern States into a sort of penal settlement for wicked Irishmen; how, after having got the emigrants down into a hot climate, among the blacks, they are to be got to stay, he does not explain. He says that, "even if shipped straight through to the Northwest, like goods in bond," they would not stay, "the Irish Celt not being a farmer," but would burn their shanties and run off to join their kinsmen in the United States. Why he expects them to live quietly in the South, under still worse conditions, does not appear.

Even if he had got them settled in the South among the blacks, however, his troubles would not be over. There are still some millions of Irishmen left in Ireland, and he anticipates from these what he calls "the rebellion of the vote," or, in other words, the use of the ballot to return a large increase of the Parnell forces in Parliament, and an Irish balance of power in thirty English constituencies. Apparently he would disfranchise all these voters by an heroic exercise of power. But as this would probably not quiet the wretches, it must be that he has a general massacre or something of that sort still in reserve.

There is nothing to us more melancholy than discussing the vagaries of a Liberal who, having lost his faith in his own creed, has adopted, and is offering as a brand-new gospel, the ancient Tory doctrine of the total depravity of the discontented, and the unreasonableness of people who dislike being ruled by those who hate or despise them. It is not surprising that the *Pall Mall Gazette* should remark of this article that "Mr. Goldwin Smith's hand has not lost its cunning, but his mind seems to have lost touch somewhat of the forces which govern modern politics." That is sadly true.

DINNER OR TEA.

THE *Christian Union* has a somewhat amusing article on tea as compared with dinner. It says:

"It seems to be the prevalent opinion of society that tea is a characterless, insipid, and altogether wearisome meal. As a matter of fact, tea is precisely what you make it; its appeal is to the intellectual rather than the animal side of one's nature. It supplies a pleasant pabulum for the physical appetite, but it does not overwhelm the whole man with a variety and volume of food which makes conversation a mere incident in a prolonged course of eating. Our two-hour dinners are survivals of barbarism; and if the tastes of society were not, as Mr. Arnold has so often said, still essentially barbaric, they would be intolerable. A cultivated Athenian would look upon an English dinner with positive disgust; to his finer instincts and harmonious development it would appear to be what it really is—gross feeding concealed by excellent cooking and perfect service. No conversation less aggressive and arrogant than that of a Macaulay can survive a full-course modern dinner; the *esprit*, the delicate interplay of intellectual sympathy, the fine flash of wit, the pervading charm of humor, the subtle and exquisite putting of nice shades of thought, are annihilated by the heavy, gross, and materialized surroundings of dinner; they are the tender flowers of a fine mental fellowship, and they blossom only in an atmosphere which has a large intellectual element and a small physical one. The tea-table, on the other hand, meets all the conditions of the best talk; it gives quiet occupation for eye and hand, it satisfies judiciously the cravings of the body while it whets the appetite of the mind, it closes a day of work and opens an evening of repose and mental release."

Now, the opinion of "society" that tea, or any other meal, is "a characterless, insipid, and altogether wearisome meal," is conclusive for the society which holds it, but for nobody else. If a man finds a meal wearisome, there is no disputing with him, because the agreeableness of a meal is a matter of taste. Trying to persuade him that he ought to like it, and that it is not wearisome, is a peculiarly Puritan undertaking, or at all events one which nobody who had not a strong strain of Puritan blood in his veins would enter on, and which few who do not possess the Puritan tradition can witness without a smile

Moreover, while it is strictly true that tea is what you make it, so is dinner or any other meal. Our friend of the *Christian Union*, who finds dinner such a terrible repast, should not forget that it is the meal at which most of the great talkers of the modern world have done their best, and is the only occasion on which you can get a great many of them to do their best, not in England only, but in France, Italy, Germany—in fact, in the civilized world. That nobody but a Macaulay or a Harcourt can talk at a modern English dinner is one of the most diverting statements in the article. In fact, his remarks on this subject show simply that late dinners do not suit him; that he probably overeats himself at them, which no good diner-out ever does, and that it is this which "annihilates" that "esprit," and "fine flash of wit, and pervading charm of humor," that "subtle and exquisite putting of nice shades of thought," which he leaves us to infer that he displays at tea-tables. Happy, of course, is the tea-table which listens to such a man. But we feel sure that he could do at least as well at a dinner-table, if he would restrain himself. No good talker ever eats right through the courses of a two-hour dinner, or drinks through all the wines. He chooses, and it is intended that he should choose, and if he means to show much "esprit" or "delicate interplay of intellectual sympathy," he must not gorge himself. Persons who find it difficult to let any dish pass them, or to avoid consuming everything that is put on their plate, and who drink four or five kinds of wine pell-mell, should either avoid dinners or resign themselves to the rôle of simple feeders. Tea unquestionably is better suited to such appetites, if for no other reason, for the very simple one that at tea there is less to eat.

As a matter of fact, however, the dinner which the *Christian Union* describes as a scene of sensual indulgence, from which all signs of intellectual interest and of mental vivacity are absent, is rarely seen in our day among educated men, unless they are very young. Dinners, in the first place, are rarely two hours long. The fashion on this point has greatly changed. In France during the Empire they lasted but little over an hour. In London one hour and ten minutes is now the orthodox limit. In New York, where the material side of the dinner unquestionably is still too prominent, they seldom reach an hour and a half among people who make any pretence of giving a dinner for the sake of the talk. Moreover, no modern man who has reached the talking age is as hungry at dinner as the *Christian Union* thinks he is. In France he has eaten a solid *déjeuner à la fourchette* at eleven o'clock; in England he has lunched heartily at two; and in Germany he has been taking little snacks of something nearly every two hours, so that he does not come to an evening dinner with a ravenous and shameless appetite. But it must always be borne in mind that dinner does

not make a dull man bright, or a bore entertaining, or an ignorant man well read; nor does it give a nervous or washed-out dyspeptic the flow of animal spirits without which no man was ever a good dinner-table talker. A goose or a dunce, when he comes to dinner, remains a goose or a dunce still. No arrangement of the meal will change him. But this is all strictly true of tea also. We suspect strongly that the reason why "society" has this low opinion of tea as a meal, described by the *Christian Union*, is that society has met a great many dreary people at tea. We do not doubt that the "esprit" and the intellectual sympathy and the rest of it are often seen there, but we may depend upon it that dull tea-tables, at which the slightness of the repast does nothing to increase the mental vivacity of the guests, are by no means uncommon.

The suggestion that tea is kept up anywhere as the evening meal because it is more promotive of play of mind at table, is of course very misleading. People for the most part have tea instead of dinner as a matter of household convenience, without the smallest reference to intellectual or æsthetic, or even hygienic, considerations. In small households of moderate means, where there are children and the husband's place of business is not too far off, it is easier for the mistress and maid to have the principal meal in the middle of the day, and the lighter one, which entails less trouble, in the evening. The arrangement is, we are satisfied, in a vast number of cases injurious to the men, who, as so often in country towns, return to their offices and their work afterward, to spend the afternoon in a dull and somnolent condition, struggling with a feeble and overtaxed digestion, and preparing the way for an early old age. To them a cup of tea in the evening, when the work is over, must be a great refreshment, and, of course, the idea of another heavy meal highly repulsive. But the practice of eating heavily in the middle of the day among men who work with their heads is not general in intellectual society. A large part of the world follows the, as we believe, salutary custom of eating the principal meal at or near sunset, when the toil of the day is over and the cares that infest it have folded their tents like the Arabs. Finally, let us say that tea is good, and so is dinner, and so are all meals, but let us have no cant about any meal.

THE LIBRARIES OF WASHINGTON.

WASHINGTON, June 12, 1883.

THE articles on Washington libraries, recently published in the *Nation* and elsewhere, have attracted considerable attention in this city. So far as the *Nation* is concerned, the only fault found with the views it has presented is that they omit to mention certain phases which would necessarily escape the notice of all except persons living in Washington.

It is asserted that the Library of Congress is a monstrosity, since it attempts to serve two masters whose interests are widely opposed. Its first master, of course, is Congress. Every parliamentary body needs a large library, and the Library of Congress should be simply what its name indicates, and what, until the new copyright law went into effect in 1870, it actually was. It fulfilled, and would have continued to fulfil, the same useful and dignified purpose as is served by the admirable libraries of the British, French, German, and other Parliaments. But, with the year 1870, it began the attempt to combine the functions of a parliamentary and a national library, and in these few years, in spite of the smallness of the annual appropriation—small both as regards books and management—it has become not only one of the largest libraries in the world, but one which, making allowance for the difficulties of management, is as well conducted as any other. These difficulties, however, are insuperable. It is commonly supposed that the motives of Congress in failing to grant the necessary funds for a library building have been, first, indifference to books and libraries, and, second, reluctance to spend money where it would serve no political end. Doubtless, these considerations have been influential, but a more powerful reason has remained unnoticed. This is the unwillingness of the average Congressman to part with the library; for, in spite of oft-repeated explanations, he cannot be brought to see that with a change of quarters it would not cease to be the library of Congress. That Congress is willing to appropriate money for libraries is shown by the facility with which the special libraries of the Government, notably, of late years, that under charge of Major Powell, obtain supplies; and it may also be remarked that the affirmative votes on appropriations for a library building have by no means included all the members who appreciate the value of books. Telephonic communication and quick expresses would bring to members the books desired within a space of time not much longer than is now required to get them. But, as it is now situated, the members use the library in dressing-gown and slippers, as it were; or, to phrase it differently, the Capitol is a great club-house, of which the library is almost as essential as the restaurant is. It is said, however, that the number of books ever wanted by Congressmen as such does not exceed 50,000 volumes, and that these could, and would, be left in the building. But however adequate the supply of books, the members would sadly miss their popular counsellor and friend, the Librarian of Congress, who serves many of them as a walking dictionary of all kinds of knowledge.

It is said, too, not only that the latter is overworked, but that it is impossible for any one to give the constant thought necessary in conducting a special library (which the Library of Congress as such is) and at the same time to manage a great general library. Especially is this held to be the case when the function of the special library is to make easily accessible all the information (contained in books) which may be needed by such a body as Congress. The responsibility of such a purveyor of information is realized only when one takes into consideration, not only the vast importance of having Congressmen provided with all the special knowledge circumstances may require (and which very few are competent to find for themselves), but also the constant watchfulness and enormous power of work needed by the person whose duty it is to serve as a key to the chaotic mass of material. It is alleged, at some of the special libraries, that Congressmen are anxious enough to learn, and that the extraordinary displays of ignorance with which the country is occasionally amused, would be much rarer if the light of books were not (for them) so largely under a bushel.

But this great collection is much more than the library of Congress, since both in size and character it is worthy to be called a national library. Unfortunately, it cannot be a national library (taking the British Museum and the Bibliothèque Nationale as representing the type of national libraries) so long as it is the Library of Congress. And it is held by some that this state of things is not really to be deplored, since, from their point of view, whatever sums may be appropriated for the purchase and care of books would be more advantageously expended in strengthening the various special libraries, in which, perhaps, Washington is richer than any other city in the world. Of these libraries, the Medical Museum is the best known, not only because of the excellence of its administration, but also because its special public is larger than that of any of the others; but persons who have occasion to use the collection of works on education at the Bureau of Education, on ethnology, etc., under charge of the Geological Survey, on international law and history at the State Department, of technical literature at the Patent Office, etc., etc., are said to have an equally high opinion of these libraries. The scientific works received, in enormous quantities, by the Smithsonian Institution have for many years been housed in the Library of Congress; but were these combined with the smaller scientific libraries, as has been proposed, and stored in a building near the Smithsonian, which, of course, is the scientific centre of the city, the wants of the scientific public would be much more efficiently accommodated than they now are. The various collections of the city would then form a university of every kind of knowledge, and, it is claimed, would so best further study and scientific investigation.

A diametrically opposite view is held by the advocates of a "national" library. They hold that a universal library is an essential feature of the capital of a great country, and that no possible combination of special libraries would serve the purpose, because no branch of knowledge is independent of others; that, in fact, they are so intertwined that, unless all branches of knowledge are brought under one roof, students would be vastly incommoded by having to run from one end of the town to the other. And irrespective of this they maintain that the copyright law produces a national library, however little the Government favors it in any other way. At the Library of Congress, they scout the idea of giving to the Medical Museum, as has been suggested, one of the two copies of each medical work deposited. The law requires two copies, they say, in order that any particular work may be always accessible to the student, just as the models at the Patent Office are accessible to the inventor.

In opposition to this view, it is said the copyright portion of the Library of Congress has a reason for existence as a special library, and that, the Congressional portion being left in the Capitol and the scientific transferred to the neighborhood of the Institution, an appropriation would be obtained without the least difficulty for a sufficiently large building for the Copyright Office, in connection with which the books, together with the other copyright "exhibits," could be displayed more advantageously than in a general library. The second copies "deposited" could then be distributed among the special libraries (including the Library of Congress) according to the nature of the work, on the plan recently advocated in the *Revue des Deux Mondes* with reference to the French "dépôt légal." In other countries, the depositing of copies is regarded merely as a special trade tax, being, perhaps, a survival of the old system of tithes. In Germany, indeed, it has nothing to do with copyright, not being exacted by the Federal copyright office, and having been abolished in some of the States of the Empire. The museum formed in Washington by the copyright deposit would thus be a unique collection, besides being of extraordinary value to the future student of American man-

ners. But if the Library of Congress is to be a museum, it is clear that the specimens should always be kept on exhibition; while it would be idle to expect Congress to alienate what, as things stand, it justly regards as its own collection.

The proposed library building would be large enough to give ample accommodations to a dozen special libraries, and there would seem to be no reason why the medical and education libraries, at least, should not be transferred to it. But there is, we are informed, a reason, none the less powerful because felt rather than expressed. Experience (it is said) has shown that as separation involves independence, so, in Washington, propinquity implies dependence. Supposing the great building finished and the Medical Library, with its staff, transported thither, however slight and silken might be the tie that connected its head with the Librarian of Congress as his superior officer, it would be impossible for a special library to maintain its individuality against the fusing currents which would play around it. *Per contra*, this is called a merely sentimental consideration, and it is asserted that the Medical Library as such would be just as useful as the Supreme Court Library is, which, though kept on the other side of the Capitol, forms part of the Library of Congress. Altogether, the question appears too involved to be judged by ordinary library experience.

PARLIAMENTARY BUSINESS AND THE LIBERAL PARTY.

LONDON, May 31, 1883.

THE condition of business in Parliament, which has caused some anxiety ever since the beginning of the session, when ten nights were wasted in the debate on the Address, grew still more serious when the Ministry had received a shake by the division on the Affirmation Bill. Although that bill was understood not to be a Cabinet matter, still a defeat after so long a debate and in so full a House could not but damage the prestige and weaken the authority of a Government which came in with so great a majority. The first effects of it were believed to have been found in a division which occurred a few days later on a comparatively unimportant question. The Chancellor of the Exchequer had proposed to transfer the collection of the income tax from the special collectors who now do the work to the ordinary revenue officials, alleging that a considerable saving would be thereby effected. The collectors raised an agitation against the proposal, on the ground that it would inflict a hardship upon them, insufficient compensation being provided for their vested interests. The Government, in deference to these complaints, modified their proposal, agreeing not to turn out the present collectors, but merely to substitute revenue officials for those who might die or resign. In spite of this concession, however, the scheme was defeated, its rejection being moved by a Liberal member, and the Conservatives, who of course voted against the Government, being reinforced by a few Ministerialists. Though the point was in itself insignificant, the want either of loyalty among the supporters of the Government, or of watchful activity in the Government whips in bringing up their men to vote, produced a considerable impression, and increased the discouragement of the Liberals. The Tories began to take heart, and to talk of their return to power as not such a distant event, after all. During the Whitsuntide holidays their journals and orators were unusually jubilant, these Parliamentary holidays being the time when the prominent politicians go on the stump. Even those Liberals who believed that Mr. Gladstone's conduct on the Affirmation Bill had rather strengthened than weakened his hold on his party in the country, and who saw no ground for disaffection in the Parliamentary majority toward its leaders, admitted that the backward state of business was a dangerous feature in the situation. If this session should pass, like the two last, without bearing fruit in useful measures for England and Scotland, there would be general disappointment in the country and a belief that the Liberal Government was, after all, but little more efficient than the Tory Government, whose failure to legislate had been so often arraigned. Up till now the Ministry had excused themselves by pointing to the defective procedure of the House of Commons, and the facilities it gave for obstruction. But after the six weeks spent last winter in passing a new code of procedure this excuse was no longer available. If the country should now see that Parliament effects nothing, it will blame the Government, who have the command of a Parliamentary majority, and who seem, therefore, to have the disposal of Parliamentary time.

These considerations had produced no small disheartenment among the Liberals, and made it seem desirable to apply some spur or stimulant to their flagging zeal. The remedy of a general meeting of the party was suggested in several newspapers. Such meetings are not very common in English politics, and more common in the Conservative than in the Liberal party. They have been resorted to either when some new and unforeseen crisis arises, which obliges a leader to make a special call on the loyalty of his followers, or when there exists, or is believed to exist, a certain amount of dissension or discontent within the party, for which it is thought well to provide an outlet. For many years Mr. Gladstone had held none until last February year, when he summoned his supporters to explain to them his views regarding the attack which the House of Lords were making on the working of the Irish Land Act. The results of that meeting were wholesome, so it was thought that the same expedient might now have similarly tonic effects. When the meeting, which was summoned for Tuesday last in the great room of the Foreign Office, was announced, much curiosity was excited. People expected some grave declaration of policy, some fervent appeal to resist and overcome the insidious obstruction which the Liberals have accused the Tory party of practising. However, the proceedings turned out so quiet and commonplace that the same afternoon people asked one another why the meeting should have been held at all. Mr. Gladstone merely announced that the Ministry felt themselves obliged to drop the bill for creating a new comprehensive municipal government for London, and added that he meant to press on all the other measures mentioned in the Queen's speech. When urged to declare that he would keep the Parliament sitting till it had disposed of those measures, even though this should protract the session into the month of October, he refused, remarking that it was not wise to threaten the House of Commons. All this of course might have been as well said in the House of Commons itself; and Mr. Gladstone did, in fact, tell the House of Commons at 5 o'clock very much what he had told his own supporters at 11. If the meeting produced any effect, it may be pronounced to have been transient, and the situation is substantially just what it was.

The Conservative party held a meeting the same day at the Carlton Club to consider what course they should take with regard to the Agricultural Tenants' Compensation Bill, a measure for providing that a farmer shall always be entitled to have compensation for unexhausted improvements made by him upon land. Although a few years ago the mass of English landlords strongly objected to making this a general compulsory rule, irrespective of the contracts made between the particular landlord and the particular tenant, opinion has now so much advanced that the Tory land-owners are willing to accept the principle of the bill, and the meeting so decided. They are mostly members for counties, and could not afford to displease their farming constituents. The bill will therefore probably pass without much difficulty, although some Radicals think that it does not go far enough.

I return to the question, which is really not an easy one to answer, why the Liberal party, which is united in its loyalty to Mr. Gladstone, which has no serious internal differences now distracting it (whatever grounds for future schism may be already discerned), which commands a large majority in the House of Commons, should be nevertheless in a condition of listlessness and languor, which allows the Conservative minority to clog so successfully the wheels of legislation. Two reasons may be suggested: The first is the fact that the questions now before Parliament are not of an exciting kind. Bankruptcy reform, the prevention of corrupt practices at elections, the creation of a court of criminal appeal, the recognition of the right of agricultural tenants to compensation, the prevention of floods—all these are matters which, however important, do not stir the heart or quicken the pulse of the country. The country, therefore, does not put any great pressure on its representatives to accelerate their settlement, nor show any great indignation at the waste of Parliamentary time in pretending to discuss them. True it is that members of the Legislature ought to recognize their importance, and to feel that the absence of more exciting and purely party questions is a reason for pressing on and settling such matters, in which the welfare of the people and the proper working of our Constitution are deeply involved. But it is vain to expect that representatives will keep much ahead of constituents, or be continuously active, except under popular pressure. The number of members who consider a seat as a social advantage, which carries with it some power and some privileges to be enjoyed rather than regarded as a weighty trust, is always large—sufficiently large to produce a great *vis inertiæ* in the House of Commons. The condition of the country seems fairly prosperous. The upper classes are thoroughly satisfied with the world of England as they find it. The poorer classes, though they neither are nor have reason to be satisfied, do not quite know what to ask for. They have not yet learned to use their power—indeed, they have scarcely realized what their power is—and no programme of changes calculated to improve their condition has yet seriously fixed their minds. Thus the motive force to propel Parliament which might be expected to come from the people comes in scant measure; and even reforming governments must be content to watch the sails flapping now and then against the masts and sit whistling for the wind.

The second cause is the feeling of vague uneasiness that springs from the expectation of Mr. Gladstone's early retirement from political life. Though he enjoys pretty good health, gives pretty constant attendance in the House of Commons, and certainly shows no sign of intellectual failing, being as fully master of his oratorical gifts as he ever was, it is no secret that for some time past he has wished to retire from labors which at seventy-four years of age it is wonderful he should be at all able to support. Nobody expects that he will consent to sit in another House of Commons, nor is it impossible

that he may quit the Ministry even before the present House is dissolved. His departure would immediately change the whole political horizon, for strong and respected as Lord Hartington and Lord Granville are, neither of them has the same authority over the extreme left wing of the party as the present Prime Minister, nor the same hold on the imagination of the country. We all know from our personal experience how hard it is to settle down to quiet, steady work when one is awaiting some event or some piece of news which will sensibly affect one's own life and prospects. The mind cannot help running off to it from whatever else it ought to be bent on. One feels as if it were scarcely worth while to be taking pains about little things when some big thing is to happen speedily. Somewhat in this way the expectation of Mr. Gladstone's departure has begun to tell on the minds of English politicians. They feel as if the present arrangements were only temporary, and cannot refrain from speculating as to the new developments they believe to be at hand Obviously the wise course for the Liberals would be to make the very most of the months or years during which Mr. Gladstone's leadership is left to them, by pushing through measures for which his experience and authority are desirable. But people can't always force themselves to do the things which they know to be wise. However, it need hardly be said that if this feeling exists it is wholly a feeling of regret and anxiety. Though Mr. Gladstone's reign draws to its close, there is no sign of any loosening of the attachment of his followers to him; nor has any one yet begun to discuss publicly the new combinations to which it may give rise. Y.

SOCIALISM IN ENGLAND.

LONDON, June 7, 1883.

IT has long been a commonplace of self-congratulation in England that the poorer classes are contented with their lot, and not, like those of some Continental countries, disposed to lend an ear to the preachers of wild or subversive doctrine. The various socialistic or communistic schemes, movements, organizations which during this century have alarmed the respectable classes of France, Germany, Spain, Russia, have not raised their heads here. No English advocate of communism has obtained any note or any following, either as a writer or as a practical politician, and when attempts have been made to transplant the programme of socialism from the Continent, it has invariably languished and expired. That great and comprehensive league of workingmen in all countries which struck so much terror into Governments all over Europe some few years ago, the International of Karl Marx, never took root here, never obtained any serious hold on the minds even of the class which is most radical in its political tendencies.

Our people attribute this remarkable and reassuring phenomenon partly to that general virtue of Britain which they are so deeply persuaded of, and to the special favor with which Nature and Providence regard this island; partly to the fortunate indisposition of the British, or at least of the English, mind to speculation, to its preference of that which is plain, solid, and close at hand to that which is ideal, visionary, remote. Admitting that this turn of mind has been serviceable, there are other causes of no less consequence. One is the material prosperity of Great Britain during the last forty years, a time which, with occasional ups and downs, has on the whole been one of abundant work, cheap food, good wages. Another is the comparatively large measure of political freedom the people have enjoyed, and their belief that grievances can be, and ultimately will be, removed by constitutional agitation. A third is the reasonably good feeling which prevails between the higher and the lower classes, there being hardly anything of that class hatred which exists in Ireland, and which to some extent exists still in France in spite of democratic equality. Lastly there has been the very important fact that Christianity has retained a greater hold on the masses than it has on the town population of Germany or France. It is no doubt true that the majority of our poorer townsfolk do not go to church, and are not to be reckoned as members of any denomination. Still, there are many among them who are under religious influences, and even among the irreligious there is very little—though, doubtless, there is some—of that positive and aggressive hatred of Christianity and its ministers which is so powerful a factor in many parts of the Continent. All these causes, and others of less general scope, have contributed to make the British working class acquiesce in the existing condition of things, and hear with listless ears the few who have attempted to interest them in large and sweeping plans for improving their condition by attacking capital and reorganizing society on a communistic basis. I cannot recollect that any person of the least note has ever proposed in England that the state should undertake the duty of finding work for the unemployed; or that any set of workingmen have demanded this. Questions as to shifting the burden of taxation more on to the shoulders of the rich off those of the poor have excited no interest. They cannot be called a part even of the advanced Radical programmes. Candidates for Parliament, for instance, are rarely asked for their opinions on the subject. Even that practical form of socialism, the English Poor-law, has not been used as an argument in favor of socialistic legislation. Whether those persons who think it has prevented the growth of other forms of socialism are right, is a point I do not discuss. The singular thing is that its inherent socialism has been almost forgotten, and not made a justification for further steps in the same direction by those who might have been expected so to employ it. In fact, the whole topic has been for us one of merely speculative interest—the interest of those who watch tides of opinion moving to and fro in other countries, and threatening practical consequences there.

But in the last year or two a change has been observable in England. Socialistic or communistic views (I use both terms, because either alone is apt to be misunderstood) have begun to find advocates here, and to be considered as influences which may have to be reckoned with as forces likely before long to come into the sphere of practical politics. It is, however, significant that these advocates do not come from the humbler class, and have not yet, so far as one can judge, made any substantial impression upon that class. Not only do they themselves belong to the educated classes (that has been generally true of socialist writers in Europe); they are still working in the plane of the educated classes and finding an audience there. No socialist party yet exists among the workingmen. The abstract doctrines of socialism which the new apostles of the doctrines preach have not yet been applied to the solution of practical problems, have not connected themselves with any section of politicians, nor taken shape in proposals to be brought before Parliament. These are results which will probably—indeed, necessarily—follow, if the movement continues. It will be time enough then to examine them, and try to forecast their action on our political future. In the meantime I propose only to suggest some reasons for the appearance of this new tendency, and thereby to seek an explanation of its nature.

Those who have watched the history of political economy in England during the last forty years, since its great triumph was won by Sir Robert Peel's acceptance of a free-trade policy, will find one of these reasons in the reaction that has taken place against the doctrines of individualism and competition and *laissez-faire* as they were enounced by the economists of that day. It was then believed that what the world needed was to have the old shackles upon industry knocked off, and that the principle of supply and demand, with unlimited freedom of contract, would do all the rest. This has been. We have had competition and (with some few exceptions intended for the protection of the working class, such as the Factory Act) full freedom of contract; and we are not satisfied with the result. We find the condition of the poor not so very much better than it was before. We perceive that competition has its drawbacks, and that under freedom of contract the stronger of the two parties to the contract may use his strength harshly. Thus there began a reaction against the teaching of the so-called Manchester school and the "high and dry" economists generally. Acts limiting the hours of labor, and giving especial protection to women and children, were passed. The system of paying workpeople in kind—that is to say, of forcing them to buy their food or clothes at the employer's store—was forbidden, elementary education was made compulsory, and the stream still continues to flow in the same direction—the direction of state interference and of the protection of people from the consequences of their own acts. At this moment a bill is before Parliament, and is pretty certain to pass, which prevents an agricultural tenant from contracting himself out of the right to demand compensation for his improvements. And the Government has promised, in deference to the opinion of a decided majority in Parliament, to allow local authorities to restrain, or perhaps stop, the sale of intoxicants. It is the extremer form of this reaction that lands some people in socialism. They despair of competition and individualism, and expect a real bettering of society from the opposite line of policy.

Nor is it only with the results of our economic legislation that the thinkers I am describing are disappointed. They complain that neither the general prosperity of England since 1846 nor the political enfranchisement of the working classes has greatly improved their material well-being. There still remains in our large towns a great mass of pauperism, and a still larger population which is only a little above the level of pauperism, and liable to be submerged if its level should rise. The agricultural laborers are in a wretched state. Their wages are still so low that it is almost impossible for them to save for their old age or to live in anything like comfort. Legislation on the old lines has done, and now is doing, so little for them that some far more sweeping change of existing conditions seems called for. The working classes now enjoy, in the towns, full political power. They have so great a voting majority as to be able to put in any Ministry they like, and dictate to them any measures they approve. Yet this power has not enabled them to get better houses, lighter taxation, a generally easier and more agreeable life. Must they not, therefore, look to some other kind of change, some radical resettlement of the economics of society, if they are to get what makes life worth living?

A third cause has come in to strengthen the two which have just been described: I mean the growing tenderness towards suffering, the growing desire to relieve men from facing those hard antagonists, weariness, want, hunger, cold, disease. All these foes of mankind are specially foes of the poor, and the relative soft-heartedness

of this generation makes it give a fuller and readier sympathy to the struggles of the poor against them. Hence a livelier interest in the possible methods of bettering their state; hence a greater readiness to grasp at any project which may seem to carry promise with it; hence also a certain sentimentalism of mind which does not try projects by the hard, dry logical or experimental tests which would have been applied thirty years ago.

Besides these general causes—intellectual and moral causes one may call them—there are two others to which some little importance may be assigned. One is the rise in Germany of the school of so-called "Socialists of the Chair" (*Kathedersocialisten*), who have discussed with zeal, and in many cases approved, proposals for state interference and state aid in favor of the working class, which, though they fall far short of communism, approach nearer toward it than the older economists would have done. Though the writings of these men are not largely read in England, thought and thought-tendencies are contagious in our modern world, and the example of learned and able men in another country following this path, undeterred by the practical dangers which socialism seems in Germany to threaten, has not failed to affect us in England.

This influence has been speculative; the other I speak of has come through politics. The Irish Land Act of 1881 was not in any sense a communistic measure. But it dealt pretty rudely with the property rights of the landlords, which, though they may have been founded in ancient wrong, had been confirmed by recent statutes. Thus the moral effect of that great measure was, if not to shake the popular respect for the sanctity of property, at least to impress upon some minds the idea that all sorts of rights may have to give way to the general interest of the people, and that the state may interfere, where economic difficulties have produced a sort of deadlock, to rescue the poor from their difficulties and give them a sort of new start. Everybody who has studied the subject knows that the circumstances of Ireland were so peculiar that the act passed for her could not be applied to England. Still, in a vague sort of way, the impression produced by such a bold and startling piece of legislation remains, and makes speculation wander more freely into new fields.

I have been speaking all through rather of tendencies than of doctrines. The only book that has proposed anything of a practical kind is Mr. Henry George's 'Progress and Poverty,' which has been largely read by our working class. But though it has made a great impression, there is still nothing like a socialist programme, much less a socialist party, among us. Perhaps a more significant occurrence is the foundation of an organ, "designed to advocate the views of Marx, Lassalle, and Henry George," by some young and ardent university men. Y.

Correspondence.

BUTLER AT WILLIAMS COLLEGE.

To the Editor of The Nation:

Sir: I want to call your attention to the fact that the presence of Governor Butler at the coming Williams Commencement has no personal significance one way or the other. In respect to State funds, Williams holds a relation to Massachusetts similar to that of Harvard. Always at a Williams Commencement the Governor of Massachusetts or the High Sheriff of the County is present in an official capacity to represent the State. The Governor is expected whenever other engagements will admit of his coming.—Yours respectfully,

A Williams Alumnus.

Peterborough, N. H., June 18, 1883.

EARLY MAPS OF THE ATLANTIC COAST.

To the Editor of The Nation:

Sir: I have read with interest the notice found in to-day's *Nation* of Mr. Henry Harrisse's paper devoted to an original map and documents of 1502, showing, it is said, the coast of America from the Gulf to the region of the Hudson. Of the paper in question, which, no doubt, is of much value, I have no knowledge; but I beg leave to call attention to the fact that during 1878, in a paper read before the New York Historical Society, I argued the existence of such a map as that produced by Mr. Harrisse, which appears to be similar to—possibly it may prove identical with—the map published in the Ptolemy of 1513. The original of the map published in 1513, I said, was drawn between 1501–4, and sent from Lisbon to the Duke of Lorraine. The map was certainly engraved prior to December 10, 1508. I also called attention to the fact that the Portuguese, at this early period, were busy exploring the Gulf, and "doubtless explored Florida." In 1503 Cosa sent a courier to Seville, complaining of the Portuguese; while at Segovia, in the same year, he presented two charts to the Queen—now apparently lost. The map of 1513, based upon the map drawn in 1501–4, probably contains all, or nearly all, that is found in the map produced by Mr. Harrisse—though I state this as a probability. Nor would it appear surprising if this newly-found map should appear to put the latitude of the Cape of Florida eight or nine degrees too high, since the principles of comparative anatomy may be applied to the old cartology with almost as much confidence as to the monstrosities of the Saurian age.

The delineation of 1513 gives a tolerable outline of the Gulf region and our coast as high up as the Hudson; yet it may appear, after all, the sketch so used was never intended for our coast, and that (as Mr. Valentini has suggested) some blunderer read a map of Yucatan the wrong side up, and made it do duty for the coast of North America. B. F. De Costa.

New York, June 14, 1883.

AUTHORS AND PUBLISHERS.

To the Editor of The Nation:

Sir: As a contribution to the discussion on the respective profits of authors and publishers, I would suggest one or two considerations which do not seem to have occurred to either side. From the very nature of things, literary labor always has been, and always will be, as a rule, underpaid. Before the invention of printing, this was evidently inevitable; and since that event, it is only the modern growth of a large reading public that has lifted the professional author above the degrading necessity of patronage. With the spread of education, however, the growth of readers has been accompanied by more than a corresponding growth of authors; and while the prizes in the literary lottery have been magnified for those fortunate enough to win them, the blanks have become proportionately more numerous.

When laborers increase faster than the wage-fund, the result must be insufficient wages. That this should be the case with authorship more than with almost any other pursuit is self-evident to any one who will bestow impartial thought upon the matter. There is, first, the competition of the dead authors of all ages and literatures, whose works supply reading matter free of all charge for authorship, consuming a large portion of the time and money which the public is willing to devote to reading. There is, I believe, no other pursuit exposed to this competition of the dead hand. Then there is the fact that many persons are blessed or cursed with the literary temperament, so that they are impelled to write irrespective of the question of literary reward; with the necessary corollary that what they write must be printed, even if this has to be done at their own expense. Partly contained in this class, and partly extending beyond it, are those who thirst for reputation or notoriety, and find their reward therein. Beyond all these are innumerable professional and scientific men whose careers may be largely benefited by well-directed efforts in their special lines of thought, and who may find themselves richly repaid for authorship even though it may yield them no return in current coin. Then there are the men and women with a mission, who have special causes to advocate in sociology, philosophy, politics, religion, and the myriad other fields of human activity, and who labor disinterestedly, without thought of payment. Add to these the horde of travellers, biographers, and a thousand others who make occasional excursions into the field of authorship, because they have, or think they have, something to say which the world ought to hear.

Not only has the professional author to compete with all these volunteers—whom he may regard as the regular soldier does the militiaman, but who nevertheless occupy largely the public time and the public ear—but his profession is one which has a greater tendency than some other professions to overcrowd itself. Aside from publishers' checks, the rewards of successful authorship have a very great fascination for a large class of minds, and the consideration which a popular author enjoys is just as much a portion of his incentive and of his gains as the social standing which compensates for moderate incomes in many other pursuits—such as the church, the army, and science. This seduces a large number of young people of both sexes to venture upon a literary life who had perhaps better be employed in some humbler but more practical career. Then, authorship is a business requiring no capital, and, as almost every person of moderate education imagines that he or she can write, the temptation to resort to it to eke out an insufficient income, or to begin life anew after a failure, is almost irresistible. A cultivated woman who is left a widow in straightened circumstances is almost sure to have recourse to her pen, and so is a briefless lawyer, a patientless doctor, or a pulpitless clergyman with long hours of profitless leisure on his hands. It is, together with teaching, the one profession which is popularly supposed to require no special training—the one profession open to all, without distinction of age or sex; and that it should be crowded beyond all other professions is the logical result. That it should be underpaid follows as a matter of course. Even the great masters of literature, who can dictate their own terms to publishers, have to be content with vastly less pecuniary success than attends equal talent and industry devoted solely to the accumulation of wealth. That the less fortunate should find ample cause for dissatisfaction in their paltry share of the world's goods is as unalterable as fate; and this will, I fear, continue as long as the printing-press is free to reproduce the masterpieces of bygone generations and to flood the world with the productions of all who choose to pay for employing it.

The moral of all this is not cheering for professional authorship, but, like other morals, it is not likely to be heeded.

As to the publisher, he, like other business

men, conducts his business to make money. If he does not succeed, so much the worse for the authors whose books he publishes. If he does succeed, his business will pay on an average about the same return as other lines of trade for the amount of capital, energy, and sagacity put into it. If it paid more, competition would be increased and profits cut down. If it paid less, the ranks would be thinned out till the average was reached. It has this drawback, however, that its extent is necessarily limited, and it is not capable of indefinite enlargement, like stocks, or breadstuffs, or dry goods, or transportation. None of the large fortunes of the world have ever been made by publishing books, nor will they ever be—unless, indeed, the dreams of the Rev. Barham Zincke be realized, and by the close of the next century the globe be encircled by 800,000,000 of educated English-speaking peoples. With a cosmopolitan copyright, this would open an illimitable vista for Anglo-Saxon authors and publishers alike—but, then, what about those of other tongues?

Very respectfully, L.

JUNE 16, 1883.

COLLEGE PROFESSORS.

TO THE EDITOR OF THE NATION:

SIR: I have been much interested in the article written by "N. N.," and in your comments thereon, in the *Nation* of recent date. I have just finished a service of thirteen years as professor in Western colleges, nine years of that time having been spent in a "land-grant" State college. I am able, therefore, to say a few words *ex-ex cathedra* about professors and salaries.

Nearly all the college professors I have known have been men of fair ability and devoted to their work. I have never, however, found one of the kind described by "N. N." Without exception, they have all felt the burden which the meagre salary of a Western college professor places on them. With all of these honest and often able men life has been a constant struggle, embittered by the thought that the urgent demands of the present permit no preparation for old age. I, being a bachelor, have been spared this struggle for existence, and, by following a simple mode of life, have never been pushed by actual poverty. If this condition of college finance is to continue, I see no hope for the professor of the future except in voluntary, or, rather, enforced, celibacy.

The Western college professor's duties are usually so varied that he has little chance to enjoy those deep pleasures which arise from great attainments in one line of study, and which, with the pipe and the *Seidel*, do so much to make the German professor's "life a happy one." In the "land-grant" college to which I have already referred, I have been nominally professor of chemistry, but at different times have been called upon to teach military tactics, physics, French, German, constitutional law, and political economy, and occasionally to lecture to the students on Sunday afternoons. Such an alternation of duties may bring a pleasing variety into the humdrum of college life, and I may say that I have enjoyed all these detours of pedagogy. But often it is otherwise, and the patient professor is overwhelmed with a deluge of subjects.

To show further how hard the lot of a Western professor is, I will add that once I have been cited to appear before the Board of Trustees to answer for the heinous crime of riding a bicycle. To this charge I pleaded guilty, and threw myself upon the mercy of the court. By one of the trustees I was compared to "a monkey riding around on nothing," which, on account of my well-known views on evolution, was doubtless intended for an ancestral insult. In spite, however, of this simian insinuation of the horrified trustee, I was allowed to retain my place. Indeed, I have learned gradually to look upon myself as an almost hardened criminal, since I was successively charged before the trustees with absenting myself from morning prayers, with being an infidel, and with membership in a political club. In another case, one of the most eminent young scientists of the country was dismissed from a college because he did not belong to a church. In another instance, where the majority of the professors in a State college happened to be Presbyterians, it was understood that, for a vacancy in the faculty, membership in that organization would be regarded as an insuperable objection to any aspirant, however high his qualifications might be. Other churches were clamoring for a representation. I do not exaggerate when I say that membership in some Trinitarian church is a *sine qua non* for obtaining a position in any Western college. Fitness for the position is a matter of secondary importance.

I close with a brief recital of three instances of hard luck in one institution endowed by the general Government and fostered by a State. The professor was about fifty years old; he had a wife and six helpless children. His compensation was small, and each quarter's salary (and somewhat more) was generally promised before it was drawn. Hard labor and the anxiety of life were too much for the poor man. One night a blood-vessel broke in his brain. The apoplexy did not kill him; the blood-clot became encysted; he lives a hopeless imbecile and paralytic. He had spent thirty years in teaching for the State. Had he been a pampered West-Pointer, the Government would have cared for him; but being only a faithful teacher, the State allows him and his family to starve. For the helpless husband, the crushed wife, and the bright children only one resource is left—to go on the county, to live and die in a poorhouse. The college is certainly not to be blamed for the breaking of the cerebral artery; but after the thirty years of faithful service which this poor professor has rendered, the State should provide something better than poverty for his apoplexy.

In the next two cases the college is not so blameless. In the first of these the professor was not old, but somewhat feeble. Nevertheless, he did his work faithfully and efficiently. He was thoroughly upright and honorable, and highly esteemed by all his students. A few months before his decapitation there had been some talk of changes in the faculty, and the president of the trustees had assured him that, whatever other changes were made, he at least should not be disturbed. A man of large liberality, he had given away what little surplus was left from his meagre salary. Thirty-five years he had been a teacher, giving the flower and the fruit of his life for the public. Without a trial, without a moment's warning, the axe fell, and his official head rolled in the dust. The only palliation offered by the trustees for this crime against humanity was, that the professor was somewhat deaf! The only consolation he has, in this mixture of falsehood, injustice, and ingratitude, he finds in the universal indignation of the students and the people who know the facts.

One other instance. In this case the professor was appointed on probation. He is a Methodist, and did not object to that. He had been a gallant soldier; four years he had served in the army, the greater part of the time as a private. A minié-ball through his hip had made him a partial cripple for life. After his year of probation, he was unanimously made professor, and, although he had the most difficult chair in the college, he was doing fairly well. A gentleman in the truest sense of the word, he commanded the respect of the students and the community. In some vague way a report reached the trustees that he was inefficient. No inquiry was made of the students, of his fellow-professors, or of the people of the neighborhood. His head fell—an act of arbitrary despotism.

The trustees of this college are honest men; they have acted through ignorance, and not through malice. In some way they have been led to believe that it was for the best interests of the institution that these two men should be dismissed. There is but one opinion among the students and the community as to how this influence was exerted, but no proof can be obtained. Their meetings are secret, and their victims are helpless. It is the hand of the assassin striking in the dark, and not the manly contest in the open day. Is there not some way in which such injustice can be prevented? Cannot some means be devised by which the professor may keep his place, or at least be confronted with the causes which make his removal a necessity? The above cases have occurred within a short time in one college, and their like are by no means unusual. I do not know of any business or profession which offers so little of stability and reward to a young man of good ability as a college professorship.

EX-PROFESSOR.

Notes.

JANSEN, MCCLURG & CO., Chicago, have in press and will shortly publish the second volume of their translation of Topelius's "Surgeon's Stories," entitled 'Times of Battle and of Rest.' It will be uniform in size and style with the preceding volume, 'Times of Gustaf Adolf.'

Soule & Bugbee, Boston, publish this month 'The Tariff Laws of the United States now in Force,' with explanatory notes, and citations from official and judicial decisions, by Charles F. Williams, Secretary of the late Tariff Commission. The book will have an index.

A new edition of Davies's 'Surveying' is promised by A. S. Barnes & Co. in mid-August.

Elliot Stock, 62 Paternoster Row, London, has in press a biographical sketch of Oliver Madox Brown, by John H. Ingram. This promising artist died in 1874 at the age of twenty, and the memorial will be enriched by illustrations after his own designs and those of his relatives and friends in a famous circle of British art. A small subscription edition will precede that for the general public.

Prof. Daniel Sanders, the well-known lexicographer and grammarian, has just written a book, of interest to specialists, on the structure and arrangement of the sentence in German. The language is unfortunately subject to much more complicated rules in this respect than English or French. The title of the book is 'Satzbau und Wortfolge in der deutschen Sprache.'

Indoors and Outdoors is the title of the new monthly organ (quarto) of the National Association for Sanitary and Rural Improvement. It is edited by Charles F. Wingate and John Y. Culyer, and issued at a nominal price, depending for its circulation on the various village improvement societies throughout the Union. The prospectus enumerates thirteen of these useful societies (without exhausting the list) in Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania; and if *Indoors and Outdoors* merely succeeds in multiplying them, it will have found an abundant excuse for existence. But it appeals to every rural householder. The publication office is 119 Pearl Street, New York.

We have received also the first number of the

Medico-Legal Journal, published under the auspices of the Medico-Legal Society of this city. It contains the inaugural address of President Clark Bell, and much other matter of interest, particularly in relation to lunacy and the coroners' system. A steel engraving of the late Dr. Geo. M. Beard serves for a frontispiece. On the recommendation of its President, the Society has voted to encourage the formation, out of its large membership, of committees for the common undertaking of translations from important foreign works within the province of this organization. It is a sign of the difference in culture between the present time and a generation ago that Mr. Bell thought it would be easier to make up a German than a French committee. The office of the *Journal* is No. 55 Broadway.

"Three Papers on Crime" is the title of a pamphlet, just issued by the American Social Science Association in Boston, which will repay careful reading. Mr. James F. Colby treats of disfranchisement for crime, urging the extension of it, after showing in tabular form the practices of the various States in this regard. Mr. Edwin Hill's "scheme for extinguishing crime" includes exemption of decent households from certain taxes, imposing the burden of municipal administration on houses used for disorderly purposes, or whose occupants refuse to give a satisfactory account of themselves. Mr. Hamilton A. Hill pleads for a differentiation in our prison discipline, by which hardened and degraded offenders may be kept apart from those of a milder and more hopeful type.

"Penitentiary Reform," as discussed at the Stockholm Congress last year, is the subject of a paper in *La Réforme Sociale* for June. In another part of this instructive journal we find proper notice taken of the extraordinary interference of Government with farmers' clubs (*comices agricoles*) in France. The Department of Agriculture has found fault with the diversity of their by-laws, and compelled them to adopt uniformly a set drawn up by one of its subordinates, with the significant provision that the prefect or sub-prefect of the department shall be honorary president, the mayor of the town honorary vice-president, of these clubs, with a right to preside if they choose to exercise it. Still another contributor, writing from Avignon, shows how the laws of succession in France not only are a premium upon small families and a stationary (total) population, but involve the dispersion of large families and the consequent abnormal growth of the cities at the expense of the rural districts. The subject is one on which it would seem as if the last word had been said, and yet testamentary liberty is apparently as far off as ever.

We read in the June *Bibliographer* (J. W. Bouton) that at the suggestion of Mr. R. R. Bowker the Index Society has agreed to reckon among its future tasks an index of English and American portraits, as it has already decided upon indexes of painted and engraved portraits. Mr. Bowker's plan includes the magazines and illustrated papers. To rate the portraits thus indexed according to their fidelity would probably be impracticable, but it would be desirable to affix the age at which taken (when known) or the year of publication.

Moses King, of Cambridge, has issued a new edition of 'Students' Songs,' comprising the most popular songs as now sung at the leading American colleges, compiled and edited by W. H. Hills. More than 11,000 copies of the earlier editions have been sold, and there is no reason for impugning the popular judgment indicated by this fact. Some of the pieces in the new edition are here printed for the first time, and have naturally a predominant Harvard flavor. In another similar collection that may here be mentioned, 'The American College Song-Book' (Chicago: Orville Brewer & Co.), Harvard is not included in the list of fifty colleges represented. The editor of this compilation issued an invitation to the leading colleges to contribute four songs each, original as far as possible, and this invitation in most cases was accepted. It cannot be said that the "originality" here displayed is anything to be proud of. In most cases the verses are much better than the music. The best songs of American students are still those adapted from collections of German student and folk-songs. Even Harvard, which has a musical department and an annual chorister who composes a class song to order, has not been able to produce anything to take the place of the borrowed "Fair Harvard."

'Mosaics of Bible History,' just published by Harper & Brothers, is composed of extracts from different writers in prose and poetry. "The mosaics," we are told, "are nearly all taken from standard literature, and many gems are embodied in them. The work furnishes an admirable method for instructing youth in Scripture narrative." In old times it used to be thought that a good way to instruct youth in Scripture history was to get them to read the Bible, and the Bible itself was considered a standard, and supposed to contain many gems. But we have changed all this, and the generation that has proceeded from its "Ancient Classics [boiled down] for English Readers," and its "Foreign Classics for English Readers," to its various "Selections" from English classics for English readers, may well expect to have the Bible prepared for weak digestions in the same way.

The latest edition of Sir Thomas Brassey's little volume on 'Work and Wages' (G. P. Putnam's Sons) represents the ninth thousand of the American reprint. This work has, in fact, not lost its utility since it first appeared in 1872. It is full of valuable facts—facts which in their very statement become lessons—for employers and employed.

From Houghton, Mifflin & Co. we have a number of new editions, the first being the late Dr. Hayes's 'An Arctic Boat Journey in the Autumn of 1854'—in all respects, so far as is evident, identical with the illustrated edition of 1867. Dr. Holmes's 'Pages from an Old Volume of Life,' embraces a great variety of essays and addresses, long and short, many of which first saw the light in the *Atlantic*. "Bread and the Newspaper" is here, and "My Hunt after 'The Captain,'" and "The Physiology of Walking," and "Mechanism in Thought and Morals," with "Crime and Automatism." The theological selections are "Jonathan Edwards" and "The Pulpit and the Pew." The twelve pieces together are, as their title implies, a fair sample of the author's philosophy, with one personal autobiographic episode thrown in.

The same firm have issued four little tracts in its "Riverside Literature Series," all by Hawthorne ("Grandfather's Chair," in three parts, and "Biographical Stories"), and the concluding two volumes of the fine uniform Riverside edition of this writer's works, with Mr. Lathrop's introductions. The tracts are equipped with questions at the end for the use of teachers. Vol. XI. includes the 'Dolliver Romance,' 'Fanshawe,' 'Septimius Felton,' and the 'Ancestral Footstep'; Vol. XII., Tales and Sketches, Biographical Stories and Sketches, the Life of Franklin Pierce, a steel portrait of Hawthorne, a sketch of his life by his son-in-law, and an index to the works (not to their contents). 'Fanshawe' excepted, the eleventh volume groups together three stories curiously related to one another and to 'Dr. Grimshawe's Secret,' and all posthumous, the 'Ancestral Footstep' being now published for the first time. Such a series of partial attempts and rough drafts has few parallels in literary history. Mr. Lathrop's biographical sketch is an excellent performance, marked by moderation and good taste. Before taking leave of this edition it is worth while to remind the reading public that the volumes are purchasable separately.

In a paper read before the American Philosophical Society on March 16, by Prof. T. F. Crane, of Cornell University, and printed in its Proceedings last month, an attempt was made to account for the spread of European folk-lore by reference to the part played in the diffusion of legends and stories by the preachers of the Middle Ages. A glance was given at the early collections of fables—Cyril's 'Speculum Sapientiæ,' N. Pergamenus's 'Dialogus Creaturarum,' and the 'Gesta Romanorum'—and then were considered in order the dictionaries (so to call them) of *exempla*, or the moral tales arranged for the use of preachers, either alphabetically or topically, such as Herolt's 'Promptuarium Exemplorum, and the 'Speculum Exemplorum'; the treatises for the same purpose, with *exempla* thrown in, like Étienne de Bourbon's 'Liber de Donis,' Peraldus's 'Summa Virtutum,' and Bromyard's 'Summa Prædicantium,' and, finally, the ready made sermons, like those of Herolt and those in Pelbart's 'Pomarium.' Samples of many of these *exempla*, with their affiliations, were given by Professor Crane, who evidently was embarrassed by the wealth of his material, which needed a course of lectures for a clear and thoroughly intelligible exposition.

The first volume of a new edition of the catalogue of the Musée Guimet, brought up to Jan. 1, 1883, has just been issued. The first edition of 1880 was in one volume; the present will fill three: (1) religions of India, China, and Japan; (2) religions of ancient Egypt, Greece, Italy, and Gaul; (3) a catalogue of the Japanese pottery. M. L. de Millone, the editor, says the *Revue Critique*, has prefixed to this first volume an introduction on the religions of the three countries, and in the body of the catalogue has carefully separated the articles relating to the belief of each people, and has subdivided them by the principal sects. He has grouped in each division the various representations of each divinity so as to show the modifications which time has made either in its characteristic features, or in its form or attitude, or in its mystic meaning.

—*Harper's* for July contains, for its chief illustrated article, an account of Hampstead and Hampstead Heath, by Mr. William H. Rideing, and of Cincinnati, by Olive Logan. Charles Reade has a short Irish story called "Born to Good Luck"; and a poem of Browning's, or song, as he calls it, is illustrated by Miss Emmet. Mr. T. W. Higginson contributes an historical account of the "Second Generation of Englishmen in America," which contains the most complete defence of the New England persecutions of Quakers and witches that we remember to have seen. "In those days religious liberty brought a heterogeneous and often reckless population; it usually involved the absence of a highly educated ministry; and this implied the want of a settled system of education"—education being still a function of the Church, or, as in New England, of the State through the Church. Mr. Higginson admits that the second generation of Englishmen in America were—as might have been expected in the case of exiled sectarians, cut off from intercourse with the rest of the world, and left to develop and perfect their own peculiar system—more narrow, gloomy, and sombre than the first generation, who represented, so far as the leaders were concerned, the

most enlightened classes in England. It is the most difficult thing in the world to enter now into the real Puritan feeling of this time, involving as it does the conception of life as a constant battle with a personal devil, who took possession of human beings and controlled their actions, for which at the same time they remained responsible. The reaction which followed the witchcraft trials is, in fact, almost as curious a phenomenon as the persecutions themselves. In the "Easy Chair" Mr. Curtis discusses the question of the proposed Newburgh memorial, and protests against either a statue of Washington brandishing a drawn sword on top of a column seven feet high, or, on the other hand, an obelisk or shaft with inscriptions. If we have to choose between the two, however, and take our chances of the badness of the work, we should be inclined to say, give us by all means a shaft. The more deeply we revere the memory of Washington, the more must we dread another statue of him.

—Mr. Crawford, in the *Atlantic*, begins another story—this time a tale of Roman life. We must defer criticism of it until it appears as a book; but we may say that it will probably please the lover of "local color," which seems to be generally recognized as the note of Mr. Crawford's stories. Mr. James has a pleasant account of Touraine, the first, apparently, of a series of French provincial sketches, and Mr. R. G. White finishes his international satire called "Mr. Washington Adams in England." The idea of this is ingenious, and we will not spoil it for the reader by disclosing the nature of the plot. It is intended to contrast the American of the English imagination, who is assumed to be still of the Asa Trenchard type, with the real American gentleman—who, we need hardly say, is, like his brother, the true British gentleman, one of nature's noblest products—and to bring out the gross dulness and ignorance as to American affairs pervading English country life. As to the accuracy of Mr. White's picture of English ways and conversation, we will not undertake to pronounce; but is not the Trenchard type probably extinct in the English imagination? It became antiquated, we have always supposed, both in England and America, while he still held the stage. If the imagination of English society is still haunted by memories of or a belief in Asa, we may look for anything in the international future. The misunderstanding of each country by the other, as depicted by Mr. White, is so profound, and has been going on so long, that we can only wonder at the goodness of Providence which still spares us a bloody war, and even seems to foster the delusion that we are every year on better international terms.

—Every now and then we are told that the taste of the world is changing—that nobody reads the English classics now except some unlucky civil-servant who must pass an examination in literature, or a young man who has been bitten by a mania for self-culture and is pursuing a "course" of reading. It is not merely that Addison slumbers on the shelf and Gibbon appears no longer on the ladies' toilet-tables where it was his chief ambition to be found. That change had already come when men who are now old were young; but the next generation of writers has met with the same fate. Jeffrey and Leigh Hunt and Christopher North—what are they but names? And Landor is barely saved by extracts. Nor has it stopped here. To come down still later, Dickens and Thackeray are not merely outdone by a finer art, but, we are told, the rising generation do not even read them enough to know whether their art was fine or not. Those who are *nel mezzo del cammin di nostra vita* can hardly believe this of their young friends; but there are not wanting signs that it is true. A very skilful writer has lately published the first volume of an admirable 'History of the United States.' In his endeavor to write in a style which should never puzzle and never fatigue, which should enchain the attention of the reader by presenting him with a series of pictures as vivid as those which our best artists furnish to our best magazines, he has fallen so exactly into the way of an historian popular a third of a century ago that the readers of that day rub their eyes and ask if here is a new Rip Van Winkle. It might be supposed that a resemblance so striking would have been generally pointed out at once in every public print. It was not so. The new 'History of the United States' was immediately noticed by all the daily papers and all the weekly and monthly magazines; it was received with a unanimous chorus of praise. The style, in particular, received especial attention; but no one thought of the forgotten writer of forty years ago: all looked at once to an English historian of our own day. Every one said that Mr. McMaster had imitated Mr. Green (though the English history did not appear till the American was half written), and no one perceived that he resembled Macaulay. Yet Thackeray did not better catch the style of Bulwer and Disraeli and Ainsworth; the parodies of the "Rejected Addresses" and of Warreniana are less like their originals; no admirer of Carlyle ever copied his model half so thoroughly and so well as Mr. McMaster has reproduced Macaulay. Whether it be imitation, or unconscious influence, or the similarity that comes from the effort of similar minds to attain the same end, the result is undeniable. The likeness is at times painful; one feels uncomfortable in listening to the familiar rhythm, and meeting, one after another, the well-known mannerisms. There are the short sentences, the repetition of words, the trick of the concrete, the trick of comparison, the trick of antithesis, the trick of the superlative—all excellent rhetorical devices, lending themselves admirably to a clear, animated, picturesque style, which tempts the reader on and on through a constant succession of interesting scenes till he drops the book from the mere fatigue of looking at such a variety of objects. The resemblance to Macaulay throughout is wonderful—at times laughable, at times irritating. Conceal the title, and it would be hard to persuade an admirer of the English historian that he had not before him a hitherto unknown essay by his favorite. And yet, till within a month, hardly one of the critics has mentioned the name of Macaulay. *Sic transit gloria mundi.*

—Dickens's 'Dictionary of London,' first published several years ago, was followed shortly by Dickens's 'Dictionary of the Thames,' and more recently by Dickens's 'Dictionary of Paris.' Now all three of these "unconventional handbooks," as their compiler calls them, have been revised and brought down to date, and are issued again and simultaneously, with the date 1883 boldly on the title-page. The original plan of these dictionaries was so good that it has needed no alteration; but the execution was not at first altogether equal to the design. After much personal use of the earlier editions of these guidebooks, and after a careful examination of the new issues, we take pleasure in saying that this discrepancy no longer exists, and that all three dictionaries are now to be highly recommended to tourists. In the dictionaries of London and Paris there is a general map of the city, filling one page and giving a key to fourteen or fifteen section maps on a larger scale. These smaller maps are less easy to tear and more easy to consult than a single large folding map. Under the heading of "Flats," Mr. Dickens notes the still slow introduction into London of the apartment-houses common in Paris and Edinburgh and now also in New York. In the 'Dictionary of Paris' we have remarked one or two minor slips which deserve correction in a third edition. Under both "Hotels" and "Ladies alone in Paris" are cross-references to "Confections"—which will, however, be sought in vain in its alphabetical place, although a list of those recommended will be found under "Tradesmen." Under "Newspapers" there is no mention of the highly characteristic *Figaro*. The information under "Panorama" is less detailed than it might be. Especially praiseworthy, however, is the section on "Old Paris." It might be well for Mr. Dickens to consult a few American guidebooks to London and Paris and borrow a hint or two from these. At present his handbooks are calculated for the meridian of Greenwich perhaps too exclusively.

—Mr. J. Edmund Clark writes us from York, England:

"With regard to my letter inserted by you on May 17, it has been pointed out to me that only in Great Britain, not in Ireland, have women *every* vote except that of the Parliamentary franchise. The municipal franchise still excludes women householders in Ireland; nor, I find on further inquiry, are women eligible as poor-law guardians. With reference to the main question, you have probably appreciated the significance of the memorial presented to Gladstone, signed by over one hundred members of the House of Commons."

—Civil-service reform has not reached France. Jules Sandeau, who died last April, was librarian of the Mazarin Library. He was an admirable novelist and dramatist, but, we fancy, nothing whatever as librarian. Certainly he has not won himself a name either in bibliography or bibliothetics. He has now been replaced by M. Ferdinand Fabre, also a good novelist, not as yet a dramatist—that will come in due time, as it does to all good French novelists—but not the least bit in the world of a librarian. The *Revue Critique* protests against the decision, as an injustice to a number of worthy and honorable workers who have served the library for years at absurdly small salaries, and now see their well-earned right to a chance of advancement disregarded. Fabre is an anti-clerical writer: readers will remember 'L'Abbé Tigrane.' This accounts for his appointment by the present Government; but the appointment is only one of a class that have exercised a very prejudicial effect upon the interests of the Parisian libraries, and have not been entirely unknown in this country.

HUMPHREYS'S VIRGINIA CAMPAIGN.

The Virginia Campaign of 1864 *and* 1865. By A. A. Humphreys. [Campaigns of the Civil War.—XII.] Charles Scribner's Sons.

THE last of the "Campaigns of the Civil War" issued by the Scribners forms in every way a fitting and creditable conclusion of the series. This volume has been looked for with unusual interest because of its author and of the period treated of; nor does it disappoint the public expectation. An officer among the highest in rank in the Army of the Potomac, and one whose rank was not more distinguished than his services to the Union cause, General Humphreys brings to his task peculiar advantages. As Chief of Staff to General Meade, his official position rendered him familiar with all the Federal movements in the campaign of 1864, while his subsequent career as commander of Hancock's (Second) Corps was not less conspicuous and important. His long and eminent service after the war, in Washington, placed within his easy reach all the official data now extant in regard

to the struggle. We are not surprised, then, to find his book a repository of data of the greatest value. The narrative is very clear, concise, and fair in spirit. It is too crowded, and written too much, perhaps, in the style of an official report, to be entertaining to the casual reader; but its interest to the student of the great campaign of 1864-65 can hardly be exaggerated.

This campaign was incomparably the greatest of the civil war. In the desperate daily struggle, unintermitted for months, in the unparalleled number of fierce battles, in the terrible destruction of life, in the magnitude of the issues at stake, and of the results determined by it, no campaign can compare with it. The history of it, when fully written, will constitute a splendid tribute to the courage and endurance of both armies. This history, too, will bear witness to the qualities of the leaders of those armies—to the determined perseverance, the obstinate tenacity of purpose, the coolness and firmness in the presence of defeat, that characterized the successful general whom his countrymen have ever since delighted to honor, not more than to the boldness, the sagacity, the fertility of resource, the consummate skill which have placed the defeated commander on the roll of great captains.

On May 4, 1864, Grant crossed the Rapidan at the head of about 125,000 men "present for duty," according to the official reports as analyzed by General Humphreys. Lee held the upper line of that river with a force of 62,000 men. Grant's purpose was to push rapidly through the tangled, wooded wilderness which covered Lee's right flank, and force him to fight in the more open country to the south of it by threatening his communications with Richmond. Lee anticipated his adversary, and, leaving his cantonments on the Rapidan, hastened to strike the Federal army while on the march. The 5th and 6th of May were marked by bloody battles in the dense, wooded wilderness, and sometimes miry thickets, of this region. Each side was by turn the assailant, but the advantage, especially on the second day, was decidedly with the Confederates. The difficulty of manœuvring large bodies of men in such a country was immense, and superiority of numbers did not give a corresponding advantage. On May 7 the Federal army again moved on Lee's flank, with the intention of seizing Spottsylvania Court-house; but Stuart's cavalry opposed their march so stubbornly that the Confederates reached the coveted position first, and held it.

From the 8th to the 20th of May, the vicinity of Spottsylvania Court-house was the scene of many severe and some furious battles, the most memorable of which occurred May 12, when Grant threw the half of his army, under Hancock and Burnside, against Lee's lines. Burnside was repulsed, but Hancock's attack on the Confederate centre was for a time successful, the Federals capturing a salient position on Ewell's line with a number of guns and a large part of Johnson's division. All day long raged at this point the sanguinary contest. The ground was piled with dead. A dead tree, nearly two feet in diameter, was cut off some distance above the earth by the terrific hail of musket-balls. The fate of the Confederate army trembled in the balance. Only by the most strenuous efforts and the fiercest fighting was Lee able to force back the superior masses which had broken his lines and seemed on the point of overwhelming him. But he did it, and the subsequent attacks upon his position were bloody and fruitless to the Federals. On May 20, Grant tried the movement by Lee's right flank again, but unsuccessfully, and in a day or two the armies once more confronted each other near Hanover Junction. Here the position taken up by Lee was so advantageous that Grant drew off without attack, and, continuing his former strategy, crossed the Pamunkey below the Confederate right. But when he advanced, Lee was again in his pathway, and continued to anticipate his movements until the lines of both armies crossed the famous field of Cold Harbor. Here, on June 3, Grant made the most bloody and disastrous of his assaults upon the Confederate army. His assault was general, but he was everywhere repulsed with great slaughter, and at comparatively trifling cost to the Confederates.

This ended the campaign against Richmond from the north side of the James, and ten days later the Federal army was on its march to try the approach by way of Petersburg and the Appomattox, where Butler had for some time been "bottled up" by Beauregard. The losses in battle of Grant's army had by this time reached nearly 50,000 men, according to General Humphreys (other Federal accounts make it much larger), and the reinforcements sent him about 28,000. Lee, on the other hand, had received about 15,000 men, which seems to have covered the bulk of his losses. This was a period of great depression in the Federal councils. President Lincoln is said to have been more discouraged and despondent at this time than at any other during the war. An ordinary commander, in General Grant's place, would have hesitated about continuing this costly and apparently fruitless mode of warfare on the south side of the James. Grant did not. He knew that Lee had been forced to detach Breckinridge and Early to drive Hunter away from Lynchburg. It was easy to maintain the Federal superiority in numbers, and General Grant transferred his army to the Appomattox and attempted to seize Petersburg. A failure and the loss of 8,000 men were the result. A series of attempts against the railroads from the South to Richmond followed, which were completely foiled by Lee, and with heavy cost to the Federals. By the 30th of June the Federal losses in battle had risen to over 68,000, according to General Humphreys (p. 242), or to 75,000 by other authorities. These losses and the detachment of the Sixth Corps to Washington, made necessary by Early's advance on that city, rendered Grant for a time less aggressive. Great preparations were now made for the springing of a mine on the centre of Lee's Petersburg lines. A vigorous demonstration on the north side of the James called off a large part of Lee's forces, and on the morning of July 30, when but three Confederate divisions were at Petersburg, the mine was sprung. The explosion of 8,000 pounds of powder buried a regiment of Confederates and made a fearful gap in their lines. An assault was at once made by Burnside's corps, supported by Hancock, Warren, and Ord. Some preparations had been made by General Beauregard against such a contingency, but only skill of the highest order, and a courage that counted life as nothing worth on the part of the handful of Confederates within reach, enabled them to resist the immense force sent against them. The assault was badly managed, and, notwithstanding the success of the mine and the tremendous momentum of the assaulting columns, ended in complete and disastrous defeat to the Federal arms. This chapter is the most graphic in General Humphreys's book.

After another period of comparative rest, Grant renewed his operations against both of Lee's flanks, his numbers enabling him to compel the Confederates to stretch their thin lines in both directions. The Federals thus seized the Weldon railroad in August, and Fort Harrison, on the north side, at the end of September, but all other efforts against Lee's lines during the autumn proved costly and abortive. The winter, however, brought worse enemies to the Confederates than even the splendid army in their front. The signs of exhaustion were everywhere evident in the South. A succession of disasters had given Georgia and South Carolina to Sherman, and Tennessee to Thomas. Sheridan had ruthlessly harried the Shenandoah Valley. For months Lee's men, in the trenches at Petersburg, were but half fed and half clothed, while every letter that came to the camp told of suffering and starvation at home.

The spring came, to find Lee holding thirty-five miles of entrenchments with 57,000 men of all arms (according to General Humphreys), while Grant had 129,000 in his front. Lee's strength was steadily weakening; desertions were numerous; the privations of the winter had broken the spirit of the Confederates. Lee's last effort against Fort Steadman, on March 25, made to cover his withdrawal from Petersburg, failed, and cost him heavily. Grant moved against Lee's right flank and communications as soon as the roads permitted. Then followed the overthrow of Pickett and Fitz Lee at Five Forks, on April 1. This Federal victory, and the loss it entailed on Lee, insured his defeat. Next day his thin lines were no longer able to resist Grant's assaults. Petersburg and Richmond were given up on the night of April 2, and Lee attempted to reach Danville. The failure of the supplies to reach him at Amelia Court-house destroyed his last chance of effecting this. The delay and exhaustion brought about by this cause, together with the rapidity and overwhelming force of the Federal advance, cut him off from Danville and forced him to turn toward Lynchburg. The sufferings of the winter found a fit sequel in the privations of that march, when for days a little parched corn was the only ration. The 30,000 men or more that had left Petersburg dwindled in a week to 8,000 in ranks at Appomattox. General Humphreys finds it difficult to credit the small number that remained to Lee at the last, and thinks that many men must have thrown away their arms after the surrender became inevitable. He is in error. There were but 8,000 men ready for duty on the morning of the day the surrender was decided upon and while the Confederate army was still drawn up for battle. The remainder of the 28,000 who were afterward paroled had already fallen out of ranks from utter exhaustion and lack of food, or had been scattered in the combats that marked the preceding days.

Lee has been criticised for his final operations in this campaign; but the truth is, the general result, after the defeat of Hood at Nashville and the advance of Sherman into North Carolina, was inevitable. It was not possible long to delay the catastrophe. As a specimen of the boldness, sagacity, and skill with which a small army may be so handled as to cripple and baffle far larger and better-appointed forces, this campaign will take high rank in history, as will its veteran commander among those who are recognized as masters in the art of war.

WHITNEY'S CLIMATIC CHANGES.

The Climatic Changes of Later Geological Times: A Discussion Based on Observations made in the Cordilleras of North America. By J. D. Whitney. [Memoirs of the Museum of Comparative Zoölogy at Harvard College. Vol. vii.] Cambridge. 1882.

It is more than forty years since Agassiz published the famous memoir in which he maintained his theory of a glacial epoch, or that the era of man was immediately preceded by a period of intense cold, during which most of the temperate

zone, as well as the polar regions, was buried under a vast sheet of ice. Though admitting that the general tendency of the temperature of the earth's surface has been toward greater cold, and that each epoch was cooler than its immediate predecessor, he denied that the process had been gradual and continuous, and held that between each two geological eras there intervened a period much colder than either of them. The glacial period was merely the latest of these. So far as the ice age is concerned, this theory is still the most widely received, though comparatively few geologists concur in the hypothesis of recurrent cold periods. Astronomers, on the other hand, are nearly unanimous in the belief that the cooling of the whole solar system has been an uninterrupted process throughout the entire course of geological time, which implies that the sun was hotter during the glacial period than now, and that the mean temperature of the earth was higher. The difficulties involved in the theory of a cold glacial epoch are not even confined to this astronomical objection: for, strange as it seems at first thought, it is by no means certain that a rigorous climate would favor the formation of extensive glaciers. A general diminution of temperature would diminish evaporation from the seas, lakes, and rivers, and consequently also the rain and snow-fall, and it is anything but an easy matter to decide whether diminished temperature would promote the formation of glacial ice, or the accompanying decrease of atmospheric precipitation retard the accumulation of ice, to the greater extent; in fact, this point has never been determined. Doctor Croll has endeavored to reconcile the views of astronomers and geologists by an ingenious hypothesis, according to which a periodic variation in the earth's orbit is accompanied, not indeed by a change in the total amount of heat received from the sun, but by an alteration in the length of the seasons, so that in his belief the glacial period was one in which the winters in the northern hemisphere were long and cold, while the summers were hot, but short. Lyell, on the other hand, believed that the glacial period could be accounted for without any change in solar radiation by supposing an abnormal quantity of land in high latitudes; but both of these theories are open to the extremely serious objection that they fail to give a satisfactory account of the whole of the heat received from the sun.

It would be easy to make out a list of good geologists who have advocated the view that the mean sea-level temperature of the glacial period must have been higher than that of the present day on one or other of the grounds referred to, resorting to local conditions, such as high altitudes, to explain the formation of snow and ice; but they have obtained little hearing, and the great majority have quietly adhered to their belief in the association of a low mean temperature and glaciation, without much attempt to refute the counter-arguments. This is in part ascribable to the strength of the current of opinion which, once having received a certain direction, is more easily followed than fought, and partly to the convenience of the theory which, as something in itself mysterious, has been called upon to account for any of a very large class of phenomena otherwise difficult of explanation.

Professor Whitney has reopened the discussion with the advantage of the greatly increased store of facts bearing on the subject which has accumulated of late years. He passes in review the various areas of the earth's present surface, so far as they have been investigated, on which glaciers are actually forming, or where the mean annual temperature is so low that excess of heat constitutes no obstacle to their formation. Of such areas the great mountain system of Central Asia is one of the most interesting. Here the southern range, that of the Himalayas, receives the hot, moisture-laden winds from the Indian Ocean, condensing the vapor as rain and snow, and upon the mountains accumulate the largest glaciers in the world. The winds, deprived of most of their moisture, pass on to other immensely high ranges where the mean temperature is lower; but the air reaching this region is so dry that very little rain or snow falls, and glaciers are insignificant or entirely wanting. In the arctic regions, also, our author traces a similar relation between glaciers, temperature, and precipitation. Greenland has commonly been supposed to be buried under a vast ice-sheet, and has constantly been appealed to as a modern example of the conditions prevailing over a much wider area during the glacial epoch; but Professor Whitney shows that the supposition of continuous ice in Greenland is an assumption, and that the glacial sheet is probably confined to the neighborhood of the mountain ranges which run parallel to its eastern and western shores—a theory upon which rests the present expedition of Baron Nordenskjöld. Southerly winds carry much moisture to Greenland from the oceanic areas warmed by the Gulf Stream, and the consequence is a heavy annual snowfall along its coasts; but in other portions of the arctic regions less favorably situated with regard to oceanic and atmospheric currents—in the archipelago north of North America, and on the northern coast of Asia—though the cold is more intense, glaciers do not form for lack of moisture. These facts, and others of a similar character, evidently suggest the inquiry, If only those cold areas which are in the direct path of warm, moist winds are now glaciated, how could a more general prevalence of cold, accompanied by decreased evaporation, result in covering the earth from the poles to middle latitudes with ice?

Turning to the geological records of an ice age, Professor Whitney reviews the literature of geology to show that there has been no general glaciation in the western United States, in eastern Europe, in any portion of Asia (unless, it may be, near its uninvestigated northeastern coast), or in Australia. In all of these regions, wherever glaciers have existed, they have evidently been, like those of modern Switzerland, of the mountain type, strictly subordinated to the local topography. In fact, the clearly established relics of an ice age are confined to western Europe and a portion of northeastern North America, or, including Greenland, to the neighborhood of the North Atlantic. Of these areas, Professor Whitney pays most attention to Scandinavia, where glaciers still exist, and which, as the Swedish geologists have shown, occupied a higher level during the glacial epoch than it now does. The greater elevation gave the mountains of the peninsula greater condensing power; but this our author does not regard as sufficient to account for a glacier system exceeding that of modern Greenland, without the aid to be derived from additional evaporation resulting from greater sun-heat. Here, too, the proof seems indubitable that the glaciers flowed from a central elevated region, and did not form portions of a polar ice cap. The glaciation of the northeastern United States and Canada he regards as too imperfectly worked out for general discussion, and therefore confines himself to some suggestions and to criticism of certain supposed facts as to its character.

Professor Whitney states the general conclusions he has reached as follows:

"The conditions of a glacial epoch are not, therefore, to be sought for in a general diminution of the temperature. It is true that the regions in which the glaciers take their rise cannot be so warm that precipitation takes the form of rain; but the required low temperature must be confined to a limited area, and be brought about by local causes, and not be something in which all the other portions of the earth are sharers. There must be copious precipitation, which, although locally in the form of snow, can in reality only be the result of a high mean temperature in other regions. In short, warmth, as a phenomenon of general occurrence, is more indispensably necessary than cold, because the latter may always be produced, where locally wanted, by increase of elevation or by the shifting of the ocean currents."

It cannot safely be predicted that most geologists will be persuaded to agree with his conclusions by the argument Professor Whitney offers or the evidence he presents. He has shown that much is to be said for his view, and he has made valuable contributions to the literature of glaciation, but he cannot be thought to have met all objections or to have proved his case. Indeed, the question of the temperature of the ice age can hardly be settled on merely geological evidence, since physical principles of no little complexity are involved. Should these prove in harmony with his views, the evidence presented would acquire new value. But, however this may be decided, Professor Whitney has done his science a great service by drawing attention to the frequent abuses of the glacial theory, which is invoked without scruple in the writings of many modern geologists to account for gravel deposits, for erosion, for displaced rock, for denudation, for the formation of soil, and for almost any mechanical effects not readily referable to other causes. He also deserves thanks for having reopened a question which should never have been allowed to rest. If the sun is a variable star, it is to the geological record that recourse must be had for proof. If it is cooling uniformly, the earth must have had a higher mean temperature during the glacial epoch than it now possesses. Geologists and astronomers have an equal interest in settling this important point, and it is one upon which they should not agree to differ. If, again, it is really capable of satisfactory proof that the northern hemisphere, from the thirty-ninth parallel northward, was cooled down to a temperature compatible with general glaciation by an alteration in the length of the seasons or by a redistribution of land, while the entire northern hemisphere received as much, or more, heat than it now does, physicists and climatologists should vie with one another in seeking a rigorous demonstration of the conditions and of the manner in which the heat was disposed of without producing more warmth.

If the earth has been growing cooler, it must also have been growing dryer. Indeed, Professor Whitney was led to his examination of the glacial question by observations and speculations on the desiccation of certain areas, especially in the far West. Few of his readers will probably consider that he has been as successful in treating this subject as the kindred one of glaciers. A critic in a scientific journal has already pointed out that historical time affords much too narrow a basis for the deductions which Professor Whitney has attempted to make from the records concerning the dryness of past geological ages. Were it possible to prove clearly any perceptible desiccation arising from the waning heat of the sun during the last 5,000 years, that fact would indicate a temperature for the early Tertiary entirely inconsistent with the existence of the fauna and flora known to have flourished at that time. He also, it is true, advances geological arguments to show progressive desiccation since the Tertiary, but he neglects to mention the evidence of small precipitation and intense evaporation abundantly afforded by the Triassic and Jurassic of the

far West. The existence of areas of desiccation is compatible with almost any general temperature of the earth and any amount of evaporation, for the presence of a mountain barrier in the path of the moist air-currents will always cause drought.

'Climatic Changes' is deficient in clearness and in logical sequence. This not only has led the author into some inconsistencies, but will, we fear, cost him many readers. In these days memoirs follow one another so rapidly that even the specialist must select his reading, and is loth to spend time in remoulding for himself into a more compact and intelligible shape the details of a desultory argument.

A FRENCH BIBLIOGRAPHY.

Bibliographie des Bibliographies. Par Léon Vallée de la Bibliothèque Nationale. Paris: Em. Terquem. 1883. 8vo, pp. vi.–774. 25 fr.

SOME time ago we called attention to M. James Jackson's 'Liste provisoire de bibliographies géographiques.' That book, although confined to so narrow a subject, contained 1,557 articles. M. Vallée's, though he takes all knowledge to be his province, has only 6,894. The reason that the difference is not greater is that M. Jackson referred to lists, even short ones, which he found in books of travel, transactions of learned societies, and the like. M. Vallée records, in general, only substantive volumes. Had he followed M. Jackson's example, in this day when the custom of prefixing "lists of authorities" is so common, one shudders to think of the size which his volume would have reached.

M. Vallée very appropriately begins by giving a bibliography of bibliographies of bibliography. These second-cousins of literature—or, if you prefer, cube-roots or double-refined essences—are, he says, three in number: Tonelli (1782), which is entirely forgotten; Petzholdt (1866), which every schoolboy knows, or at least every library boy; and Sabin (1872), which is merely a selection of 1,200 titles. This list is absurdly incomplete. M. Vallée himself gives, in the body of his work, Peignot's 'Répertoire bibliographique universel,' Namur's 'Bibliographie paléographico-diplomatico-bibliogique,' Guild's 'Librarian's Manual,' and "J. D. O.'s" 'Some French Bibliographies.' Besides these, there are three books which he has apparently not met with, though it is almost incredible that he should not—Power's 'Handy Book about Books,' which was the foundation of Sabin's list; Porter's 'Handbook of Bibliographies in the Reading-room of the British Museum'; and the list of "bibliographical aids" prefixed to Leypoldt and Jones's 'American Catalogue,' which, though it is almost confined to recent English and American bibliographies, is fuller in a number of topics than M. Vallée's, in spite of the greater extent of his field.

Of the three whom he has mentioned, Petzholdt is the chief; and it is not evident why the German book of more than 900 pages should be replaced by this French work of 774. M. Vallée gives no explanation, unless we take as such his pointing out that Petzholdt is arranged systematically by subjects, with an index of authors, and that his own book is arranged alphabetically by authors, with an alphabetical index of subjects—as near an approach to a "dictionary" catalogue, which would mix the two alphabets in one, as a Frenchman would like to make. If this be M. Vallée's reason, it is hardly sufficient. There is a manifest propriety in arranging the entries in a subject-bibliography by subjects, as Petzholdt does, and not by authors, as Vallée does. There is also a manifest convenience to the reader in spreading before him in one place all the bibliographies of a certain subject; there is almost no advantage in having all the bibliographical works of a certain author brought together. One goes to such a manual to find what Schiller bibliographies there are, or what art bibliographies, and very rarely to know what Peignot has written or Quérard. Then, as to the ease of finding any special subject, if there is a pin to choose, the superiority is not on the side of the Frenchman. You want a Goethe bibliography: you look in Vallée's index, and find eleven brief catch-titles referring you by numbers to eleven different parts of the author-list, where are given the full titles—with imprints, but without collations, by the way. You look in Petzholdt's index, and you find one reference to three consecutive pages, where all of the fourteen Goethe books are spread before you at once, with full titles.

There is, however, a reason for which it is well worth while to buy M. Vallée's work. It is published seventeen years later than Petzholdt's, and those years have been unusually prolific in bibliographies. For instance, there are eighty-one subjects in Vallée's index in the letter T alone which are not in Petzholdt—that is to say, nearly four-fifths of the later editor's subjects in that letter are new, and probably the proportion is the same throughout. And yet he has not exhausted the field. We do not find, for example, Hortis's 'Bibliografia delle edizioni del Tasso,' 1879; Coelho's 'Bibliografia critica de historia e litteratura spagnuola,' 1872; Carpellini's 'Letteratura dantesca' (a continuation of De Batines's Dante bibliography); Salimbeni's 'Nota bibliografica intorno gli scacchi,' 1881; Orsi's 'Saggio bibliografico su G. Botero,' 1882; Pappafava's 'Letteratura notarile,' Innsbruck, 1883, although M. Vallée has the Zara edition of 1880. He has Papanti's 'Catalogo dei novellieri italiani,' 1871, but omits his 'G. B. Passano e i suoi novellieri,' 1878. A similar omission is Melzi and Tosi's 'Bibliografia dei romanzi di cavalleria italiani,' 1865. We do not find Antonucci and Giannini's 'Catalogo di opere stampate dai Soncini nei sec. XV e XVI, 1868,' nor the 'Catalogi dei codici orientali di alcune biblioteche d'Italia,' begun in 1878; nor the two periodicals, *Bibliografia d'Italia*, 1867, etc., and *Bibliografia universale*, 1879, etc.; nor Valdrighi's 'Annotazioni bibliografiche intorno Bellerofonte Castaldi.' These are all Italian books, but we miss also Dukas's 'Étude sur le Satiricon de J. Barclay'; Quérard's 'Livres à clef,' 1873; Tesar's 'Litteratur des Feuerwesens,' 1881; Pollen's 'Universal Catalogue of Books in Art,' published by the South Kensington Museum in two volumes and a supplement (the most important art bibliography ever compiled); the British Museum Catalogue of Hebrew books (although Steinschneider's Catalogue of Hebrew books in the Bodleian Library is given, which shows that the omission did not proceed from its being a library catalogue). And here we may remark that M. Vallée affords in his preface no indication of the principle upon which he goes in excluding and including books—one has to infer it from his practice; and from that it seems that he means, very properly we think, to put in whatever is in effect a bibliography, though it may be in form the catalogue of a library or a bookseller's list. He might include, for instance—but he does not—the catalogue of the Ticknor collection at the Boston Public Library as a bibliography of Spanish literature; it is one of the best that there are. He might put in—but again he does not—Quaritch's bulky volumes; they are, to say the least, quite as useful as *Le Livre*, which he has. He includes also a number of those bibliographies of authors which of late have so frequently been annexed to their works. But he has not found them all—not, for instance, the one annexed to Berti's 'Lettere inedite di Tommaso Campanella,' and to Cino da Pistoia's 'Rime,' edited by Brindi and Fanfani, 1879. There are serious omissions, too, among the older books, as Lichtenthal's 'Dizionario e bibliografia della musica,' four volumes, 1836; a remarkable omission, because the book is in Petzholdt. Indeed, there is some reason to think that our author has not used his predecessor as he might have done, but has rashly attempted to compile a bibliography from his own resources. How else can one explain his saying nothing of Adelung and Rotermund's continuation of Jöcher's 'Allgemeines Gelehrten-Lexicon' (he has the original work), and Finke's and Hauber's 'Beyträge'? Jöcher was in the Bibliothèque Nationale in which M. Vallée is employed; is it possible that the continuations were not? How else excuse his neglect to mention that Lowndes's 'British Librarian' was left unfinished at its author's death, and contains only the section Religion and its history? M. Vallée should have referred to it under Religion or Théologie, if he knew this.

American literature we do not expect to be well treated by a Frenchman, and so are not surprised that he makes no reference to Mrs. Hale's 'Woman's Record,' Putnam's 'Library Companion,' President Porter's 'Books and Reading' with Mr. Hubbard's select catalogue, and Foster's 'Literature of Civil Service Reform'; to Sprague's 'American Pulpit,' Drake's 'Dictionary of American Biography,' Harrisse's 'Columbus,' Hunnewell's 'Bibliography of Charlestown,' Norton's 'Literary Register' (except for 1856), Norton's 'Literary Advertiser,' and Leypoldt and Jones's 'American Catalogue' (!), Vicuña-Mackenna's 'Bibliografia americana,' Lee's 'Hand-list of Laws, Journals, etc., of Maryland,' or Trübner's 'Bibliotheca Hispano-Americana'; or that of Ticknor's 'History of Spanish Literature' he does not mention the three American editions, the London edition, and the French and Spanish versions, confining himself to the German translation by Julius. The last is perhaps the worst. One can pardon a man for not meeting with the title of a book published in a foreign country—though one would think he must have closed his eyes not to have seen the 'American Catalogue'—but to have found the title of a translation and not to have looked up the original, appears to indicate either carelessness, great haste, or an ignorance of the duties of a bibliographer. Similarly, the enumerations of editions and the treatment of periodicals leave something to be desired. Two quarto editions of Tiraboschi's 'Storia della leteratura italiana' are mentioned—the Roman and the second Modena—but M. Vallée does not allude to the two earlier editions of Florence in octavo, and of Naples, quarto, nor to the later and more convenient Milan edition in octavo (1822–24). The supplements to Schwab and Klupfel's useful 'Wegweiser' are stated in utterly insufficient fashion; but it would take too long to give the details here. There is nothing to show that the *Index Medicus* survived its first volume, or that the *Library Journal* outlasted 1881. The *Neuer Anzeiger für Bibliographie* rightly appears under *Neuer*, but the first series, the *Anzeiger*, is inconsistently put under the editor, Petzholdt, and wrongly said to cover 1840–(1846) in five volumes, when it really goes from 1840 to 1856 in sixteen volumes, and no notice is taken of two changes of title; yet all these details are correctly given in Petzholdt's 'Bibliotheca Bibliographica.'

We have by no means mentioned all the omissions we have noticed. The most remarkable character of the work is its incompleteness. It is difficult to understand how any one, with all the resources of the largest library

in the world at his command, could leave out so many works which a slight research in obvious places would have given him. Fortunately, M. Vallée intimates his intention of publishing a supplement, which, at the present rate of the production of book lists, will be, if he waits a few years, as large as the present volume, and in conjunction with it will be a very useful help; for what he has done is done well. There are a few slips, of course. The title of the standard Spanish bibliography, which is put in full under Antonio, N., for the Roman edition, is repeated a little further down under Antonius Hispalensis for the Madrid edition. A mechanical accident, probably, in the title of G. T. Petrowitch's 'Scanderbeg, essai de bibliographie raisonnée,' has reduced Scanderbeg, the subject of the work, to a first name of the author, thus, "Petrowitch (Sc.)—Essai de bibliographie raisonnée"; and consequently Scanderbeg does not appear in the index. But the work of the copyist appears to be generally painstaking and accurate, and the typography is admirable. It is only to be hoped that M. Vallée will not be in such a hurry to publish his next edition or his supplement, and will meantime have learned the art of research.

GENERAL SKOBELEFF.

Skobeleff and the Slavonic Cause. By O. K. London: Longmans & Co. 1883.

It is an open secret that "O. K.," the author of this account of General Skobeleff, is a certain Mme. Novikoff, the wife, we believe, of a Russian general, and well known in London society as, after some inscrutable fashion, an informal agent of the Russian Government. She has taken advantage of the sudden death of the brilliant young Russian general to put together a book which, under pretence of being a biographical memoir, is really a glorification of the autocratic system of government which prevails in Russia—a glorification and a defence. The book, being written in English, is addressed primarily to the British nation, with whom Mme. Novikoff may be said to have a standing quarrel on account of their lack of admiration for the great Russian institution of autocracy; and, in order to effect their conversion to the true faith, she adopts, woman-like, the *tu-quoque* style of argument. England, it appears, is just as autocratically governed as Russia:

"At his [Mr. Gladstone's] bidding the House of Lords pass one measure after another which they most abhor; at his command the House of Commons reluctantly consents to impose—after twenty days of talking—the closure upon interminable debates, which formed a kind of concert which no impresario in the world would tolerate more than one night. Mr. Gladstone's opponents are powerless. Queen, princes, lords, commons—all the estates of the realm—are as nothing compared with him. It is, no doubt, a noble spectacle, the devotion of the English people to their greatest statesman; but what about 'the one-man power'?"

Mme. Novikoff, adopting as her own the sentiments of a certain pan-Slavic organ, is

"firmly persuaded that all the talk of the present day about introducing another form of government is nothing more nor less than vain twaddle, which can lay claim neither to justice nor to sincerity. It is not of this that Russia stands in need. . . . What we want is, toleration in matters of religion, a cessation of discourses against dissent by police agents, publicity and independent courts of justice, freedom of the press, as the only means to drive out all infectious juices which poison our literature, and thereby to call out a free reaction of sincere convictions and honorable, sound judgment; we need a simplification of local administration, a reform of taxation, free access to means of enlightenment, a limitation of unproductive expenditure, a reduction in court attendants," etc., etc.

In other words, what Mme. Novikoff desires is, that her cherished Russian autocrat should be melted down and then recast in the similitude of that tremendous British autocrat, Mr. Gladstone. And she is of opinion that "all this can be done, not only without limiting the absolute power, but more speedily and more easily by an autocratic will, fearless and without suspicion, mindful of his absolute power, and therefore a careful guardian of the free expression of the people's mind and the people's needs." There is, of course, no accounting for ultimate convictions, and, as Mme. Novikoff declares herself to be possessed of this extraordinary faith in the healing power of an "autocratic will," there is, as Carlyle would have said, "nothing to be done but to leave her in that strange state, prayers at the same time being put up for her in all churches."

More interesting than "O. K.'s" queer defence of Russian autocracy is that portion of her book which deals with the life and exploits of General Skobeleff. She has little or nothing that is new to tell about her hero, but she has brought together the notices which appeared of him in the letters of newspaper correspondents during the Russo-Turkish war, and from the reading of these a tolerably clear picture of the man can be obtained. He was remarkable in many ways—a scholar as well as a soldier. He spoke English without the slightest foreign accent, was well read in English literature, and fond of quoting from the English poets, especially Byron. He also read French, German, and Italian; spoke modern Greek, as well as Wallach, Bulgarian, Serb, and more than one of the Central Asian dialects. Had he not been a soldier, he would probably have been known as a great geographical explorer. In all his campaigns he carried with him neatly-bound diamond editions of the British, German, and French standard authors, the margins of which were covered with annotations written in small, distinct characters. Speaking of his first meeting with Skobeleff, Mr. Archibald Forbes, the well-known war correspondent of the *Daily News*, writes as follows:

"I thought then, as I have never ceased to think, that I never looked on a finer man. Six feet high, straight as a pine, the head carried high, with a gallant, *débonnaire* fearlessness; square across the shoulders, deepened chest, slender of waist; . . . of frank, graceful, supple figure, set off to perfection by the white frockcoat with decorations and gold lace on it—Skobeleff, with his high, frank bearing, looked a genial king of men. As I write, I see before me that lofty forehead, shaded with the chestnut curls, the clear, frank, manly blue eyes, that met yours so stanchly; the long, straight, decisive nose—the kind of nose Napoleon said he looked for among his officers when he wanted to find a general; the beautiful mouth, with its wonderful mobility of expression; the well-turned, compact chin, with the deep dimple in the centre."

Mr. Forbes, in common with all who had any intercourse with him, speaks enthusiastically of the charm of manner which belonged to Skobeleff, the variety and easy flow of his conversation. He appears to have been preëminently great as a general and a soldier, because that happened to be the profession which he had selected, but endowed also with powers of mind which would have raised him to eminence in any walk of life. No judgment of him could be more erroneous than that which attributes his uniform success in all his undertakings to mere dash and excess of courage in the work of leadership. No general, it is true, ever possessed in a greater degree than Skobeleff those qualities which win the affection and confidence of the soldier, and so freely obtain from him all that it is possible for him to give; but Skobeleff called upon his soldiers to run no risks the measure of which had not been carefully calculated beforehand. His most brilliant achievements owed their success to the thoroughness and precision with which his plans had been previously matured in his mind. The sublime indifference to danger which he showed upon the field of battle was an essential part, so to speak, of his system. It was this indifference which drew forth to the uttermost the fighting capacities of his soldiers, which evoked in them a like disregard of death.

In the intervals of fighting, no one was more sedulous in looking after the well-being of his men. He was a rich man, and every penny of his pay he was wont to give away, in order to mitigate the hardships of his men in the field. "He knew the soul of every soldier as if he were himself a private," was the common remark of the men who had served under him. In front of Plevna, his was the one Russian camp that was kept scrupulously clean. The men were all sheltered in excellent huts, prepared for any degree of cold, and with a fire-place and chimney to every hut. When on the march, the camp-kettles were always despatched with great care in advance to the place where the troops were to sleep; and when the men arrived, their food was ready cooked. Skobeleff always tasted it, and recorded whether it was good or bad. He laid great stress upon a saying of Marshal Saxe, that the strength of an army lay in its feet, and was most particular to allow of no damaged boots in his division. It fared ill with the soldier and with his officer if the boots were not well and regularly greased. After the war, when typhus broke out in the Russian army, Skobeleff chartered a vessel at his own expense to convey his sick and wounded back to Russia, and they were, in consequence, the first of the Russian army who had the good fortune to return to their native land. By the Bulgarians he was idolized as much as by his own men; and he succeeded in instilling into Bulgarian recruits no small measure of his own reckless and indomitable spirit. One of the greatest exploits of the war was the battle of Shenovo, when about 15,000 Turkish troops, entrenched with heavy guns, surrendered to an attacking force unaided by a single piece of artillery. The position had to be carried at the point of the bayonet, and this apparently desperate enterprise was successfully accomplished by Skobeleff at the head of a force a considerable portion of which consisted of Bulgarians recruited during the war. Skobeleff's early death—for he was not forty when he was suddenly smitten—was an irreparable loss to Russia and the Slavic races generally. These races looked to him as the man who was marked out to be their deliverer from Turkish, Austrian, and Magyar tyranny, and Skobeleff responded to the hopes cherished regarding him by becoming an ardent partisan in the cause of Slavic emancipation. He appears to have resembled "O. K." in an infatuated admiration for the autocratic system of government, but in this he did not differ greatly from most successful soldiers in other parts of the world. It is exceedingly hard for a man who devotes his life to the slaughter of his fellow-creatures to place much value upon the ideas of law and liberty, seeing that his career is an energetic practical protest against the authority of all such ideas. Skobeleff had also that peculiar pitilessness, that light regard for human life, which, we fancy, is an essential element in the moral and intellectual equipment of a great general; and where a due sense of the sacredness of human life is not to be found, there it is chimerical to look for a recognition of the worth of individual liberty. For the latter conviction is but the developed fruit of which the former is the seed.

New England Bird Life: being a Manual of New England Ornithology. Revised and edited from the Manuscript of Winifred A. Stearns by Elliott Coues. Part II. Non-oscine Passeres, Birds of Prey, Game and Water Birds. Boston: Lee and Shepard. 1883. 8vo, pp. 409, 88 woodcuts.

THE high praise we accorded to Part 1 of this work, embracing the *Oscines* or Song Birds, is equally merited by the present and concluding part, treating of the non-oscine *Passeres*, the Birds of Prey, and the Game and Water Birds. The material for an exhaustive treatise upon New England ornithology is, as the editor observes, ample and inviting, though hitherto widely scattered; and especially is this the case with the Water Birds, in regard to which its richness is almost an embarrassment. The editor, in his preface, complains of lack of space to elaborate properly this abundant material and expresses himself as poorly satisfied with the result of his labors. "While inaccuracies of statement may possibly prove to be few and not serious, very much has been left unsaid through sheer stress of time and space." The 409 pages treat of about two hundred and thirty species; the notices of the different species varying from about a page to eight or ten pages in length, according to the particular interest of the species. Special pains have been taken to collate and sift the New England records of the rarer species, and in this part of the work the editor pleasantly recognizes the valued assistance rendered by Mr. H. A. Purdie, of Boston, whose name alone in this connection would be a sufficient guarantee of its trustworthiness.

The delay that has attended the appearance of Part 2, owing to unfavorable circumstances attending the editor's share of the work—evidently a large share, as already mentioned in our review of Part 1 — led to the fear that the same fatality of non-appearance of the part relating to the water birds which had overtaken several recent works on North American birds, would mark the present undertaking. Owing to the fact that no work adequately treating of the water birds of Eastern North America has appeared for nearly a quarter of a century, or, with the exception of one strictly technical, since Audubon's, the conclusion of 'New England Bird Life' has been anticipated with unusual interest, and we can safely say that within the narrow limits imposed this portion of the subject could hardly have been treated more satisfactorily.

The whole number of species formally included in the work is 368—140 in Part 1 and 228 in Part 2. Twelve others are noticed incidentally, three of which are introduced species, and five escaped exotics, while four are cited as liable to occur. Five species formerly more or less abundant are now doubtless extinct as regards New England, and about eighty are practically stragglers or waifs from remote parts of the continent or Europe. Former enumerations of New England birds are: Coues, 1868, 335 species; Brewer, 1875, 336; additions by the last-named author raised the number in 1878 to 357, and in 1879 to 361, or seven less than the number now recorded. Notwithstanding a few errors, mostly of no great moment, respecting the New England distribution of perhaps half a score of species, chiefly in Part 1, the author and editor of 'New England Bird Life' may well be congratulated on the production of a manual of the subject so eminently convenient and satisfactory. We only regret that a work of such excellence could not have been more extended; but this was hardly compatible with the cheapness and size that should characterize a manual. The fifty pages of introductory matter are highly pertinent; the descriptions are concise and to the point; the biographical matter sufficient to outline the leading traits of the species, is felicitously dressed; the rarer species receive the attention their special interest demands, the records of occurrence in such cases being well-nigh exhaustive; while the 144 woodcuts, though few of them are new, greatly aid in the exposition of technical characters.

Ecclesia Anglicana, a History of the Church of Christ in England from the Earliest to the Present Times. By the Rev. Arthur Charles Jennings, M.A. Thomas Whittaker.

THE title of Mr. Jennings's handy little volume indicates its purpose. It aims not to be a mere recital of events in the Church history of England, but to represent the Anglican Church as a thing existing by itself, having a continuity of being from its earliest to its latest day. According to this view, the Anglican Church did not begin with the Reformation. The Reformation was rather simply an episode in its life, bringing in new currents of thought, founding it upon a new principle, but making it no more an independent organization than it had been before. To carry out this theory of original independence requires very considerable skill. To the ordinary reader it would appear that for long periods the control of the King in alliance with the Papacy had abolished whatever of liberty might have been contemplated by the original English Church; but Mr. Jennings succeeds in showing very well that there always remained in the Church a sense of what Mr. Freeman would call its "Englishry," which claimed expression whenever the pressure from without was removed. This is exhibited by the long struggle against the right of Papal investiture and taxation. The avowed object of this volume is to furnish to candidates for theological examinations a concise summary of the chief points of importance for them. But it must be that very many others will welcome so compact and withal so scholarly a treatment of things every one ought to know, but cannot always find ready to hand, in so practical a shape.

BOOKS OF THE WEEK.

Abel, K. Ilchester Lectures on Comparative Lexicography. Delivered at the Taylor Institution, Oxford. London: Trübner & Co.
Across the Atlantic. A. D. F. Randolph & Co. $1.

The Nation.

NEW YORK, THURSDAY, JUNE 28, 1883.

The Week.

DORSEY'S letter to Mr. Dickinson should be read with care not only by politicians, but by all who are interested in the development of the language. The English tongue as managed by him is as mighty an engine as the political machine became in his hands. His style is entirely his own, and he combines in it in a very curious way two widely different methods. One is simple but vigorous denunciation and abuse. This he applies to James, MacVeagh, Brewster, and Arthur, much as the frequenters of Billy McGlory's or Owney Geoghegan's do to the police when their feelings have been excited by an unexpected descent; the other is a lofty poetical imagery, so purely Oriental in its character that, outside of Stalwart politics, it is seldom used by modern letter-writers, unless in jest. He says, for instance, as to the charge that he has stolen money, just as if he were talking the matter over in the saloon which is said to have been the headquarters of the defence in his recent trial, that it was simply "a lie"; and that Arthur, MacVeagh, Brewster, and Bliss "knew it was a lie"; that the "white scoundrels" who had charge of the case tried to bribe his honest black boy to steal his books; that his wife was "shadowed" when she went shopping, and his servants "spotted"; and that "perjurers" were found among "the body lice of humanity" to go on the stand and swear him into jail. This is thoroughly Western; but in a moment, with the hand of a master, he transports us to the East. He has been living in "the House of Innocence," and it is the "Back Stairs of the House of Innocence" that George Bliss has been trying to sneak up, notwithstanding the fact that, as we have seen, everybody, "from the Stalled Ox feeding at the rich Trough of Accident" (this must be Arthur) to the "meanest Worm which fed from the Refuse swept from behind him," knew his residence to be the House of Innocence. It is satisfactory, on the whole, to be assured that though "the Claws of Ingratitude have spread their Nails," this remarkable man has been left abiding in the House "without a scratch," notwithstanding the sneaking manner in which the owners of the Claws, after spreading their Nails, listened at the "half-open Doors of Whispered Confidence," and also at the "half-closed Door of Family Confidence," which is probably in a different part of the House.

The explanation given by the new Commissioner of Internal Revenue, Mr. Evans, of the removal of Mr. Eldridge as Internal Revenue Agent, and the appointment in his place of Mr. Horton, who had been dismissed from the service several years ago, makes his action only look worse. He says that Horton was dismissed years ago without sufficient reason—mainly because he belonged to the Butler-Simmons wing of the Republican party in Massachusetts; and that Eldridge, who succeeded him, was an enemy of Horton's, and that to remove Eldridge now and to put Horton back, was a mere act of justice. Besides, Horton is his personal friend, which Eldridge is not. Taking Mr. Evans's own statement of his motives, it only shows that he has no conception of the business principles upon which a Government office should be conducted. Eldridge had been doing the work of Internal Revenue Agent for several years. He had proved himself an efficient officer. No fault could be found with him. He had worked up some important cases now pending, in the trial of which his aid was essential. On the other hand, there had been fault found with Horton's official conduct, and it was but a very natural thing that Horton, in applying for a reappointment at the incoming of a new Commissioner, should represent himself as the victim of some personal grudge on the part of the late Commissioner, and profess the warmest personal devotion to the new man in power. This is the common dodge. Every new chief of a department or of a bureau is at once overwhelmed with such representations, and no sensible man in that situation will fail to see that, if he yields to the pressure and attempts to redress all the real or fancied wrongs alleged to have been committed in the past, he will disorganize and demoralize the service and inflict great injury upon the public interest. We will not deny that in some cases wrongs may have been committed that ought to be righted. But they should then be very carefully investigated, and action should be taken with great circumspection, lest a new wrong be added to the old one. When the chief of a department or bureau goes at this sort of business pell-mell, he is sure to plunge from confusion into confusion, and to find himself shortly in very hot water. Putting the most favorable construction upon Mr. Evans's doings, this is the folly he has committed. He has shown that at best he is not a man of sense. But some of the other removals do not admit of even so favorable an explanation. They are simply a "new deal," according to the old ways of the spoilsmonger.

While we write, a terrible conflict is impending between the editor of the Richmond *State* and the editor of the Richmond *Whig*—the former the opponent, the latter the supporter, of Mahone. The duel is to be fought about a description which the *State* gave of the followers of Mahone, and a description which the *Whig* gave of the editor of the *State*, and is to decide which description is the more correct. If Mr. Beirne, the editor of the *State*, hits Mr. Elam, the editor of the *Whig*, it will prove that the followers of Mahone are a "vicious, corrupt, and degraded gang," who are in favor of mixed marriages and mixed schools. If, on the other hand, Mr. Elam hits Mr. Beirne, it will prove that "lofty pretensions of superiority in manners, morals, and letters are laughably ridiculous coming from a source so pitiable in all moral and intellectual resources" as Mr. Beirne. It will thus be seen that the controversy is a very important one, and well worth a life or two. One of its features is some very comic preliminary boasting from Mr. Elam, in the style of the Ashantee warriors. He drummed on his shield in front of the Beirne tepe, and called him a "Bombastes Furioso," who had shown the white feather by "going on the field without caps," while he (Elam) had on one occasion "fallen before a shot which he met in full face," and consequently "laughs at the *State's* vituperation and vaporing." The editor, for the time being, of the *Whig* has, we believe, always been a duellist, and has been accustomed to spend much of his time on "the field of honor."

Governor Butler turned up last week at the Commencement of Exeter Academy, where he got his schooling. In his address to the pupils, in speaking of the conditions of success in life, he said much apparently of "science and mechanical work," as the things which hereafter are to rule the world, but appears to have omitted all mention of morality, which gave President Eliot, who followed him, an opportunity to mention "the foundation of a true character" as one of the things an Academy should supply to its alumni. The report is very meagre, but if this is what happened it was a fortunate occasion. Butler, who wittily said long ago that he "never knew what happiness was until he lost his character," supplies in many ways a constant example to the young men of New England of the success which may be achieved without any pretence of morality whatever, by sheer and undisguised smartness. This probably makes him an instrument of an immense amount of unseen evil, and makes it very desirable that he should be confronted as often as possible by some testimony that our society is still based on truthfulness and duty and self-denial.

We notice with regret that the troubles which broke out a year ago at Union College continue. It is a pity that a venerable institution which can claim as alumni many of the distinguished men of this State and country should have fallen upon such evil days. The trouble seems to be due in part to denominational antipathies, which flourish, apparently, with uncommon rancor in a college professedly Christian and undenominational, and union in character as well as in name. No doubt, in fact, a Christian undenominational college is an anachronism. The conditions which obliged the union of several denominations in one institution belong to days when the country was sparsely settled, and when, to have any college at all, it was necessary to unite several denominations in it. Heretofore, until the advent of the present President, the College was practically in the hands of Presbyterians, and it would seem as if the process of natural selection by which a man takes his associates from among members of his own communion had led, in this instance, to the appearance in the Faculty and Board of Trustees of so many Episcopa-

lians that jealousy and alarm have been excited on the part of those who think the College ought to belong, whatever it is called, to the Presbyterians.

The methods, however, which have been adopted against the President, and to change the majority in the Board of Trustees, promise, if continued, to destroy the institution. Why its Board of Trustees have left the mode of election of alumni Trustees unprotected by the safeguards thrown around it in other colleges, they would probably find it difficult to explain upon any other theory than that of inattention to a very important matter. As it is, they are paying the penalty of a disorganized Faculty, the members of which have been tempted to leave their proper business of teaching to meddle with matters which properly concern the Board of Trustees, and in which the professors can never intervene without great injury to themselves and to all the interests of the institution. As to the complaints in respect to the President's financial management, none seem to emanate from those who have made the endowments and gifts to the College which have come to it through him. After all that has been published on that subject, those friends of the College—its real friends, one would say—are still his friends, and protest, so far as heard from, against the attempt to remove him. That he has worked with the greatest energy and devotion not even his enemies seem to deny. Having everything to do, and having done it, so far as appears, very much alone and without help, his efforts seem to have been crowned with such a measure of success as should have procured a different sort of return from that he is receiving for them.

The University of Cambridge (England) in 1881 formally sanctioned the admission of the women students of Girton and Newnham Colleges to the Tripos competitions—that is, to the mathematical and classical examinations for honors. The girls have since then answered on exactly the same papers as the men, and have had rank in the competition assigned them on the same scale. The only discrimination made against them was that the names of the successful did not appear in the University calendar among those of the men, but only in that of their own college. It is now understood that even this is to be done away with, and that the Senate of the University is so satisfied with the success of the experiment that they will probably next year publish the names of the female Wranglers and junior and senior Optimes in the regular University lists. These rash Radicals will probably read with amusement the plan of female education drawn up by Dr. Dix as a defence for the framework of society in this part of the world. But we trust Columbia College will in another year relieve itself from the somewhat ridiculous position in which it has allowed the reverend gentleman's fancies to place it.

A striking practical commentary on the medical Code has been furnished by an incident said to have occurred in Wisconsin. A little girl was thrown from a carriage and her skull fractured. A "regular" physician was called in, but when the family doctor, who was a homœopath, came, the allopath conscientiously refused to consult with him. The case needed surgical care, which the allopath could give and the homœopath could not. The regular physician, however, pointed out that under the Code he would have to leave the child to die, and went away; and, we are told, the child would have died but for the appearance of a surgeon from Chicago. The story is difficult to believe, because, unless we are greatly mistaken, the Code, or the practice under it, allows physicians to make an exception in critical cases involving safety to life. But if there is any reason for the existence of the Code, the conscientious adhesion to the spirit of it by the Wisconsin doctor is very praiseworthy, for critical cases are just those in which it ought to be obeyed most implicitly. The *Herald*, however, suggests that the Wisconsin physician, if the child had died, might have been indicted for manslaughter. But what of that? The physicians have never pretended that the Code was devised in the interest of patients, but represent it as having an ethical origin, or as a part of the professional moral law. If they are right, a conscientious "regular" ought to be willing to stand a trial for manslaughter, or even murder, for Its sake. A physician who once undertakes to discriminate between cases in which he will apply the Code and cases in which he will not, on such a flimsy pretext as the safety of the life of the patient, might just as well do it on the score of mere health, and then we are all at sea again. The only way is for conscientious believers in the Code to stick to it, no matter what becomes of the patient. It may be necessary to indict them for doing so; but what really good man will violate a principle for fear of the consequences?

The strange story of the disappearance and sudden return of Mr. Krum to St. Louis will, we trust, attract attention to the important position which the occupation followed by him is getting to have among lawyers in the United States. He was, as his father had been before him, and so many other prominent men all over the country are, an "ex-judge." He held the position of judge only for a short time, and apparently did not go on the bench on account of his love of a judicial career, but in order to become an ex-judge. There are many reasons why the position of ex-judge should be regarded among lawyers as one of greater value and dignity than that of judge. In the first place, any judge can become an ex-judge by simply resigning his office, whereas to become a judge he has to be nominated and elected, which is generally difficult, disagreeable, and sometimes, at least in this part of the country, very expensive. Then an ex-judge holds his position for life, and is irremovable, while a judge's tenure is short, and his reëlection dependent upon the action of political bodies which he cannot control and fix without subjecting himself to the risk of annoying charges. Added to all this, an ex-judge can practise the "law business" and make money to any extent, and as an ex-judge he is of course likely to enjoy the confidence of clients to a degree that one not an ex-judge can never reach. This is shown in ex-Judge Krum's case, for, notwithstanding his unexplained absence for some weeks, during which he was reported to be travelling under an alias to avoid arrest, and was removed by order of court from an administratorship for failure to settle his accounts, his return appears to have dissipated all suspicions, and restored complete confidence to his creditors. There is one drawback at present to this attractive profession, and that is that a man has to be a judge in order to become an ex-judge. Could not this be got over by a change in the law? Why should not lawyers, on proof of a certain number of years' active work, be entitled to adopt the rank of ex-judge as of course? An ex-judge is just as much an ex-judge whether he has been on the bench for a month or thirty years; and, therefore, to insist on his actually filling a judicial office seems an idle form, inconsistent with our national hatred of sham and pretence.

The consternation displayed by the Commissioners of Emigration over the landing of the "assisted immigrants" at Castle Garden, if it comes from their fear that a lax enforcement of the emigration laws will get them into trouble, is natural enough; but the idea spread by them that the British Government has concocted a cunning scheme of flooding this country with its own paupers does not seem borne out by the facts. Exactly how many paupers and tramps there may be in the British Isles we do not know, but there must be a good many thousands, and it is difficult to conceive a more dastardly outrage than an attempt on the part of a friendly government, in a time of profound peace, to deposit this pauper population on our shores. Considering what we have done in the past, and are all the time doing, in the way of relieving England of her surplus able-bodied population, how warmly we have welcomed it on landing, and how we have always called for more, it would be an act of peculiar baseness and ingratitude quietly to ship over here all her tramps, cripples, beggars, and paupers. Fortunately, there is no reason to think that she is doing anything of the kind. In the first place, the vessels now landing immigrants are not bringing any large number even of "assisted emigrants." There do not appear to be a dozen well ascertained cases of pauperism in the whole list. Some of the Commissioners seem to be laboring under the delusion that "assistance" in these cases is a test of pauperism, because the assistance is furnished by a government. The English Government is now undertaking to do for a surplus agricultural population, which has not food enough to live upon, exactly what is usually done in individual cases by private means. Of course, among the people it assists in this way, in the present condition of Ireland, there will be more real paupers than is customary among the emigrants, and these ought to be, and, we trust, will be, weeded out; but the idea gravely suggested of sending back all the "assisted" emigrants as paupers is a monstrous proposition.

Dr. Edward Lasker, who arrived here on Friday by the steamer *Werra*, might for a considerable period have been called the central figure in German politics next to Bismarck. When the Chancellor appeared willing to ally himself with the Liberal sentiment of Germany in shaping and consolidating a national empire, Lasker occupied the first place as a parliamentarian in aiding the work and in endeavoring to keep its progress and development in the direction of free institutions. With equal ability, again, and honesty of purpose he for a long time led the Opposition when Bismarck, cutting loose from the Liberal alliance, pursued the building up of absolute power in the empire with the same directness of purpose and energy with which he had served the cause of national unity. It was Lasker also who, when the French milliard developed its demoralizing influence, attacked the growing spirit of speculation and jobbery with singular fearlessness and power. At present the momentum of the reactionary policy is so great that Lasker finds himself pushed back into the ranks of those public men who have quietly to bide their time. It may be said without exaggeration that there is no man in public life in Germany who enjoys a higher degree of popular confidence and respect, even from those who do not in all things agree with him.

The speculation in the grain and provision markets at the West continues on a large scale. It was expected that the heavy failures of the last two weeks would effectually discourage these operations, but the result was a great decline in prices. Since June 1, wheat has declined in the Chicago market about 12 cents per bushel, and this week touched the lowest prices for nearly a year. Corn has declined 5 cents per bushel, pork $3 per barrel, and lard 2 cents per pound, in the same time. This has placed prices so low that fresh speculators are now buying these commodities with the expectation of a rise, and it is publicly known that Armour, of Chicago, is now carrying out the tactics in which McGeoch failed. Meantime, the decline has induced exporters to take a large amount of both grain and provisions for foreign markets, and the movement from Chicago in the last week, unusually great for this season of the year, has already had the effect of weakening the rates for foreign exchange.

The crop prospects are not as good as could be desired in some quarters of the country. The most trustworthy information goes to show that in the States of Ohio, Indiana, Illinois, and Missouri the winter wheat crop (which ordinarily constitutes about 60 per cent. of the entire wheat crop of the United States) will this year be short of its usual average by 75,000,000 to 90,000,000 bushels. The prospects for the spring wheat crop, however, are uncommonly good, and the deficiency in the winter wheat crop seems likely to be made up. The money markets of the country continue abundantly supplied with funds at the low rate customary at this season, but the stock market has not been greatly affected by it. Public confidence in the management of American railways has been so unsettled by such occurrences as the Northwestern railroad war last autumn that railway stocks do not attract speculative capital, and prices of stocks have, as a rule, continued to decline. During the past week New York Central touched the lowest price it has sold at in three years. In foreign circles there is a great deal of distrust in the stability of financial affairs in Paris, and the credit of some of the large banking and credit-loaning institutions has been publicly attacked in the newspapers. In London everything is quiet; the Bank of England has been gaining in specie reserve for nearly two months, and the outlook is for lower rates of interest.

The treaty of commerce, which General Wallace is discussing with the Porte, was concluded by Mr. Morris on our side in 1862 for a period of twenty-eight years, but with power to either side to terminate it on giving one year's notice at the expiration of fourteen years, or again at the expiration of twenty-one years. The treaty was accompanied by a tariff, settled by international agreement, which was to be in like manner terminable on notice of one year at the expiration of each seven years. The Porte now wants to get rid of them both, and, as the period of twenty-one years has expired, has given notice of abrogation, which General Wallace declines to accept, on the ground that it is too late. By the treaty the Porte agrees not to charge a higher import duty than 8 per cent. ad valorem on American goods, and to reduce gradually the export duty on goods exported to the United States from 3 to 1 per cent. From the protectionist point of view, it is difficult to understand General Wallace's course. It ill becomes us to exert even moral pressure to compel a weak Power to submit to free trade with us—for 8 per cent. ad valorem is substantially free trade—considering what the views are which are held by the majority of our Congress, and by so many of our leading statesmen, touching the social and political value of high duties on foreign goods. Turkey is a poor and struggling country, with little or no manufactures, and with her agriculture in an exceedingly rude and unprosperous condition, which our protectionists hold is the result of long persistence in the policy of free trade. She has apparently discovered in some degree the source of her weakness, and is seeking to get rid of the bonds which tie her down to a low tariff. Is it seemly that at this juncture the United States, of all countries in the world, should step in and insist on her continuing to receive American goods at nominal rates of duty, knowing well, or professing to know, that by so doing she pauperizes her own laborers, or, in other words, drags them down to the level of the pauper laborers of America, whose low standard of living enables them to undersell the respectable and self-respecting Turkish mechanic in his own markets?

This is not all, however, or by any means the worst. The tariff has not worked well for us of late. In other words, we have been receiving from Turkey more than we sent her, which, as every good protectionist knows, means loss. Without going back further, from 1876 to 1881 we had a nice balance of trade against Turkey; that is, we put off on the unfortunate Turks far more of our goods than we took of theirs. This is the way the account of American trade with Turkey stands during six years (we lack the figures for 1879):

1876..	Exports from U. S. to Turkey.....	$3,396,629
	Imports	439,647
1877..	Exports	9,338,501
	Imports	429,017
1878..	Exports	1,413,161
	Imports	558,091
1880..	Exports	1,913,122
	Imports	1,201,316
1881..	Exports	1,499,399
	Imports	1,582,307
1882..	Exports	2,585,256
	Imports	2,678,437

This table tells its own story. The treaty—we are considering it as good protectionists—appears to have worked well for us down to 1881. Thus far we gave the Turks more than we got from them, which everybody knows is the true way to make money in international trade. Since then the Turks have apparently discovered the secret, have called up their pauper laborers, and although they have only an 8 per cent. tariff against our 50 or 60 per cent. tariff, have managed to turn the balance of trade against us, and last year gave us $93,181 more of goods than we gave them. In fact, for the last two years they have been "drawing the gold out of the country," which everybody knows is the worst thing anybody, whether Turk, Jew, or Infidel, can do to us.

The *Tribune* fell into a curious mistake recently about Lord Reay, whom Mr. Gladstone has just appointed High Commissioner to the Boers at the Cape of Good Hope. It apparently thinks that he is an Englishman, and says he was "born Baron Bentinck," though how this could have happened, under the most favorable circumstances, it is hard to see. As a matter of fact, he is a Dutchman by birth, and was born Baron Mackay, owing to the Continental custom of giving all sons their fathers' titles as a matter of courtesy. His ancestor was a younger son of the Scotch Mackays, known as Lords Reay, one of the oldest of the Scotch peerages. He was an officer in the Dutch army under William of Orange, and, marrying a Dutch woman, settled in Holland for good. The elder branch became extinct a few years ago, and the title then passed to the younger or Dutch branch, of which the present Lord Reay was then, as Baron Mackay, the representative. He had his choice between remaining a Dutch Baron or becoming a Scotch Peer, and chose the latter. But a good deal of his youth had been passed in England, and he was already half an Englishman. He is a very accomplished and painstaking man. He visited this country twelve years ago, and was then noted for the indefatigable zeal with which he "studied our institutions." His father, the late Baron Mackay, was a Dutch statesman of distinction, and was for several years President of the Council at the Hague. Lord Reay has married an Englishwoman, and has of late years been a prominent figure in London society.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, June 20, to TUESDAY, June 26, 1883, inclusive.]

DOMESTIC.

THE Ohio Democratic State Convention met in Columbus on Thursday. There was a very large attendance. The names of Messrs. Durbin Ward, Hoadly, and Geddes were put in nomination for Governor, the first-named by ex-Senator Thurman. The first ballot resulted as follows: Hoadly, 290; Ward, 261; Geddes, 77; Denver, 4. During the second ballot, and after its conclusion, some changes were made for Judge Hoadly, and amid great excitement a motion to nominate him by acclamation was carried. He had about 350 votes before the motion was made, 319 being necessary for a choice. He is about fifty-three years of age, and for many years has been one of the leaders of the Cincinnati bar. Previous to 1872 he was a Republican, but supported Greeley in that year; he was a Tilden man in 1876. A full ticket was then nominated. The platform adopted reaffirms the principles of Jeffersonian Democracy, favors a tariff for revenue "limited to the necessities of a government economically administered, and so adjusted in its application as to prevent unequal burdens, encourage productive interests at home, and afford just compensation to labor, but not to create or foster monopolies"; advocates the regulation of the liquor traffic by "a judicious and properly graded license system"; and reaffirms recent Democratic platforms, State and national, on the civil-service reform question, but does not mention the Pendleton bill. A great deal of dissatisfaction has been created among the "old line" Democrats by the nomination of Judge Hoadly.

The Supreme Court of Ohio on Tuesday decided the Scott Liquor Tax Law of that State constitutional.

The New Hampshire Legislature met in joint convention on Wednesday and cast a ballot for United States Senator. Mr. Rollins received 125 votes out of 329. His leading competitor was Mr. Harry Bingham, with 121 votes. On Thursday Mr. Rollins sustained a net loss of ten votes. No quorum was present on Saturday and Monday, though ballots were taken. On Tuesday Mr. Rollins received 104 votes out of 321.

On Monday afternoon the plan for the reduction of the Internal Revenue districts was officially promulgated at Washington. By the President's order the number of districts is reduced from 126 to 82, a reduction of 44. This is a greater reduction than was expected. In New York State the changes are all effected outside of Brooklyn and New York city. The State will have on July 1, or as soon thereafter as the changes can be made, seven districts instead of twelve. The consolidation in New England, New York, and Pennsylvania includes one-fourth of the reduction.

Mr. Evans, Commissioner of Internal Revenue, is carrying out his programme of "reorganizing the bureau" on the spoils basis. Another efficient officer has been asked for his resignation, and assigned to other duties, to make place for a friend of the Commissioner. It is understood that President Arthur and Postmaster-General Gresham, who suggested Mr. Evans's nomination, are much annoyed by his policy, and that he has been cautioned to refrain from any more removals without cause.

Mr. Solomon Carter, of Boston, has written to President Arthur protesting against the appointment of Charles W. Horton for a position in the Internal-Revenue Department. He narrates his experience when a member of a firm of liquor dealers, when Mr. Horton was in the Revenue Department before. He asserts that a portion of his stock was seized by Mr. Horton on account of irregularities, but he compromised the matter with him by the payment of $600 in cash. Mr. Horton denies the charge.

Postmaster Thomas L. Tulloch, of Washington, died on Wednesday. The President on Saturday appointed David D. Parker, Chief of Post-office Inspectors, to succeed him.

The Secretary of the Navy has sent a circular letter to the commandants of the different navy-yards, relating to his proposed reorganization of them with a view to a retrenchment of expenditures therein.

The contract with John R. Miner, to carry the mails over the route between Fort Niobrara and Deadwood, has been annulled by Second Assistant Postmaster-General Elmer, who finds that certain statutory requirements were not regarded in awarding it.

A nolle prosequi was on Monday entered by the Government in all the Boone "straw-bond" Star-route cases. The dismissal of the indictments as to him also dismisses the indictments as to a large number of other persons with whom, in the five cases, he was charged with having entered into conspiracy. Boone's friends say that the action of the Government in dismissing the suits was forced by Boone's lawyers, and that, as a matter of fact, he had a written agreement with the Government counsel that the cases should be dismissed, and threatened to make it public unless speedy action was taken.

The investigation of the official conduct of Supervising Architect Hill is still in progress at Washington. Considerable testimony for the prosecution was presented during the week. On Tuesday Mr. Hill filed his answers.

The Indians captured by General Crook arrived at San Carlos reservation on Saturday. Chief Loco and his family headed the hostiles. Loco, Nana, and Bonito were met by Indians acquainted with them. Nana said he was too old for further operations, and glad that he had arrived at a safe place. Bonito has no friends, but seems glad to be under the protection of General Crook. The officers of the command express the opinion that the Chiricahuas will be quiet and peaceful. General Crook has been summoned to Washington to consult in regard to the final disposition of his captives.

Considerable discussion has been caused by the arrival at Castle Garden of a number of "assisted" emigrants from England and Ireland. It is asserted that many of them are paupers and liable to become a burden on the State and country. The Emigration Commissioners are now considering the question.

Mayor Nolan, of Albany, caused a surprise on Friday night by presenting his resignation to the Common Council. This was due to the fact that the suit of Doctor Swinburne against him for possession of the office, on the ground that his election was secured by fraud, was set down for trial on Monday. No defence was made on that day by Nolan, and Mr. Swinburne was declared legally elected Mayor. He immediately took the oath of office.

The new Board of Trustees of the Brooklyn Bridge organized on Thursday by electing William C. Kingsley President. Treasurer Witte's report showed that the income from the bridge since the opening, for twenty-seven days, was $22,937 58, or an average of $849 54 per day. Of this amount $10,060 58 was collected during the first week, ending May 31. For the six days ending on Wednesday, $3,808 was taken. The total income from foot passengers has been $13,438 56, and from vehicles, $9,499 02.

The celebration of the seventieth birthday of the Rev. Henry Ward Beecher attracted an immense throng to the Brooklyn Academy of Music on Monday night. Congratulatory addresses were made by the Rev. Messrs. Armitage, Collyer, Fulton, and Mayor Low. Mr. Beecher responded in an appropriate address.

Commencement exercises were held at Brown, Rutgers, and Princeton Colleges on Wednesday. At the last-named institution the trustees refused to accept the resignation of President McCosh. Dr. J. O. Murray, Professor of English Literature, was elected Dean of the Faculty to relieve the President of part of his duties. At Cornell, Commencement was held on Thursday. President White's administration was approved by the alumni, and an alumni trustee was elected who is in sympathy with the present management. The fiftieth annual Commencement of the University of the City of New York was held on Thursday.

At a meeting of the alumni of Union College, Schenectady, on Tuesday, Col. David C. Robinson, the anti-Potter candidate, was elected alumni trustee by a vote of 159 to 122 cast for Judge Van Vorst.

The centennial of Phillips Exeter (N. H.) Academy was celebrated on Thursday. Many distinguished alumni were present. Two thousand persons attended the exercises.

Governor Butler has accepted the invitation to attend the Harvard College Commencement, and has ordered out the National Lancers to escort him thither according to custom, notwithstanding the refusal of the degree.

The Harvard College eight-oared crew defeated Columbia at New London, Ct., on Wednesday, in a four-mile straight-away race, by twelve lengths. Time, twenty-four minutes and forty-two seconds.

All the games in the college base-ball series have been played, and Yale has secured the championship, having won seven out of eight games.

President Cattell, of Lafayette College, on Sunday announced his coming resignation on account of ill health.

At the dedication of a Confederate monument in Camden, S. C., on Wednesday, Senator Wade Hampton made an oration in which he glorified the Confederate cause and principles, but counselled obedience to the laws and to the supremacy of the Constitution.

Warrants were issued in Richmond, Va., on Thursday morning for the arrest of Richard P. Beirne, editor and owner of the Richmond *State*, and W. C. Elam, editor of the Richmond *Whig*, charging them with being about to engage in a duel. The cause of offence was an editorial article in the latter journal. Both gentlemen left the city, and the warrants could not be served. On Friday preparations were made for the duel near Richmond, but Editor Beirne was arrested on the ground chosen for the conflict. Since then secret efforts have been made to bring about the meeting.

The will of N. L. Dukes, the Uniontown (Pa.) murderer, has been found. It is written on the back of a letter, and is dated December 29, 1882. He gave $2,000 to Miss Mary Beeson, to whom he was supposed to be engaged, and the remainder of his property, without specification, to his mother, Mrs. Struble.

Several levees, protecting the rich farms on the Illinois side of the Mississippi, between Alton and St. Louis, broke on Friday, inundating thousands of acres of land. The loss of crops was great. The water continued to rise, and on Monday the loss was estimated at more than $2,000,000. It was said on Tuesday that the American bottom, from Alton to Cairo, was flooded.

A terrible explosion occurred in a blast furnace of the North Chicago Rolling Mills on Friday, by which thirty-five tons of molten metal were scattered and seventeen persons severely injured.

A sensation was created in Philadelphia on Wednesday by the discovery in the cellar of the house No. 2243 North Fifth Street of the bodies of twenty-one infants who had been killed before birth. The house was occupied until a few months ago by Dr. Isaac Hathaway, who is now in Moyamensing Prison, awaiting trial on a charge of assault and battery upon Rose Elmer, his wife's daughter by a former marriage. Dr. Hathaway was

brought into court on Saturday and held for trial. He is about eighty-two years of age.

Wednesday proved to be another exciting day on 'Change in Chicago. The fluctuations in all the markets were sharp and rapid. The failure of George Stewart & Co., who were "long" on wheat and lard, was announced. There was a rally in prices on Friday, and confidence was somewhat restored. It is said that the liabilities of McGeoch, Everingham & Co. are $6,000,000; assets, $50,000.

The wife of Major Nickerson, of the United States Army, has sued for a divorce.

Hanlan, the Canadian oarsman, won a victory on Friday at Pullman, Illinois, winning a prize of $1,000; time 22:30. There were fifteen well-known oarsmen in the race.

Dr. Edward Lasker, the distinguished German Liberal statesman, arrived in New York on Friday. He will remain in America for five months, studying at leisure the political institutions of the country.

General Sherman, with members of his staff, on Wednesday, started on a tour of inspection of military posts across the continent.

Gen. Charles Ewing, formerly of Ohio, died in Washington on Wednesday morning. He served all through the war, part of the time on the staff of General Sherman, his brother-in-law. He was a brother of Gen. Thomas Ewing.

Gen. James Conners, ex-Attorney-General of South Carolina, and one of the most prominent lawyers and politicians in the State, died in Richmond, Va., on Tuesday morning. In the contests of 1876–7 the success of the Democratic party was in a great measure due to his efforts.

James Bates Thomson, LL.D., the author of a number of mathematical works, died in Brooklyn on Friday.

Charles Backus, the famous end-man of the San Francisco Minstrels, of this city, died on Thursday at the age of fifty-three.

FOREIGN.

The French, it is asserted in Paris, do not intend to go to Antananarivo, the capital of Madagascar, but will occupy the custom-houses and all the roads leading to the capital, and await the submission of the Hovas, which they expect will occur soon. Tamatav has been captured. An ultimatum offered by Admiral Pierre to the Hova Government, which refused it, included the acceptance of a French protectorate over the northwest coast, according to the treaties of 1841, the payment of an indemnity of 1,500,000 francs, and the acknowledgment of the right of French citizens to own land in Madagascar.

At the French Cabinet council on Thursday it was positively asserted that the Queen of Madagascar had been dead six months, and that the military party had concealed the fact. Friends of the Queen in London discredit the report.

Marquis Tseng, the Chinese Ambassador in France, and Prime Minister Ferry have had several interviews, and there are favorable prospects for a compromise of the difficulties between the two countries. It was announced from Shanghai on Friday that the difficulties between the two nations had been adjusted, but a subsequent despatch threw doubt upon the report. The Marquis Tseng also denied it.

In Tonquin General Bouet, the French commander, is fortifying Ha-noi, Nam-denh, and Hai-phong, and operations will not begin until the troops are completely organized. The health of the forces is excellent.

The French Senate has passed the bill providing for a direct postal service between New York and Havre.

Louise Michel has been on trial in Paris during the week for inciting to murder and pillage. In a speech in her own defence on Saturday she violently attacked the Government, and declared that the issue of the pamphlets to the soldiers inciting them to burn their barracks and murder their officers was justified. She declared that the soldiers at Sedan would have done well to shoot their officers and save their honor. She was found guilty and sentenced to six years' imprisonment and ten years' police supervision. Two other Anarchists were convicted and sentenced at the same time.

The protest recently sent by the Pope to President Grévy, of France, in regard to Church matters in that country, is couched in an amicable, though firm tone. His Holiness points out the painful position of the Church in France because of the policy of the Republic during the last few years. He says laws hostile to the Church are now being prepared. He hopes that the pacific assurances given by France at various times really signify a desire to avoid a painful conflict, which would be equally disastrous to both Church and State.

Herr von Schloezer, the German representative at the Vatican, has been ordered not to quit Rome until the fate of the Church Bill in the Prussian Diet has been decided.

The Prussian Church Bill was passed by the Lower House of the Diet on Monday by a vote of 224 to 107.

In the House of Commons on Wednesday a bill passed its second reading providing for the application of £250,000 of the church surplus fund to aid the Irish Sea fisheries, and particularly to provide harbors.

In the House of Commons on Tuesday, the Attorney-General for Ireland announced that James Carey, the Irish informer, had not yet been pardoned, but the subject was being considered by the Government. He said that Executive clemency would be coupled with conditions.

Mr. O'Donnell, Irish member of Parliament for Dungarvan, in a letter to the Dublin *Freeman's Journal*, on Monday, said the adoption by the Parnellite members of Parliament of the so-called bill providing for the abolition of the Irish Viceroyalty forces him, as a Home-Ruler, to resign from the party at its next meeting, The bill, he says, really is intended to convert the Viceroyalty into a Principal Secretaryship of State, the incumbent of which is to be appointed by the Queen from among the Irish members of Parliament.

A despatch has been received in Dublin from Mr. Redmond, now in Australia, asserting that he would guarantee to send from that country £1,000 toward the fund for Mr. Parnell.

The Land Corporation of Ireland, for the occupation and purchase of farms from which the tenants have been evicted, met in London on Monday. The Chairman reported that the operations for the year had been beneficial, and that tenants were returning and paying rents. A dividend of 5 per cent. was declared.

Lynch *alias* Norman, the informer, who testified against Doctor Gallagher and the other dynamite conspirators, was released on Monday from custody in London, because of his services to the Government as an informer.

In the inquiry which was in progress at Mullingar, Ireland, last week in connection with the murder of Mrs. Smythe in April, 1882, an informer testified that an assassination society had been started by Michael and John Fagan, with the object of removing tyrants and bad landlords.

A London despatch asserts that "everything points to a speedy break-up of the Liberal party. At the Cabinet meeting on Saturday the question was considered whether, having regard to the paralysis of business in Parliament, the Government should at once dissolve Parliament and appeal to the country. Mr. Chamberlain and Sir Charles Dilke advised against dissolution, and suggested that the Parliamentary session be prolonged until the necessary bills be passed."

Lord Randolph Churchill, in a communication to Mr. Gladstone, says that he will forward to him an indictment of the Khedive of Egypt on the charge of being the real author of the massacres, and that he (Lord Randolph) will be prepared to coöperate to the utmost extent of his resources in bringing up such witnesses as may be necessary to prove the truth of the statements in this particular.

The English Channel Tunnel Committee is drafting a report, which is said to be in favor of the project.

The Storthing of Norway has rejected, by a vote of 80 nays to 32 yeas, a proposal to increase the allowance of the Crown Prince by 50,000 kroner. The reason given by the opponents of the measure for voting against it is the unsatisfactory political situation.

Mr. P. Lorillard's five year-old Iroquois won the Stockbridge cup in England on Thursday. Iroquois was the winner of the Derby in 1881.

The British passenger vessels *Hurunui* and *Waitara*, belonging to the New Zealand Shipping Company, came into collision off Portland, England, on Friday night, and the *Waitara* sank in two minutes. Twenty-five persons were drowned.

General Wallace, the American Minister to Turkey, has refused to accept the notice given by the Porte of the termination of the treaty of commerce between Turkey and the United States, on the ground that it was given too late.

The Right Rev. John William Colenso, D.D., Bishop of Natal, South Africa, died on Wednesday, at the age of sixty-nine. He was appointed First Bishop of Natal in 1853. He published a number of religious books, one of which, on the Pentateuch, was deemed heretical, and in 1864 he was deposed from his see, but the decision was rendered null and void by the Privy Council. He espoused the cause of Cetewayo, and was an effective advocate of his restoration to his kingdom.

Disastrous floods visited Silesia, Bohemia, and Moravia during the week. Seventy persons were drowned in Silesia.

Anarchists have posted placards in Athens, Greece, threatening to destroy the royal palace and ancient monuments with explosives.

Serious anti-Jewish riots have occurred at St. Gall, Switzerland.

A trial is now proceeding in Hungary of a number of Jews who are accused of murdering a Christian girl for the sake of using her blood to mix with the Passover bread. The evidence proves the manifest absurdity of the charge.

While a performance was in progress at a puppet theatre at Dervio, Lake Como, recently, the structure took fire and was entirely destroyed. Forty-seven persons lost their lives and many others were injured.

Senator Lafayette Rodrigues Pereira has succeeded in completing a new Brazilian Ministry from the most advanced branch of the Liberal party, and the administrative decentralization of the country is one of the reforms which may be expected.

Meetings have recently been held in Peru which declared for peace and for Iglesias as President and regenerator of the republic, as proclaimed by the Cajamarca Assembly.

Letters from Peru announce that it is believed the Chilians will gradually evacuate the north of Peru under the treaty made with Iglesias, and that he will first establish his government, beginning in Trujillo and other leading towns, before he goes to the neighborhood of Lima. The Chilians certainly have more confidence in him than in any other leader, so that they may furnish him with the arms he will require to suppress Montoneros and marauders.

An epidemic of cholera, as is alleged, has appeared in Damietta, Egypt.

Intelligence has been received in London from Sierra Leone, Africa, that the recent British operations against Chief Gbpowe were attended with great atrocities on the part of the native allies, who butchered and mutilated all the males taken prisoners.

THE OHIO DEMOCRATS.

In selecting former Republicans as candidates for high places, the Democrats have not always been as fortunate as in the latest instance. Judge Hoadly, who has been nominated by the Ohio Democrats for the Governorship, is a man of marked ability and high standing. He also possesses many of those qualities which are apt to make a candidate stronger than his party: an extensive personal popularity, an active and energetic temper, and a pleasing faculty of speech. It is not probable that he will lose Democratic votes on account of the short time during which he has been identified with the party, while he may draw more votes from the Republican side than any man in Ohio similarly situated could do. Judge Foraker, the Republican candidate, is undoubtedly aware that in Mr. Hoadly he has as formidable a competitor as could have been picked out in the State.

The platform adopted by the Democratic Convention of Ohio deserves to be studied as a model of the double-action system. It exhibits the art of the platform-maker whose object it is to be all things to all men, in its perfection. It begins with a reference to Thomas Jefferson's principles, and their application to the present condition of affairs, which of course involves the substitution of good practices for bad practices. No well-meaning citizen of the United States, whether he be Democrat or Republican, will object to this, unless he be thoroughly perverse and obdurate. Coming down to tangible particulars, the platform takes up the tariff question. It "favors a tariff for revenue." Everybody does, under present circumstances. It does not speak of a tariff for revenue *only*, for that would offend the protectionists. It would, moreover, have the tariff for revenue "limited to the necessities of a government economically administered, and so adjusted as to prevent unequal burdens." This is to please the revenue reformers. But the tariff is also to "encourage productive interests at home and afford just compensation to labor," which is the exact language used by the protectionists when glossing over their selfish policy. All this, however, is by no means "to create or foster monopolies," which will make the crowd applaud and the protectionists smile. And then the platform denounces the reduction of the tariff on raw wool by the Republican Congress as iniquitous legislation, thus countenancing the most odious and absurd feature of the protective tariff, the duties on raw materials. This, of course, will be highly gratifying to all protectionists of the extremest stripe.

As to the liquor question, the platform declares against all sumptuary legislation, which will please the liquor interest and also those who are on general principles opposed to prohibitory or restrictive measures. It is "in favor of the largest liberty of private conduct consistent with the public welfare and the rights of others," which will be subscribed to by the prohibitionists as well as by their opponents, each side reserving to itself only the right to define how large a liberty of private conduct will be consistent with the public welfare. And finally it is also "in favor of regulating the liquor traffic, and providing against the evils resulting therefrom, by a judicious and properly graded license system." This bears a striking resemblance to the Republican platform, which declares its approval "of the taxation of the liquor traffic for revenue and for the purpose of providing against evils resulting from such traffic." Both speak of providing against the evils resulting from the liquor traffic—the Republicans by "taxation," and the Democrats by a "license system." But as the State Constitution forbids a license system, the thing favored by the Democrats can be reached only by constitutional amendment, and they must, therefore, by implication at least, concur with the Republicans in "approving of the action of the General Assembly of Ohio in the submission of constitutional amendments in relation to the liquor traffic." The Democratic platform, therefore, covers the ground pretty completely. While it has a broad smile for the anti-prohibition side, it has a wink for the other.

As to civil-service reform, the present platform demands it as earnestly as the Democratic State Conventions of Ohio did in 1880, 1881, and 1882, and the Democratic National Conventions of 1872, 1876, and 1880. But how earnestly? The fact that since that time a civil-service reform bill, fathered by a Democratic Senator from Ohio, has passed Congress and become a law, is not deemed worthy of notice. Considering the circumstance that this law and the champion of it were roundly denounced and ridiculed by the Democratic press of Ohio and the Democratic members of the Ohio Legislature, in spite of the repeated platform declarations in favor of civil-service reform, it is not surprising that the Convention did not push its earnestness so far as to endorse that measure and its champion.

Thus the Democratic party may enter upon the canvass with the reassuring consciousness of having something in its platform to please everybody, even people of the most opposite views and endeavors. It will be a curious campaign. The Republicans, according to Senator Sherman, will press the tariff issue, but they will find the Democrats on both sides of it, and both parties will be apt to appear on both sides of the liquor question. Both parties will vociferously "claim" the victory down to the day of the election, and when the struggle is decided we shall know which candidate is elected and which party has gained an advantage, but it will be hard to say whether any, and what, distinct set of principles and policies has won a triumph over another.

CAMPAIGN RECORDS.

Dorsey is apparently a very prolific writer, and we shall, now that he has leisure and has got over his fear of the penitentiary, have a great deal of literary matter from him in the shape of abuse of his enemies. There is nothing, however, in his letters which is at all new or interesting except his explanation why he did not surrender the papers and books forming the party archives, which were supposed by his successor to have come into his hands as Secretary of the Republican National Committee. He says, in a communication to his successor in that office, Mr. John A. Martin, that before he became Secretary he, too, supposed there were party records, and that the Secretary was the custodian of them, and he asked *his* predecessor, Governor McCormick, for them, but was informed that there were none, that "a bonfire of forgetfulness" was allowed at the end of each campaign to "eat up the evidence of honesty." Governor McCormick had in like manner received no records from his predecessor, the late Mr. Chandler, owing to the same bonfire of forgetfulness. "They," then says Dorsey, with a certain epigrammatic force, "were my predecessors, and you are my successor. I have nothing more to give you than they gave me." But he goes on to add that he has certain party papers, and means to keep them. "I have," he says, "a great mass of papers relating to the last campaign. They are chiefly made up of letters addressed to me and letters written by me to others, in which no one could have the slightest interest except to obtain curious information." He then explains that none of the campaign funds came into his hands—that they were simply "expended under his direction"; which is his fine way of saying that money was sent to such persons as he designated.

Now, there is no question that the next great step in the work of political purification will be to compel the campaign committees to file and publish, after each canvass, an account of their receipts and expenditures, and there could hardly be a better proof of its necessity than this letter of Dorsey's. Public attention was drawn to the need of something of the sort last fall, apropos of the assessments which Mr. Jay Hubbell was levying on the office-holders, and of the subsequent destruction by his committee of all record of the amount and disposition of the proceeds of his extortions. The burning of books of account always excites suspicion, unless they are strictly private books. To burn books showing what you did with other people's money raises a presumption of wrong-doing, and all electioneering money is in a double sense other people's money. An account of it is due not only to those who may have voluntarily contributed it, or from whom it may have been extorted, but to the people of the United States, whose will it has been used to shape or modify. In plain English, the public has a right to know what party managers do with money about election time for precisely the same reason that they have a right to know what the trustees of corporations do with the money of the corporations, *i. e.*, because the temptation to use it for the public detriment—or, in other words, for illegal purposes—is strong. In England this has been fully recognized, since the extension of the suffrage, by compelling each candidate to file after every election a sworn itemized account of the money expended in his canvass. If the items are improper, the candidate loses his seat or suffers the other legal penalties of corruption.

We ought to have an act of Congress compelling every campaign committee to file its accounts after each canvass, showing how much money it used and in what manner. The legitimate uses of money in a canvass are easily specified, and no party need be asham-

ed to tell how much it spent on them when all is over. Nor need any party be ashamed of having plenty of money, provided it comes from proper sources—that is, the free contributions of voters. In fact, a full party treasury is a very legitimate sign of party strength and hopefulness. The proper use of party funds in a canvass is the provision of the machinery of persuasion. If Dorsey's letters relate to this, neither he nor the party need be afraid to have them published. Doubtless they contain plenty of lies and skeletons or suggestions of lies; but these things the law cannot touch and ought not to concern itself with. In so far as they direct the expenditure of money, they are or ought to be public property. It ought, therefore, to be obligatory on him to produce them, with explanatory annotations. Hubbell ought to have been compelled to produce his, and all persons burning or concealing or mutilating campaign records ought to serve a term in the penitentiary. Astounding as it may seem to party managers, we have no sort of doubt that this is coming. We shall see these things enacted before long. The American people will do whatever is necessary to make elections a fair expression of the popular will, instead of a game between two rival sets of jugglers or "manipulators." And when we have such a law, able men of high character, and not smart, tricky men, will be sought out for the executive work of campaign committees.

DUPLEX PROFESSORSHIPS.

President White, of Cornell University, has tried to solve a problem which has long vexed many souls, by appointing Mr. H. C. Adams, a free-trader, to the chair of Political Economy, and at the same time appointing Mr. Ellis H. Roberts as a lecturer "to present the protectionist view," or, in other words, to confute whatever the Professor may say in favor of free trade. This is a concession to long-standing discontent on the part of the protectionist public with the way in which political economy is taught in nearly all our leading colleges. We have no figures before us, and, therefore, speak under correction, but we believe the University of Pennsylvania is the only college of note at the East which now has a protectionist professor. Nor is this the result of any settled policy or leaning on the part of the college authorities. We believe they formerly all, or nearly all, had protectionist professors. It is due to the fact that almost all promising men of the younger generation who devote themselves to the study of political economy, and are willing to teach it, are free-traders. In other words, the colleges are committed to free trade almost whether they will or no. Nor are the protectionists compensated for this disadvantage by the assistance they receive in the literary field. The support which comes to them from this quarter cannot be compared to what it was twenty-five years ago. No journal advocates their cause with the vigor and ability displayed by the *Tribune* in Horace Greeley's days, and they have no book writer who approaches the late Henry C. Carey in dogmatic force and audacity. In fact, they may be said, for all practical purposes, to have lost the press. Their most faithful journalistic friends, instead of preaching the old protectionist gospel, plead *ad misericordiam*, or ask for a postponement of the inevitable day on grounds of expediency.

They lament this state of things a good deal, but have never produced any practical remedy. They have consoled themselves somewhat by the reflection that if the professors and "doctrinaires" were against them, the practical men—that is, the manufacturers—were on their side; and that if the young men in the colleges were led astray for a while as to the true conditions of national prosperity, they would get over their errors when they came to engage in the actual work of life. They have found much comfort, too, in painting the free-trade professor as a blear-eyed, dreamy pedant, who got on very well while he was talking to boys in the recitation room, but would cut a very sorry figure if brought, with his theories, face to face with hard-headed business men, who know "the bottom facts" of the case. The Tariff Commission apparently invited Professor Sumner before them on this theory, and were confounded by finding the actual Professor a very healthy and decidedly warlike person, exceedingly plain in his speech, who knocked all their heads together in five minutes, and made a most amusing exposure of their mental condition, even about their own subject.

There is, no doubt, a certain absurdity in putting up two persons in an institution of learning to teach opposing views of the same subject simply because opposing views exist in the community. They do this in Germany, but the American college is not a German university. It professes to know the truth, besides teaching how to seek it. Before 1879 the silver men and greenbackers were nearly as powerful, respectable, and reasonable a body as the tariff men are, and held that the existing teaching of the colleges about currency was false, mischievous, and inspired by capitalists and "gold-bugs." We believe they did also, in some cases, ask for "representation" in the collegiate lecture-rooms, so that they might have a chance to prove to the undergraduates the virtues of "fiat money," and the desirableness of having money of low purchasing power for the poor man, and money of high purchasing power for the rich man; but nobody listened to them, and they have now nearly all disappeared, and are making hard money as fast as they can.

But we do not think any free-trader need complain of the Cornell method. It is, perhaps, the best thing for free trade that could be done under the circumstances. It is not easy at present to find protectionist teachers of political economy who can contend successfully with the existing occupants of the chair. Acquaintance with the literature and history of the subject is somewhat rare among them, and this, though of small consequence before popular audiences, tells on a college class. We should be glad, therefore, to hear of two professors of political economy in every college in the country fighting, hammer and tongs, over Adam Smith, the pauper labor of Europe, and British gold, Willimantic thread, and the million tracts of the Cobden Club, and Dr. Hamlin's Turkish protective tariff.

CZECH REVIVAL IN AUSTRIA.

The Taaffe Cabinet in Cisleithan Austria proceeds without wavering on the path which it marked out for itself when it assumed the direction of affairs four years ago, and it proceeds more rapidly than it then intended. Its latest political act, the dissolution of the Bohemian Diet, (in which the German element had a majority over the Czech), merely for the sake of reversing the balance of legislative power in Bohemia, surpasses in directness anything ever done by the present rulers of Cisleithania in favor of Slav preponderance. We are not ready to say that this act is the result of a deliberate intention to accelerate the momentous change of base undertaken in 1879. On the contrary, it appears to us rather a necessary consequence of the position originally taken by the Cabinet, perhaps more from necessity than choice, and of its long-continued movement on the inclined plane leading from the artificial summit of dualism and German leadership to the broad level of federalism and Slav supremacy. The Germans call it a descent toward an abyss which will engulf not only the higher civilization and constitutional and religious liberty of the Austrian peoples, but also the monarchy itself; and some are bold enough to make it clear that they will not hesitate to contribute to the dissolution of the latter, convinced that a really German order of things, under the auspices of the Hohenzollern sceptre, could be evoked out of the ruins. Taaffe, however, and his supporters—Czechs, Poles, feudalists, clericals—are equally emphatic in the assertion that the present policy is the only one which can save the monarchy from a collapse. In the meanwhile, the Czechs—who, since they reëntered the Vienna Reichsrath on the formation of the present Cisleithan Cabinet, have extorted concession after concession—are jubilant in the triumphs achieved and in the sure expectation of an electoral victory soon to come, while dismay and disorganization reign in the ranks of their opponents.

Nothing is more peculiar and curious in the political history of our times than the constantly changing phases of the Czech national movement within the Austrian Empire. A hundred years ago no Bohemian nation existed. It had been extinguished by the victory of the Emperor Ferdinand II. at the opening of the Thirty Years' war, and by the stamping out of its Protestant elements during the course of that terrible struggle. The Bohemian nobility and burgher classes had become completely Germanized, and the whole people Romanized. The descendants of the Hussites had become bigoted Papists, and subservient tools of the Hapsburgs. The Czech language, in which Huss and Jerome of Prague once preached, had been degraded to the state of a vernacular of a despised peasantry. A slow national reawakening began to manifest itself during the reign of Joseph II. Poor *literati* attempted a rehabilitation of the beautiful Slavic idiom of the country, and ultimately dreamed of a resuscitation of the national spirit. The tendency of the era of revolution which followed favored the movement. Powerful writers arose, and the higher classes, though late, were finally carried along by the

current; and when, in 1848, the Metternichian system collapsed, there was a half-regenerated Bohemian nationality, with which new Austria had to reckon. This nationality, however, had dual features which distinguished its aspirations from those of any other. It cherished the recollections of a national past, the glories of which were anti-Catholic and revolutionary; it was intensely Catholic, and clung with religious fidelity to the Hapsburg dynasty, which had extinguished the Protestantism of the country together with its independence and liberty. This dualism has not yet ceased to characterize the modern history of the Czechs.

The first impulse of the Czechs of Bohemia, when they were roused from political lethargy by the revolutionary tempest of 1848, was to baffle the attempt of their German fellow-citizens to join in the pan-Germanic movement of the time. They hoisted their own flag with the arms of Austria. The next aim was to reunite all the fragments of "the crown of St. Wenceslas"—Bohemia, Moravia, and Austrian Silesia—into one Czechic realm. Extremists talked of the annexation of the Slovakish territory of Hungary. The pro-Austrian agitation against the Germanic Parliament at Frankfort was soon followed by the convocation of the Slavic Congress at Prague, which led to a bloody contest with the Austrian military authorities, in which the Czech cause succumbed. This revolutionary movement was rapidly succeeded by efforts to sustain Austria in her desperate grapple with the Hungarians, the Czechs sacrificing their liberal aspirations to their Slavic race interests. They flocked to the banner of Windischgrätz, who had bombarded Prague and dispersed the Slavic Congress. It was, however, Russia that decided the contest, and when Hungary fell Austria returned to her centralizing and Germanizing policy. When Solferino and the passive opposition of the Hungarians had forced Austria to conciliate the non-German nationalities by constitutional concessions, the Czechs entered the Vienna Reichsrath in the expectation of ruling it with the help of the other Slavs —Poles, Slovenes, etc.—but, baffled in this, left the Reichsrath in 1864, and finally also the Bohemian Diet, when the majority there too escaped their grasp. It was during this long period of abstention that their Slavic ardor almost completely prevailed over their creed-hallowed fidelity to the house of Hapsburg, and the Czech leaders Palacky and Rieger, frightened by the victories of the Prussians in the Bohemian campaign of 1866, sought to win the sympathies of Russia and France by demonstrations and secret manœuvres almost bordering on treason. All sympathy with oppressed Catholic Poland was ostentatiously renounced for the sake of the future Russian alliance; Russian and Czech celebrated in common the memory of Huss; Panslavism, under Russian headship, became the goal of Czech patriotism.

The occupation of Bosnia and Herzegovina by the armies of Austria-Hungary in 1878 caused a sudden change in the political combinations of the Empire. That occupation was the work of a court policy, supported by the sympathies of the army, the nobility, and part of the people, but distasteful to the leading Magyar and German parliamentary spheres. Andrássy won for it the reluctant consent of the Hungarian Diet and Imperial Delegation, but the opposition to the policy of expansion in Vienna became so passionate that it cost the German party its unity, the favor of the court, the coöperation of a fraction of the nobility, and the confidence of many a constituency. The parliamentary situation became untenable at the moment when Prince Bismarck meditated the formal conclusion of an Austro-German alliance, directed against Russia and France. This alliance was to strengthen and extend the Austro-Hungarian influence in the Balkan Peninsula. Bosnia was to form the *point d'appui* there. The Slavic interest of Cisleithania was to support the occupation, and form a counterpoise to the influence of Orthodox Greek Russia. The alliance was formed. The Czechs and Poles readily entered into a combination with feudalists and clericals of every hue, and the Taaffe Cabinet was created. The German Constitutional party drove it, by an almost factious opposition, completely into the Slavic camp, forcing it to purchase its only possible support by constant yielding to demands in the Slav interest. The Czechs, reëntering the Reichsrath, at once again became the most loyal subjects of the Hapsburgs, the most devoted citizens of the Empire which they again hope to rule. The power of Panslavism is thus broken for the moment, and this it is which makes Taaffe boast of a successful and saving policy, while the Hungarians, in their quieter and better governed part of the dual Empire, contemplate with patience the advance of their Czechic ill-wishers, and Bismarck apparently looks on with contentment. The German politicians of Austria, on the other hand, exasperated by constant defeats and the arrogance of illiberal opponents, see in their own impatience an earnest of future revolt, conflict, and collapse. Austria has, however, gone through so many crises of a similar character that all predictions of imminent ruin for her have ceased to be terrifying.

GOOD MANNERS.

The *Pall Mall Gazette* has been raising the old question, "What is a gentleman?" and answers it in a somewhat novel way by saying that the meaning of the term "varies with the times." Conservative people, of course, will be shocked by such an assertion, for the conservative view of the term is that it is absolute, and that any recognition of changes in its meaning would be an improper acknowledgment of the inroads which sheer vulgarity is constantly making in the social world. Their view of the subject is that a gentleman is always a gentleman, as a lady is a lady; but that good manners, which are the true mark of both, are in a state of decadence. At heart, too, whatever they may pretend, they believe that the spread of democracy and equality is driving good manners out of the world.

If this idea is just, it is not owing to a lack of attention to manners, for there probably never was a period of the world in which so many people gave close and thoughtful attention to matters relating to behavior as in the present. A century ago good manners among men and women were a good deal like breeding among horses, a question of inheritance and blood. The social traditions of the race were in the hands of a small class, who handed them down orally from father and mother to son and daughter. The mass of mankind had no more part or lot in them than they had in a knowledge of Latin and Greek. Indeed, the dead languages were really more accessible. Money would always furnish a road to any branch of polite learning, while it was universally admitted that it took "three generations to make a gentleman." Now, however, all this is considerably changed. Everybody who is at all familiar with modern society knows that gentlemen have to be made quickly nowadays. People are not willing to wait for their grandchildren to be gentlemen; they want to be made into gentlemen themselves. In this country especially, where family counts for so little and money for so much, and where the bewildering ups and downs of fortune revolutionize the features of society every thirty or forty years, it would be ridiculous to talk about manners being the result of "breeding," or being confined to any particular class. They have been thrown open, like education, or foreign travel, or the suffrage, to all the world. Anybody can now get some manners. They still have, however, aristocratic associations, and in a thoroughly democratized society there is nothing so pleasant—particularly to women—as a touch of what is essentially undemocratic. This explains the fact that while manners in the United States have been so constantly found fault with by foreigners, there is no country in the world where so much attention is paid to them, where so many books on etiquette appear, where there is so much conversation about them, so many people constantly trying to find out what they are and to practise them, and also giving a substantial proof of the difficulty of the process by producing "too good manners" as the result of the process. A man or woman whose manners are "too good," is invariably a person to whom manners have not come by inherited tradition and early association, but by conscientious and painstaking labor.

On the other hand, it should be admitted that, in a purely industrial community like ours, refinement is always looked upon by outsiders who do not happen to be trying to refine themselves, in a hostile spirit. The vulgar, underbred man looks upon a refined and fastidious man with a feeling something like that which Justus Schwab may be supposed to feel when he walks by the Vanderbilt houses in Fifth Avenue, though less consciously. But whereas Justus is working for the day when the wealth and splendor he sees about him may be divided among him and his friends, the general fund of refinement and good manners, even when the reign of absolute justice and equality is established, can never be distributed *per capita* on the basis of population. The resentment which the vulgar man feels against the refined man leads him, in a free society like ours, to do what he can to spread and foster vulgarity, just as his enemy does refinement, and this may serve to explain the

phenomenon, certainly noticeable in our day, of a constantly increasing refinement in manners generally, contrasted with and accompanied by a rapid progress in vulgarity. Everybody has noticed the feeling of disgust that any marked display of refinement or sensitiveness in horse-cars, omnibuses, and railroad stations produces among the majority of the passengers; and what is this but an expression of the confident superiority and unaffected pride arising from a sense of common vulgarity?

One marked proof of the deep interest taken in the United States in the subject of manners has always been the attention paid by Americans to foreign critics of their manners; an attention which is all the more remarkable because England, which is the country generally resorted to for advice, owing to the radically different mode in which society is organized there, cannot possibly furnish a fixed code of manners for this country. Nevertheless, the interest in the English code has always been very great. We have before us a curious historical illustration of the fact in some manuscript directions as to behavior in society written down about fifty years ago for the benefit of an American "set" of that day by an English nobleman. The owner of the manuscripts tells us that they were asked for by the late Mrs. Patterson-Bonaparte, and furnished to her by Lord Cholmondeley, a man of fashion of that day. It will be seen that they were not meant exclusively for women, and they relate to language as well as behavior:

Say *shooting*, and not *gunning; coachman*, not *driver*. Say *drive*, not *ride*, if it be in a carriage. Say *drawing-room*, not *parlour*. Say *glass of water*. Say he *doesn't*, not he *don't; apple tart*, not *apple pie*. You must not say, "I have dined off ham," or off anything. Say "Give me some Madeira or sherry," but never add wine. It is not vulgar to say "port wine." Never utter the word *victuals*. Avoid the word *elegant* on all occasions. No one ever says *genteel, dashing*, or *elegant*—words entirely excluded from good company. Be sure never to send your knife and fork when you send your plate to be served a second time. Do not put your knife into your mouth. Do not carve with your own knife. Do not put your knife into the butter or salt, or anything which is destined for another. Do not ask for a piece or slice or cut of anything; say, "May I trouble you for some of the beef, ham, turkey," etc. Hunting means riding after hounds; shooting, killing with a gun. Never say "people of quality," but "persons or people of rank." Never say "My Lady," it is never used except by footmen. Avoid saying Sir, Ma'am, or Madam—you may say it in a public coach or in the street. Do not call a surgeon "Doctor," but "Mr." in speaking to him or of him; you may call a physician "Doctor." You must not say "send for a doctor," but "send for a physician."

Eat fish, fruit, and vegetables with a fork. Break your bread at dinner; never cut it. Say a fortnight, not *two weeks*. Say autumn, not *fall*. Say "I shall get cold," not I will, etc. Say a ladylike or gentleman-like, or nice or agreeable person, but never use the expression *genteel person*. Say clergyman, never parson. Parson is never used but as a term of ridicule when applied to Methodists, etc. Say lilac, not *laylock*. Say a pain in the chest, not a *pain in the breast*. Say ill, unwell, indisposed, never *sick*. Direct your letters to Thomas Brown, Esq., never to Mr. Brown, unless he is a tradesman. If you do not know his Christian name make a dash, thus: —— Brown, Esq. Seal with wax, never with a wafer, unless you are writing to low people. Use blotting-paper, never sand. Do not ask people how their brother, father, mother, son, sister, daughter is. Speak of them by their names or titles. Say hall, not passage, unless it be a back one. Say street door, not *front door*. Do not laugh loud or rub your hands or show turbulent symptoms of any kind. Never use the word God; do not say devil or devilish. Do not spit on the floor or in the chimney; if obliged to spit, let it be in your pocket-handkerchief. Do not pick your nose. Do not sit close to or touch any one in any way. "May I trouble you?" or "I will trouble you" for the salt. Never say "Please help me" to anything. Never say "I guess," or "I expect," for believe or suppose. Do not empty your egg into a glass. Do not crowd different things on to your plate. Expression of wonder or any great show of emotion is ungentlemanlike. Never pour your tea or coffee into the saucer. Do not put your spoon into your tea-cup to signify you have done. Say James not Jeames. Never say old Mr. or old Mrs. Anybody. Do not speak through your nose, as most Americans do.

Many of these instructions cannot have been of much use to Mrs. Bonaparte or her friends; and most of them relate to such minute points that no one could possibly remember them all, unless they came to him as part of an inherited tradition. Some of them have no meaning out of England, as the distinction between physician and surgeon, and the insistance upon apple "tart." Such rules could never have been applied as practical tests of good manners here, and cannot now. Most of them would not now be recognized in England as furnishing infallible criteria. No Lord Cholmondeley of the present day would ever dream of sketching out such hard-and-fast tests as to details of behavior. Refined people clearly perceive now that vulgarians have rights in society which should be respected, and one of these is that their lives shall not be made miserable over such contemptible trifles as the trick of asking for "a drink of water," confusing "will" with "shall," of putting their spoon in their tea-cup to show that they are "through." If we were to go seriously to work, as Mrs. Patterson-Bonaparte did, to get our present faults corrected, we should undoubtedly find plenty of censors who would tell us what they were, but would there be any general agreement as to whether the criticisms were right or wrong?

THE COMTE DE PARIS'S HISTORY OF THE REBELLION.

PARIS, June 7, 1883.

THE Comte de Paris is continuing the history of the war of secession at his Château d'Eu, and has just published the fifth and sixth volumes of his great work. I have opened with a melancholy feeling these new volumes, and could not help meditating on the singularity of the times we live in. Only a few months ago, while the Count was perhaps correcting the proof-sheets of his work, he was suddenly threatened with banishment. Prince Napoleon had put on the walls of Paris a placard which seemed to throw the Republican party out of its senses, and the Chambers were on the point of sending all the so-called pretenders into exile. In 1871 the Comte de Paris, inspired, I have no doubt, by the most patriotic motives, waived all his claims to the throne of France in favor of the Comte de Chambord. He did not declare himself an enemy of the Republic; he merely said to his cousin at Frohsdorf that if the French nation wished to reëstablish the monarchy, he would not be his rival, he could only be his successor. I will not dilate here on the character or the consequences of the interview at Frohsdorf; the monarchy was not reëstablished, and it is only just to say that the Comte de Paris has lived quietly, like a private citizen, mixing in no intrigue, and winning all suffrages by the dignity and purity of his life, by his laborious habits, and by the disinterestedness of his character. We owe the continuation of the 'History of the American War' to the leisure which circumstances have made for him. At Eu the Comte de Paris has collected an enormous quantity of documents concerning the war, in which, as a young man, he took an honorable part, with his brother, the Duc de Chartres. He is in correspondence with many officers, Northern and Southern, who were conspicuous in these great events; he works diligently and with great regularity; and thus it is that, notwithstanding all the circumstances which often have crossed his quiet life, he has been able to bring down his history as far as the momentous battle of Gettysburg.

The fifth volume opens at the beginning of the campaign of 1863—a campaign which everybody felt would be decisive. "Though the Federals had gained ground on their adversaries during the preceding year, they had paid such a price for their acquisitions, and the last months of 1862 had been marked with such bloody reverses, that the reëstablishment of the Union by the force of arms seemed more distant than ever. In vain did people count on the resources of the North, on its obstinacy, on the strength which would be given to it by the proclamation of emancipation: it was natural to doubt of its success when the results obtained were measured with the sacrifices which they had cost." In December, 1862, the Army of the Potomac had in vain tried to take the lines of Fredericksburg, and Sherman had suffered a defeat before Vicksburg.

General Hooker took command of the Army of the Potomac on the 26th of January, 1863. The army was discouraged, but the name of Hooker was popular, and his presence soon reestablished discipline and put a stop to desertion. The Comte de Paris describes with great accuracy the region of the Rapidan and of the Rappahannock, and the forest called the Wilderness. He explains the plan of General Hooker, who opened his campaign on the 29th of April.

"After having well combined and very happily executed the first part of his plan of campaign, Hooker seems to have forgotten that the point the possession of which was to decide the fate of the enemy was not in the forest of the Wilderness, but on the heights of Salem Church, which dominate Banks's Ford. Instead of taking possession of them with the promptness which he showed when, as a simple general of division, he conducted his soldiers against the enemy, it seems as if he allowed the enemy time to come and attack him in the midst of thick woods very unfavorable to a numerous army, well provided with artillery."

After the bloody struggle of Jackson against the Federal right, near Dowdall's Tavern, the position of Hooker became critical; he was, so to speak, shut in on the plain of Chancellorsville, threatened on one side by Jackson, on two others by Lee. The battle of Chancellorsville, told in the minutest details by the Comte de Paris, was, in his opinion, a defeat, but not a disaster, for the Northern army. The troops were tired, but not discouraged, as they had been after Fredericksburg. They needed repose, but Lee did not leave them much leisure.

The invasion of the Northern States had been decided on in the Southern councils. The Army of Virginia knew all the ways which led toward Washington, Baltimore, and Pennsylvania. Such an invasion, even if it was followed by the capture of Washington, would undoubtedly have more results than a battle like Chancellorsville, which had been fruitless. When General Lee asked for rations, he received the answer: "If the General wants rations, let him go and find them in Pennsylvania." The Virginian army was put in motion on the 3d of June, 1863. This army was far superior to what it was the year before, when it had invaded Maryland; it

was well drilled, well disciplined, well organized; it had great confidence in itself and in its chiefs. Lee had divided his army into three corps, which were commanded by Longstreet, Ewell, and A. P. Hill. His object was to follow the Shenandoah Valley, behind the Blue Ridge, and to enter Maryland. Meanwhile, it was necessary to keep the Federal army before Fredericksburg by a great show of troops. Great secrecy could alone protect his own army during its dangerous flank-march. Hill was left behind, and concealed the departure of two-thirds of the army.

Hooker had only 80,000 infantry; his artillery was very numerous, and out of proportion to the reduced number of the infantry. His cavalry was tired, after the raid of Stoneman, and needed repose. The most cruel experiences could not determine the authorities of Washington to reduce the garrisons of useless posts. Hooker had orders which forced him to cover Washington and Harper's Ferry, though Washington was well garrisoned and Harper's Ferry had no strategical importance. "General Hooker had asked that all the forces which could coöperate against Lee should be under one direction, so as to combine their efforts. General Halleck judged that the superior direction which was exercised by himself in his cabinet at Washington was sufficient." The Army of the Potomac was thus reduced to the defensive. The Comte de Paris praises the efforts made by Hooker in order to counteract the plans of Lee. In reality, Lee was leaving the road to Richmond open, while he himself tried to march on Washington—he was playing, as he said, Queen for Queen; and Hooker soon perceived the advantages which could be drawn from the movements of his adversary. Washington, with its powerful fortifications, its formidable artillery, its garrison of 36,000 men, which Schenck could have rapidly swollen to 50,000 men, was more than a match for Lee, while, without a second army, Davis could not have been able to protect Richmond. The resources of the Confederates were limited in men, in material of war, in means of transport; they had not the command of the sea. Hooker could not, however, persuade the Government; he was told that his mission was not to go to Richmond, but to fight Lee's army. Abandoning to the enemy the offensive, there was nothing left for him but to try to understand its movements.

Meanwhile, Lee marched his army between the two parallel ridges, the Blue Ridge and the Bull Run Mountains. His movements were masked. The campaign was opened by the battle of Winchester, which told the North that the army of invasion was in the valley of Virginia. Hooker put his whole army in motion, turned northward, and concentrated his troops so as to cover Washington. The disastrous retreat of Milroy produced a profound sensation; the invasion of Pennsylvania was near; Harrisburg was in danger; the valley of the Cumberland was in alarm. The audacious, though extremely injudicious, raid of Stuart had very singular results. At one moment, says the Comte de Paris, Lee, Hooker, and Stuart were marching all three on parallel lines, the second being between his two enemies, and separated from them by a chain of hills. The diversion of Lee's cavalry was very useless, and brought in reality no good result to the Confederate cause.

It is well known that the command of the Army of the Potomac was transferred from Hooker to Meade. "This change would have been logical the day after Chancellorsville; it was singularly inopportune at the moment when the two armies were on the eve of a decisive struggle." General Meade is thus described:

"Quiet, modest, silent, but with a just judgment, a clear and precise mind, and a coolness which danger could not alter, he was only known by his subordinates and by the other generals; for neither his slow and methodical mind nor his long thin face, with eyes the sad expression of which was hardly veiled by spectacles, was made to strike the multitude or to inspire enthusiasm. But he was esteemed by his companions in arms and respected by his adversaries."

Meade received large powers from Washington, but he had the good sense to make as few changes as possible in the organization of his army. This army, when he received the command, was little short of 105,000 men. The two armies, in ignorance of each other's movements, changed their direction, while their cavalry crossed each other and sometimes met in sharp encounters, and finally, on the 1st of July, took a direction which placed them in presence of each other in the neighborhood of Gettysburg.

The Comte de Paris has two long chapters on the momentous battle of Gettysburg, which was in reality the turning-point of the war. I will only give a résumé of his account. The first cause of the defeat of the Confederate army was the absence of Stuart, which brought about the fortuitous encounter at Gettysburg, and retarded the concentration of this army. Lee had four brigades of cavalry with him, but did not know how to use them. He did not understand that a new ground, open, with commanding positions, rendered all concealed marches, all sudden attacks impossible. He gave too much development to his line, and made his principal attacks at the two extremities. Having failed in them, he did not throw troops enough against Meade's centre. The Army of the Potomac had the advantage of good positions, of which Meade made excellent use. His victory was decisive, for the losses were enormous on both sides, amounting to 27 per cent. on the side of the Federals, and to 36 per cent. on the side of the Confederates. The numbers show how desperate the struggle was. The Confederates lost seventeen generals; the Federals lost ten. On the 4th of July a proclamation by President Lincoln, conceived in a simple and noble style, announced to the people of the North that the invasion of the free States had come to an end. Three days after, the news came that Pemberton had capitulated at Vicksburg. We have left aside this part of the operations, which fills half a volume of the work of the Comte de Paris. The sixth volume ends with the "third winter" of the war—a chapter which gives a complete survey of the Union and of the Southern States during the months which followed Meade's victory.

Correspondence.

THE LAWYER IN LITERATURE.

To the Editor of The Nation:

Sir: Apropos of the remarks in No. 937 of the *Nation* concerning the disparaging "note" which literature has almost uniformly sounded in respect of lawyers and (in lesser degree) of other learned professions, let me recall the fact that, so far as English literature is concerned (to say nothing of the classics), the offence is one of pretty long standing. The "London Lickpenny," of Lydgate, who flourished during the reigns of the fourth, fifth, and sixth Henrys, is an old and typical example. Says that jolly Benedictine:

"To London once my stepps I bent,
Where trouth in no wyse should be faynt,
To Westmynster-ward I forthwith went,
To a man of law to make complaynt;
I sayd, 'for Mary's love, that holy saynt!
Pity the poore that wold proceede';
But for lack of mony I cold not spede."

This experience is repeated till the whole round of barristers, or attorneys, is made, and so it is at "the Chepe," "Canwyke Street," "Corn-Hyll," and "Belyngsgate," where "hot pescodes," "hot shepes feete," and "many a pye," made tempting displays, but—

"Wantyng mony, I myght not spede."

At last, after vainly trying to get ferried over the Thames gratis—

"I prayd a barge-man for God's sake
That he would spare me my expense."

He footed the journey into Kent—

"For of the law would I meddle no more,
Because no man to me took entent.
. . . . . .
Now Jesus that in Bethlem was bore
Save London, and send trew lawyers there mede!
For who so wants mony with them shall not spede."

The circumstance of Lydgate's being a monk may explain his evident claim to services and supplies without "mony," and doubtless the same reason would stand for other censures than those in "London Lickpenny." Finally, as showing the irrational character of this particular critic of the "man of law," we may refer to one other verse of the poem:

"The taverner took me by the sleve,
'Sir,' sayth he, 'wyll you our wyne assay?'
. . . . . .
I drank a pynt, *and for it did paye.*"
. . . . . .

This is the solitary instance where anything was paid for, and there is not a word of censure of the "taverner," who, like the bargeman and the lawyer, wanted his "mony," and, unlike them, got it. C. F. B.

Washington, June 25, 1883.

THE TOTAL DEPRAVITY OF THE BICYCLE.

To the Editor of The Nation:

Sir: In your last number an ex-professor relates that he was called to account by a board of college trustees for having ridden a bicycle. Can it be that the religionists have discovered this little machine to be in some way the work of the devil? The Rev. Hugh O. Pentecost, it is currently reported, was invited to resign, and did resign, the pastorate of Marcy Avenue Baptist Church, Brooklyn, because of the severe displeasure of his flock at his having ridden a bicycle.

The said church is, I believe, an offshoot of the Hanson Place Baptist Church, upon whose expulsion, readmission, and retrial of a deacon you recently commented. Brooklyn.

June 22, 1883.

THE ORIGINAL "MASHER."

To the Editor of The Nation:

Sir: I think it is the Autocrat of the Breakfast-Table who somewhere, in confirmation of his assertion that there is nothing new under the sun—not even in slang phrases—quotes Horace's *Est tibi mater?* as the original of "Does your mother know you're out?" Another case in point, as suggesting the possible genesis of the "masher," may perhaps be found in the following, from the same poet's fourteenth Epode:

"Me libertina neque uno
Contenta Phryne *macerat.*"

DUELLING AND KILLING ON SIGHT.

To the Editor of The Nation:

Sir: Your editorial article on "Southern and Other Duelling" contains nothing that the majority of us in the South who are at all enlightened do not consider worthy of our warm assent. There is reason to lament, however, that the duel, carefully arranged, should be superseded by the reckless street encounter, as it has been, unquestionably, to a great extent. In the South most severe penalties are pre-

scribed for those who in any way take part in duels. Of course such laws are successfully evaded, as are divorce laws, by repairing to other States, and, besides, the Legislature promptly removes the political disabilities imposed. A considerable number of Southern people, however, fearing that they might be made exceptions, or shrinking from implicating their friends, are deterred from duelling. But they are not deterred from fighting what are in essence duels—and duels devoid of all safeguards. In most cases one does not in the South arm himself for an affray without first warning his foe. I know of a case, also, where one of the parties in a "street duel," having his thumb disabled by the first fire, was allowed to push back the hammer of his revolver against an object several yards distant by his antagonist, who "chivalrously" waited for him thus to get ready for the second shot. When prevented from getting word to the other, it is common to provide yourself with two knives or pistols, that there may be no temptation to kill unfairly.

Cox, who killed Allston in Atlanta in a "fight on sight," was found guilty of murder—probably the only case on record; and doubtless his conviction was due to the fact that he continued to shoot after all the chambers of Allston's revolver had been emptied. These cases prove that the street fight is regarded as a sort of duel. The effect of all anti-duelling legislation in the South has been, according to my observation, to increase the number of fights and homicides. Few of the horrible murders which occur among us, and which the *Nation* hears "cast gloom" over our communities, but call forth the declaration that we all feel to be true: "Under the code this would not have happened." It seems that at this time we should concern ourselves only about the question whether we shall have code or codeless duels. In time both will go. Under the code, the judgments of the aggrieved principals were surrendered. The seconds were usually men whose friendship prompted them to save their principals from danger. There was much room for conciliation, and at the worst there was an abundance of precaution, and certainly an entire absence of risk on the part of others.

A gentleman of large experience in such matters recently said that where the code had been carefully followed in the many duels with which he was conversant, there had invariably been amicable adjustments of difficulties. Of course such duels are somewhat silly, but if they are your great peace-makers they should be tolerated. We of the South are not entirely submissive to the law. We have not thoroughly surrendered a portion of our natural rights to society in consideration of having what remains more fully secured. We want to be protected in part by society without giving any consideration. If we had reached that stage when slanderers, seducers, and all that class are, as a matter of course, handed over to society by individuals, and not, as is now the case, handed over to individuals by society, to be punished, strict laws against the private avenger would be well enough.

Until a greater diffusion of knowledge has removed the idea now fixed in our people that without the shedding of blood by individuals there is no satisfaction of a certain class of injuries, it would be well to control the effects of that idea. At present the Legislature virtually says, "You shall not fight your duels as of yore"; the juries say, "You shall not suffer if in a fair fight you kill." The effect is known. It is not generally known that in several Southern cities—for instance, in Savannah, Augusta, and Macon—a board exists consisting of the most influential citizens, whose duty it is to arrange differences. They are men as adverse to unnecessary bloodshed on the one hand as they are "jealous in honor" on the other. They are, in consequence, unobjectionable to the most punctilious. Being sure of their own weight and standing, they exercise freely and on their own motion the powers of arbitrators. Though not formally appointed, they are a real institution, and the community sustains their decisions. Their suggestions are received and their conditions are submitted to because nobody in the community cares to be known as one who resists the counsel of such men, and who obstinately insists upon fighting for its own sake. The attempted abolition of the "code" has made such "boards" a necessity in the South.

E. I. R.

ATLANTA, GA., June 18, 1883.

Notes.

A LUXURIOUS holiday book in preparation by J. B. Lippincott & Co. is Gray's 'Elegy,' with illustrations on wood by the best American artists.

'The Story of Theodore Parker,' by Mrs. Grace A. Oliver, will introduce a series of "The Great and Good," to be published by Cupples, Upham & Co., Boston.

We have received the revised edition for 1883 of 'Appleton's General Guide to the United States and Canada,' a work of approved excellence, very compact, generally free from error, and giving evidence throughout of alterations to date. It is one of the best of its kind.

F. Leypoldt has got out a revised and enlarged edition of Samuel S. Green's little pamphlet on 'Library Aids,' and "hopes that it may form the foundation of a 'Library Annual,' having for chief features a topical record of the more prominent bibliographies, and of the articles and books relating to libraries published during the year."

Doctor Coan's "Topics of the Times," No. 2 (G. P. Putnam's Sons), consists of Studies in Biography, with selected articles on Gambetta, Swift, Miss Burney, Bishop Wilberforce, Lord Westbury, George Sand, and Literary Bohemians. The table of contents now names the magazines from which the articles are taken.

In the *Monthly Reference Lists* for June (F. Leypoldt) the Brooklyn Bridge and Jefferson's Administrations are the topics of biblio graphical guidance. The latter is third in the very valuable series which Mr. Foster is at great pains to prepare for students, with special reference to collateral reading in connection with the "American Statesmen" series. That the most profitable way of reading history is in the lives of those who make it, is a truism, old indeed, but never untimely.

The catalogue of the Phillips Exeter (N. H.) Academy for the hundred years 1783-1883 is, humanly considered, a very interesting document. As one runs through the class-lists from the beginning, great family and individual names meet one at every turn of the leaf. Here are Lewis Cass, in the class of 1792, and Joseph S. Buckminster (1795), Daniel Webster (1797), Joseph G. Coggswell (1801), Edward Everett (1807), W. B. O. Peabody and O. W. B. Peabody (1808), Thomas Bulfinch, John A. Dix, John G. Palfrey, and Jared Sparks (1809), George Bancroft (1811), Richard Hildreth (1816)—four eminent historians in succession; John Langdon Sibley (1819), Samuel Foster Haven (1821)—these, with Doctor Coggswell, make three eminent librarians; Morrill and Jeffries Wyman (1826), Francis Bowen and Benjamin F. Butler (1829). We stop short of the half century, and have omitted not a few who attained distinction in the professions or in politics.

Five columns of the *Athenæum* of June 9, in fine print, are occupied with Baalun-Bartram of the B's proposed for Mr. Leslie Stephen's 'Dictionary of National Biography.' Corrections or additions may be sent to the editor at Smith, Elder & Co.'s, 15 Waterloo Place, London.

In the *American Naturalist* for July Mr. Edwin A. Barber has an interesting paper on "Catlinite: its Antiquity as a Material for Tobacco Pipes." This stone is the product of the famous quarry at Côteau des Prairies, in Minnesota, and, though mostly and preferably red, passes through many shades, even to white. It is found distributed in relics all over the country, and, while obtainable in some other deposits, appears to have been derived by the aborigines exclusively from the source just named. The evidence is in favor of an ancient working of the quarry, going back some centuries.

The latest instalment of the 'Anecdota Oxoniensia' (Mediæval and Modern Series), from the Clarendon Press, consists of the 'Saltair na Rann,' edited by Whitley Stokes from the MS. Rawl. B. 502 in the Bodleian. This Psalter of the Staves (translating the title literally) is a rendering of the Psalms in rhyming (or assonating) quatrains. The language is of the period known as early Middle-Irish, but with many archaisms. Not a few of the pieces treat of themes outside of the Psalter, notably from the fabulous mediæval literature that accumulated around the personages of the Old and New Testament. We could have wished that the editor had allowed himself more space in his preface for the discussion of such points. It would have been well also to indicate the Latin text followed in this Irish psalter, and to compare it with the kindred Anglo-Saxon psalter in Grein. But doubtless Mr. Stokes is saving up for a separate monograph. Meanwhile we get an extremely valuable addition to our store of Irish texts, edited with the scrupulous fidelity for which Mr. Stokes is well known.

It is but a short time since we described the distinguishing features of 'Meyer's Hand-Lexikon,' apropos of the appearance of the first volume of the third edition (B. Westermann & Co.). The second and concluding volume (L-Z) has now reached us, and is, like its predecessor, a model of useful condensation. The political maps are again numerous, and each is accompanied by a reference list of places, for example, Northern, Central, Eastern, South-eastern, and South-western Europe, by States, the United States, the ancient world, the world according to forms of government. There are historical maps for Prussia and Austria-Hungary, and maps of the world's religions and languages. The physical charts show the North Polar regions, ethnography, the ocean currents, isothermal belts, the solar system. Tables of the mineral kingdom, the animal kingdom, of the history of painting and music; of orders (arranged according to the countries which bestow them), of time differences all over the globe, of the chief observatories, of the German meteorological stations, of measures, weights, and coins, in international equivalents, of the world's trade, of the German Imperial army and navy; a chronological survey of the Roman Popes under German Emperors and Kings; the order of business in the Reichstag—these are among the most noticeable general insertions in the text. For the purpose of reference hardly any scheme could be more satisfactory. We will remark again, also, on the typographical neatness and clearness of this *multum in parvo*.

From Dietrich Reimer, Berlin, we have a number of wall-maps of excellent quality. One is a physical delineation of Asia by Dr. H. Kie-

pert (the third edition), which really embraces also Europe and the whole Mediterranean basin, and, in a side map, shows the main political Asiatic divisions. Elevations are indicated by tinting; the northern limits of the vine and the palm, of barley and tree growth, by colored lines. The scale of this map is 1:8,000,000. Companionable with it are the same cartographer's new wall-map of ancient Palestine in eight sheets (1:200,000); the second revised edition of his public school wall-map, in four sheets, (1:300,000), and the fourth of his hand or pocket-map (1:800,000), of the same country. All these agree in adding the modern European and Turkish names to the ancient, and in showing separately the tribes of Israel and the plan of Jerusalem. In the wall-maps the topographical features are of course more accentuated. The English surveys of the country west of the Jordan have been available in the revision. The fifth and sixth numbers in Richard Kiepert's series of school wall-maps of Europe are devoted to Italy, physical and political, in four sheets (1:1,000,000). It is worth remarking that Tunis, Montenegro, Bosnia, Herzegovina, and *Italia irredenta* are included in these surveys. The lettering in the political map is distinct and well-proportioned.

The Pedestal Loan Exhibition in behalf of the Bartholdi monument in New York Harbor will, the Committee announce, be held in the Academy of Design during the month of December.

The thirty-second meeting of the American Association for the Advancement of Science will be held at Minneapolis, August 15–21. Principal Dawson will call the Association to order and resign the chair to the President-elect, Prof. C. A. Young, of Princeton. The headquarters of the Association will be at the State University; of the Permanent Secretary, at the Nicollet House. The Local Secretary is Prof. N. H. Winchell.

—The *Century* for July has contents of a very varied interest. Mr. E. V. Smalley, who is, on the whole, the most successful producer of the typical illustrated magazine article of "contemporaneous human interest" now writing, has a description of the petroleum industry ("Striking Oil") which we have found very pleasant reading. He makes very intelligible the causes of the extraordinary periodical excitements in the oil market, differing as they do in some respects from other speculative excitements. Put in the fewest words, the secret of the wild fluctuations in oil is the fact that no human being knows how long the supply of oil will last, nor whether it may not disappear some fine day altogether, nor whether it may not double over night from the discovery of new fields, in search of which the "wild-catters" are continually prospecting in every direction. This was what was supposed to have happened in the excitement over the Cherry Grove well last year, which began with 4,000 barrels a day, caused a "shrinkage" to the extent of $30,000,000 in oil, sent crude petroleum down from eighty-five to forty-nine cents, and a few months later "petered out." This well, while it was being sunk, was the scene of a curious struggle between the "wild-catters" who were at work upon it and the petroleum "bears." The bears, of course, wanted to get early advices as to the yield, so as either to sell heavily for a fall, or to avoid doing anything of the kind. The wild-catters, for similar reasons, wanted to keep the knowledge to themselves, and, knowing that only strong measures would keep bears at a distance, they guarded the well against them by discharging their pieces at random into the woods on all sides, as a warning to any bears that might be trying to come too close. Notwithstanding these precautions, an enterprising young bear managed to creep up through the bushes and secrete himself under the floor of the derrick, and, lying there, discovered that the well was yielding oil. This news he carried to his brother bears in the busy marts of commerce, and it is to be hoped was well paid for his trouble. Mr. James Herbert Morse has a second instalment of his "Native Element in American Fiction," relating to the novelists who have appeared since the war, in which he asks, apparently in reference to Howells and James—a nice pair of Americans they must be, if what Mr. Morse says is correct—"Is the new novelist to take his stand with the healthy livers or with the dyspeptic?" This seems a strange question to ask. Does not Mr. Morse know that dyspepsia is a trait of the critic, not the novelist? But we will spare our readers the painful revelations that Mr. Morse makes as to the behavior of Howells and James in literature, out of respect for the feelings of the editor of the *Century*, who, we observe, allows both of these shameless enemies of their country to write in it—Mr. James, this time, on Trollope. It is a good article, too—for when he is not defaming his country, Mr. James writes well—though to our mind he rather exaggerates Mr. Trollope's power of producing real human characters. Certainly, in his later books, his people's conversations, though good in substance, are marked by a uniformity of style which often destroys all illusion as to individuality. Then, too, Mr. James hardly dwells enough on his story-telling, narrative power. This Trollope certainly had to an extraordinary degree, notwithstanding his disregard of form.

—In his letter last week "L." gave some excellent reasons which should discourage any young man from becoming a writer. We hope his counsels will be heard, and that a diminution of the supply will lead to an enhancement of the price. As possibly tending to that end we add some fresh disadvantages of the literary profession lately discovered in France. When a minister decorates an author, he excites the enmity of all the authors whom he does not decorate; when he decorates a painter or a comedian, he gains the good will of all the amateurs who like the painter, of all the dealers and collectors who own his pictures, and of all the journalists and the audiences who applaud the actor. The natural result is that the practice of giving the ribbon of the Légion to painters and actors has increased, and that it is very rarely given now to men of letters. Perhaps this is not very applicable to this country, where we do not give ribbons to anybody, and where, too, the successful author enjoys full as much consideration as the successful actor or artist. But in France literature formerly certainly stood higher than art or the stage, and if there it is really at any disadvantage, now, the fact indicates a change which may come to pass also in our own country, for such ways of looking at things are apt to spread from country to country in this age of internationality.

—So important a book from the sceptical side as Renan's 'Souvenirs' was not to be passed over in silence by the *Revue Critique*. M. Duchesne, whose travesty of the preface to 'Ecclesiastes' we have mentioned, indulges in two or three pages of raillery at the autobiography, in which he represents Renan as having given himself a sort of lay canonization, and as recording the qualities which have justified the admiration of his followers in a book that might be termed the 'Acta Sancti Renani.' One remark is not without force. M. Duchesne had been explaining that there are no miracles in these Acta, because anti-clerical saints, of course, do not perform miracles, nor even believe in those which their ecclesiastical brothers are asserted to have worked. They go further, and regard the belief in the resurrection of Christ as a hallucination, and explain the conversion of St. Paul by a sunstroke, "without reflecting that, turning their own 'scientific' method against them, we might demand that they should repeat the experiment, and see if the dreams of a visionary will persuade twelve French peasants to leave their property behind and found a religious society, or that they should submit M. Paul Bert to the sun's rays long enough to make him join the Jesuits." As an argument, this, of course, does not amount to much, for the scientist would reply that, to repeat an experiment with the same result, you must repeat all the conditions; but as a bit of badinage it is worth anything in Mallock's 'Is Life Worth Living?'

—One of the leading ideas of the new school of political science is, that in sociology as in geology nothing is done *per saltum*, that the new is always the old a little modified, and that the reformer who pronounces his reform a complete change pronounces it a failure. An example of this permanence has been lately given by the *Parti Ouvrier*. The French workman is no friend of the *Dimanche*. He has protested against the law forbidding work on that day. And yet in their official *Programme électoral*—their platform, as we say—the first article of the third part, the *Programme économique*, is: Repose for one day in each week, or legal interdiction to employers to keep their laborers at work more than six days in seven. Not one day in ten, as some one proposed in the last generation—the magic number seven retains its power; it is enough if the day of rest is some other than Sunday. The second part, or *Programme politique*, is more radical: "Suppression of all state support of religion (*le budget des cultes*); suppression of the legal inferiority of woman to man; suppression of the public debt." The latter suppression is, of course, not to be made in the way in which the United States is doing it, for the French workman is as bitter against bloated bondholders as the American demagogue, and he would be content with nothing less than complete repudiation.

—For some time the engravings of Rembrandt have brought higher prices than those of any other artist. Till recently no plate had ever brought more than the 29,500 francs which M. Dutuit paid for the "Hundred-Guilders" piece (from Sir Charles Price's collection); but last May Rembrandt, to use a sporting phrase, beat his own record. At the sale of Mr. Griffiths's prints, at Sotheby's auction-rooms, in London, the portrait of "The Advocate Tolling," or "Petrus van Toll," excited a contest as lively as the famous one for the Valdarfer Boccaccio. It was in the first state, of which only three other copies are known (and they are beyond the reach of purchasers), in the national print-rooms at Amsterdam, Paris, and London. The previous engraving had gone for £33, but this was started at £500. Various persons joined in the contest at different periods, but the print was finally adjudged to M. Clément, a printseller of Paris, at £1,510 (37,750 francs). He was thought at first to be acting for M. Dutuit, who would then have owned the two costliest Rembrandts; but it has since been announced that the fortunate purchaser was Baron von Rothschild. Some other prices were not bad. A second state of "The Burgomaster Six" reached £505, and a "rich impression" of the "Hundred-Guilders" piece went for £305. Some fine Marc-Antonios brought very moderate prices, from £13 to £61. At some future day these may be bringing their small fortunes to their lucky possessors, as was the case with a battle piece of Du Hameel, sold

for £371, with an old price-mark of £15 15s. on the back.

—Those who wish to study the supernatural and the miraculous element in folk-lore, in its quaintest and most fanciful shape, we recommend to lay aside the 'Arabian Nights' and take up a collection of tales, legends, and popular poetry of the Southern Slavic nations scattered all the way from Istria and Dalmatia to the plains of Southern Hungary. We do not find in these stories the contemplative spirit prevailing in German folk-lore, in which the quiet, truly poetical talent of the rhapsodist never seems to hurry to a conclusion. The legendary tale of the Southern Slav is all passion, fire, and excitement; an ancestral garb seems to be assumed only to picture men and women of our own times, as they act now before our eyes. The purpose of these fictions is to show the impassioned, moral or immoral, side of human life. Animal stories, which monopolize almost entirely the folk-lore of the ruder nations, as that of the South African and of the American races, are not more frequent here than purely human tales; and when an animal speaks, it is as the personification of some human trait. Several collections containing the popular stories of these Slavs have been made public, but failed to attract from Europeans the attention which they deserve on account of their poetic qualities. These collections were reduced to writing in the original Slavic dialects; but the author of the latest of them, Dr. Friedrich S. Krauss, has published one hundred and nine tales and legends in an attractive, though colloquial, German style, well adapted to popularize this branch of literature. Born at Pleternicza in the Austrian province of Slavonia, Krauss had an efficient tutor in his illiterate mother, who from his infancy recounted to him all the numerous legends, tales, and ditties she was acquainted with. On account of her strange familiarity with spirit and hobgoblin stories she passed for a witch throughout the neighborhood. When Krauss had settled as a teacher in the Austrian capital, he began to compose his charming 'Sagen und Märchen der Südslaven' (Leipzig: W. Friedrich), the majority of which had never seen the light before. The transcendental power or *deus ex machinâ*, interfering miraculously with men's affairs, is here the fairy-queen or Vila ("elf"), another fairy called Vilenik ("elf's companion"), and Bendeš Vila ("the chained one"). Krauss prefaces his elegant volume with a literary sketch adapted both for the popular mind and to satisfy the curiosity of the learned, in which he points out his authorities, as Valjavec, Vuk Stefanovic Karadzič, Stojanovićs, etc., and gives a general introduction to this class of studies. This is but the first volume of a larger collection, which will be forthcoming if the author is encouraged by ready sales, and which will serve a special purpose in pointing out the connection traceable between the folk-lore of the Southern Slavs and that of the other Indo-European nationalities.

—Mr. Alexander Meletopoulos, a prominent collector of antiquities in Athens, who published last year the important inscription containing the specifications of construction of the Arsenal of Philon, announces to the Parnassos Society the probable existence, within easy reach of recovery, of an ancient bronze equestrian statue of large size. Four years ago some Aiginetan sponge-fishers discovered near the shore of Delos, not far from the site of the temple of Apollo, at a depth of five metres, the colossal figure of a horse in bronze, covered with shell-fish. They succeeded with much labor in detaching one of the feet of the horse, which they sold to Mr. Meletopoulos. From the workmanship of this foot, its owner believes that the statue to which it belongs is a fine work of the Hellenic period—probably a votive offering of some distinguished person, set up in the sacred precinct of the temple. Mr. Meletopoulos at once reported his acquisition to the Direction of Antiquities in Athens, and invited the authorities to profit by so good an opportunity to obtain an important acquisition for the National Museum, which has as yet but a scanty collection of bronzes. He also offered to present to the museum, upon the recovery of the statue, the foot in his possession. The Government has, however, done nothing, and Mr. Meletopoulos now calls upon the Parnassos Society to take steps to cause this interesting monument to be raised and brought to Athens.

—A Moscow correspondent of the Munich *Allgemeine Zeitung* recently sketched the condition and tendencies of the political press of the two Russian capitals as follows: The leading liberal journals—the *Golos* (*Voice*), *Strana* (*Country*), and *Molva* (*Report*) of St. Petersburg, and the *Poryadok* (*Order*) and *Telegraf* of Moscow—were all either entirely suppressed or suspended for a number of months. The *Golos*, suspended for six months, was expected to receive pardon at the coronation, just as the *Russki Kuryer* of Moscow had received it. The latter journal, however, which was formerly very outspoken, has been awed by repeated persecutions into strict reserve. Only Katkoff's *Moskovskiya Viedomosti* (*Moscow News*) and Aksakoff's *Rus'* (*Russia*) are allowed to speak their minds, both being Slavophils and ardently monarchical, though at present otherwise widely divergent in their tendencies. Aksakoff advocates the extension of provincial autonomy and the unshackling of the press; Katkoff demands of the Government nothing but energetic action and strenuous repression. Prince Meshtcherski's St. Petersburg *Grazhdanin* (*Citizen*), which is fully in accord with the ultra-conservatism of the intimate advisers of the present Czar, Count Tolstoi, and Pobiedonostzeff, applauds Katkoff, and fiercely inveighs against Aksakoff, whose occasional liberal indiscretions are denounced as atrociously disloyal. Meshtcherski's organ is also in constant feud with the St. Petersburg *Novoye Vremya* (*New Age*), a newspaper without principle or steady tendency, inclined to go with the powers that be behind the throne, and, before his fall, the organ of Count Ignatieff. This journal, however, devotes its chief attention to foreign affairs, which none of the liberal papers does, engrossed as the few surviving are with the momentous problems agitating the inner life of the Empire, though compelled to treat them with extraordinary caution and reserve. The general sympathy, in foreign questions, is with France, the United States, and on occasion with England, while Katkoff now exceptionally coquets with Germany, receiving in reward the applause of Bismarck's semi-official organs. Austria-Hungary has no friend in the Russian press, and to the Panslavist Aksakoff that Empire has not ceased to be the *Carthago delenda*. Neither has his nor Katkoff's hostility to the Polish nationality cooled off. Russian chauvinism, however, is at present at a discount, and nobody dares to blow the trumpet of war.

SIDGWICK'S POLITICAL ECONOMY.

The Principles of Political Economy. By Henry Sidgwick, author of 'The Methods of Ethics.' London and New York: Macmillan & Co. 1883.

By the publication of 'The Methods of Ethics' Professor Sidgwick made sure of a respectful hearing whenever he should choose to make known his views on any subject, but there are several reasons why the importance of the present work is less than that of the former one. In the first place the audience addressed is far more limited. To say nothing of other classes, the clergy at least must have some acquaintance with ethical systems; but it is thought less indispensable that legislators, and still less that ordinary citizens, should have much acquaintance with political economy. Not many persons in this country have read even the principal works referred to by our author, and to those who have not, this book would be of doubtful value. For, in the second place, Professor Sidgwick is nothing if not critical. His mental attitude we can liken only to that of a judge in charging a jury. His discussion is addressed to those who have heard the evidence and listened to the arguments, and is on that account unsuited and even misleading to those who are familiar with neither. For, as he says, it is not truth itself, but the search for truth, with which he is concerned. Other economists commonly "underrate the importance of *seeking* for the best definition of each cardinal term, and they overrate the importance of *finding* it." He considers that the true method of investigating relations of fact—where the organs of sense are unavailable—is to reflect upon our use of common terms; the effect upon superficial readers, however, being to make the whole discussion appear to be about words alone. Moreover, the constant and extreme care with which exceptions and qualifications are noted puts a strain upon the attention greater than most readers are capable of enduring. There are so many "senses before explained" requiring to be held in mind and clearly distinguished, that one walks in dread as of

> "Seventeen distinct damnations,
> One sure if the other fails."

Nor will the wayfaring man find that he is aided by illustrations. Professor Sidgwick seldom descends to particulars; his examples are few, and almost invariably expressed in general terms. His method results in such a mass of subtle reasonings and refined distinctions that most men, to whom concrete illustration is as their daily bread, would consider it proportioned to "an intolerable deal of sack." Nor is he always fortunate when he does refer to "facts"; as when he speaks of "the great coal companies of New England," although he is only partly responsible for this slip. So in one of the few cases in which he positively recommends a particular measure of legislation—that bankrupts should be deprived of all political franchises—the proposal would seem, to Americans at least, wildly impracticable.

It may be said that much of this criticism would apply as well to 'The Methods of Ethics'; but there is a difference in the mode of treatment of the subjects. In that work the author stood, as it were, in a place where three ways met, and warned coming travellers of the various sloughs and pitfalls into which those who had gone before had fallen; but he also pointed out to them the only true path. It cannot be denied that the present work contains warnings of like character, but they do not seem to us so instructive, nor do we consider that the methods of political economy have been so clearly defined. The third division of this treatise, the Art of Political Economy, suggestive and careful as it is, fails to satisfy the needs of our society at least, for reasons that we cannot take the space to explain, but which we can indicate by saying that the doctrine of natural liberty is inadequately apprehended. It is true that this is because it has been inadequately presented by its defenders; but we are disposed to exact of Professor Sidgwick, in most cases, stronger statements of his adversaries' positions than they have themselves given. In this case he inclines

to assign to government the function of redressing inequalities of distribution by means of productive enterprises; whereas we conceive its proper function to be so to regulate the fundamental laws of property as to restrict monopoly, and thereby enable just distribution to be obtained by individual effort. Our civilization is certainly disgraced by the tyranny of monopolies, but we consider their regulation to be within the power of our citizens; and certainly no one who is acquainted with the secret history of our public works can contemplate without a shudder the possibility of our politicians engaging in business with the public funds.

But perhaps we have adopted an unfair standard of criticism, for Professor Sidgwick does not lay claim to originality. His book is based upon that of Mill, which it will not supersede, but to which it will be an indispensable commentary. Its aim, as stated by the author, is to do to a certain extent for political economy what we consider his former work to have done for ethics. A small number of vivacious writers have recently assailed several of the established doctrines of the orthodox school with what they persuaded the world was great success. Our author undertakes to clear away the ruins, so far as there are any, and to show that the main structure of the science is substantially unimpaired. We note as especially satisfactory his statement of the population theory and the law of diminishing returns, his chapter on money; and as especially suggestive, the discussion of *laissez-faire* and the moral influences of the science. The treatment of the theory of rent seems to us defective in two respects: in neglecting to consider the rent of lands in towns—when it brings thirteen millions an acre it is worth the attention of philosophers—and to investigate the relation of rents to the fluctuations of wages and profits. It is the great problem of the science to determine whether the landlord, the employer, or the laborer will yield in particular circumstances. This brings us to what we regard as the most serious error in the book, the view taken of the wages fund.

Professor Sidgwick maintains that wages are not normally paid out of capital at all; that they are not "advanced" by the employer to the laborer. The employer, he says, purchases the result of a week's labor, and gives in return some of the finished product of the laborer's industry. This view seems to us to overlook entirely the fact that the wages—*i. e.*, the real support of the laborer—must exist in the possession or under the control of the employer before the work is begun. Otherwise there is nothing to hinder the laborer from hiring his master—leaving fixed capital out of view—and paying him his wages out of what he earns. In one passage (p. 379) this seems to be admitted, but only incidentally. Time is the all-important element, for the laborer must be supported by the employer until the result of the labor becomes available. General Walker, indeed, informs us of cases where farmers have not paid their laborers until the end of the year. To the question, What did the laborers live on during that time? he replies, if we remember correctly, Oh! they lived upon credit. But this argument, for obvious reasons, fails to be convincing. We think nothing but confusion can result from any theory concerning wages that disregards the fundamental fact that the labor of any given season is paid for out of the products of the preceding season; and we consider that such part of these products as at the beginning of the given season is set apart for the payment of laborers is properly denominated the wages fund. It is with reluctance that we differ from Professor Sidgwick, but we cannot reconcile his theory with the facts of the case.

The chapter on protection is unexceptionable in logic, but we fear that the American advocates of the doctrine, should they discover it, would wrest some of its texts to their own destruction. It is no doubt conceivable that the wealth of a nation may be increased by levying taxes for the support of industries that cannot support themselves. But the conditions that must be supposed (as on p. 487) are so different from those that actually prevail, that the argument seems to have a purely speculative interest. It is in the nature of our government impossible that a bounty should be imposed upon only one industry; the sentiment that would support it would demand a system of bounties, and where the attempt is made to bestow these through a tariff, the resulting interferences with industry are absolutely incalculable. It appears from Professor Sidgwick's method of discussion that he has not considered the complexity of the results of governmental interference, and we think this also appears from his remark that there is no evidence that either the ingenuity or the enterprise of manufacturers in the United States has been impaired by protection. A notable instance to the contrary, cited in Cairnes's 'Leading Principles,' seems to have escaped his attention. There is, however, an element of truth in the observation; for to many of our manufactures protective duties have been a severe burden by raising the cost of the necessary materials and machinery, and only ingenuity and enterprise have saved them from ruin. But to a very few these duties have really had the effect of bounties. We should hardly venture to assert this of any great industry except the manufacture of pig iron; and there is no more conspicuous instance of the absence of both the qualities referred to. It is but a few weeks since even the New York *Tribune* felt constrained to denounce the folly of the Lehigh furnace men in not adapting their methods to the wants of trade, and an inspection of some of the greatest of these works will convince any one that, for whatever reason, they are in a very backward condition.

But these are only minor imperfections in a great book. There is no economist who will not learn much from it, and few who will be disposed to lay before the public their views upon any of the topics of which it treats without having first consulted its pages. We have given reasons why it will not interest a large number of readers, but they are reasons why it will be of greater value to a few, and through these its influence will be widespread. The sustained dignity and sweetness of the style cannot fail to impress every reader.

RECENT NOVELS.

Through One Administration. By Frances Hodgson Burnett. Boston: J. R. Osgood & Co. 1883.

The Scarborough Family. A Novel. By Anthony Trollope. Harper's Franklin Square Library.

Hot Plowshares. By Albion W. Tourgée. Fords, Howard & Hulbert.

The Priest and the Man; or, Abelard and Heloisa. A Novel. Boston: Cupples, Upham & Co.

In the Olden Time. By the Author of 'Noblesse Oblige.' [Leisure Hour Series.] Henry Holt & Co.

Mongrels. By T. Wilton. Harpers.

Like Ships upon the Sea. By Frances Eleanor Trollope. Harper's Franklin Square Library.

Doctor Claudius. By F. Marion Crawford. New York: Macmillan & Co.

Mr. Jacobs. A Tale of the Drummer, the Reporter, and the Prestidigitateur. Boston: W. B. Clarke & Carruth.

The Led-Horse Claim. A Romance of a Mining Camp. By Mary Hallock Foote. Boston: J. R. Osgood & Co.

'THROUGH One Administration' is such a very American novel that it is hard to explain the fact that it has caused little or no discussion as to whether it presents a true picture of American life. The scene of its action is laid in Washington, the characters are all American, and the relations established between the heroine and the various men in the story are such as it would hardly be possible to imagine existing in any other country. It contains, moreover, a picture of society at the national capital which, in its broad general features, is at least as true to nature as that contained in 'Democracy.'

It resembles most novels of the day in being largely devoted to analysis and introspection; the action is slow, and it all ends with the kind of climax that is now most in fashion—that which avoids a pathetic death-scene, or an act of retributive justice, or any of the regular pieces of terminal business such as writers of novels of incident used to resort to. It ends much as Howells would end one of his stories, though with a dash of pathetic retrospection which he perhaps would not allow himself. The last words of the story are, "Bertha went into the room and closed the door." We have, however, been just reminded that this was the very same door that Philip Tredennis "had seen open the first night when he had looked in, and had seen Bertha sitting in her nursery-chair with her child on her breast." Bertha, like Charlotte in Thackeray's version of Werther, was a married woman, and a good one, though surrounded by temptations, and put to very base political uses by her good-for-nothing husband Richard, in the interest of the great Westoria land scheme. He in fact uses her attractions to bring over certain politicians of influence, and we feel bound to say that it gives us a far higher notion of the purity of the capital than we had before to know that the scheme failed. Any woman with the charms of Mrs. Amory who plays Mrs. Amory's part, however unconsciously, would in most cases, we fear, insure her friends' success.

At another point, the curious relations established between Mrs. Amory and the good Tredennis, the novel also presents a very pleasing picture of the effect of the absence of social restraint upon the morality of American life. Richard, the husband, on several occasions makes Mrs. Amory over to Tredennis, who takes care of her like a mother, notwithstanding the fact that he and she are in love with each other, and ought, by rights, to have married each other in the first place. In a French novel such a situation would be simply regarded as absurd; in an English novel, in a moment of supreme passion, the pair would run away, filled with guilty regrets, no doubt, but unable, in the weakness of human nature, to resist the temptation. But nothing of the kind happens in this novel at all, though there are scenes between Philip and Bertha which make the reader feel very doubtful as to what can be the upshot of it all, and even fearful that Mrs. Burnett may be going to tell him a naughty story. There is really nothing, however, that is not improving in 'Through One Administration.'

The only fault that we have to find with it is that it is a woman's rather than a man's book. Mrs. Burnett's analysis of Bertha's psychological history may be perfectly correct; but her men's conversation, she must permit us to say, is not true to nature. It has one fatal defect: she

makes the men talk about the woman in whom they are interested in the same unreserved way that women do about a man in whom they have a common interest. The analytic conversation of women about a man is always searching, and their interest in him only serves to make them less reserved to one another in discussing him; but, for some reason, there is no subject that two men are less likely to spend an evening of conversation over than a woman in whom both are interested. The fact of the interest usually takes away the male power of conversation. It might be better if it were otherwise, but it cannot be changed. A good deal of the men's talk in 'Through One Administration' is about Bertha, and they talk about her, not with the suspicion and reserve of men, but with a frankness and interest in each other's views that are deliciously feminine. The book is well worth reading, as all of Mrs. Burnett's are; but chiefly by women. Men, we fear, will find it too long. As a social study it presents many curious features, and perhaps the only reason why it is not already attracting more attention as a fresh specimen of the American novel, is that we have not yet got the news of the way it is looked at in England.

Mr. Trollope's posthumous novel is in some respects very like a great many others of his stories. It is a picture of English life taken in his usual photographic way; it opens well, drags through the middle, and gets better again at the close. It concerns the fortunes of an English country family, but has a dash of low life for comedy, some fox-hunting, a love-affair in which the lady's family raise fruitless objections, and so on. It opens with a situation out of which any novelist but Mr. Trollope would have made a thrilling romance. The hero, who is the rival of young Captain Scarborough, meets that gallant officer at two o'clock in the morning in the streets of London, is assaulted by him, knocks him down, and leaves him. The Captain then disappears from human sight altogether, and his adversary very unwisely conceals the fact of the encounter, and rapidly gets himself suspected of knowing more than he is willing to tell. A romantic novelist could hardly have failed, under circumstances like these, to have the young man arrested for murder, tried for his life, sentenced to be hung, and saved at the last moment owing to the unexpected reappearance of his supposed victim. But Mr. Trollope is above all things a moderate man. He holds his hand from any such iniquities as these, and merely lets the young man first get into a great deal of commonplace trouble, and then get out again.

The central figure of the book, however, is not the hero, but old Mr. Scarborough, who is a terrible rascal, judged by ordinary standards, but who, notwithstanding his defiance and violation of all law, human and divine, gains the reader's regard, partly perhaps because, in Mr. Trollope's commonplace world, he is a very uncommonplace man. In the first place his eldest son, the Captain, at heart an amiable man, goes to the devil through gambling, and, having made away with all his means, has recourse to the Jews and *post-obits*. By this means he first raises and then squanders a large fortune. His father, making up his mind that such proceedings mean the ruin not only of himself but of the entire Scarborough property, resolves to cheat the Jews by declaring that his eldest son is illegitimate, and that consequently the paper they have taken from him is worthless. To do this he submits to his family lawyer a set of documents showing that he married his wife (since dead) after the birth of the Captain. These documents seem to be all right. He and his second son, Augustus, now promoted to the position of heir apparent, then propose to the Jews that if they will take the money actually advanced by them in full discharge of all their claims, without regard to interest, or to the face of their bonds, it shall be paid them; otherwise they will get nothing. This they reluctantly do. Meanwhile, however, Augustus has turned out a very poor and ungrateful substitute as a son for the spendthrift Captain, and his father is heartily sick of him. So in the end the worthy though lawless old man declares that his first story was all a lie, restores the Captain to his proper position, "bounces" Augustus, and dies, triumphing, much to the horror of the good family lawyer, over the laws of England. All this Mr. Trollope has great difficulty in making seem probable; but interesting it certainly is.

In reading this last of his long series of successful novels, in the light of the admitted fact that they represent English life more clearly than the works of any novelist of our day, we have been reminded of one striking feature of English life as he describes it, which in the criticisms brought out by his death was not dwelt on as much as it deserves to be. We refer to the extraordinarily strong, coarse flavor of money that pervades them. In most American novels, as in American life of our day, money is generally avoided, or looked at and spoken of askance, as if there were something belittling about appearing to think too much about it. In Trollope's novels, the action of the book generally revolves in some way about a question of pounds, shillings, and pence. Whether a man may marry the woman he loves, whether a youngster shall go into a profession or emigrate, whether a son shall honor or despise his father—all questions, practical or sentimental, become a simple matter of money, until in the end the reader gets an impression of English society as a country pervaded not merely by a commercial, but by a positively sordid tone. How much of this is due to England and how much to Mr. Trollope, we must leave others to determine; but as to the fact we think we can hardly be mistaken, for we never lay down one of his novels without regretting that in so rich a country as England it should always seem as if there were rather too little money to "go round" comfortably, and easily, and expansively.

'Hot Plowshares' is the last of the series of which 'The Fool's Errand' was the first to appear. Chronologically it is the earliest of all the stories, covering the period from the election of President Taylor to the outbreak of the war in '61. According to the preface, "it is designed to give a review of the anti-slavery struggle, by tracing its growth and the influence of the sentiment upon contrasted characters." The book is too long and too diffuse for any vivid effect. Eight didactic chapters, each of which would make a heavy "leader," are too much for one novel. The interest is divided between loosely connected incidents, of many of which it may be said, that if true, they are *too true* for a novel. Whether this remark can include the one hundred and fifty pages (one-quarter of the book) devoted to an account of an attempt to kidnap a young girl in rural New England, is doubtful. Nothing short of the evidence of one's own senses would make the story as told credible to anybody. Human nature is so constituted that it will willingly accept a great deal of the terrible, the horrible; but the point where it will refuse to believe in the preposterous is very soon reached.

If the book were more important, the fairness of some of the statements about even Northern affairs would doubtless be impugned. This we pass, except to notice what recurs not unfrequently elsewhere, that opinions held on both sides thirty years ago are judged as if their holders had all the light of experience which we have to-day, with no allowance whatever for the marvellous changes of a purely physical sort, the increase of wealth, the rapidity and ease of intercommunication, etc., which have taken place since 1850.

That some things are too true for a novel—that is, too true to themselves, and too much at variance with the common experience of mankind to become the subjects of fiction—may be affirmed, upon a higher plane, of the story which has been worked out in 'The Priest and the Man.' The letters of Abelard and Heloisa make one of what have been called the "only" books that have no parallels. Nothing can add to them, nothing take from them. The scholar already knows them at first hand. The reader of belles-lettres gets the story from the French essayists or from the drama of M. de Rémusat. The only justification for choosing it as the subject of a novel would be the possession of such power of dramatic presentation as should make the dead live again—a power, for instance, like that by which Scott made Claverhouse a present reality whether to friend or foe. There is even greater difficulty in reproducing a world so remote as the scholastic world of the twelfth century. Not Scott himself could have made that intelligible to one in a thousand of novel readers. The author of the book before us has gathered much geographical and historical detail, but that makes brilliant essay writing, not the picture of life. As to the love-story itself, no eloquence of imagination can equal the simple tale of the calamities of Abelard and Heloisa as they have told it themselves. The attempt to reproduce it has, it seems to us, coarsened and degraded the whole story, not altogether from the fault of the writer, but from the necessities of the case—the difficulty of presenting it in any form to be comprehended by modern superficial thought.

'In the Olden Time' is a chronicle story rather than a novel, but it deserves a place not far below the 'Schönberg-Cotta Family' and 'The Dove in the Eagle's Nest,' as an illustration of some of the aspects of society in the later Middle Ages. The author is hardly equal to the working up of striking situations, but she has gathered a succession of varied incidents such as a troublous time like the Peasants' War supplies indefinitely.

'Mongrels' would have done credit to a more attractive title, having which it would have been surer to make its way into holiday satchels. It, as well as 'Like Ships upon the Sea,' to which the same praise may be accorded, has a tragic incident, but deals mainly with commonplace people, though the latter sets off very well English commonplace against Italian or rather Roman types, which, if exceptional from English standpoints, are ordinary enough in so mixed a world as Rome. It is something to say of both books, that nobody has any money to speak of. The burden of riches, the ostentation of wealth, the hard brutal force of it in the second-class novel, just now are repulsive.

Beyond question 'Doctor Claudius' is next of kin to 'Mr. Isaacs.' A *Privat-docent* at Heidelberg who "wears twice-mended shoes," and has in his letter-box "a string of pearls" lying loose with eight or ten thousand pounds—a man who by way of joke caps the mast with a Scotch bonnet, as "it sways far out of the water with the motion of the yacht," or who, quite unknown, just steps over to Saint Petersburg and, merely by asking the Czar, rescues the fortune which his lady has lost through a suspicion of Nihilistic proclivities on the part of her brother-in-law—surely no one could do the like of that but "Mr. Isaacs." Need we add his coming in for a mil-

lion odd from a New York uncle at one end of the book, and a grand title from one in Norway at the other? He keeps the finest company we have known since the days of 'Lothair' and 'Endymion'—a Duke of superlative grandeur; a Countess "whose hair is as the thickness of the night spun fine," and a New Yorker who cannot fail to be recognized, for he is "a priest of Buddha" and wears diamonds and "a priceless sapphire." "He is the only man of his time who can wear precious stones without vulgarity." Seriously, there seems to be some reason for inquiry into the reason of the success which 'Mr. Isaacs' attained, if numbers are to be trusted. It lies in the surface cleverness, the cheap splendor, which entertains for a moment, which dazzles as it passes. 'Doctor Claudius' is made up in the same way. Let any one count, for instance, the number of times that the heroine is called "the dark lady" or we are told that her eyes and her hair are dark. Mark how many catch phrases there are, like *quand même*, *foi de gentilhomme*, or stock quotations or allusions—"the strength of ten," "eternal womanhood guiding me onward," etc., etc. To these add the use and misuse of Scripture phrase, and the sources of most of the fine sound of the book will be apparent. What doubters call vague incoherency, extravagant fantasy, may be (in the eyes of admirers) largeness of view and unfettered imagination; but these are not the days of Haroun-al-Raschid. Imagination without the basis of observation, the correction of experience, is futile in our time.

One specimen of the style will do the book no injustice. "The screw below them rushed round, worming its angry way through the long quiet waves," may not be grandiloquent; but does Mr. Crawford parody himself when he, a little after, describes Mr. Screw the lawyer, "relentless as a steel cork-screw, crushing its way through the creaking cork"? The speech of the men has a kind of school-boy coarseness, but the pungent, sparkling wit which bright men throw into the *argot* of the smoking-room and other masculine haunts, is utterly wanting; yet Mr. Crawford's men, by his own showing, are nothing if they are not bright. "Vulgar" is an epithet easily bandied about in these days, and one hesitates to apply it to the tone of a book. Yet it might be that, after a short-lived popularity, these books would be classed as specimens of the brummagem in literature.

'Mr. Jacobs' is a vivacious little sketch far more successful than the elaborate affair in *Life*. The world will laugh over it, while the author of 'Mr. Isaacs' will probably console himself with the thought that it is something to have arrived at the dignity of caricature.

'The Led-Horse Claim' has the striking merit of a very distinct purpose, so far as literary form goes, and of keeping very closely to that purpose. It may be only the unconscious fidelity to experience which gives the story so purely and simply from the woman's point of view, but the merit is none the less. Picturesque and graceful description is likely to be a woman's forte, but the fine balance which keeps Mrs. Foote's eye and hand true is a rare power. Not even the sharp contrasts, the swift tragedy of the wild mining-life tempt her to venture imagination, but so much the more powerful is her picture of the women waiting at home. It seems something more than a chance coincidence, that the return to the older life in the East appears now in more than one novel. Whereas once there was only the escape from it to the more brilliant possibility of the West, now more than one comes back in story to the old home, and finds a friendly light in the sky, a content in the hills, a sense of refuge in what was once a hated narrowness. All the years from Plymouth Rock to the Golden Gate are embodied in the home of the "Led-Horse Gulch" and the home at "Little Rest" on the New England hillside. It is hard to say which picture is the better; but by way of minor figures, one must go far to seek even in a novel a more gracious pair than the two boys, half-brothers of the hero. They are most slightly sketched, but one-half the readers will flatter themselves that they were once such boys, and the other half will *know* that they have at some time loved and watched over their like.

"When the afternoon sunlight gilded the tree-stems and dappled the warm slopes of the wood, they were always at large, making the rounds of their favorite haunts. . . . Divers and many were their errands, but none of so pressing a nature that time was wanting for wrestling together in beds of fallen leaves, or flinging surreptitious armfuls of them over each other, or pausing on the top rail of a fence that crossed a hill, to wake the silent landscape with a shrill hoot or whistle."

HARE'S SOUTHERN ITALY.

Cities of Southern Italy and Sicily. By Augustus J. C. Hare. George Routledge & Sons. 1 vol. 8vo.

MR. HARE is well known as the author of 'Walks in Rome,' 'Walks in London,' 'The Life and Letters of Frances, Baroness Bunsen,' etc., in all of which works he has been the editor rather than the author, being indebted to the scissors more than to the pen. The present volume belongs to the same class. It purports to be an historical, archæological, classical, and practical guide-book to southern Italy and Sicily; but the historical part is condensed from encyclopædias, the archæological and classical from previous narratives and guide-books, with quotations derived all the way down from the oldest Greek poets to the latest tourist; the practical is his own personal experience. This last is the poorest part of the book, being biassed by the author's English prejudices and superficial knowledge of the manners and customs of the people, whom he judges from what he has read in guide-books long out of date.

The introductory chapter is composed of quotations from Mme. de Staël, Stamer, Martial, Pliny, Virgil, Sannazzaro, Swinburne, Horace, Juvenal, Fergusson, etc.; but in the last paragraph, which is the author's own, in referring to the scarcity of manufactories in southern Italy, he mentions only the few which existed there fifty years ago, and which he had found mentioned in some old guide-book. As the author travels from one town to another, he refers to their archæology, quotes classical passages of ancient writers, relates absurd and silly legends connected with them; but of the people of to-day, their progress and improvements, not a single word, if we except a tiresome growl against the hackmen's extortions or beggars' solicitations for alms—as if only hackmen and beggars existed in southern Italy. His description of Naples is a random collection of historical facts, interspersed with the most narrow-minded criticisms of modern improvements. He states that "since the change of government and the enormous increase of taxation, poverty has greatly increased." Had Mr. Hare looked into the present statistics of Italy, the parliamentary reports, the modern scientific publications, he might have learned something very different about the poverty of Naples or southern Italy. The late resumption of specie payments is the best proof of the wealth of the country. To show with what little labor he has written a book of 535 pages of very small type, it suffices to state that for the description of the National Museum he merely transferred to his book twelve pages translated from the official catalogue. In his quotations from classical authors he uses an English translation, if there is one; otherwise he gives merely the original, as if expecting every traveller to understand Latin.

In referring to historical events, he frequently follows old traditions without any critical inquiry. He says of the island of Procida, "that it was the property of John of Procida, *the hero of the Sicilian Vespers*." Now, Michele Amari, in his 'History of the Sicilian Vespers,' published thirty years ago, satisfactorily proved that John of Procida had nothing to do with it, was not in Sicily at the time, and was anything but a hero. Mr. Hare repeats the same story in speaking of his tomb, when he treats of Salerno, which he calls "a dull place with a beautiful view." He gives a confused account of its cathedral, built by Robert Guiscard, with its Norman and Swabian tombs, but not a word of the place itself as it looks now. And, indeed, how could a classicist, with scissors in hand, take note, for instance, of a three-masted American schooner, as is constantly to be seen, discharging bales of Southern cotton to supply the looms of a large factory which manufactures cotton goods for half the population of southern Italy? He could not be expected to notice a noisy cotton factory among such archæological wealth, in the very seat of the oldest medical school of mediæval times!

But the worst comes when Mr. Hare starts for Sicily. He begins with the following growl: "It is a long railway journey of nineteen and a half hours from Bari to Reggio, and the traveller who is in a hurry to reach Sicily becomes unutterably weary of the meaningless lingering at the most obscure stations, to which a filthy crowd of idle peasants are always admitted to beg and curse, to the disgrace at once of the Government and the railway company." What a shame that the Italian Government and the railway company do not put an express or "lightning" train from Bari to Reggio to accommodate Mr. Hare and the score of English tourists who in the course of the year might desire to take this roundabout way to reach Sicily in a hurry! Why should they, instead, be so anxious to accommodate the thousands of "filthy, idle peasants" in every insignificant village? Did the idea occur to Mr. Hare, in the midst of his clippings, to inquire about or study the railway system of southern Italy? Had he done so, he would have learned, and informed his readers, that there are no railway companies in Italy, and that the Italian Liberal Government built those roads at an enormous expense, and keeps them running at an immense yearly loss, not to accommodate half-a-dozen English tourists, but to educate and civilize those very "filthy crowds of peasants" whom centuries of religious and political despotism had reduced to semi-barbarism.

Mr. Hare's ignorance and obtuseness of observation in regard to the present state of Sicily are marvellous. In his introductory remarks he says, in reference to the products of the soil: "The upland plains of the island, which in classical times were supposed to be the native land of wheat, are still famous for their crops; *but the chief industry of the country is sulphur*." And what of the millions of boxes of oranges and lemons that flood England, America, and even St. Petersburg by way of Odessa; the millions of bags of sumac that supply the tanneries of the world; the line of steamers owned in Palermo that ply all along the coast of Italy, the Levant, and even reach semi monthly to New York; the thousands of hogsheads of wine and oil that are exported to France and go toward the manufacture of French clarets and salad oil; the wine factories of Marsala, the iron factories of Palermo; to say nothing of

other articles of export, such as licorice, manna, nuts, figs, raisins, and the early vegetables and fruits that are sent even as far as Paris?

Describing the ascent from the station of Giardini to Taormina, on his way from Messina to Catania, Mr. Hare says: "A steep stony footpath leads to the heights from the station of Giardini to Taormina." This gives the impression that there is no other means of ascent to the town except a "steep stony footpath," whereas there is a most picturesque winding *carriage*-road to the very summit. An English tourist may prefer to climb the hill, and thus save a few francs in hack hire; but when he writes about it for the information of travellers, he is bound to know and to state that there is such a convenient road. Then he proceeds to say that "near the top it winds through thickets of the prickly pear (*Cactus opuntia*)—'*fichi d'India*' the natives call it, for the plant is of West Indian origin. It is very productive, and *contributes largely to the food of the lower classes, who make a kind of bread of the fruit, when dried and pounded.*" In the sentence we have italicised there are almost as many errors as words. The prickly pear does not "contribute largely to the food of the lower classes," for it only bears three months in the year; the fruit does not keep more than three or four days after being gathered, and is used merely as fruit, like oranges, grapes, fresh figs, plums, etc. As to their making "a kind of bread of it," it is simply ridiculous, and we cannot conceive how it was possible for Mr. Hare to make such a blunder, unless, in his total ignorance of the Sicilian language and the peculiar manners of the lower classes of Sicilians, more Eastern than European, he was the victim of a practical joke by some fun-loving Sicilian fruit-vender. We can only guess this laughable blunder to have arisen thus: Perhaps Mr. Hare saw the prickly pears in a stall, and the vender peeling and selling them to the street-gamins and maid-servants. (The fruit is so covered with almost invisible little thorns that only experts with gloved fingers can peel them unhurt.) He probably inquired of the man what they were, and if the people ate such cactus fruit. At the unusual question the man replied with the Oriental figure of speech common to the natives of Sicily: "Eat prickly pears? Why, certainly, they are *the bread* of the poor people!"—meaning by it that the poor people make great use of them during the season, because they are very cheap: they can have a basketful for a few cents. At the word *bread*, our tourist, taking it *ad literam*, must have asked in a serious tone: "Do the people make *bread* of them?" The vender must have opened wide his eyes, and winked almost imperceptibly at the crowd collected around the stand; and in order to have a joke at his expense, replied: "Oh! yes, sir; they *dry them, pound them*, and bake them as *bread!*" "Ah! indeed, most extraordinary," the tourist must have observed, moving off, and taking out his note-book to record the fact, without perceiving the broad grin on the man's face, and the gesture or exclamation signifying, "He swallowed it!" to the great amusement of all the bystanders.

From the fact of his mentioning the prickly pears, Mr. Hare must have been in Sicily in the dead of winter, the only season when they are eatable; therefore, he could not have ascended Mount Etna, though he gives what seems a personal description of the ascent, quoting, as usual, other authors, such as Sir C. Lyell and J. A. Symonds for a description of Val del Bove, and Silius Italicus, Claudian, Ovid, Virgil, in the original Latin, for a description of the volcano itself. Among other suggestions to tourists, he states that, in order to rest and put up their mules at the Casa del Bosco and Casa Inglese, they must obtain the keys from Doctor Giuseppe Gemellaro at Nicolosi. Poor Doctor Gemellaro, who has been dead and buried these several years, and whose only son left that town at the foot of Etna long ago to fill the chair of Mineralogy at the University of Palermo!

But it is useless to follow further Mr. Hare's guide-book, filled with misrepresentations and unreasonable grumbling. At Syracuse, for instance, he quotes Cicero, who claimed that "while Quæstor in Sicily, he discovered the tomb of Archimedes surrounded and overrun with brushwood and brambles, and utterly unknown to the Syracusans, who even denied its existence," which proves that, as far back as the age of Cæsar, Syracuse was partly in ruins, and her ruins neglected; and yet, throughout the book, Mr. Hare writes as if the fault for the disappearance and neglect of those archæological remains belonged to the present race of southern Italians, for whom he seems to have not the least sympathy. We will close with the statement that for those interested in the archæology or classical descriptions of Magna Græcia, and who have not read the many classical writings and innumerable guide-books relating to that part of Italy, this book may be of some use for reference, but for a knowledge of the present state of the country and the people it is absolutely worthless.

Emily Brontë. By A. Mary F. Robinson. [Famous Women Series.] Boston: Roberts Bros.

An Hour with Charlotte Brontë; or, Flowers from a Yorkshire Moor. By Laura C. Holloway. [Standard Library.] Funk & Wagnalls.

No repetition of the story of the Brontë sisters could fail of interest. The piteous fate of Emily is only less sad than Charlotte's own. 'Wuthering Heights' will long be counted one of the curiosities of literature, nay more, one of its marvels. But all this does not vindicate the claim of Emily Brontë to rank as a "famous woman" in a list headed by George Eliot, and in which are to follow George Sand and Maria Edgeworth. This is not to deny her remarkable powers, but to protest against the misuse of well-established terms, the misappropriation of long-recognized standards.

The book is, with but slight additions, borrowed from Mrs. Gaskell's life of Charlotte Brontë. Much is taken outright. The rest is reproduced with a heightened color that is at times a trifle coarse compared with Mrs. Gaskell's grave tones. One quotation will illustrate the style of the whole book. Charlotte writes most justly of Emily's poems: "I thought them condensed and terse, vigorous and genuine. To my ear they had also a peculiar music, wild, melancholy, and elevating."

This the biographer quotes, and then amplifies as follows:

"Very true; these poems, with their surplus of imagination, their instinctive music and irregular rightness of form, their sweeping impressiveness, effects of landscape, their scant allusions to dogma or perfidious man, are, indeed, not at all like the poetry women generally write. The hand that painted this single line,

'The dim moon struggling in the sky,'

should have shaken hands with Coleridge."

The last remark is not criticism; it is nonsense. But there is too much of the same sort scattered through the biography. It is the result of an attempt at something quite beyond the power of the writer. To compose a simple narrative of the facts of a life is not a very difficult matter, whereas literary criticism presupposes both study and practice of a most serious kind. Yet biographies like the one before us are now expected to contain a great deal of it—an expectation which begets such absurdity as we have quoted. The world has been forced to submit to the theory that anybody can write a novel. It would be a pity if the same were applied to biography. We have had heavy, dull books—stupid, one might well say—but the biography to correspond with the *trashy* novel, biographies written with the sole purpose of making them as entertaining, as sensational as possible, we have hitherto been spared. We do not mean that this book is on that level, but it certainly has in it fatal tendencies in that direction. The shameful story of the dissolute brother offered too tempting an opportunity for a sensation. The treatment of it demands distinct, decided condemnation. The account differs from Mrs. Gaskell's in ways which would have seemed to the sisters harsh, and no new evidence whatever is adduced in proof. That might pass, but nothing can justify dragging out of a merciful oblivion his contemptible letters. It is no excuse that the friend to whom they were written had been base enough to print them. They were not needed here to prove the profligacy of his life, nor to point a moral. The thought what keen pain this wanton exposure would have been to the sisters should have been enough to stay the hand. The growing inclination to leave nothing sacred, to bare the innermost recesses of a life to the vulgar gaze, makes it a duty to utter a word of warning.

To turn to less painful things, we have looked in vain for what, remembering all the associations that came after, is perhaps now the most striking of Charlotte's expressions about her sister. The date is 1850:

"I could not feel otherwise to Lewes than half sadly, half tenderly—a queer word that last, but I use it, because the aspect of his face almost moves me to tears; it is so wonderfully like Emily—her eyes, her features, the very nose, the somewhat prominent mouth, the forehead, even at moments the expression: whatever Lewes says, I believe I cannot hate him."

The brief sketch of Charlotte Brontë prefixed to a hundred pages of selections from her letters and novels gains from a comparison with the strained accent and the forced pitch of the biography of Emily. It is much less ambitious and therefore more satisfactory, even with the necessity of making allowance for a roughness which deprives it of anything like style. Its interpretations are, however, based upon a theory quite different, so far as we can remember, from Mrs. Gaskell's, and one which could be established only by definite testimony. The pages of 'Villette' might be accepted as witnesses to thought or feeling, but hardly as to facts. The author has, further, an amiable intention, both in her original work and in the selections, to reinforce some views of her own upon the woman question. This, it seems to us, is to detract, not to praise. Currer Bell worked unconscious of theory or "questions." It was the wonder of her novels that they were the simple, solid representations of concrete realities as her imagination knew them. It was so, because it was so, is as true of the whole of them as of the well-known close of 'Villette.'

Modern Landscape. By J. Comyns Carr. With Etchings from Celebrated Pictures and Numerous Illustrations on Wood and in Facsimile. London: Remington & Co. 1883.

THIS cursory, though interesting and suggestive, essay is accompanied by nine etchings from pictures by Crome, Corot, Constable, Diaz, Daubigny, Dupré, Lawson, and Rousseau; and by thirty-three engravings on wood and in mechanical facsimile. We believe, though we are not sure, that the pictures have been gathered from the pages of *L'Art*. They are of varying merit, and none are of very high quality. The best

are the woodcuts, of which that facing p. 6, "A Spring Morning at Cernay (Seine-et-Oise)," engraved by Lepêre from a picture by Alexander Defaux, is noticeably good. It is a charming glimpse of a French village, half hidden by blossoming fruit-trees, with a duck pond, and ducks splashing in the water, for a foreground—one of those bits of quiet landscape realism, showing little art of composition, but much sweetness of feeling, which are the best outcome of modern French art. Of inferior excellence, though it possesses some pleasant sentiment, is "Evening," from a picture by Guillon, facing p. 10. Other good ones are "Gorse in Flower," after Ségé, facing p. 14, "The Valley of Poussin, Rome," after Harpignies, on p. 20, "A Farm at Baunalec (Finistère)," after Bernier, facing the same page, and "June in Denmark," after Bonnefoy, on p. 24. The photo-engravings have the defects which this process always displays, and which render its results inferior to good engravings wrought by hand. Unless the design is especially adapted to the capabilities of the process, these reproductions are very faulty and unpleasing. Where there is any closeness of fine shading the lines run together and form those violent and inharmonious patches of dark which are so frequently noticeable; and where even single lines are not very strong and distinct, like those of a Dürer woodcut, or a firm etching or pen drawing, they are apt to be rendered in what engravers call rotten lines—lines more or less broken or indistinct. Among the best of these facsimile engravings in the book are "November," by Denduyts, p. 2, and "Washerwomen on the Banks of the Cure, Yonne," by Guillon, p. 34. The poorest are, perhaps, those after drawings by Cecil Lawson.

Mr. Carr's essay is in some parts lacking in discrimination. He begins by alluding to the fact that landscape, as an independent branch of art, is of modern origin; and briefly traces the gradual change of feeling from that which gave rise to the conventional landscape backgrounds of the early figure painters to the more faithfully studied, though still largely conventional and subordinate, landscapes of Da Vinci, Dürer, and Titian. He then shows truly that the great advance which more recent artists have made consists in the perception and expression of the enormous influence of the sky upon the earth and its objects—the infinitely varying effects of light and air. He does not, however, notice the untruthful manner in which some of the most influential modern artists have rendered effects of light and shade, and thus given rise to such faulty conditions of it as M. Fromentin has pointed out in the case of Rembrandt. The remark quoted from Constable, that "there is nothing beautiful but light and shade make it so," is an expression of an idea which has wrought much harm in art ever since the late Italian schools introduced the practice of giving undue importance to chiaroscuro. It was this idea which made Constable himself so neglectful of those other qualities of design which are no less important. The value of Constable's work in giving fuller expression than had before been given to that "passion for the beauty of the outward world" which had "been a powerful influence in the literature as well as the art of modern England" is not overestimated by Mr. Carr; though he seems to rate its intrinsic excellence rather too high. The writer's want of discrimination is perhaps most clearly shown by the remark on p. 32, that the French artists Corot, Millais, and others like them "had acquired all that was vital in the principles of classic design." That which is here referred to as classic design is the art of Claude and his followers—an art which has been miscalled classic on account of certain sentiments and forms in it which were borrowed from classic art. Of this Corot and Millais may have acquired all that was vital; but with the enduring principles of true classic art these artists were never acquainted. Their art owes what value it has to sentiments and qualities which are far removed from those of ancient art. On pp. 34, 35 are some very good remarks upon the manner in which Corot eliminates from a natural scene all that is irrelevant to the singleness of total impression which he wishes to convey; but it is unnecessary, as well as untrue, to add, as the writer does, that the artist paints as much as he can see, while others, who give more detailed definition to their forms, represent rather what they know than what they see. It is idle to contend that Corot's extremely slight and sketchy method is a complete and sufficient expression of all that in nature has effect upon the eye. His method is satisfactory only when taken as giving a hint or suggestion, rather than a complete artistic realization of the visual effect of a given scene. Would Mr. Carr affirm that the elaboration of Titian, of Veronese, or of Turner expresses what these artists knew about nature rather than what they saw? That vague sketches of Corot have often much suggestive beauty may readily be granted; but that they establish a just standard for finished painting is an idea which cannot be entertained by a discerning and reasonable lover of art and nature.

If judgment of the art of the late Mr. Cecil Lawson were to be in any measure formed from the illustrations given in this book, it could be allowed very little merit. We can see no good qualities, either of line or light and shade, in his "In the Valley—A Pastoral," facing p. 28, or in "The Minister's Garden," p. 32, or in "Strayed—A Moonlight Pastoral," facing p. 38. A comprehensive and judicious essay on modern landscape is yet lacking in the literature of art.

Sinners and Saints. A Tour Across the States, and Round Them; with Three Months Among the Mormons. By Phil Robinson, Author of 'Under the Sun.' Boston: Roberts Brothers. 1883. 16mo, pp. 370.

THE travelled traveller holds the ordinary tourist at great disadvantage. Witness this book. Our author, whose memory is stored with the scenery and customs of half the outlying world, has observed clearly, omits judiciously, and writes charmingly. He cannot help being an Englishman, but he is a cosmopolitan Englishman if there ever was one, and he has a sense of humor that the wandering Briton rarely shows. His experience has given him standards, and he is full of comparisons that vitalize description. The hills above Harrisburg recall to him the fatal landslip of Naini Tal, in Northern India; the Mississippi is the Lower Indus; a homicide at Omaha introduces a vivid sketch of the Kohat Pass in Afghanistan; the mountains at Leadville surpass Switzerland; Echo Cañon is not equalled in the Himalayas nor by the Bolan Pass; Yuma is a reproduction of Rohri; the cacti of the Santa Cruz Valley are the counterparts of those that crowd the field of Isandula; the valley of the Rio Virgin rivals in beauty the scenery of Cashmere, and the steamy summer heat along a Texas railroad "might be the Soonderbuns." Such a one is not ashamed to express admiration where it seems called for, to confess ignorance when he is astonished, nor frankly to affirm that what the native extols he has seen surpassed elsewhere. He has written a book of geographical criticism, and he bestows plentiful and hearty praise.

But the bulk and essence of this volume are the outcome of three months' residence in the Land of the Honey Bee—Deseret. It is a study of the Mormonism of to-day as it is found in the heart of the continent. The author reaches the conclusion, which is the truth, that "the Mormons are a peasant people, but with many of the best human virtues as well. They are conspicuously industrious, honest, and sober." Polygamy he brands as "wrong in itself and a cardinal crime against the possibilities of a woman's heart. A plural wife can never know the utmost happiness possible for a woman. They confess this. And by this confession the practice stands damned." He believes contact with the outer world and education will eliminate this feature, partly by leading the women into more expensive habits and partly by the pressure of opinion. Opinion will act slowly. As long as coercion, moral or physical, is employed, so long will reaction show itself equal to action. That the blood of the martyrs is the seed of the church, applies to heresies as well as to true faiths. A dragonnade may disperse families, but will not alter belief, nor change practice after the pressure is removed. The necessities of social life are more repressive. One man cannot support three households in Utah more readily than in Pennsylvania, if both sets have the same artificial needs. What will bankrupt the one will impoverish the other, and with the spread of luxury and the divergence from primitive frugality it will become more difficult for one pair of hands to supply a multiple family. Polygamy will be limited to the rich, and by the cultivation of taste, to say nothing of morals, it will be gradually denied them also. It is not high morality that calls on Mammon to overcome Mormonism, but, after all, it is its expensiveness that will dissipate the evil. Practical statesmanship, although it may properly put itself on record as condemning plurality, and further, in this case, may wisely insist that a community so diverse from the others in a fundamental principle shall remain in territorial tutelage until it is assimilated, should hesitate long before it indicts a populous community and prosecutes in its courts so numerous a clan. Mr. Robinson only emphasizes what other unprejudiced writers admit, that drunkenness, gambling, sloth, and public unchastity are not Mormon vices. The Gentile community of Utah, in common with a large part of the nominally Christian world, has its many drunkards, its gamesters, its vagabonds, and its other public sinners. The Latter-Day Saints have their individual criminals in the same matters, we may suppose, but, speaking broadly, the line is drawn at polygamous marriage, which is the barrier separating the two classes of goats. Limited observation accords with what he lays stress upon, that the women of Salt Lake City, plural wives and their pretty daughters, are no less modest in mien than their Gentile sisters there or elsewhere. They give no recognition of wrong-doing, no consciousness of shame, no boldness of demeanor. The casual observer sees no difference between these and other decent women; and, however he may theoretically disapprove their tenets, the practical philosopher must admit that their sins, whatever they may be, are not stamped upon their foreheads and lead no one into temptation.

The Mormons are chiefly of foreign birth from the lowest social orders. They lend themselves naturally to government—that is, to being governed—and they find an energetic and intelligent hierarchy prepared to guide them. Nearly all of them are elevated in every material and in many moral features by the discipline they endure. The author does not lay sufficient stress upon the direct and graded control that the Church, which to them is also the State, has exerted over these peasants. It has moulded them at all points. The ancient and sage advice of

Jethro, which Moses cordially adopted (Ex. xviii., 13-26), has been the central principle of Mormon administration, and it has accomplished there what it always will when consistently pursued. It has made a solid, obedient, homogeneous community. Where it will find its limit is for the future to determine. The strain will probably be greatest when faith yields to thought. The leaders wisely determined that their people should be cultivators of the soil. Out of the soil have grown both the rustic virtues and material prosperity, and the hind of Europe has become a land-owner beyond the sea. It is not probable that the Mormons will halt in their career; but whether their future shall be blighted with whiskey or be adorned with true manliness will greatly depend upon the zeal, the example, and, above all, the tact of the really Christian people of America.

Mr. Robinson's book has been written from what may almost be called an esoteric point of view. He was the guest of an Apostle, and received, as his friend, the hospitality of half-a-hundred saints, finding the fairer side constantly turned toward him. Frowning upon plurality and deprecating the neglect of education, he finds the rest of the system to have little blemish, and he believes the Mormons as a whole have been grossly and persistently maligned and libelled. Their management of the Indian question he cordially and justly commends. They have converted all their savage neighbors into sympathetic allies instead of holding them, as we do, hostile subjects. As a quasi-authoritative presentation of the Mormon side of the Utah problem, the book is well worth reading. The American student will miss reference to the sterner discipline with which President Young governed his primitive community, to the monogamous Mormon stock in the West that claims to retain the true faith, to the tragedy of Mountain Meadow, and to other features which the Mormon of to-day would naturally keep in the background. The armed rebellion of '57 has not received the condemnation a citizen would bestow, and there is a curious reticence as to the existence and extent of Mormon colonies in the adjacent regions—colonies that might be looked upon as outposts, of which the ordinary public rarely hears. There is, also, a refreshing absence of description of the Lion House, the really wonderful Tabernacle, the multiple front-doors for the multiple dames, and other features of Salt Lake City that have become hackneyed in report.

This is not altogether a Mormon book. The author carried his observant eyes on to California, and, not tarrying by the way, down to Arizona and New Mexico, and back, through Texas, to St. Louis. He became a friend to the Chinaman as he had become to the Mormon. We should like to discuss the same side of that text, but there is no space. He dashed too hurriedly over the Southern Pacific and noted San Bernardino as settled fifty years ago by Mormons. There was not a Mormon west of the Missouri before 1846. To Yuma, the synonym of aridity, the place where lead-pencils for use must be kept in water, where ink evaporates between the pen and the paper—to Yuma, sapless and anhydrous as funereal cinders, he awards the discredit of a villanously hot, damp climate, like Lower Bengal in August. Hot it has been since the creation, but it is no damper than Tophet. In natural history he suggests that the bunch-grass dies in May—say, rather, that it is cured standing; that the cicada is literally vociferous; that the bison-herds have retired from California before the white man; and he allows the well-known and valuable mezquite to masquerade perpetually as "muskeet." Such slips indicate undue haste, imperfect information, or over-dependence upon a fallible memory. Nevertheless they are welcome, as establishing a bond of human sympathy with the writer who has seen so much. In like manner the somewhat important Reno becomes Greeno, and Texarkana loses its geographical significance in Texakharna. Our tourist met one puzzle which, even at the expense of more serious matter, we must solve for him. He says, "Then Poplar Bluff, a crazy-looking place, with many of its houses built on piles, and a saloon that calls itself 'the XIOU8 Saloon.' I tried to pronounce the name. Perhaps some one else can do it." A greater familiarity with Western phonetics than the author's suggests that, broken up thus, X-10-U-8, it will develop an apologetic designation that other groggeries might emulate.

The book as a whole is delightful. It has much real humor and some wit. There are numerous attractive episodes, with plenty of directly illustrative story and suggestive comment; and although once or twice the fun is strained and an occasional remark grates, it will probably be many a long day—unless, indeed, Mr. Robinson writes up the Yosemite, which he faintly suggests—before we get so capital a collection of notes and ideas.

How to Dissect a Bird. Part 2 of the 'Handbook of Vertebrate Dissection.' By H. Newell Martin & W. A. Moale. Macmillan & Co. 12mo, pp. 85, four plates. 1883.

PART 1 of this series, 'How to Dissect a Chelonian,' was noticed in the *Nation* of February 9, 1882. The authors have doubtless felt that there were good reasons for not adopting the suggestion therein offered as to the substitution of the domestic fowl for the pigeon; but the omission of all reference to the matter of selecting a representative bird leads one to infer that these reasons are held by the authors to be self-evident. Certainly the fowl, like the dog, is open to objection on the score of breed-variation, but this did not prevent the late Jeffries Wyman from recommending it, or W. Kitchen Parker from basing thereon nearly all the illustrations of the article Birds in the 'Encyclopedia Britannica.' Indeed, the anatomy and development of the fowl have been so much more fully studied than those of the pigeon, that the latter would more properly form the subject of a monograph than of a guide to elementary work in comparative anatomy. Finally, the fowl is always and everywhere obtainable without mutilation, which cannot be said of the pigeon. Our authors offer no information as to how pigeons may be had for anatomical purposes, and do not even state—what the isolated student might not know—that, when caught, they are most readily killed by means of chloroform in a close box. Neither is injection of the blood-vessels mentioned as an aid in their dissection and identification.

As admitted in the notice of Part 1, it may be a fair question whether student manuals should include even an approximation to a complete bibliography of the subject; but what good and sufficient reasons can there be for not referring to Rolleston's 'Forms of Animal Life,' McAlpine's 'Zoölogical Atlas,' and some at least of the works and papers on bird anatomy by Garrod, Haswell, Nitsch, Owen, Parker, Shufeldt, and Vaughn? Coues's 'Key' is indeed mentioned twice, but the same writer's memoir on the 'Osteology and Mythology of *Colymbus Torquatus*' might well prove useful for comparison.

The figures of the skull are more distinct than in Part 1, and the leg is also represented. The wing would have been instructive, and it is difficult to see why figures of the heart and brain would not have facilitated the student's comprehension of those organs. The descriptions and directions for dissection for the most part presuppose more knowledge and a greater familiarity with instruments and methods than most students have acquired at the period a book like this would be used. This lack of explicit information as to the details of the best way of accomplishing certain objects is shared, however, with nearly all manuals of dissection, and, when judged by the ordinary standard, the directions in this work are fairly clear. Infelicitous passages occur on pp. 125, 127, 132, and 135, and the humerus and radius are said to expand *behind* or *posteriorly*, instead of at their distal or proximal ends, as the case may be. Since *dorsal* and *ventral* quite consistently indicate general regions and aspects of the entire body, the former should have been replaced by *thoracic* in designating part of the aorta and the sympathetic nervous chain, and the vertebræ and ribs between the cervical and lumbar regions. Following Huxley's strange example, both the thigh and the bone thereof are given the same name, *femur*, and there is no intimation, in either text or index, that this is unusual. The body cavity is called *thoracico-abdominal* on p. 129 and *pleuro-peritoneal* on p. 132, neither term occurring in the index. The unfamiliar terms *uropygium*, *pygostyle*, and *aditus laryngis* are employed without mention of their more common synonyms. Among typographical errors are *turbosity*, *pteregoid*, and *proscencephalon*, and possibly the printer is responsible for spelling the surname of the three Scotch anatomists *Munroe* instead of *Monro*.

Books for the Country.

HENRY HOLT & CO.

PUBLISH:

Christine.

By Louis Enault. Translated by Elizabeth W. Pendleton. 16mo, Leisure-Hour Series, $1; Leisure-Moment Series, 20 cents.

Plant Life.

By Edward Step. With 148 illustrations. 12mo, $1 25.

Gives an interesting account of the life and growth of plants in plain language for non-scientific readers.

"More delightful reading for the country at this season of the year authors and publishers have not provided for us."—*Pall Mall Gazette.*

"The author writes with a mastery of the subject and a perspicuity of style which makes his chapters delightful reading."—*London Literary World.*

Lacombe's Growth of a People.

A Short Study in French History. A Translation, by Lewis H. Stimson, M.D., of the 'Petite Histoire du Peuple Français' by Paul Lacombe. 16mo, $1.

Standard Educational Works

PUBLISHED AND IMPORTED BY

MACMILLAN & CO.,

Including those issued in the well-known CLARENDON PRESS SERIES *and* PITT PRESS SERIES *of the Oxford and Cambridge Universities.*

TEXT-BOOK OF GEOLOGY. By Archibald Geikie, F.R.S., LL.D. With illustrations. 8vo, $7 50.

ELEMENTARY LESSONS IN PHYSICAL GEOGRAphy. By Archibald Geikie, F.R.S., LL.D. With colored maps. 16mo, $1 10.

A TEXT-BOOK OF PHYSIOLOGY. By Michael Foster, M.D., F.R.S. With illustrations. Third edition, revised. 8vo, $5 50.

A COURSE OF ELEMENTARY PRACTICAL PHYSIology. By Michael Foster, M.D., and J. N. Langley, B.A. Fourth edition. 12mo, $1 50.

A COURSE OF PRACTICAL INSTRUCTION IN Elementary Biology. By T. H. Huxley, LL.D., and H. N. Martin, B.A. Sixth edition. 12mo, $1 50.

LESSONS IN ELEMENTARY PHYSIOLOGY. By T. H. Huxley, LL.D., F.R.S. With illustrations. 16mo, $1 50.

HANDBOOK OF VERTEBRATE DISSECTION. By H. Newell Martin, D.Sc., M.D., M.A., and William A. Moale, M.D. Part 1, How to Dissect a Chelonian; Part 2, How to Dissect a Bird. 12mo, each, 60 cents.

MANUAL OF POLITICAL ECONOMY. By Henry Fawcett, M.P., F.R.S. Fifth edition, revised. 12mo, $2 65.

THE PRINCIPLES OF POLITICAL ECONOMY. By Henry Sidgwick, author of 'The Methods of Ethics.' 8vo, $4.

THE PRINCIPLES OF SCIENCE: A Treatise on Logic and Scientific Method. By W. Stanley Jevons, LL.D., M.A. New edition, revised. 12mo, $2 75.

ELEMENTARY LESSONS IN LOGIC: Deductive and Inductive. By W. Stanley Jevons, LL.D., M.A. 16mo, 90 cents.

LESSONS IN ELEMENTARY CHEMISTRY: Inorganic and Organic. By Henry E. Roscoe, F.R.S. With numerous illustrations. 16mo, $1 10.

LESSONS IN ELEMENTARY PHYSICS. By Balfour Stewart, F.R.S. With numerous illustrations. 16mo, $1 10.

ELEMENTARY LESSONS IN ELECTRICITY AND Magnetism. By Prof. Silvanus Thompson. With illustrations. New edition. $1 25.

Macmillan's Classical Series.

SELECTED LIST.

CATULLUS. Select Poems. Edited by Simpson. $1 10.

HOMER'S ILIAD. The Story of Achilles. Edited by Pratt and Leaf. $1 50.

HOMER'S ODYSSEY. Books 23 and 24. Edited by Hamilton. 90 cents.

LIVY. Books 21 and 22. Hannibal's First Campaign in Italy. Edited by W. W. Capes. $1 10.

SALLUST. Catiline and Jugurtha. Edited by Merivale. $1 10.

INDEX TO VOLUME XXXVI.,

JANUARY TO JUNE, 1883.

Summary of the Week's News.

4, 26, 48, 72, 94, 116, 138, 162, 182, 202, 224, 246, 266, 288, 310, 332, 354, 374, 394, 416, 438, 458, 482, 502, 522, 542.

The Week.

AT HOME.

Arthur, President, delay in appointing a Postmaster-General, 285, removal of Collector Trowbridge, 285—Oakes Ames whitewashing resolutions in Massachusetts Legislature, 371, 392—Judge Arnoux's decision against Western Union stock dividend, 2—Albany *Evening Journal* on American wages, 113—Annapolis naval cadets insubordinate, 114—Apaches not pursuable over the Mexican border, 371—Augustinian Fathers' savings-bank operations, 308—American privateering against France unlawful, 500—*Alabama* award surplus, British claims on the, 243, 480, insurance companies' proceedings in Court of Claims, 285—*Atlantic* article on books, 480.

Butler, Governor B. F., nominated for President, 23, attempt to multiply copies of his message, 69, vetoes charitable appropriations, 243, bouffe reformer, 263, on the eight-hour law, 264, historical errors exposed, 286, Fast Day proclamation criticised, 307, refused doctor's degree by Harvard, 479, but gets invited by other colleges, 499, speech at Phillips Exeter (N. H.) Academy, 539, Safe-deposit veto sustained by Supreme Court, 500—Governor Begole dislikes to be called Governor, 45, but sits in a Louis XIII. chair of state, 329—S. W. Burt nominated out of the naval office, 199, accepts chief-examinership under N. Y. Civil-Service Commission, 480—J. G. Blaine's monologues with the Nicaraguan minister, 500—Geo. Bliss reputed the President's political adviser, 285—Bosler's assault on the Sheriff, 244—Barber brothers lynched in Iowa, 500—Beirne-Elam attempted duel (Virginia), 539—Buffalo *Express* on the anti-bouquet movement, 181—Brooklyn deacon laying car-tracks on Sunday, 351, bridge accident, 481—Belgian extradition treaty on non-political regicide, 392, 413—Bank-tax repeal takes effect, 221—Baptist Missionary Society paying its salaries in silver, 413, 479—Boycotting British goods, 456—Business, 69, 91, 113, 135, 159, 179, 199, 221, 263, 285, 308, 329, 352, 371, 392, 413, 437, 455, 479, 499, 519, 520, 541.

Congress, XLVIIth, third session, Revision of Tariff Commission's report by Ways and Means Committee, Civil-Service Reform Bill passed with chiefly Democratic opposition (House), 23—Bill restoring Fitz-John Porter passed (Senate), 45—Nicaragua Canal Bill defeated (House), 113—Protectionist purpose to let the tariff stand; Japanese Indemnity Fund Bill passed, 159—Mr. Van Wyck's resolution on peace movement in Peru (Senate); Rule permitting Tariff Bill to be non-concurred in and sent to Conference Committee (House), 179.

Connecticut, illegal Democratic ballots, 2—California divorce bill, 244, wine production, 265—Roscoe Conkling's "ten years of progress" lost by Grant's non-nomination, 391—Senator Don Cameron not a candidate for reëlection, 46—General Crook, the Apaches, and Tombstone Rangers, 371—Secretary Chandler accepts Captain Gorringe's resignation, 180, correspondence with Mr. Dezendorf as to the Norfolk Navy-yard, 435, new views on the authority of the Supreme Court, 499—Conkling-Haverstick homicide, 285—Joseph Cook on the press, 529, on G. M. Beard's deathbed, 372, trouble with a drummer, 457—Civil-Service Reform Bill, expected opposition in the House, 1, expected trouble from rejected candidates, 351, Commissioners appointed, 159, rules approved, 391, Judge Thoman's alleged views, 285, Chief Examiner to be the choice of the Machinists, 351, Mr. Keim withdraws in favor of Charles Lyman, 413—Chicago lawyers' new racket, 307—Convict labor, New York State Trades' Assembly on, 92—Columbia College and higher education for women, 93, report of Trustees' Committee, 201, appeal for larger endowment, 286, offer to examine women and grant certificates, 392, 413—Clubs, private management vindicated, 114—Cobden Club's "bribery" explained, 414, 499—*Christian Advocate* and Methodist mines, 222,

Dukes-Nutt homicide comforting the South, 24, local indignation, 243, jury's mode of deciding, 244, Dukes warned out of town, 264, killed by young Nutt, 519—Dunn-Elliott murder, Chicago, 414, Dunn acquitted, 436—S. W. Dorsey resigns Secretaryship of National Republican Committee, 45, assaults Judge Lilley, 221, on the witness-stand, 263, serenade speech after acquittal, 519, letter to Mr. Dickinson, 539—Rev. Morgan Dix on the higher education of women, 180, comments of the *Pall Mall Gazette*, 285, 286—Divorce, Rev. S. R. Dyke's lecture on, 222.

Egan, Patrick, on Brady's conviction, 331—Walter Evans appointed Commissioner of Internal Revenue, 435, puts the spoils system in operation, 539.

Folger, Secretary, on more storage for silver dollars, 91, lowers his gold balance, 221—Boss Filley's self-recommendation for Garfield's Cabinet, 91—John W. Foster appointed Minister to Spain, 179—D. D. Field's address on the Civil Code, 92—Failures, Oct.-Dec., 1882, 45—Free-Trade Conference at Detroit, 479—Floods in the Ohio Valley, 135.

Georgia, one hundred and fiftieth anniversary celebrated, 136, murder statistics of Rabun Co., 245—Walter Q. Gresham made Postmaster-General, 307—Jay Gould's endeavor to be philanthropic, 46, retirement from Wall Street, 414—Gorringe-Chandler correspondence, 180, Gorringe's ship-yard, 414—Lizzie Gannon's suit against Father Fleming, 329—Germany's pork prohibition and American reprisals, 329.

Hatton, Assistant Postmaster-General, sneering at the Civil-Service Reform Bill, 2, forcing his paper on postmasters, 23, unpopular appointments, 45—Postmaster-General T. O. Howe deceased, 263, his successor, 307—Senator George F. Hoar reëlected, 69—Senator Harrison's successor for Judge Gresham not appointed, 391—General Hazen's Signal Service lobbying, 136—Dr. Cyrus Hamlin's notion of the Turkish tariff corrected, 499—O. W. Holmes dinner in New York, 330—Harvard Annex, appeal for endowment, 244, Overseers refuse doctorate to Governor Butler, 479, local examinations for women in New York, 480.

Ingalls-Patton controversy, 137—Indian pursuit on Mexican border checked, 371—Irish National League Convention in Philadelphia, 372.

Jay, John, appointed member of N. Y. Civil-Service Commission, 455.

Kentucky platform dodging as to the tariff, 457, pistol and shot-gun, 500—Keifer, Speaker, gives his nephew a sinecure, 199—Ex-Judge Krum's wanderings, 540.
